The bill was also objectionable from the standpoint of our international relationships, since it tended to destroy the tremendous equity and interest of the Dominion of Canada in the boundary waters of the Great Lakes and in the success of the St. Lawrence Seaway project, a joint undertaking by our country and Canada.

We are glad to advise you that there has been effective consultation between our State Department and the Dominion of Canada. Participating and assisting in the discussions have been the St. Lawrence Seaway Development Corp., the U.S. Department of Commerce, the U.S. Coast Guard, the Lake Carriers' Association, pilots' association representatives, and Great Lakes-overseas shipping services.

From these consultations S. 3019 has emerged, representing the results of careful and comprehensive study and presenting a compromise measure acceptable to all interests. The Great Lakes Commission, representing the public interest of six Great Lakes States, has actively participated and is satisfied that this bill protects the public interest and also safeguards the marine safety requirements of the waterway system.

We can therefore recommend S. 3019 for your favorable consideration and support. We understand that an identical companion bill H.R. 10593 has been introduced in the House by Mr. BONNER and will be the subject of hearings on March 9-10.

The port of Milwaukee has not appeared in the hearings on this measure, and we have relied on the Great Lakes Commission to present our viewpoint. The Great Lakes Commission has presented the viewpoint of six Great Lakes States and the general viewpoint of the port cities, including Milwaukee.

We appreciate your careful consideration of this important matter, and are glad to advise you that S. 3019 should have your full support, representing as it does a carefully considered compromise bill which recognizes the rights and equities of all parties, and the economic capacity of Great Lakes-oversea shipping to absorb the cost of pilotage where demonstrably needed.

Very truly yours,

H. C. BROCKEL,
Municipal Port Director.

MILWAUKEE, WIS., February 29, 1960.

HON. ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.:

Our association, through its international trade and export-import traffic committees, strongly favors the passage of S. 3019 relating to pilotage requirements for ships on the Great Lakes and St. Lawrence Seaway. Sincerely hope you will support this position in the interest of Milwaukee and Wisconsin shippers and agencies.

Thanks for your letter telling of your support of our invitation to Secretary of Commerce Mueller. We are most anxious to have him and urge that you follow up your preliminary contacts in this regard.

RAY H. WEISBROD,
Executive Vice President, Milwaukee
Association of Commerce.

A GOOD PILOTAGE BILL, AT LAST

The long fight for reasonable pilotage requirements in the Great Lakes, to head off a "featherbunking" rule that would have saddled prohibitive costs on foreign ships, now nears successful conclusion.

A proper bill has been worked out in the proper way—jointly by the United States and Canada through diplomatic channels—and hearings on it will open before the Senate Commerce Committee in Washington Monday. It will be made wholly reciprocal through parallel legislation by Canada.

This came about only after Congress had twice been alarmingly tempted by the Coast Guard bait—a claim that safety required licensed pilots throughout the lakes, even during the 80 percent of the time when vessels are docked or sailing open waters. Since United States and Canadian captains are so licensed anyway, this was aimed at foreign vessels, and interests hostile to a flourishing seaway were quick to support it. Canada properly resented it, and objected. So, of course, did seaway port interests in Milwaukee.

The new bill provides that the President will designate Great Lakes waters—presumably limited to certain locks, canals and restricted channels—in which a registered United States or Canadian pilot will be required on board. It authorizes international arrangements to regulate the pilotage service, including rates.

In undesignated waters ships will need only to have one of their own officers qualified for lakes navigation and so certified by either country. In practice Canada, being the point of entry into the waterway, will do most of this certifying. And most foreign ships will have captains or mates with the necessary command of English, sailing experience and knowledge of local sailing rules. Many of them, in fact, could qualify as pilots if allowed.

This must certainly satisfy any reasonable concern for navigational safety. Since it is an administration measure, the Coast Guard

has to acquiesce in it. As an agreed bill with Canada, it recognizes the necessity for international collaboration in regulating an international waterway. Its prompt passage will be a happy end to what had threatened to be a sticky business.

Policy: How the "Banks" Work

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Post's daily magazine of March 9, 1960:

(By Ted Poston, with Alfred Hendricks, Irving Lieberman and Richard Montague)

The citywide numbers racket here is at least a quarter-billion-dollar business, but the profits are no longer as astronomical as they were in the old days.

Operating expenses eat heavily into the daily gross, the Post investigation showed. The biggest single bite is in the stiff payments to those vice squad cops who operate the pad, the multimillion protection racket for the policy banks.

Once the police have gotten theirs "off the top," today's policy operation is faced with strong fixed expenses which must be deducted from the gross take which pours in 6 days a week. A table of organization for the average operation runs like this:

The runner: He collects numbers bets in specific places, such as apartment houses, tenements, offices, factories, or street corners. Since he deals directly with the public, like a bank teller, he is most often the man arrested. The runner gets a commission of 25 cents on every dollar in bets he collects, and he turns his "book" over to the controller. Few runners have contact with a policy banker; usually, they don't even know who the actual banker is.

The controller: He is the branch manager of the bank and handles the business of the runners. One controller may have as many as 100 runners and he gets 10 cents on every dollar they turn in to him.

The ordinary controller may operate from his home, several ever-changing apartments, a bar or another designated spot. He is regarded in the industry as "the man with all the headaches," for in most cases, he must take care of the cops in his area, the lawyers and bailbondsmen in the "accommodation arrests" which are necessary to protect the pad. And he must also make good any shortages in cash which the runners may come up with.

Spot controller: This is a controller who operates without runners but takes bets across the counter in a tailor shop, grocery, fruit market or any other protected location on the pad. Because no runner's commissions are involved in this operation, the spot controller keeps 35 cents out of every dollar played. This is the kind of operation favored by the syndicate, which has brought the bribery setup to its highest point of perfection. But a spot writing less than \$300 a day in numbers won't cover its own costs.

The banker: This is the president, the chairman of the board. He puts up the money to operate the policy bank, collects his 65 cents on every dollar, and pays off all "hits." He has to be able to put his hands on large sums of money at any time, so

many policy kings finance their ready-money business from the cash receipts of the related narcotics trade.

The banker is the man who sets up "connections" with the cops on the take. In most cases, the bank is responsible for the heaviest higher level payments to the Pad, but where the controller receives 10 percent, the latter must pay the "bite" from the cop on the beat on up through the precinct.

Policy barons usually maintain their "banks" outside the area in which they have the most "spots" as their base of operations. As one of them put it, the vice squad cops will say: "Don't keep your bank in our area. If it's located there, we may have to raid it. And if we don't raid it, we may have to explain why. We'll protect your spots but take your bank elsewhere."

As a result, most of the major banks are in New Jersey, Westchester, Nassau, or any adjacent center outside the five boroughs.

Although the runner, the controller, and the banker are the important cogs in the policy operation, there are also others who make their livelihood from it:

The writer: He works in one of the spots and writes the bets as the players come in off the street. He has to be able to write quickly and legibly, add swiftly, and have a flair for figures. He is paid a minimum of \$85 a week.

Lookout man: He keeps an eye out for uncooperative policemen and steers the customers to the new spot when an old location is changed or "busted." He generally gets \$10 a day for this chore but can earn more by taking on other duties.

Pickup man: This is the one who takes the "works" (policy slips) from the controller to the bank. In Harlem, women are used mainly for this task. The controller furnishes cab fare and pays about \$40 a week to each pickup man, but the pay is higher when the "works" are large. Of this operation, one numbers man said:

"This is another point where the cops on the take can get an extra taste from the business. Between 1:30 and 2:30 in the afternoon—especially in Harlem—those cops are so busy shaking down cabs with only one passenger in them that anybody else could run off with the rest of the community."

"If they catch a pickup man or woman with the 'works,' they'll hold on to it until a call goes through either to the controller or the bank. If the cop himself is on the regular Pad, he may release the 'works' in time for the final figure for about \$50. But some of the freebooting cops have demanded and got as much as \$500 for surrendering the 'works' in time."

Payoff man: He is the guy who collects the winners' money from the bank and makes the payoff. This may take place in the "spot" where the original wager was placed, but often a "payoff station" is established in a nearby bar during certain specified evening hours. This is considered "good public relations" so that unlucky suckers can see that it is possible to "hit" the number and maybe get as much as a 600 to 1 payoff (on a 1,000 to 1 gamble).

The payoff man, who gets about \$100 a week, must be a solid citizen who can ward off hijackers and stickup men. And, of course, he must be trustworthy. One Harlem bank is still looking for a payoff man who ran away with \$14,000 in one day's hits.

Tenant: An apartment dweller who lets a controller use the premises for a few hours each day to tally up the policy slips before sending the "works" to the bank. The tenant is usually an employed person who is away from home during this time.

There are hundreds of such apartments in use all over the city. The controller may pay the tenant's rent—or perhaps \$10 a day—for the privilege.

Adders: They work inside the actual bank itself and operate the computing machines and other modern office equipment to make up the "ribbon" which is the total list of the day's bet. More highly skilled employees calculate the percentage of hits daily and the profit and loss. These office workers average about \$75 a week, and each bank or subbank has a manager, who gets about \$125 a week.

Many of the runners and some of the controllers also work part-time as single action bankers, offering odds of 8 to 1 on any one of the three official digits (in order) or 60 to 1 for a "bolita," or any combination of two of the three official figures.

Many of these margin operators use money they have collected (runners) or sums held for the bank (controllers) to bank their single action. This often accounts for the "shortages" which the controller must make up in his weekly report to the bank. For to prevent seizure by the cops, both honest and dishonest, most controllers send in the policy slips daily and hold the week's cash accounting for Saturdays.

AND MORE TO COME

There are other single action bankers—many of them former full member bankers whose operation has been taken over by the East Harlem mob—who deal exclusively in this operation. They will take bets of from \$2 to \$1,000 on any chosen number.

Single action is predominantly a Negro operation and is estimated to involve about \$15 million to \$20 million in wagers each year. Although some large white banks have been moving in on the larger bets, the syndicate generally shies away from it here because single action is too complicated to handle.

Single action, however, is the backbone of another operation which is part of the expense sheet of the swindle. This involves:

Service men: A "service" maintains employees at the specified "numbers" race track—Hialeah in Florida is the designated one now—to furnish the banks, especially the single action bankers, with each official number as it comes out.

The men at the track maintain an open telephone line to the New York "service," which sells this information to the bankers and single action men.

For three individual digits a day, 6 days a week, the "service" receives \$20 a week from each client. The East Harlem mob maintains its own "service," which is available to its West Harlem outlets, but most Negro single action bankers prefer to buy their "service" from a member of their own race, who, in turn, employs several "wire men," operating from rented private phones, to rush the digits to the single action bankers between races.

Another major expense for the bankers and the controllers in the daily operation of the racket is the legal costs for the runners and other employees who may be arrested—even those who are taken under accommodation arrests.

Several banks are assessed a specified number of arrests each month by the crooked cops operating the pad, to meet quotas for the official police records.

Each wino or junkie, or anyone else who accepts the role, must be paid \$50 a "bust" when he takes a "stand-in" arrest for a policy employee. In addition, the lawyer and bondsman in each case usually get \$25 apiece.

In the case of a "legitimate" arrest and a conviction and jail term, the expenses are much higher, for if a runner with a good book is picked up and sent away, the industry must arrange to take care of his family until he gets out.

The amount given the family depends upon the size of the runner's book. It usually averages about \$50 a week. A good controller, accustomed to a higher standard of living, can expect his family to get from \$75 to \$150 a week if he goes to jail.

In the case of an infrequent arrest of a banker, the East Harlem mob may take over his bank, put his profits away for him, and give him an accounting on his return.

In any case, none of today's policy barons are likely to come near the \$10 million which Al Adams, their predecessor, salted away after muscling in on the game, back in the gas-lit days, in such the same way that the Syndicate has taken over the citywide operation here. The overhead is too high now.

Federal Judge Lemley's Decision in the Little Rock School Integration Crisis

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. MORSE. Mr. President, I was recently in Chicago and spoke at the Chicago Conference for Brotherhood. While there I listened to the president of the Monumental Baptist Church, Chicago, Ill., the Reverend Morris H. Tynes. I found him to be a brilliant speaker, thoroughly dedicated to the cause of human rights.

Mr. President, at that dinner my attention was called to a letter to the editor which Reverend Tynes wrote, of recent date, and I ask unanimous consent that the letter to the editor be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

A LETTER TO THE EDITOR

DEAR EDITOR: Federal Judge Lemley's decision in the Little Rock school segregation crisis is tragic, disgraceful, and a dangerous precedent for American jurisprudence.

Most laws fall into a rather objective category but racial laws are always highly subjective and controversial. Nobody organizes a mob to protest the placing of a signal light at a dangerous intersection, or an ordinance that forbids jaywalking or spitting on the sidewalk. But whether objective or subjective, all laws are enacted for the regulation of human conduct, and in a democratic society should be given equal respect and enforcement. It would be admirable if a law (even one such as the Federal income tax law) would engender an attitude of goodwill and brotherly love. But above and beyond any consideration of whether we like or dislike a particular civil rights law, the fundamental justification for its enactment is the protection of human rights. The primary function of the law is not conversion but regulation and prosecution. It is the function of religion to convert people, to cause them to respect and love one another. If we were spiritually what we ought to be, we would not need the external compulsions of the law to force us to do what is morally and ethically right. If we were what we ought to be on the streets and highways of our Nation, for example, the billions spent for traffic law enforcement could be used more constructively for the benefit of humanity. We would insure the safety of streets and highways by habitually following the rules of courtesy.

No nation can long endure where some laws are respected and rigidly enforced and others are not. Anarchy prevails where citizens can choose the laws they will respect and obey.

A number of Communists have been prosecuted under the Smith Act for advocating the violent overthrow of the Government. I would like to know how many white supremacists, under the banner of states rights, have been prosecuted for advocating that the Federal laws, affecting integration in the public schools, be disobeyed.

Judge Lemley's decision in the Little Rock school segregation crisis is very much like saying to a criminal: "You are violating the law of the land but I will grant you permission to violate it for another 2½ years. The hammer in your hand drips with the blood of your victim's head but I am going to give you 2½ years more to apply the crushing blows." This kind of arbitrary decision has destroyed the effectiveness of our voice in world affairs. It is sheer acquiescence to mob rule.

If all the Negroes in the United States refused to respect the law of the land as it relates to service in the Armed Forces and the annual payment of Federal income tax would Federal Judge Lemley similarly render such a biased decision favoring their actions? How much longer must American Negroes pay first-class prices for second-class citizenship?

Sincerely yours,

MORRIS H. TYNES,
Minister, Monumental Baptist Church,
Chicago, Ill.

Your Stake in Research and Regulatory Programs

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. McINTIRE. Mr. Speaker, I insert into the RECORD an interesting and informative address delivered last month in Kansas City, Mo., by Dr. M. R. Clarkson, of the U.S. Department of Agriculture:

YOUR STAKE IN RESEARCH AND REGULATORY PROGRAMS

(Address by Dr. M. R. Clarkson, Associate Administrator, Agricultural Research Service, U.S. Department of Agriculture, Washington, D.C., at annual meeting of the Corn Belt Livestock Feeders Association, Kansas City, Mo., February 11, 1960)

Thank you for inviting me to talk with you today.

I am going to examine the demands on the livestock industry in the years ahead and some of the difficulties in meeting them.

We can take it for granted that livestock will continue to be a dominant feature in American agriculture. We are a nation of meat eaters. We eat meat because we like it. It's good for us. We can afford it. The supply is ample. And we can buy meat with confidence that it is safe and wholesome.

What are the probable demands for meat and other livestock products in the years immediately ahead?

Let's take 1975 as a benchmark. Barring catastrophe, we can expect our population to increase by almost a third within the next 15 years. A reasonable estimate is that by 1975 the United States will have a population of 230 million people.

To supply 230 million people with the same kinds of food we ate in 1958 would require one-third more of red meats. Think what that would mean to your operations. We would also need one-third more produc-

tion of poultry, meat, and eggs and the same increase in milk. Total crop output would need to be increased by one-fourth that of 1958.

This may sound far-fetched. Supply is fully equal to demand. However, with 230 million people, I don't see how these estimates can be wrong.

During the past few years the gross national product has climbed from slightly under \$300 billion to almost \$500 billion. It is expected to reach \$775 billion in 1975. Measured by current dollars, that represents an increase of 77 percent. Disposable income will go up slightly more. It is expected to rise by 80 percent.

More people with more money to spend are very likely to spend more for meat, milk, eggs, and the other livestock products that add quality to our meals.

One point to keep in mind. The demands of this expanding agricultural market must be met without adding to present acreage. They can only be met through new technology—a more intensive application of science, through agriculture, to meet the needs of the people.

We will have more intensive production and greater concentration of poultry and livestock. This means greater danger from disease. When livestock concentration doubles, the hazards of disease increase fourfold. The rate goes up in geometrical progression.

Our livestock is the envy of the world. But the good health that adds to its value also makes it highly vulnerable to any exposures to foreign diseases.

The growing volume of international trade and travel is building heavy pressure on Federal inspection and quarantine, our first line of defense against threats to livestock health.

A work force only slightly larger than that of 1946 is handling 100 percent more ocean traffic and 600 percent more air traffic.

USDA inspectors now intercept an important crop pest, from some other part of the world, on the average of every 20 minutes during the working year. Last year, Federal inspectors found nearly 65 thousand pounds of prohibited meat in passenger baggage and mail from other countries—countries where foot-and-mouth disease and rinderpest are known to exist.

Some travelers who carried the meat didn't know it was restricted. Some of them tried ingenious ways to get it into the country. One sealed it in a can of olive oil. Another wrapped the meat in corn husks. Still another brought the meat in wrapped in pastry.

We've strengthened our defenses against imported livestock and poultry diseases in a number of ways—by intensive training for inspectors, by more specific information to travelers, and by cooperation with other inspection services. Our people get round-the-clock help from inspectors for customs and public health. They are assisted in the surveillance of military planes from abroad by officers in the armed services.

Even so, the size of the job is increasing faster than our forces can keep pace. The new St. Lawrence Seaway is bringing ships from all over the world into the heartland of North America. Traffic from Mexico is growing at the rate of a million vehicles a year. A few tourists are already traveling the Inter-American Highway as far south as Costa Rica.

Every ship, every plane, every car coming into our country holds a potential threat in the form of destructive plant and animal diseases and insect pests.

The guard against foreign animal diseases was strengthened immeasurably, 4 years ago, when we moved into the new U.S. Animal Disease Laboratory on Plum Island, N.Y.

In this \$10 million installation we have for the first time, the facilities needed to

study foot-and-mouth disease and other foreign diseases to provide greater protection for our own livestock and poultry.

At Plum Island we have added significantly to basic understanding of the virus that causes foot-and-mouth disease. We have assembled materials and devised techniques for early diagnosis of a great many others of the most dangerous foreign diseases of livestock and poultry.

Along with hazards from abroad, we also face greater dangers at home as our livestock population is increased. We are losing animals and productivity to many diseases that are widely prevalent and that, with present knowledge, we can neither prevent nor cure.

Shipping fever is a good example. Corn Belt feeders have watched shipping fever cut profits for more than 50 years. The disease takes a toll wherever large numbers of cattle are held together. And it's like the common cold. It is widespread but not much is known about it.

Research to date suggest that shipping fever is caused by a complex of viruses and bacteria. The scientists have made a good start in isolating and identifying causative agents (myxo-virus para-influenza 3(SF4) pastuerella multicauda, and pastuerella hemolytica). When the mechanism of infection is fully understood, it will be possible to develop diagnostic tests. We then have a means for mapping reservoirs of infection, for isolating carriers of the disease, and working out techniques of prevention and control.

This is one of the difficult disease problems that will receive a high research priority when we move into the new Animal Disease Laboratory at Ames. Modern facilities and equipment, new techniques, and, most important of all, a staff of fine scientists will be brought to bear on this and other important livestock diseases. We are proud to have Dr. W. A. Hagan assume the responsibility of directing the laboratory. He will be ably assisted by Dr. Chester Manthel and Dr. J. E. Williams.

We estimate that hazards to the health of livestock and poultry now cost more than \$2 billion a year. You can document the high risks in meat production with dramatic examples from your own experiences. In addition to shipping fever, a high toll is taken by anthrax, mastitis, transmissible gastroenteritis, and a whole complex of diseases of cattle, swine, and poultry.

The national laboratory will be large enough and with sufficient isolation facilities so that work can go on simultaneously with complete safety on many of the most dangerous diseases. There will also be laboratories for work in connection with our livestock regulatory programs.

One of the first orders of business—when we move into the new laboratories—is to establish standards, improve procedures, and provide for the testing of vaccines and other veterinary biologics.

This becomes increasingly urgent as a wide variety of new and different biologics come to market and as more and more of them are put to use. Last year's record output of 3.9 billion doses—over 95 percent of them modified live-virus vaccines—is strong evidence that the livestock and poultry producers of America believe an ounce of prevention is worth a pound of cure.

The Department of Agriculture has a proud record of screening out those that don't measure up to standard.

For instance, enough brucellosis vaccine for 500,000 calves was destroyed last year because it did not meet inspection standards. Actually, this represented only a small percentage of the total brucella vaccine manufactured—less than 8 percent of the lots . . . but from one point of view the most important percentage.

The tremendous rise in the production of biologics for veterinary medical use calls for improved procedures for rapid and continuous tests. Efforts to improve testing have been hampered by lack of facilities. These will be available with the opening of the National Animal Disease Laboratory.

All signs point to rising investments in protective measures in the years ahead. Profits in livestock feeding and nearly every other farm enterprise depend on the prevention and control of diseases and pests. In the future they will depend on new techniques that do a precision job at reasonable cost with safety.

There is great concern about the effect the growing use of chemicals in our daily lives may have on our health.

The people of this country look to those in agriculture—producers, processors, and marketers—researchers, extension workers, and regulatory officials—to use all chemicals wisely for the safety and the quality and quantity of the food supply.

We are responsible for exploring opportunities to use chemicals in agriculture, for maintaining rigid standards to measure their effectiveness and safety, and for drawing up recommendations for their proper use.

Agricultural scientists help build up the body of knowledge about chemicals. Agricultural teachers help to train the technical people who staff our food supply line. And agricultural leaders such as yourselves help perpetuate the climate of opinion that says our food supply must be of high quality and completely safe.

The Government has assumed increasing responsibilities for the preclearance of foods and the materials used in the production and preparation of foods before they are permitted in commerce.

One of the earliest steps in this direction by the Federal Government was the passage of the Meat Inspection Act over 50 years ago. Under this act the Secretary of Agriculture is made responsible for the wholesomeness, safety, and proper identification of red meats in interstate and foreign commerce.

Chemical and other additives, processing methods, and product composition are carefully controlled. Each animal is inspected under veterinary medical supervision. Although most of the 100 million animals are healthy, inspectors condemn and destroy nearly a million pounds of products each working day, because of disease, spoilage, or contamination.

Evidences of contagious disease are referred back to Federal and State veterinarians to aid in disease prevention on farms and ranches. For example, the progress against tuberculosis of cattle and the eradication of vesicular exanthema of swine would have been impossible without this coordinated effort.

This meat inspection system is the envy and model of the world. It has maintained public confidence in the safety of our meat supply and thereby assured producers of a steady demand for meat.

The Department's newly established poultry products inspection program is rapidly achieving this same status. These two inspection services by the Department of Agriculture cover a most important part of the total food supply.

In recent years, the Congress has provided for the preclearance by the Food and Drug Administration of new drugs for man and animals, residues of pesticide chemicals, and additives for foods not covered by the Department of Agriculture in meat and poultry products. Responsibility also is given to the Department of Agriculture for prior registration of pesticide chemicals. All this covers interstate commerce, of course.

Enforcement of these interlocking acts requires the closest coordination between the

Departments of Agriculture and Health, Education, and Welfare.

In the case of additives to feed, or drugs given to livestock, the Food and Drug Administration acts on petitions for specified uses. The Agricultural Research Service also must decide upon acceptance of the practice from the standpoint of the safety and wholesomeness of the meat passing through its inspection. Such acceptance is based upon adherence to the details of the practice.

Some questions have been raised about the requirement that animals on feed containing chemical additives should be taken off such feed 48 hours before slaughter. As an added safety measure, the Director of the Division issued instructions to inspectors and inspected meatpacking plants to withhold such animals from slaughter for the required time. This is just one example of the routine actions taken to keep secure the public confidence in its meat supply.

There is a very simple admonition we must observe in using drugs, pesticides, and feed additives for livestock: "Use chemicals safely—follow the label." This must be done. You must do it. You must help see to it that others do it. The integrity of your industry depends upon it.

Clearances of chemical usages are given on the basis of effectiveness as well as safety. There is no gain in misuse. There is only extra expense, often a loss of effectiveness, and a chance of real trouble.

Public controls of chemicals and other factors affecting food are here to stay. If anything, they will be made more stringent.

To meet the increasingly urgent needs for maintaining the health of livestock and the safety and high quality of the food supply, a greatly accelerated research effort is needed. This is a job for industry and the States as well as the Department. New and improved chemicals and new techniques for their use are required to avoid questionable residues in food. Biological methods of disease and pest control must be developed wherever possible. This is a real challenge in basic research and we cannot overlook the need for continued nutritional evaluation of the end products.

The Agricultural Research Service accepts its share of the responsibility for these tasks. I know you accept yours. Let us show the world that we can do this job.

The World Court and the Connally Amendment

EXTENSION OF REMARKS

OF

HON. ANDREW F. SCHOEPPPEL

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. SCHOEPPPEL. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Should We Trust a World Court To Stay Out of Our Affairs?" published in the Saturday Evening Post of March 12, 1960.

The editorial points out concisely why we should think carefully before we vote to repeal the Connally amendment.

I commend the Saturday Evening Post for its constructive and timely approach to this subject through its editorial.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHOULD WE TRUST A WORLD COURT TO STAY OUT OF OUR AFFAIRS?

There has been a lot of high-level support, from President Eisenhower down, for the idea that this country should surrender its right to withhold from the International Court of Justice cases which we think concern domestic matters. In 1946 the United States accepted compulsory jurisdiction of the International Court in cases which we agree should come before the Court. But, by means of the Connally amendment to the Senate resolution of adherence, we retain the right not to submit cases which in our opinion are of domestic concern. Those who wish to repeal the Connally amendment think we should let the International Court decide whether a case is domestic or international.

Among the arguments in favor of this proposal are: This country ought not to be the judge of whether or not a case is "within the domestic jurisdiction of the United States"; such reservations reduce the number of cases for the International Court and thus delay the inauguration of a system of law among nations.

Vice President NIXON, who is among those proposing that Congress repeal the Connally amendment, agrees that "all disputes regarding domestic matters must remain permanently within the jurisdiction of our own courts. Only matters which are essentially international in character should be referred to the International Court." But he thinks the Court itself can be trusted to decide which cases are domestic and which are international. Secretary of State Herter has expressed the view that it was extremely unlikely that the Court would take jurisdiction over a matter which we regarded as of our own domestic concern. He thinks the Connally amendment puts this country in the position of sitting in judgment in its own case when we decide for ourselves that a given matter is our own business.

But why do so many eminent people believe that an international court would never intervene in our domestic affairs? In a letter to the New York Times a few months ago, Philip Marshall Brown, former professor of international law at Princeton University, pointed out that, for one thing, "the Declaration of Human Rights sponsored by the United Nations actually operates to invite intervention by one nation in the domestic concerns of another nation." It is easy enough to imagine an international court holding that the griefs of minority groups in this country constituted a violation of this declaration and was therefore an international question. Our immigration laws might easily be defined as beyond domestic concern. After all, we are denying the right of people from other nations to come to this country.

Undoubtedly, by insisting on withholding from the International Court cases which we declare are exclusively domestic, we can be said to sit in judgment on one aspect of our own case. But is this bad? There is a point at which every nation has to be judge of its own case, or go out of business. For example, the Panama Canal—already there are rumblings to the effect that it should be "internationalized" after the matter has been adjudicated by an international tribunal. To that proposal this country would have to say, "No, the canal is a factor in our national-defense system, and we occupy and administer it under a treaty entered into in good faith by both parties. We can't agree to gamble away our security to satisfy the sea lawyers of Latin America or our own visionaries."

Professor Brown tied up the subject tight in the letter quoted above: "At this time of world revolution and cold war we Americans need to observe the utmost caution in taking any steps which might impede our freedom of action in unforeseen emergencies."

Frustrated Narcotics Fighters

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial from the Los Angeles Times for March 3, 1960, which has been brought to my attention by Mr. Nick B. Williams, the editor:

FRUSTRATED NARCOTICS FIGHTERS

"The dope traffic in Los Angeles County has reached epidemic proportions. We cannot turn our backs on this problem, which has become a public health and safety problem."

MEASURES SOUGHT

This was Dr. Stuart C. Knox, chairman of the county medical association's committee on narcotics and alcoholism, speaking to the board of supervisors. The supervisors had been studying proposals for broadening police powers in narcotics cases and sharpening the penalties for dope peddling.

There is much room for improvement in the handling of narcotics cases in this county, as we shall see. It is important that improvements should be made. But most important is suppressing southern California's dope traffic is stopping the smuggling from Mexico. The Times has been crying the international aspect of the narcotics plague for nearly a year. The State can improve its law enforcement, but only the U.S. Government treating with the Mexican Federal Government can cut off the major source of supply of heroin.

MUST PLUG THE HOLE

State judges and law-enforcement officials are like deckhands working the pumps of a leaking ship. They must bend their backs and sweat—and their pumps had better be functioning efficiently—but they cure nothing; the ship's carpenters have got to go below on the double to plug the hole in the ship's side.

Some suggested changes in State narcotics laws—on improvements in pumps and their management—have been sent to Sacramento. The proposed amendments to the statutes have two aims—harder penalties for narcotics violators and easier rules for the police who must catch them.

PROPOSED PENALTY

Some of the penalties should be more severe. The worst of narcotics crimes, in the general opinion, is furnishing the horrible stuff to minors. Under the present law, the penalty prescribed for a first offender is a prison sentence of not less than 5 years. Five years of solid time might be enough—but the prisoner would be eligible for parole in 20 months. The proposed law would prescribe 10 years to life for this offense, with no parole eligibility until 5 years had been served. This example of increased penalties is typical of the proposals for strengthening the punishments for transportation, sale, furnishing, etc., with stiffer terms for second offenders all along the line.

But proclaimed penalties do not stop the narcotics traffic; they must be imposed on the violators. The present penalties, which may be too mild, have never been tested for their full effect. Some of the recent records tend to show that offenders are treated too leniently in the courts. The statistics suggest that judicial discretion is almost boundless.

Several undercover men of the Los Angeles police department were assigned last year to make narcotics purchases from "pushers." They submitted their evidence

to the Los Angeles County grand jury, which returned 90 indictments. Then the police rounded up 79 indicted persons. This is what happened to them:

Cases	
Without prior convictions turned over to the youth authority.....	9
Without priors sentenced to prison.....	5
Without priors sentenced to county jail (less than a year).....	15
Without a prior given probation.....	1
With priors sent to prison as first offenders (priors ignored).....	8
With a prior sentenced to jail (less than a year).....	1
With priors sent to prison (priors recognized).....	8
Cases disposed of with some kind of sentence.....	47
Acquitted.....	7
Dismissed.....	3
Identified but not apprehended.....	9
Not identified and not apprehended.....	10
Still pending.....	3
	32
Making a grand total of.....	79

TOO MANY ESCAPE

Here is justice holding not a balance but a sieve. Note that 10 defendants with prior narcotics convictions were sentenced as first offenders. Also note that while the police department made 90 cases, all with sales to police officers, only 47 resulted in prosecution (by February). The indictments were returned last August. The tabulation suggests that harsher penalties, particularly for those with prior narcotics convictions, might not make much difference in the dope trade—unless judicial discretion were circumscribed by the legislature. Perhaps it should be mandatory upon judges to recognize prior narcotics convictions in sentencing a defendant in a present narcotics case.

The record embitters zealous law-enforcement officials, naturally. And they have other complaints against the courts, which cut them very fine on search and seizure in narcotics cases under the so-called exclusionary rule. Police have a hard time digging into narcotics cases because violations differ from other crimes; there is no victim to report to the police.

EXCESSIVE LICENSE

But it seems to us that in their zeal the enforcement officials want to swing the pendulum from too much restriction to too much license. The recommendations for law changes submitted to the legislature contain this hair-raising sentence:

"No evidence shall be excluded because of the manner in which it was obtained."

The Times will fight until the narcotics blight is ended, but we believe the fight can be won without suspending constitutional guarantees. Before we accept the police state as a remedy let us urge the courts to look to their evident responsibilities and let us above all press the Government in Washington to get the heroin cut off at its Mexican source.

What the Negroes and Whites Must Do

EXTENSION OF REMARKS OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. MORSE. Mr. President, my attention was called to a press interview

had with Dr. Morris H. Tynes, minister of the Monumental Baptist Church, 729 East Oakwood Boulevard, Chicago, Ill., in which Reverend Tynes discussed some of the problems of human rights in this country as they relate to the Negro. He discussed the problem under two headings: first, his views as to what the Negro must do; and, second, his views as to what the whites must do if we are going to reach a settlement of this great problem which will result in first-class citizenship for all Negroes of America. I ask unanimous consent that a copy of a portion of the interview with Reverend Tynes be printed in the Appendix of the Record.

There being no objection, the interview was ordered to be printed in the Record, as follows:

(The following is a portion of an interview that a reporter from the Chicago American had with Dr. Morris H. Tynes, minister, Monumental Baptist Church, Chicago, Ill.):

Realizing that "all generalizations are false, even this one," I certainly would not have the temerity to suggest that all Negroes or all whites fall into the classifications enumerated. Such ideas can only serve as a barometer of self-examination and general improvement in human relations.

WHAT THE NEGRO MUST DO

He must develop a mature sense of values that embrace education, character development, community pride, civic responsibility, technical skill, thrift, stable family life, home ownership, and sensible religion.

He must keep his neighborhoods clean and attractive. He must realize that to be accepted, he must be acceptable.

He must stop expecting God and white people to do for him what he can do for himself.

He must make his religion a daily practice rather than simply an emotional affair. His religious life needs more rationality and less emotionality. Witchcraft and superstition have kept his religious experience on a naive, primitive level.

He must stop rationalizing his faults and failures on a basis of color.

He must learn how to keep both his word and his friends.

He must learn how to operate business; not "Negro business."

The average educated Negro must develop a deeper social consciousness. He must learn how to walk with crowds and not lose his virtue and talk with kings and not lose the common touch.

He must assume a greater responsibility for such agencies as the NAACP, the Urban League, the church, and his other civic and charitable institutions.

He must develop a more mature sense of humor. He is too sensitive.

WHAT THE WHITES MUST DO

White people must stop penalizing Negroes for not being white. There is no inherent virtue in being either white or black. Color is not character and pigment is not principle. It is only a distinguishing mark.

They must stop decrying integration and social equality in the daytime while many of them practice both in the nighttime.

They must stop trying to disprove the religious and scientific fact that "God hath made of one blood all nations to dwell upon the face of the earth."

They must start practicing in their economic, political, and religious life the brotherhood they preach.

They must stop denying Negroes the kind of democratic citizenship that the Constitution guarantees to all Americans. Ours is either a democracy or it is a hypocrisy.

They must stop using Negroes politically and exploiting them economically. As long

as the Negro or any other element of our society is economically insecure, America is insecure.

They should stop treating the Negro in such a way that he develops an inferiority complex and loses his motivation and ambition for decent, purposeful living.

They should stop lumping all Negroes into one general category. Negro society is as highly stratified as any other.

They should stop expecting all Negroes to be great or outstanding. The Negro should have as much right to be a bum as the white man.

Finally, both Negroes and whites should strive for a better understanding. If we do not live together as those who have been created equal, we are destined to die as those who have been cremated equal.

Cold War GI Bill Needed Now: Corpus Christi Caller-Times Shows Student Need

EXTENSION OF REMARKS OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. YARBOROUGH. Mr. President, time is running out for the cold war veterans' educational opportunities. The cold war GI bill (S. 1138) was passed by the Senate in July 1959. It is now being heard before the House Veterans' Affairs Committee.

The urgency of this legislation is forcefully proven by two recent articles in a dynamic and forceful Texas newspaper, the Corpus Christi Caller-Times. It is a leader in Texas journalism; its editorials and news selectivity show an awareness of America's position of leadership and peril in the world today and of the relationship of our domestic problems to our international leadership.

Mr. President, the argument that "every boy can go to college if he wants to" and that "the GI bill isn't needed" are equally fallacious, and both are effectively answered in an article by Terry Ferrer in the Corpus Christi Caller-Times of Friday, March 4, 1960, entitled "Scholarships Not Plentiful or Adequate for College Costs."

This article proves statistically that college has become a necessity as well as an ideal for Americans.

The hard-hitting editorial "Complacency" from the same paper, ends with this true warning:

Of course, if we cannot agree that the best education obtainable in schools which demand hard mental discipline is the fundamental basis for democratic citizenship, then there is no need to worry. We can go our carefree way, piling material prosperity on material prosperity, and, as with Louis XVI, let our descendants cope with the torrent.

Mr. President, I ask unanimous consent that these remarks be printed in the Appendix of the Record, and that there be printed with them from the Corpus Christi (Tex.) Caller-Times the following editorial "Complacency" of

Sunday, January 31, 1960. Article, Friday, March 4, 1960, "Scholarships Not Plentiful or Adequate for College Costs."

There being no objection, the editorial and article were ordered to be printed in the RECORD, as follows:

[From the Corpus Christi Caller-Times, Jan. 31, 1960]

COMPLACENCY

It seems far away and long ago, now, the sudden cold fear that gripped so many Americans when Soviet Russia launched its first sputnik in October 1957. Time has quieted our fears. We face a pleasant presidential election year that may be won on the lotus-land slogan of "peace and prosperity."

The late sputnik unpleasantness, for all our willingness to lock it up in the past, did have a message for us. The message is still there if we care to heed it. It was expressed by an eminent scientist, Lloyd V. Berkner, member of the President's Scientific Advisory Council, in these words:

"The achievement of the Soviet satellite has demonstrated to Americans what they refused to believe before, that they are in a race for intellectual leadership when they hadn't realized that there was a race. In the complacency of our assumed technological lead, we have confused our high standards of living and material prosperity with intellectual stature. It is an extravagant and dangerous mistake."

This quotation, too, seems to come from the remote past. A few voices here and there are raised in defense of a much more purposeful and demanding educational effort, but they are lonely ones indeed. It almost seems as if the American public has concluded that it was frightened needlessly by Soviet technological success in a field that, after all, has no bearing on our way of life.

A feeling almost of complacency has crept even into the recent publication of the Committee for Economic Development, "Paying For Better Public Schools." One of the most startling findings of the study was expressed in these words: "The growth of the national economy, without any increase in the share of total output devoted to public schools, will supply most of the resources needed to keep pace with rising school enrollments." This seems to presuppose a continuation of the present level of plant and instruction. Furthermore, a Texan would find it difficult indeed to single out any school district in the State that can look forward with any confidence to natural growth for a solution to its fiscal problems.

All too many legislators and professional States' righters have refused to come to grips with this central and overriding question: Is it in the interest of the United States to insure that every child is educated to the maximum of his mental capabilities? If so, who shall pay for that education if local school districts cannot afford, or refuse, to do so? It is on this point that the move for Federal aid to education inevitably flounders. Beyond these preliminary questions is another of vital importance to the United States: What steps would be taken to insure that the superior student, wherever he is found, is encouraged financially and otherwise to enter college, obtain a degree and urged to take postgraduate work that may fit him for the tasks of leadership tomorrow?

Of course if we cannot agree that the best education obtainable in schools which demand hard mental discipline, is the fundamental basis for democratic citizenship, then there is no need to worry. We can go our carefree way, piling material prosperity on material prosperity and, as with Louis XVI let our descendants cope with the torrent.

[From the Corpus Christi Times, Mar. 4, 1960]

SCHOLARSHIPS NOT PLENTIFUL OR ADEQUATE FOR COLLEGE COSTS

(By Terry Ferrer)

NEW YORK.—"I'm not worried about paying for my daughter's college education. She's a bright girl and I'm sure she can win a scholarship. After all, there are thousands of scholarships around."

The uninformed father who made that remark recently was earning \$12,000 a year. What he did not realize was that vast changes have been made in who gets a scholarship, in the actual part of the college bill a scholarship will pay—in fact, in the whole student-aid program at all colleges. For the majority of today's college students who need financial help, a scholarship is no longer the assured way of financing 4 years of college.

This is particularly true for families whose incomes are in this father's bracket. Twenty years ago, the bright students did win scholarships and often went off to college with added funds that were not essential, while a less talented child from a poorer family stayed home because he couldn't afford to go. Now, almost all scholarships are awarded on the basis of actual financial need, and even then, they must be supplemented by loans, savings, student work during the summer and winter, and some family support.

The cost of going to college has more than doubled since 1940, and will double again by 1970 if the inflation spiral continues, according to Ernest V. Hollis, college financial expert of the U.S. Office of Education. With the present college population of 3,400,000 students expected to double or triple by 1970, the financial headaches for families with teenage children will become endemic unless some planning is done.

Unfortunately, such planning has not been evident so far. A recent survey of 5,000 heads of households across the country conducted for the Ford Foundation by Elmo Roper and Associates revealed these facts: Parents say that almost 7 of every 10 of the country's children will go to college (the U.S. Bureau of the Census says the 2 of every 10 college-age youngsters were actually in college in 1958). But 60 percent of these parents have not saved any money for their children's college education. Among those who have saved, the average nest egg was \$150 last year.

And parents have no idea of how much college costs now, let alone 10 years from now. Those surveyed expected that a private college would cost them an average \$1,574 a year a child and a public institution \$1,370. Dr. Hollis has computed the average all-expense cost this year at \$2,354 private and \$1,980 public. "Parents," he says "are completely unrealistic, and they're in for a terrible disillusionment."

If tuition and expenses are to double in 10 years, this means that 4 years of residential college with all expenses may cost from \$16,000 to \$19,000 or \$20,000. Of course, 2 year colleges are less expensive, and living at home can save \$400 or \$500 from the annual bill. But the total is still staggering, especially for a family with more than one child. Obviously, planned saving, endowment plans or insurance will be necessary for most families of college-going students.

Most college financial experts advise using a variety of ways to pay for college expenses. These would include a combination of a scholarship (if one is available), a loan, student work during the summer and college year, personal savings and parental support.

Today the estimated \$100 million available in scholarships through the colleges and such programs as the National Merit Scholarships is divided among some 690,000 boys and girls. This makes the average scholarships less than \$145 a head.

In loans, the outlook is brighter. The National Defense Education Act has provided funds for college loans worth almost \$44 million which are currently held by 95,841 college students in 1,368 participating colleges. And 30 percent of the loans were taken out by freshmen. The colleges must put up \$1 for every \$9 the Government gives. Administered through the individual colleges, the loans can run up to \$5,000, at the rate of \$1,000 a year a student. Repayment begins 1 year after leaving college and continues for 10 years with an interest rate of 3 percent. For borrowers going into public-school teaching, half the debt is forgiven.

While some parents have been dubious about saddling their youngsters with, say a \$4,000 debt at the end of college, Dr. Morse points out that the monthly payments on such a figure would be only \$38.64.

In terms of money, a college education is worth \$113,000 more in lifetime earnings than a mere high school diploma, the U.S. Department of Labor has calculated. Inflation being what it is, Dr. Seymour Harris, Harvard economist, has raised this estimated differential to between \$200,000 and \$250,000.

In earnings, in prestige and, most of all, in educating a first-class citizenry, college has become more and more of a necessity as well as an ideal for Americans. To insure that young child will have his chance at college, the requisite is that you chart a long-term course to the campus—beginning now.

William E. Keith, Regional Manager, Veterans' Administration, Chicago, Ill.

EXTENSION OF REMARKS

OF

HON. KENNETH J. GRAY

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. GRAY. Mr. Speaker, I was saddened and grieved to learn of the death of a devoted public servant and friend of thousands of veterans. Mr. William E. Keith, regional manager of the Veterans' Administration, with offices in Chicago, Ill., passed away Monday night March 7, 1960 in the Veterans' Administration Research Hospital in Chicago, Ill. Along with his family and a host of friends, thousands of veterans will long remember his many kindnesses and sympathetic understanding for the problems of veterans of all wars, their widows, and orphans.

The Chicago regional office serves veterans in Illinois, Wisconsin, and Michigan, and is the second largest VA office in the country. Mr. Keith took over as regional manager in June 1958, after serving as assistant manager and regional representative. He was active in Illinois veterans affairs for 25 years and once served as assistant deputy adjutant for the Illinois Department of the American Legion.

Since coming to Congress I have handled thousands of cases for veterans and since he has been manager I have always received prompt and courteous replies to my inquiries. Mr. Keith was a good administrator and his services will be sorely missed by the Veterans' Administration, veterans, and all of us who deal with this most important agency.

We all mourn his passing and extend to his wife and two daughters our heartfelt sympathy during this sad time of bereavement.

The Coming of His Feet

EXTENSION OF REMARKS

67

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. BYRD of West Virginia. Mr. President, I think we often become so engrossed in our own little private worlds and personal ambitions we forget temporarily the thought expressed by Hamlet to Horatio when he said, "There's a divinity that shapes our ends, rough-hew them how we will." Not only do we fail thereby to draw upon that source of infinite wisdom and strength which we need so much in coping with the problems and cares of this life, but we also overlook the spiritual things which, in the final analysis, are the only things that last and endure. I realize this shortcoming in myself, and I am often brought face to face with a greater awareness of the fact as I read the lines penned by Lyman W. Allen entitled "The Coming of His Feet." Keeping in mind the exhortation by the psalmist, "Be still, and know that I am God." I commend to the attention of all who read the CONGRESSIONAL RECORD this stimulating and inspiring verse. I ask unanimous consent that it be printed following my remarks in the Appendix of the RECORD.

There being no objection, the lines were ordered to be printed in the RECORD, as follows:

In the crimson of the morning, in the whiteness of the noon,
In the amber glory of the day's retreat,
In the midnight, robed in darkness, or the gleaming of the moon,
I listen to the coming of His feet.

I heard His weary footsteps on the sands of Galilee,
On the Temple's marble pavement, on the street,

Worn with weight of sorrow, faltering up the slopes of Calvary,
The sorrow of the coming of His feet.

Down the minster aisles of splendor, from betwixt the cherubim,
Through the wondering throng, with motion strong and fleet,

Sounds His victor tread approaching, with a music far and dim—
The music of the coming of His feet.

Sanded not with sheen of silver, girded not with woven gold,

Weighted not with shimmering gems and odors sweet,

But white-winged and shod with glory in the Tabor light of old—
The glory of the coming of His feet.

He is coming, O my spirit, with His everlasting peace,
With His blessedness immortal and complete;

He is coming, O my spirit, and His coming brings release—

I listen for the coming of His feet.

Early Approval of House Bill 10590 Needed

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. WILEY. Mr. President, in the face of rising costs of Federal operations, the Congress and the executive branch must make realistic efforts to put the country's financial house in order.

As we recognize, today the Nation has a national debt of \$290.4 billion. The interest charges on this debt for the fiscal year 1961 amount to \$9.6 billion annually—a big slice out of the budget.

We realize, therefore, that the cost of financing is a major factor in our fiscal program.

As we recall, the administration has recommended—and soundly, I believe—that the ceiling of 4½ percent on long term bonds be raised, so that the Treasury can compete more favorably in the money market. If this is not done, Uncle Sam will need to continue to borrow money on a short term basis at substantially higher rates of interest.

Fortunately, the House Ways and Means Committee has now reported out a measure, H.R. 10590, providing for a lifting of the interest ceiling under specific conditions.

As I understand it, the administration feels that this bill—although a compromise—would, if enacted, better enable our Government to handle its financing problems.

Because I believe that such action is essential in terms of fiscal policy, as well as for the protection of the U.S. taxpayers, I feel that the measure now pending on the House calendar, with whatever revisions may be deemed necessary, should receive early approval by the Congress.

Recently, the Wisconsin State Chamber of Commerce published a report on national governmental affairs. In the report, the chamber supports the enactment of H.R. 10590. In addition, the Wisconsin Bankers' Association has also expressed approval of this measure.

Because the report reflects the broad gamut of responsible views of these organizations, which include in their membership men in business, in the professions, in finance, leaders in civic and community affairs, and others, I ask unanimous consent to have an excerpt from the report by the Wisconsin State Chamber of Commerce, as well as a telegram from George Forster, executive director of the Wisconsin Bankers' Association, printed in the Appendix of the RECORD.

There being no objection, the excerpt and the telegram were ordered to be printed in the RECORD, as follows:

INTEREST CEILING ON U.S. BONDS

A compromise interest ceiling plan on U.S. bonds, H.R. 10590, was favorably reported recently by the Ways and Means Committee and House action is forthcoming this week.

Secretary of the Treasury Robert B. Anderson said at the hearings on February 23 that the administration would continue to press for the complete removal of the interest ceiling but added that the bill would permit the Treasury to "a substantial extent, in the period immediately ahead to achieve the debt lengthening which is so highly important in the national interest." Under Secretary Julian B. Baird went even further to say that the bill would provide the Treasury with "enough authority to meet the financial crisis now confronting it."

On the Ways and Means vote, all 10 Republican committee members voted for the bill, but only 8 of the 15 Democrats so voted.

The bill provides four modifications:

(1) In the case of bonds, etc., issued for periods of more than 5 years in exchange, before maturity, for outstanding bonds, etc., the bill provides that the 4¼ percent maximum interest rate is to be determined on the basis of the coupon rate alone and is not to take into account any investment yield attributable to the bond being exchanged at a discount.

(2) The bill provides that the 4¼ percent ceiling for interest on Government obligations may be exceeded (upon a determination by the President that the national interest so requires) to the extent of 2 percent of the outstanding debt included in the public debt limitation. To the extent that this allowance is not exceeded in any fiscal year, the excess may be carried over to the 2 next succeeding years (except that there is to be no carryover for the fiscal year 1960).

(3) The 4¼ percent ceiling on interest rate for Government obligations is not to apply to the special issues for the Government trust funds, such as the OASI trust fund, etc.

(4) The 4¼ percent ceiling presently applicable to savings bonds may be exceeded without limitation upon a finding by the President that this is in the national interest.

The Wisconsin State Chamber of Commerce recommends support of H.R. 10590.

MADISON, WIS., March 9, 1960.

Senator ALEXANDER WILEY,
Senate Office Building,
Washington, D.C.:

The Wisconsin Bankers Association sincerely urges that you support the compromise interest ceiling plan on U.S. bonds H.R. 10590 which was recently favorably reported by the Ways and Means Committee.

GEORGE FORSTER,
Executive Director, Wisconsin Bankers
Association.

Preaching for a New Era

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very interesting editorial written by William H. Robinson entitled "Preaching for a New Era," which comments on the high order of spiritual leadership Rev. Morris H. Tynes is giving to the congregation which he serves in Chicago. Although he happens to be a Negro, Mr. President, it was interesting to me to discover the congregation is an integrated one. There are white members of the congrega-

gation as well as colored members of the congregation.

I think it will be of interest to the Senate to have this editorial appear in the Appendix of the RECORD, commenting on the great spiritual leadership Dr. Tynes is giving to his congregation.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PREACHING FOR A NEW ERA

(By William H. Robinson)

We who live today are the most fortunate people in the history of the world. We live in the richest and most powerful country in the world and we are the most prosperous and comfortable people on earth. Our material achievements are dwarfing our moral and spiritual progress. Unless we can bridge the gap between our material progress and moral and spiritual growth, disaster hovers over our civilization. This situation is a historic opportunity for the church. The minister is challenged to preach to a generation which is groping for spiritual satisfaction in confused and troubled times.

The layman, today, needs preaching that enriches one's insights and gives a sense of direction in the day to day business of living. A grinding need of our times is a clarification and interpretation of old religious teachings which are no longer valid in our scientific age. The beauty of the Bible's great writings shine through when old myths, stories, allegories, etc., are interpreted in the light of new knowledge and current discoveries and investigations.

Monumental is fortunate to have a minister who preaches for a new era. He is a scholar who translates difficult Bible truths into simple and plain language which all can understand.

Preaching for a new era by our pastor is an eloquent exposition of religious views which are current. He is prophetic and profound. His sermons are protests against wrong and urging calls to repentance.

Reverend Tynes prophesied that the current corruption in city government would run its course. He prophesied concerning police scandals which now shock all America. He predicts that more scandals will come as the result of the moral decay which is at the heart of this city. Like Jeremiah, Amos, and Isaiah of old, Monumental's pastor stands four square and proclaims the good tidings and message of civic and social redemption.

The Mounting Plea for the Politician.

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we in politics sometimes receive the impression that many of our fellow Americans have a distinct and heartfelt prejudice against politicians.

If, for instance, a man wants to disparage the ambitious white collar colleague who is rising to the top in a hurry, he refers to his industrious associate as the office politician.

We have all heard comments about politicians' promises.

And we certainly wince a little when someone talks about political cunning.

It is always refreshing, therefore, when an editor or writer comes right out and admits that politicians are needed in government, and that they should be good politicians if they are going to accomplish anything at all.

In a nation such as ours, every citizen should be somewhat of a politician, and by that I mean he should have some degree of the skills and knowledge that we must have to make a democracy work for the good of its people.

An editorial in the March 9 edition of the Bergen Evening Record, Hackensack, N.J., quotes a Member of this body and a New Jersey candidate for public office on this subject, and it quotes them well.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE MOUNTING PLEA FOR THE POLITICIAN

To the defense of the politician have come in recent days two thoroughly qualified apologists, Thorn Lord of Trenton and JOHN F. KENNEDY of Boston.

Mr. Lord, newly announced candidate for the Democratic nomination to be U.S. Senator, and Mr. KENNEDY, who currently has that office for the Massachusetts constituency while seeking a higher one, spoke to widely different audiences geographically and philosophically. But their message was the same:

The country needs politicians.

The scene of Mr. Lord's lecture was a political dinner in Paramus. And this made it more than just another Saturday night political dinner: It was the first one Mr. Lord attended as a committed candidate. "People like ourselves," he told the audience, "who are interested in government, are the hope of the Nation and the world."

Mr. KENNEDY's environment was somewhat more picturesque, as was his audience. Mr. KENNEDY spoke at Dartmouth College on the eve of New Hampshire's early-bird primary. Dartmouth seems to be a warmup area for presidential aspirants. One of the college's distinguished alumni, Nelson A. Rockefeller, almost got his nomination off the ground there last fall. Mr. KENNEDY was there opportunely to speak to the college's Young Democratic Organization. He threw away his text on South America, and talked instead about Daniel Webster and politicians.

To say anything unkind, about Daniel Webster in New Hampshire, especially at Hanover, is feebly comparable to slandering the Lodges or the Cabots, not to say the bean and the cod, in Boston. But Mr. KENNEDY boldly pointed out there was some sly cunning in Daniel Webster's political background and all this proves is that politics shelters a great many divergent people. There is a saying about bedfellows.

"Students," said Mr. KENNEDY, "should not unthinkingly disparage the profession of politician."

We hear of this all the time, from increasingly surprising sources. Businessmen are telling other businessmen they had better get into politics if they want to protect their investment. Professional men are being told by outsiders and by themselves they can no longer stand aloof if they wish to assure their profession's reputation and integrity.

It's all true, of course. But it seems a difficult lesson to learn. The politician is the practitioner of the science of government. In that capacity he needs, deserves cannot do without the help and respect of

his neighbors no matter where they may be. But too many of us still think of the politician as Boss Tweed.

Gov. G. Mennen Williams—May Providence Make Him an Instrument for Peace

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. RABAUT. Mr. Speaker, because Gov. G. Mennen Williams and his wife Nancy are constituents of my congressional district, I take the privilege to make known their remarks on the occasion of the Governor's decision not to seek a seventh term as Democratic Governor of Michigan:

ADDRESS BY GOV. G. MENNEN WILLIAMS ON TELEVISION AND RADIO, DETROIT, MICH., MARCH 3, 1960

Good evening, friends and fellow citizens of Michigan.

In the Book of Ruth, there is an inspiring passage on loyalty and devotion: "For whither thou goest, I will go; thy people shall be my people, and thy God my God."

I quote this passage as a sort of text for our talk tonight, because it expresses my feeling about the people of this State, where I was born, and in whose service I have spent most of my adult life.

Eleven years and two months ago, I stood on the steps of Michigan's Capitol to take the oath of office for the first time as your Governor. Although I had served in important appointive positions, and had done my stint as an officer in the Navy, I had never been elected to public office before. The job of Governor of Michigan loomed as a huge task.

Yet, as I stood there on the capitol steps on that cold, bright New Year's Day of 1949, I felt a deep sense of confidence and faith. I looked out over the faces of the crowd which had gathered to see the inauguration of this brash young fellow everybody called "Soapy"—and I saw in those faces something that transcended the difficulties we faced.

That something was the awareness of a common bond of unity. We, the people of Michigan, were as one family. We had a common goal. That goal was to realize the great promise and opportunity of the second half of the 20th century.

That was when I knew that you and I, working together, could succeed at this job, because you, the people, were with me.

Since that cold New Year's Day of 1949, a decade—more than a decade, an era—has passed. The face of Michigan has changed. We have achieved great progress in many important fields. State government has been brought closer to the people. The State now has a real two-party system, with all the good results of competition for the confidence of the voters. Our schools, colleges, and universities are better staffed and better equipped to meet the challenge of rising population and the increased demand for education. Our mental hospitals no longer are merely places in which to lock patients up; they are places where people with mental illness are being treated and cured.

The century-old dream of a bridge across the Straits of Mackinac is a reality. We are rapidly crisscrossing the State with a net-

work of four-lane divided expressways. We have improved all of our social services.

The administration of justice has been modernized and tempered with mercy and human understanding. We have made the language of the Declaration of Independence a living thing in Michigan as we approach closer, year by year, to the ideal of equal dignity for all our citizens, regardless of race, creed, or color.

Other problems, such as fair apportionment of the Senate, tax revision, governmental reorganization, and constitutional reform have been brought into focus, and there is no question in my mind but that an aroused people will find the solutions.

Thus Michigan has moved ahead into the second half of the 20th century. To accomplish this progress has required hard work on the part of many people. For my part, although public problems have absorbed almost every moment of my life for these 11 years, I have worked happily and with the greatest satisfaction. I have never made a secret of the fact that I love the job of Governor of Michigan. I am deeply grateful to you, the people of Michigan, for giving me your confidence and permitting me to serve you in this highest State office for so long a time. I am grateful to all those who have in innumerable ways helped me and given me their friendship.

Whatever may lie ahead for me in a personal sense, I have every intention of continuing to serve, to the best of my ability, the interests of the people of Michigan. I intend to do all in my power to promote the things I believe Michigan needs—particularly constitutional reform and a fair standard of representation in the legislature.

Yet it is obvious that no man can, or should, occupy the highest executive office indefinitely. Over the last few months, I have been facing a decision—whether I could best serve the State and the country I love as a seventh-term Governor of Michigan, as a private citizen, or in some other public office.

As I faced that decision, I was aware that the new decade of the 1960's has brought with it a new basis for judgment. When I took office as your Governor in 1949, the great challenge was to realize the social and economic gains a new technology made possible, and past neglect made imperative. The United States, at that time, was unquestionably the most powerful nation in the world. We had exclusive possession of the atomic bomb and we feared nothing. Our primary purpose was to build, behind the great shield of the Strategic Air Command, a more abundant life for our people.

Today, that picture has changed. The Soviet Union has the hydrogen bomb and the missiles to deliver it. Other nations are entering the nuclear weapons race. The dreadful nightmare of the movie, "On the Beach," has become more than a bad dream; it has become a possibility. The human race, for the first time, has the capacity to destroy itself.

The great imperative of today is not domestic progress—important as that is. The great overriding imperative of today is peace. Our most important need is not for longer cars and wider television sets, nor even for bigger profits, higher wages or lower taxes, desirable as those may be. Our great need is for a just and lasting peace. Until we succeed in building such a peace, we live on the edge of nuclear destruction.

As far as my duties as Governor would permit, and to the extent of my influence outside of Michigan, I have addressed myself to this challenge. I have tried, through reading, travel, and personal contact, to acquaint myself with the problems and hopes of people in other parts of the world. I have visited the Middle East, Africa, South Amer-

ica, and the pressure areas of Central Europe. I have called together, at my own expense, conferences of experts to get the best thought in this field.

As a consequence, I am convinced that the greatest challenge to anyone in public life today lies in the advancement of peace and in the supporting fields of national economic growth, education, and the elevation of human dignity everywhere in the world.

I want to work for this cause. I would like, frankly, to work for the cause of peace in some public office where I could be effective. But I have made no commitments for national office. I am perfectly willing to work for this cause as a private citizen, if that is the role providence has assigned to me, using whatever influence I have in the interests of a strong American nation in a peaceful family of nations.

As a matter of fact, I came to this conclusion many months ago, during my visit to the Holy Lands and Central Europe. But when I returned to Michigan, in late October, I was greeted by many of my dear friends with the urgent suggestion that my party needed my help here in Michigan and that I should be a candidate for a seventh term. As the weeks went on, these suggestions became more insistent, and I felt that I must give them my most sincere consideration. Because of my high regard for these friends, and my loyalty to the Democratic Party of Michigan, I was deeply moved and concerned.

Now, after exhaustive consideration, I am convinced that I can leave this office to meet a challenge to be of service in a wider field, with complete loyalty to my friends and my party in Michigan. The Democratic Party of Michigan is not the infant organization it was in 1949. It has grown up and become the majority party of this State. It had developed sound leadership and a living program which I am confident will have the continued support of you, the people. It is equipped to present effective solutions to the State's problems, and candidates for office who will carry on the work of the last decade. I am confident that the Democratic Party can win the State election of 1960, and that it will carry Michigan for the Democratic national ticket. Certainly it is my intention to do everything I can to make this prediction come true.

So I have made my decision. I will not be a candidate for a seventh term.

I would be less than honest with you if I did not confess that I make this decision with a heavy heart. I shall leave our old gray capitol with deep regret. This, for almost 12 years, has been my life. The capitol has almost been my home, as Nancy and I have dedicated nearly every evening and weekend, as well as normal working days, to public tasks. I shall deeply miss the friends in both peninsulas, whom I will not be able to see as frequently in the future. I shall miss the day-to-day contact with your problems.

But while I will be leaving this job, I don't feel that I will really leave this work. I will still be working for your interests, wherever I am.

I remember something Frank Murphy said when he was leaving the office of U.S. Attorney General to take his seat on the Supreme Court. I was a young assistant of his and, like all of his staff, I did not want to see him go. But he said to us: "I have never left an office without sadness, but I have never felt regret in taking up my new work."

The years ahead hold great promise for the people of Michigan and of the United States. It is up to us—you and me, whether as private citizens or public officials—to make that promise come true. A new decade is beginning. Let us strike forward boldly, remembering the words of the psalmist: "I will lift up mine eyes unto the hills."

May God bless the State and the people of Michigan.

STATEMENT BY MRS. NANCY WILLIAMS

With all its hard work, the Governor and I have really loved the jobs we were doing. It has been a privilege never before granted to be Governor of such a wonderful State for so long a time.

The many people who have chosen to make Michigan their home present a very colorful population, rich from its blending of nationalities and cultures from many lands. We have enjoyed knowing them personally, and working with them to build Michigan for the future and to produce legislation of value to all.

We have both devoted all of our energies to it, and it is with real sadness that I see this part of our life drawing to a close. Whatever the Governor decides to do in the future, I will be with him to help as much as possible. He had never intended to run for a seventh term until he found pressures mounting and many friends shocked at the thought that he might be laying the governorship aside.

The children have been in on the decision and approve heartily. My personal feelings are of mixed joy and grief as the future holds for me time for so many things I have long wanted to do. I shall work first on our house at Mackinac which is such a great thrill for me.

Waste in Armed Services Buying

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under permission to revise and extend my remarks I place in the RECORD two articles issued by the Scripps-Howard newspaper chain dealing with waste in the supply functions of the Department of Defense. These articles stem from hearings held by the Special Subcommittee on Defense Procurement of the Joint Economic Committee. The basic work on these articles was done by reporter Jack Steele and he is to be congratulated on his fine work.

I want to point out that there may be some confusion over the fact that a statement is made that 1.8 million common-use items have been cataloged. There have been 3.4 million items cataloged but these include common use as well as other types.

The present interest in elimination of waste in military supply is certainly understandable. I am sure that every American citizen wishes to do whatever is necessary in the way of defense effort, but we all revolt at the idea of paying tax money to support uncontrolled bureaucratic in the Department of Defense. There has been a wide gap in top management in obtaining necessary economy and efficiency in these areas. If the Bureau of the Budget, with its great authority, and the Secretary of Defense would exercise the authority vested in him by the McCormack-Curtis amendment to the Reorganization Act of 1958 in all supply and service areas, I am confident that billions of dollars could be saved.

The articles follow:

[From the New York World-Telegram, Mar. 9, 1960]

SURFACE ONLY SCRATCHED

For sheer size, there is no business to match our armed services. In buying, supplies on hand, and surplus disposal, a congressional committee reports, the Defense Department is without parallel. It is also, the report makes plain, the most wasteful business.

For years, Congress, top Government officials and others—such as the Hoover Commission—have been trying to get the Armed Forces to pool their buying on so-called common-use items—of which more than 1.8 million have been cataloged.

The new report of the Joint Subcommittee on Defense Procurement says: "But efforts to date have only scratched the surface."

Less than a sixth of the common-use items have been standardized for purchasing purposes.

As a result, the armed services now have surplus supplies costing \$26.7 billion. The job of disposing of this excess material is so staggering the Defense Department estimates it will take 3 years—and more surplus is accumulating all the time.

"The net return to the Government on surplus disposal sales," says the subcommittee, "is less than 2 percent of the acquisition cost."

Billions of taxpayer dollars simply vanishing.

This is bureaucracy in action—a bureaucracy so vast, so glued to its ways and so cumbersome that it is able to resist all efforts to control it. Congress, a succession of Defense Secretaries, the Hoover Commission—all have tried—in vain.

Despite this record, though, we believe this problem can be licked if some military heads are bashed together and firm orders issued.

[From the Washington Daily News, Mar. 7, 1960]

REPORT HITS SERVICES FOR WASTE IN BUYING (By Jack Steele)

The Defense Department, despite many "surplus" scandals in the last decade, has made little headway in eliminating waste and duplication in the purchase of military equipment and supplies.

This charge was made today by the Joint Economic Committee, headed by Senator PAUL DOUGLAS, Democrat of Illinois, after an exhaustive staff study of Defense procurement.

The committee's report charges that the Defense Department, despite repeated promises to Congress, has been "extremely dilatory" in unifying and standardizing its buying.

BLAME

But it blames the foot-dragging chiefly on the Army, Navy, and Air Force, which have fought doggedly to keep their separate procurement services and stave off formation of a single military buying agency as proposed by the Hoover Commission and many other groups.

The report charges that waste and overlapping which result from this individual service buying have helped build up a huge surplus of 2.67 billion in military supplies.

It notes that the Defense Department—to get rid of this vast surplus and more in prospect—plans to dispose of \$10 billion worth a year for the next several years. The Department expects to get back only about 2 cents on the dollar of the original cost of this material, even though much of it is new and unused.

This surplus-disposal program is almost twice as big as that needed to get rid of the vast military supplies after World War II, which the old War Assets Administration

liquidated at the rate of \$5 billion worth a year.

FEW STEPS

The Douglas committee accuses the Defense Department of making many studies, but of taking few steps to unify and standardize its procurement.

Its report notes that:

"Defense has spent \$200 million to catalog the 3.4 million different items bought by the armed services. But only an estimated 14 percent of the 1.8 million common-use items in the catalog have been standardized. The remaining still are bought separately by the three services—even though they differ only in color, finish or even terminology. About \$450 million a year might be saved by standardizing these items.

"The Department has not yet forced the services to adopt joint purchasing of such common items as hand tools, hardware, office machines, furniture and even athletic goods and toiletries."

In 1956, under pressure from Congress, single manager buying programs were set up for four types of military supplies—food, clothing, medical supplies, and petroleum. These have worked well.

But, after a gap of 4 years, it was not until last month that the Department got around to ordering single manager buying of two additional categories of military supplies—housekeeping items, and hardware and paint.

Remarks of Congressman Robert W. Hemphill Before the Washington Area Clemson Alumni Club

EXTENSION OF REMARKS

OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

MR. RILEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. ROBERT W. HEMPHILL, Member of Congress from the Fifth South Carolina Congressional District, before the Washington Area Clemson Alumni Club, at Britts Cafeteria, Wilson Boulevard, Arlington, Va., March 9, 1960:

Mr. President and members of this distinguished and privileged group of the Clemson alumni, when I first received the letter from my boyhood friend and companion, Howard Nottingham, now a distinguished architect, I wondered whether I should risk acceptance, not because of the traditional rivalry between Carolina and Clemson, a happy and lively one, to be sure, but because I knew I would be tempted to express my opinion as to the truth of our present national position because of the quality of my audience. I am neither a seer, a prophet, nor even a great statesman. I am simply a Congressman from a proud State, representing a proud people, and I have done my best to inform myself. I hope my remarks reflect application and some knowledge. I assure you they will reflect concern.

For about four decades now we have been involved in international affairs in an increasingly complicated fashion. Up until World War I, and actually until the successful use of the airplane reduced the water defenses, the Atlantic and Pacific, to minimum advantage, we in this hemisphere enjoyed a semi-isolation which was reflected in our strength as a nation. We were strong and proud and free, and we were very, very

moral. No one in the world either doubted our strength or questioned our future.

After World War I, the internationalists were able to lure us into playing the game about which we knew so little, and about which they had been so busy for generations before our Nation, as a neophyte, was invited to sit at the council table; they assured us that we, as one of the leaders of the world, would be listened to, and that we would be benefited. If we suspected, we did not heed the warning of time and events that the British Empire was to disappear as the leading nation on earth, nor did we recognize the truth of the fact that we were called to the council table for the purpose of saving the British Empire. We were to be the chief vehicle in that effort.

Now we did not know the rules of the game; if we did, we paid no attention. British diplomacy is based purely and simply on what is best for the British Empire. This has been their theme song since the days of Runnymede, and had we listened to the warnings of our forebears, we would have been duped into the belief that either the British Empire had changed, or that it will ever change, that diplomatic philosophy. That is their philosophy today, and if they are to continue as a sovereign nation in the future, that will be their philosophy, and, in my opinion, they will play Communism against Americanism to any degree to accomplish and preserve that purpose.

When we entered the international picture, somebody gave us the idea that we could change the rules. We did not change the rules, but we brought Santa Claus to the conference table. Now assuredly, we have always had a governmental duty to protect our own people and preserve their freedom. I would not for one minute, have you believe that I think we have any other than a Christian duty to go out to the world and to publish and to save and to help, if possible. But since we believe in separation of church and state, why did we not leave to the church those things which the church has as its mission, and to the state those things that are within the peculiar province of the government. I feel free to question this international philosophy of ours, if we have any policy or philosophy, and not because I am in any sense an isolationist. I just recognize the results.

We have not asked the Christian church to govern, but we have asked our Government to spend itself blind for charity that is misused, abused, distorted and subject to the vandalism of every sort of international cheat and vulture. And we have spent billions and billions and billions to lose friends and antagonize peoples.

The only victory I know of that the State Department of these United States has had in the last 10 years, if it is to be called a victory, is in usurping the powers of the State, or misusing the powers of the Federal Government, in the Chessman case. If this had happened in my own State of South Carolina, I would consider it as a personal insult to me as a citizen of South Carolina. It is my considered opinion that the Governor of California used the State Department's Mr. Rubottom or Nudebottom, or Falsebottom or whatever his name is, as a fall guy. In any event, we have the unorthodox interference by a bureau of the Federal Government in the affairs of a sovereign state.

Meanwhile the world is going to hell and the fires of discord are running rampant while Eisenhower plays golf and uses an Air Force plane to fly his grandchildren down to Puerto Rico for a vacation.

Let us examine our international policy for a minute. Closer to the mainland of the United States than we are to our beloved State of South Carolina is a little island we know of as Cuba. Cuba was once under the domination of the Spanish Government, and

we freed Cuba for the purpose of bettering Cuba and giving that country and its people a future. As time progressed our policies with Cuba did not develop Cuba or its resources to the fullest. The people remain ignorant and hungry. I would not for 1 minute blame the United States for this, but I do say the policies toward Cuba have not been so productive that we can afford to have the State Department of this country spend its time interfering in the domestic affairs, particularly state, while a little Communist shrill by the name of Castro shakes his fist at the great Government of the United States and shows off to his Latin neighbors and to the world that he can violate any agreement, seize property, trade with Russia, and get by with it. I read only this morning that he was thumbing his nose at Secretary Herter. I am here to tell you that anytime the Secretary of State of the United States is not a bigger man in the eyes of the world than a rabble-rousing dictator, our international philosophy and our foreign policy is not only woefully inadequate; it is innocuous and disgusting.

When I first came to the Congress we had a terrific emergency. For many nights I stayed awake concerned over the fact that the President of the United States, in the Mideast, was asking the Congress of the United States to give him the power to virtually declare war, by the use of troops without the permission of the Congress. I fought that resolution, and I thought it was wrong at the time. Then we interfered to save Nasser. We doublecrossed Great Britain and we doublecrossed France, who were our friends, at least a lot better friends than Nasser will ever be. We ignored the fact that we had already committed against the Arab people one of the sins of our generation and there are today in miserable camps in parts of the Mideast people who have been displaced, their accumulations depleted, their homes taken away from them, and who rightfully blamed these United States for that fact. These refugees are mostly Arabs, and they hate the United States. My friends whose origin are in the state of Lebanon and elsewhere in the Mideast, who return home as often as they can to their homeland, now tell me that these people, these Arab people, who formerly loved the United States and respected its flag, now hate the United States and curse its purposes. How is such a policy as productive of good will, or good future? Nasser, another peanut-sized dictator, shakes his fist at the United States whenever he wants to.

Recently the President returned from a trip to Latin America. I listened last night, and to make sure that I missed nothing, I read the text again this morning. I followed the trip with great interest, and I find nothing, absolutely nothing, productive in that visit. I hope he took Rubottom with him, and I think he did. I hope also he took the man with him that was making the concessions to Panama which the Congress found out about and stopped.

Let us transfer our thoughts to national defense. Surely it is a concern of every one of you, because it is purely and simply a matter of survival. In the event of a nuclear war, Washington would probably be one of the targets, one of the prime targets of our enemy. It would be so easy and so simple to paralyze the United States by decimating its Government, knocking out its Capital City, and depriving the people of a seat of leadership. Thank God for the National Guard. We in the Washington area would live or die—you and I.

We are told that we are behind in the missile race. There is no excuse for it. We are told that we are behind in the arms race, and it is my considered opinion that the Russian serviceman is better equipped today than the average American serviceman. The Strategic Air Command has been char-

acterized as our last desperate line of defense. In the Air Force magazine of this week, an able writer began to point out the possibilities of a missile-age Pearl Harbor. Not too long ago, a member of the Armed Services Committee told me that if the American people knew the truth of our defense picture we would have a panic on our hands. And, while all of this is going on, I notice that the DAV had a noble purpose to raise a shrine to the battleship *Arizona*, and its loyal company of heroes. Is there a duty on the President of the United States, first to ascertain the truth of the situation, and, second, to tell the people? In our part of the world I believe there is and I believe you do too.

The domestic scene presents no pretty picture, either. As we gather here tonight, a thin gray line in the Senate, and an equally thin gray line in the House of Representatives, seeks some relief, some avoidance of the worst legislation since Reconstruction, force bills commonly called the civil rights bills. In the House of Representatives a committee is concerned over "payola," bribery in our communication industry. Meanwhile, within the shadow of the Capitol, there is a farm at Gettysburg furnished with gifts, gifts, and more gifts. I noticed where the Chairman of the Federal Communications Commission received a rich trip to Florida and then off on a yacht. I think that was wrong, but some people think it is not wrong for the President and has family to receive jeweled gifts and all sorts of other things from all over the world. Harry Truman put his in a library, but maybe he did not know how to use the farm to get out of income taxes.

Make no mistake about it. I would not for one minute tell you that this world is not going through a revolutionary period, the likes of which it has never seen before. Men are demanding their place in the sun, men and women who hitherto have been satisfied to sit under the shade of an olive tree and live an undisturbed, provincial life. We have engineered a great part of this thinking by means of communication, and by our promises to the world that we are going to develop, at an American pace, undeveloped portions of the world. We have failed to take into consideration the limitations of these people, a majority of them, but we have promised, and they will look for Santa Claus to come down the chimney. Disappointed children are unhappy children, and so the uneducated and the unlearned and those who can be swayed around the world, such as the people of Cuba, now look to Santa Claus with bitter tears of disappointment.

I do not think we can prevent the revolution from succeeding. I do not believe we can now tell the peoples of the world that they are not entitled to food and clothing, and education. We have told them so long that they are entitled, and we have told them that we are doing something for them, and sometimes we impose the yoke of a dictatorship who would steal everything we sent to a country, and whose corruption was attributed to these United States.

It is therefore time to evaluate our position and our potential to help or not help, and consider it in the light of the future of the American taxpayer, the breadth of his freedom, the soundness of his dollar as the evidence of his economic stability.

And so we find that the future so far as you and I are concerned is either one of two kinds, either a future controlled by these United States, or a future not controlled. Any future of this world not controlled by the United States is a future of slavery for people like you and like me, a future of absolute governmental regulation for your and my children and our grandchildren.

Some years ago, teaching at the Xavier University, was a Catholic priest by the name

of Father Thompson. Because he made some unorthodox statement he was shipped to Nova Scotia. He believed, and I subscribed to his theory, that you cannot teach Christianity to empty stomachs. When he arrived at Nova Scotia he found that 80 percent of the people were out of work, they were dismayed, and they were not interested in religion. They were hungry. He set to work to organize the communal life, into community participation in fishing, canning, and the like. Within 5 years 96 percent of the people were employed, were happy, and useful citizens belonging to the church. The moral is evident.

How can we expect the rest of the world to look at the fact that we have a surplus in food, and a surplus in clothing, and that we dump it into the ocean practically on the one hand or give it way to a private business interest in a foreign country on the other, and these people whom we have told that the United States believes in and is their champion of freedom and their champion against poverty, go hungry and naked. This is the underlying philosophy of all those people who hate us today. Santa Claus has promised so much, and has not delivered.

Now why should I talk to an audience such as you in this particular manner? I have dared to tell you what I believe to be the truth, dared despite the fact that I realize some of you will not like it, and that my words can be misinterpreted and taken out of context, and used by any opponent that I might have in the forthcoming election, if I am opposed. I tell you because we have had the best sort of training in the world. While I may have been against you on "big Thursday," I recognize the fact that you are the kind of men I can depend on, as my forefathers and yours have fought together. After all, men are government, and if we ever depart from that conception, we after all are citizens of the Government, then we have departed from that conception which gave us independence, determination, and a willingness to die for our country.

You and I must face the problem. I have proposed a Great White Fleet filled with surplus goods. At least that would reduce scandalous storing charges. So far the executive department is against it. I shall seek other means of meeting the challenge before us. So must you.

I am telling you because it is men like you that must awaken to the seriousness of the situation, become witnesses for freedom in your own right, and you must be the Government. I enlist you in the army of freedom for the future.

Thank you very much.

Inside the Policy Racket

EXTENSION OF REMARKS OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article from the New York Post, March 10, 1960:

INSIDE THE POLICY RACKET

(By Ted Poston With Alfred Hendricks, Irving Lieberman and Richard Montague)

Have all the Negro bankers been driven out of Harlem's lush numbers racket through police connivance with white racketeers, as Representative ADAM CLAYTON POWELL, Jr., has charged?

No. There are still some Negro policy banks in operation. Several of them have been listed in the Post's series on the alliance between corrupt police and the policy barons.

But this does not completely discount Powell's charges. The number of Negro-controlled policy banks have been reduced from about three dozen to less than 12, and some of the remaining ones are suspected of domination by the East Harlem mob which controls the citywide game.

The fate of a handful of Negro bankers, of course, hardly accounted for the most startling revelation of the Post's investigation into the policy racket.

The corruption which makes for collaboration between crooked policemen and policy bankers goes well beyond the borders of Harlem. The Post team found that it extends throughout the city, and, in many ways, permeates the police department.

The pattern of corruption is often established even before a rookie enters the department, and in some instances, it continues years after a veteran leaves it.

A Negro ex-cop recalled his experience at the Police Academy for the Post.

"There were quite a few of us Negroes in our class," he said, "and most of us were puzzled over the number of our white classmates who said they wanted to work in Harlem when they graduated."

"At first I thought they were just trying to be nice, although I felt they were really being a little condescending, but when they started talking about the money that could be made in Harlem, we got the drift."

"You can believe me or not, but I first heard of The Pad [the multi million-dollar policy protection racket] in the Police Academy, of all places. Then I found out something that shook me up more. I found that many of these guys had actually been recruited for the force by friends and relatives who were already on the take in the department."

"One fellow told me how he had planned to study law at first. But an uncle, who although a plainclothesman, had made more money than anyone in the family had ever dreamed of, 'put him straight.'"

UNCLE KNEW BEST

"My uncle told me," this boy said: "You go on to the academy and get on the force and I'll see you make enough money not only to put yourself through law school in style, but to pay the rent on a downtown law office while you get your business started."

"And, you know, I think he did just that."

Some Negro policemen, past and present, complained to Post reporters that they were discriminated against in the parceling out of policy graft. "The white boys try to keep it all for themselves," they said, observing, seriously, that Negroes on the force often were denied equality of opportunity even in the matter of making a fast buck.

Yet the Horatio Alger of the hustlers in the policy grab turned out to be a young Negro cop who never rose above the rank of plainclothesman but retired in 8 or 9 years with more money than many successful honest men accumulated in a lifetime.

This man went almost directly from the Police Academy to the staff of a high ranking official and the graft came fast.

A recently retired Negro numbers banker with whom the plainclothesman was friendly recalled the other day the cop's decision to leave the department.

"He had been called down to District Attorney Hogan's office and sweated about the pad," the banker said, "and they really shook him up down there."

"He made up his mind then and there that he was getting out, but his boss urged him not to. The boss asked him to stay on just 1 more year. 'By then, I'll be ready to

pack it in, too,' the boss said. But my man said he'd had it, so he quit anyway."

The ex-plainclothesman is now a very successful businessman and coowner of a plush supper club.

Of course, when a plainclothesman leaves the department after serving the expected number of years, he doesn't necessarily have to leave the pad completely. If he was a "stand-up guy" when he was on the force, he can work as a "bagman" for the various squads preying on the policy game, earning as much as \$25 per spot just for picking up the monthly graft for his associates on the pad.

Ex-Sgt. Joseph Luberdia, for one, made a lucrative career as a "bag man" until he got drunk one night and was picked up by State police with over \$19,000 in cash and a list of the Harlem spots on the pad for which he had been collecting.

Luberdia's arrest sent more jitters through the department than anything since the expose years ago of the Harry Gross book-making empire in Brooklyn, but Luberdia went to prison rather than name the police officials for whom he was serving as "bag man."

Before the East Harlem mobs took over major control of the Harlem game, Negroes, including some bankers, served as "bag men" for the grafting squads.

A well-known Negro nightclub owner was once the "bag man" for most of the community.

"When the money got so big and the take so fabulous," one ex-banker said, "the boys decided that they were better off with one of their own handling the bag. And the East Harlem guys went along with the idea all the way. They didn't want any Negroes to know too much about their operations anyway."

As for the recruits on the force, a rookie who doesn't happen to learn about the pad while studying in the Police Academy can't remain ignorant of it more than a few days after he gets his first assignment, the Post found.

One authoritative source put it this way:

"One of the first things the kid will find out is that he can't even make a legal arrest without it costing him money. If he doesn't slip a few bucks to the right person in the station house, he'll find himself swamped under with paper work. If he doesn't 'see' the man in charge of roll call, he may find himself exiled to a deserted beat. If he doesn't 'see' the right man in court, he'll find his case put on the bottom of the calendar and have to spend all day warming a bench in court."

"This whole system of cops grafting on cops is a direct outgrowth of the pad. The guys inside the station house know that the boys outside are pulling it down and they feel entitled to get a taste of the take themselves."

THE TAKING WAYS

Now to get back to Harlem and the sunset of the Negro policy bankers.

It is true, the Post found, that the pad has priced many Negro bankers out of the Harlem policy business, and that the police have helped to consolidate the racket in the more lucrative hands of whites. But there were other factors, too, as one veteran policy man explained.

"One of the ways the white mobsters took the business over," he said, "was by getting the Negro bankers into 'peonage' through loans. Once a Negro banker got in hock to a white mobster, he had to stay in line."

"If he tried to stop working for the white bank and took his action elsewhere, the white man would contact all the other white banks, and order the would-be rebel frozen out. No one would touch his business when this happened. And some Negroes who tried to switch were dealt with more directly. They just had the hell beat out of them."

"What the whites had, and still have, is organization. Even the cops know when a Negro is in bad with the white bankers. And when you're in bad, the cops help put you out of business with harassment and arrests. They'll even carry 'dead' policy slips around in their pockets, and if the word is out to get you, they'll plant them on you even if you insist on being taken to the station to be searched."

And how do many Negro bankers get into hock? One observer put it this way:

"Too many Cadillac cars, fur coats, high living, women, and Harlem society stuff. The big white boys go around looking like bums and banking their loot. The Negro boys think that even a Brooks Brothers outfit is bargain basement stuff. Then one big 'hit' and 'bang.'"

A veteran policy player, a woman, touched on that last point.

HIT AND RUN

"You spend your money playing with these Negro banks and you hit them big and can't find the runner, the controller or the banker," she said. "That's why I leave my play in a spot. I know that if I hit, they ain't going to close up the grocery store or the fruit market or the bar where I played. I'm as much of a race woman as the next one, but when I gamble my money I want to be paid."

A cynical single action man termed the white mobsters' success "a matter of public relations."

"You hit one of these white cats," he said, "and they pay you off in brand new crisp \$10 and \$20 bills. You hit one of these darker brothers and if you get paid at all, you might have to take some old greasy, crumpled up bills and maybe part of it in quarters and halves."

"Now when you see that sawdust, you know that the mill can't be far behind."

In the Bronx, one operator said that the East Harlem higher-ups had ordered their white operators to get out and "socialize" in the Negro community, visit the bars and order the bar-maids to run 'em around for the house.

"One cat," he said, naming one of Harlem's biggest white bankers, "maintains at least two Negro girl friends that he takes around and introduces as 'my wife' or 'my old lady.' I don't think that's doing him much good though. Some of the brothers don't like it."

The few Negroes left in the game are not exactly starving, of course. One of them summed it up whimsically this way:

"If I had it all to do over again, I don't think I'd go into the numbers business. I think I'd just graduate from the Police Academy and become a lowly cop."

"Then I'd be guaranteed to get my dime out of every dollar that's bet on the figures. And I wouldn't have to worry about the odds, or paying off bets, or splitting down the line with anybody."

Citizen Responsibility and the Pennsylvania State Chamber of Commerce

EXTENSION OF REMARKS

OF

HON. JOHN A. LAFORE, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. LAFORE. Mr. Speaker, on March 9, 1960, it was my privilege, along with some of my colleagues in the Congress from the great State of Pennsylvania,

to join with members of the committee on Federal taxation and expenditures of the Pennsylvania State Chamber of Commerce at a meeting held in Washington, D.C.

I was given opportunity to address a few remarks to the gathering and at that time I expressed appreciation for the opportunity of meeting with such outstanding business leaders from my State. It has been my experience that these fine Americans epitomize the finest attributes of responsible citizenship and of devoted patriotism.

During the events of the evening Mr. B. Frank Spicer submitted to the group the report of the committee on Federal taxation and Government expenditures of the Pennsylvania State chamber. This report evidenced a keen understanding of the important national issues confronting our country and its citizens today. So that the text of that report may be publicly available, I will include at this point in the RECORD, as a part of my remarks, Mr. Spicer's very well considered presentation:

I have been asked to present the report of the Pennsylvania State Chamber of Commerce Committee on Federal Taxation and Government Expenditures program with respect to Federal tax and Federal spending, and it is both a privilege and a pleasure to address the Pennsylvania Members of Congress and my fellow members on the Federal taxation committee of the State chamber. There may be some gaps to bridge between the tax field and the political field, but with honest efforts and understanding on both sides, we feel that much can be accomplished in closing these gaps.

It is rare, indeed, in these times, to find a newspaper, magazine, or other form of publication that does not make some reference to proposals for Federal tax reduction and reform. An editorial in the Saturday Evening Post of February 27, 1960, presents a provocative argument for a more liberal and realistic depreciation policy for Federal income taxation under the title "Tax Rules Hamper American Industry in Replacing Its Wornout Machines." Some reasons why Federal taxes and the budget are so high are set forth in a revealing article in the Reader's Digest of March 1960 by Mr. Morris H. Stans, Director, Bureau of the Budget, on the subject "Shocking Facts About Our Federal Budget." The newspapers of Pittsburgh, Philadelphia, and all of our cities are publishing stories about the Federal spending, tax, and debt outlook, the tighter enforcement of our high income taxes, and the deliberations in Congress over the President's appropriation requests, and other questions involving the taxpayer's purse. All of these straws in the wind are indicative of the concern of the Nation over its tax burdens and the possibilities of tax reduction and reform.

This is the season of Federal budgetmaking, and the lines of battle over spending and taxation measures are being drawn. The possibility of at least a moderate surplus in 1961 has excited the hopes of those praying for tax reduction, as well as those looking for additional millions to spend upon their pet projects. Confusion is compounded by the fever over the national elections next November. In these days of uncertainty, when taxes and more taxes are trying men's souls, it is time to take inventory of the costs, as well as the assumed advantages, of our widespread Government establishment and its multitudinous activities.

Those whose lives are dedicated to careers in public service and who are under constant pressure to obtain increased funds for every

imaginable project and service and at the same time to secure tax reductions for their constituents must find it difficult at times to walk the tightrope of popularity. Perhaps the great British statesman, Edmund Burke, had this dilemma in mind in a speech to Parliament in the year 1774 concerning the hotly debated issue of taxing the American colonies when he said, "To tax and to please, no more than to love and be wise, is not given to men."

OUR HIGH RATE OF TAXATION

We are all aware that the vast expansion of Government activity in nondefense areas and the continuing tensions in the world have caused our taxes to be maintained at deplorably high rates, particularly when we add our State and local tax burdens to that of the Federal Government. How many would have dreamed, when the 16th amendment became effective in 1913, that by the year 1960 the personal income tax rates would be graduated from 20 to 91 percent; that corporate income in excess of \$25,000 would be taxed at 52 percent; that the estate tax would be graduated up to 77 percent; gasoline would be taxed at the rate of 4 cents a gallon; cigarettes, 8 cents a package; and liquor, \$10.50 a gallon; not to mention the additional State and local taxes?

A built-in gimmick in the income tax automatically imposes higher rates as the income of an individual increases. The first \$4,000 of taxable income is taxed at the rate of 20 percent, which rate in 1913 would have been regarded as confiscatory. As a man's income rises, his tax rates also mount. In due time, if the man is fortunate to earn sufficient income, he will be honored with a tax rate of 50 percent or greater.

As we all recognize, much of the increase in our incomes is fictitious. The Consumer Price Index for November 1959 was 125.6 percent of the 1947-49 average. The Consumer Price Index for 1939 was 59.4 percent of the 1947-49 average. The consumer dollar on this basis bought, in 1959, less than half of what it bought in 1939, and we do not enhance this picture when we consider that the income tax rates are now much higher than they were in 1939, when they ranged from 4 to 75 percent. Those with incomes lagging behind the rising costs of living are especially hard hit, and, as previously noted, because of the scheme of rate graduation, an increase in income in depreciated dollars automatically brings higher tax rates.

To some extent, one may become adjusted to the pains of increased taxation as the corns on his feet become adjusted, through much misery, to tight shoes or the shoes become stretched with age, but old taxes, contrary to an ancient adage, are neither painless nor perfect—they still deprive the taxpayers of money which they could otherwise use.

To some extent, also, the burdens of taxation may be relieved by beneficial Government expenditures and by the illusions of prosperity resulting from inflation, to which increased Government spending has significantly contributed. But high spending and high taxes add to the inflationary pressures, both by raising costs and by forcing more money into the markets. Inflation breeds on inflation, with everybody seeking more dollars to offset the decline in purchasing power of the dollars he presently possesses. It may take longer for creeping inflation to bring the inevitable financial and economic collapse than runaway inflation, but its potency may be just as deadly.

The pressures of heavy taxation intensify the resentment of the citizens against it. Excises and sales taxes are denounced as regressive imposts, and our onerous income taxes are scored as confiscatory. There are many who feel that the income tax has passed the point of diminishing returns as a revenue.

The apparent widespread evasion of the income tax, which has recently been given much publicity in the press, is a symptom of its partial breakdown as a revenue and the demoralization of the taxpayer. One is reminded here of the famous indictment of the income tax many years ago by Gladstone, who warned that the tax had made the British a nation of liars.

The problem of the many legal loopholes in the income tax is further evidence of its inequities and its inadequacy as a revenue measure when its rates are pushed beyond what the traffic will bear. It is the history of the income tax in this country, as well as in other countries, that as the rates increase to unreasonable heights, the base of the tax is eaten away both legally and illegally. Of all taxes, the income tax requires popular acceptance and effective cooperation to enable a proper enforcement, but, in a democracy, a tax deemed to be excessive cannot possibly win public approval.

As tax men who live and breathe taxes every day and see their effects on business management and the economy, it is our deep conviction that the Federal taxes on personal and corporation incomes are too high to be long endured if we are to maintain a healthy, growing, and reasonably stable modern enterprise economy. When taxes take over half of the upper brackets of personal income and of corporation income, it is only natural that they play a leading role in business and financial decisions and in the lives of consumers. Such taxes drastically curtail private funds for both consumption and investment, and tend to dampen initiative, risk taking, and economic motivation.

SOME TAX PROPOSALS

Our close contacts with taxation as a factor in business and economic activity have resulted in the formation of some firm convictions about our taxes and the need for tax reduction and reform. In facing the tax and budget battle of 1960 over the fateful decisions for 1961 and subsequent years, we can only reach the conclusion that we should join with the other business groups seeking tax revision along the lines of the Herlong-Baker bill.

Members of the business community have often disagreed over the major features of Federal taxation. Out of our studies and those of other business organizations has emerged the prevailing conclusion that business can advantageously unite in pressing for a definite pattern of tax reduction and reform. The Herlong-Baker bill, as you know, provides for an annual series of substantial revisions in the personal and corporation income taxes and a sharp reduction in the rates of the estate and gift taxes. Over a period of several years, the personal income tax rates would be lowered to a scale of 15 to 47 percent, and the corporation income tax rate of 52 percent would be cut to 47 percent. The bill would also provide an appropriate step toward the much needed liberalization of depreciation allowances.

In addition to these tax reforms, the Pennsylvania State Chamber of Commerce committee on Federal taxation and Government expenditures, which is continuously studying the impact of Federal taxation on a community, proposes the following:

- (1) Further alleviation of the double taxation of dividends received by individuals.
- (2) The elimination of tax penalties on intercorporate dividends and consolidated returns.
- (3) The taxation of cooperatives under the Corporation Income Tax Act with a deduction for dividends distributed in cash to the patrons.
- (4) Government enterprises engaged in business and in competition with private enterprises should be taxed as a private business.

TAX REDUCTION AND THE BUDGET

The Pennsylvania State Chamber of Commerce does not advocate irresponsible tax cuts which would unbalance the Federal budget. We are mindful that if economic conditions are favorable and the Federal expenditures are wisely strained, a sizable surplus will be available in 1961 for tax and debt reduction. Tax reductions along the lines outlined here would, in time, strongly encourage economic growth and enhance the national income and taxable economic activity. Over the long pull, more moderate taxation, in our opinion, will produce more revenue than the present oppressive tax rates.

Substantial reductions in Federal spending are both desirable and feasible, waste should be minimized, and activities which the State and local governments can, and should, assume should be transferred to that area.

Some guidelines growing out of the studies of the Council of State Chambers of Commerce, the Chamber of Commerce of the United States, and other business organizations and research by public and private experts suggest several avenues of greater economy in Federal spending, and would include the following:

- (1) Eliminate nonessential expenses for national security without weakening our national defense.
- (2) Review unexpended appropriations to determine extent of necessity.
- (3) Stop backdoor Federal spending measures which avoid review and approval by the Appropriations Committee.
- (4) Keep highway financing on a pay-as-you-go basis.
- (5) Reverse the growth of Federal grants-in-aid to the States.
- (6) Liquidate Federal lending programs for area development and community construction facilities.
- (7) Place the responsibility for the financing of education with State and local governments.
- (8) Reexamine agricultural aid, with a view to its substantial reduction and eventual elimination, if possible.
- (9) Limit public works to those which are vitally needed but cannot be financed locally.
- (10) Stop the construction of Federal public housing.
- (11) Reject general health insurance or reinsurance proposals.
- (12) Take action necessary to eliminate the postal deficit.
- (13) Discontinue the operation of Federal business-type enterprises in competition with private enterprise.
- (14) Reduce Federal civilian personnel where it will not have an adverse effect upon the essential functions of government.

BUSINESS MUST SPEAK OUT

Our proposals for retrenchment in Federal spending are strong medicine for the serious disease of "budgetitis" which has afflicted our Nation. The small Federal, State, and local governments spending of a few decades ago may be swollen to a total of \$156 billion in the fiscal year 1960, according to a recent survey by the tax foundation. State and local governments may add \$58 billion of spending to the \$98 billion of Federal money. Our Government expenditures are increasing faster than our population and faster than prices, and it is not national defense but our domestic expenditures which are swelling the tide of Government spending. Government influence is being extended everywhere in the economy and the community. Socialization and centralization are growing apace, and with them have come higher taxes and creeping inflation.

We have not rationally compared the supposed advantages of every Government spending program and every dollar poured

out with the costs. Perhaps in our form of government, it is not given to the great majority to understand the relationships between Government activity and high taxes. We are reminded here of the comment of Thomas Jefferson when he submitted a report on banking to the Nation. He stated, after witnessing much popular misunderstanding of money and banking problems, "In matters of arithmetic, the bulk of mankind are schoolboys through life."

We feel that it is the duty of taxmen and business executives to inform the public, members of legislative bodies, and those in public administration of the results of their studies of the impact of taxation on economic activity and our institutions. It is also our duty, when other groups are presenting their views, to suggest such courses of action as our experience and judgment may deem to be wise and fair.

In closing a taxman may humbly say, "The difficulties encountered in tax and financial education are indeed great." And perhaps the Pennsylvania State chamber may be permitted to point out to the Pennsylvania Members of Congress that the formidable task of education will be even greater if legislation is not enacted which will permit business, labor, and other taxpayers to deduct lawful expenses for influencing legislation and determining liability for income taxes. If such deductions are not allowed, we shall be in the strange and unfair position of being taxed to provide funds for Government agencies to influence legislation which will, in turn, tax us on the funds we, as taxpayers, devote to setting forth our views on vital legislative proposals. In such a one-sided battle over taxes and the budget, the outcome is clearly prejudiced in favor of the spenders against the taxpayers. No better way could be found to encourage fiscal irresponsibility and the unwise use of our Nation's material and human resources.

Effective Soil and Water Conservation Is a National Must

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. JENSEN. Mr. Speaker, much concern is being registered all over the country by farmers, townspeople, district soil conservation commissioners, watershed boards, and municipal officials, relative to the comparatively small amount of funds in the budget for the Soil Conservation Service to expend in fiscal year 1961.

I shall take for example the proposed watershed of which I am very familiar, other proposed watershed projects in my county, district, and State are in a similar situation.

Mr. Speaker, I am sure you know that I would be the last Member of Congress to ask for an appropriation that cannot be completely justified, and I am also sure that every good American wants our very necessary soil conservation and flood prevention program to continue on a sound, effective basis, which cannot possibly be done with the funds in the budget. There are hundreds of places where savings could and should be made and a small part of such savings used

to better conserve our priceless soil, and to avert disastrous floods.

Just a few days before returning to Washington for the opening of this Congress, I attended a meeting of the town council at my home in Exira, Iowa. They were interested in the possibility of obtaining a supplemental water supply in a multiple-purpose dam. A watershed project under Public Law 566 is being planned in the vicinity where a water supply could be developed in conjunction with a dam planned for flood prevention purposes. Exira, like hundreds of other towns in the United States, has been short of water for a number of years and urgently needs an additional supply.

Now I am informed that the Town Council of Exira has reached the point where it must take action very soon on a plan to finance the local cost of such a water supply dam. But they are wondering what to do in view of the situation pertaining to Federal funds available to carry out the Public Law 566 program. If they issue bonds or make an appropriation and then find that Federal funds are not available, where does that leave them?

Similar situations exist elsewhere. In many States funds have been made available to highway departments and other agencies of the State to carry out small watershed projects. These funds, if not spent within the period for which appropriated, due to failure of the Federal Government to carry out its end of the bargain, will be lost.

Right now, for example, in the Mill Picayune watershed in my district in Iowa, the local organization has provided rights-of-way and easements valued at \$292,000 including \$198,000 for putting roads across dams in lieu of building bridges. The road costs are to be provided by the county board of supervisors of three counties and the Iowa Highway Commission. If the Federal Government does not come through with funds to build the dam, this money will be lost.

I believe that local communities spending their own time, effort, and money in an agreed-upon cooperative undertaking with the Federal Government have a right to know where they stand; that they have a right to expect their Government to treat them fairly.

One of the Nation's major needs is sound, continuing resource development programs. The strength of our country is no greater than the natural resources we possess. Our resources are not unlimited, yet we continue to make increasing demands upon them, year by year.

A basic resource is water. And we have a water problem. It is nationwide in scope. One of our greatest challenges is how to avoid water scarcities on the one hand and floods on the other. We must take all necessary steps to assure our Nation of water in appropriate quantity, of adequate quality, in the right places and at the right time.

Our water needs are increasing at a tremendous rate as our population grows and industry expands. These needs must be met from a water supply that remains constant. The answer lies in

water resource developments that will prevent water losses in floods that do untold damage, and in providing for storage and better use and distribution of the available supply for our basic domestic, industrial, and agricultural needs.

The Federal Government has long recognized its responsibilities in the water field, a responsibility that is shared by the States, by local communities and by the operators of the Nation's farms and ranches.

Our major water resource activities are those embodied in the programs of the U.S. Corps of Engineers, the Bureau of Reclamation, and the Department of Agriculture. These programs are sound. They deserve full support on a continuing basis.

The President's 1961 budget calls for an increased appropriation of \$118 million in the combined budgets of the Corps of Engineers and the Bureau of Reclamation. This proposal would raise their combined total to more than \$1.1 billion.

In startling contrast is the budget proposal to increase the small watershed program which provides for the Public Law 566 projects by only \$5 million. Actually, the budget leaves this program with about \$4.5 million less funds because of using up the carryover funds from prior years. It is my understanding that a construction slowdown is already threatened.

We cannot afford to minimize the small watershed program by this kind of inequitable treatment. It is fully as important to the national welfare as the programs of the Corps of Engineers and the Bureau of Reclamation. Indeed, watershed protection and flood prevention work in our small watersheds—where about half of our annual flood damage occurs—is essential in most instances to protect our investments in flood control and water storage projects in our major river basins.

There is another compelling reason why full Federal financial support should be given to the small watershed program. This is a partnership program—a cooperative undertaking between the local people, the State, and the Federal Government. The Federal Government has an obligation to keep its end of the bargain it makes with the local sponsors of small watershed projects.

The Federal Government does not keep its bargain when it fails to keep pace with the commitments that local people and the States are making in many parts of the country when it causes postponement of construction after the local people have carried out their end of the bargain and are ready to proceed.

I understand that the proposed budget for the small watershed program means that construction starts cannot be made on a sizable number of local projects that will be ready to go in fiscal year 1961; that even funds for technical services will not be available for a large number of local projects that will be fully planned and ready to be authorized for operations in fiscal year 1961 and finally that the amount of construction funds available will cause a stretch-out of construction time on the average small project from the scheduled 5 years to 10 years

or longer. The 30-percent reduction in watershed planning proposed in the budget will mean a cut from 42 to 30 watershed planning parties, and preparation of about 70 work plans instead of 100.

Not only is the proposed budget increase for the small watershed program completely unrealistic, but the budget also proposes to cut back the program on the 11 authorized flood prevention watersheds from \$18 million to \$15 million. This program includes the Little Sioux watershed in western Iowa where work started in 1947 is proving to be of outstanding benefit to people in my district and the district of my esteemed colleague, Congressman HOEVEN. Even at the \$18 million level of appropriations, it will take an estimated 21 years to complete the Little Sioux project. How, I ask you fellow members of the Appropriations Committee, can we rationalize increasing the rate of construction on major river dams while cutting back the rate of construction in these long-authorized watershed projects?

Failure to provide adequate Federal financial support is a real disservice to the State governments and to the community organizations that have made tangible commitments in these watershed projects. The local people are required to operate and maintain the project when completed. In Public Law 566 projects, they are also required to do the construction or let contracts for the construction; to acquire water rights; and to obtain agreements from farmers and ranchers to plan and apply soil and water conservation measures on their lands.

In projects involving multiple-purpose dams, such as for municipal water supply storage in combination with flood prevention, the local people must pay all the costs of the structure chargeable to municipal water storage.

The local costs of small watershed projects often involve bond issues and assessments. They involve appropriations by State and the county governments.

These local people who have kept their agreements with the Federal Government to the point where they are completely ready to start construction certainly have a right to expect their Government to be ready to carry out its commitments.

But many of them are going to be sorely let down by their Government if the funds proposed for fiscal 1961 are not increased by the Congress.

The State of Iowa and the people of my own district are deeply concerned about Federal financing of small watershed projects. Iowa is one of the 13 States that made available a total of about \$1.1 million this year to accelerate watershed planning. Iowa appropriated \$50,000 for this purpose; the Federal Government provided \$76,000 in Iowa for planning.

The effect of the proposed budget for watershed protection and flood prevention will be to slow this worthwhile program to almost a standstill just when it has reached maturity, with local

groups in hundreds of communities across the country ready to proceed.

The Federal Government has an obligation to give adequate and continuing support to this program. It is sound. It is geared up for action. The costs are divided in accordance with the benefits. Let not the Federal Government be responsible for crippling it, especially when it is proposed in this same budget to add many millions of dollars to speed up construction of Federal dams on major rivers to which not one cent of State or local contribution has been made.

Some Case Stories of the Health Needs of Older People

EXTENSION OF REMARKS

OF

HON. CECIL R. KING

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. KING of California. Mr. Speaker, I have had many letters from Californians indicating great interest in providing health care benefits to the aged in connection with the Social Security Act. Most recently I have had a number of letters from social workers in the Los Angeles and adjacent areas who know the problem of hospital and medical care needs of older people because they are employed to serve them in public and private agencies and in the social service departments of hospitals.

I was interested to note that in my district and the several other districts that constitute Greater Los Angeles, we have something like 40 percent of the 1,250,000 residents of California who are 65 years of age and over. I am glad these older people have chosen my part of the country as a place to retire to, but I am distressed that such a high proportion of them—estimated at about two-thirds—have no hospital or medical insurance; yet 10 to 20 percent of these older people require 60 days or more convalescent or nursing care per year—10 times the amount needed by younger adults.

The testimony of a couple of my correspondents was with respect to the difficulties and inadequacies of public medical care. Said one correspondent:

I am a social worker in the county welfare department and my attention is drawn daily to the health problems presented by older people and their delays in securing care because of the lack of availability of medical care and the stringent eligibility requirements for free medical care. To receive care at the county hospital it is necessary to sign a reimbursement agreement to repay the hospital and it means a lien on real property. If nursing home is required, personal property of a person or a couple must be reduced to \$300. This has kept many from seeking medical care until they were critically ill, long periods of illness have resulted, and it has been more costly to the taxpayer.

Another social worker indicates as follows:

I have been employed in the public welfare department of a large county, on the

faculty of one of the schools of social work, and with the department of mental hygiene. In each agency I have seen numbers of older persons, both old age assistance recipients and those with limited financial resources, faced with the necessity of limiting essential medical care because of heavy demands on an inadequate budget for food, clothing and shelter.

All too often we hear of instances in which children appear to avoid what are their responsibility and appropriate obligations for the care of their parents. I was interested, therefore, in an illustration that demonstrates a counterexperience.

This involved an elderly widow who has been a resident of California for many years but moved to another county in order to be near her only son. She was supported solely by OASDI benefits and a small supplement from her son. Eight months ago she suffered a severe heart attack and because she did not have any insurance, her extensive and expensive care in the hospital had to be paid for by her son who was already carrying heavy family responsibilities. Nursing home care was indicated but the high cost of such care, about \$200 a month, was not possible and so Mrs. K. moved in with her son. Because she required constant care—since she was bedridden most of the time—heavy financial and emotional stress has been placed upon the entire family. Undoubtedly, further hospitalization will be required which may mean turning to public assistance since the son's resources are stretched to the limit.

Still another illustration by one of my correspondents of the strain placed on family relationships by the sickness of an elderly parent is given in the following case:

Mrs. G., 76 years old, was admitted to the hospital for cataract surgery from an outlying area. Her husband, 76 years old, a stroke victim, remained at the couple's home as he was not physically able to accompany his wife to the city. Family income amounted to approximately \$100 (from social security). Prior to hospital admission, with some supplementary financial help from their married son who lived in the same community, this elderly couple was managing on the above income. Problems arose in the medical-social planning for Mrs. G. because, after she had her surgery, it was going to be necessary for her to remain in the city near the hospital so she could return to the eye clinic weekly for 6 weeks. Because she needed convalescent care, a nursing home was necessary (\$225 minimum monthly). The married son, who had three young children and a modest salary, contributed a small amount and the nursing home operator, after an emotional appeal, agreed to subsidize the balance of the cost of the patient's care in his institution. Aside from the family worry about trying to work out a solution so the patient could have adequate medical care, it is not difficult to speculate on what it means to an individual to have to go through such an experience, especially when he has not been dependent on charity or relief previously in his or her life. Yet, in this case, the patient was quite healthy with the exception of needing cataract surgery, and barring unforeseen circumstances, still has many years left.

Important as are the humanitarian aspects of health care benefits for older

people, there is also an economic side which could benefit health services to all of us. Thus, as one of my correspondents put it:

I can see needed new equipment, less overloading of medical personnel, thus encouraging an increase of services to the patient and more adequate members of medical staff to care for them.

Most of all I see the tremendous relief from increasing county taxes to homeowners, businesses, and corporations when these costs for medical care are spread throughout the Nation to the employees covered by the Social Security Act. Many of the patients now in overcrowded public facilities will wish to patronize private hospitals, dentists, physicians, and private nursing homes who can afford to maintain higher standards on the standard fees which will then be available.

Many of the present nursing homes have minimal standards because they are forced to depend on the limited amount a State like ours, which is overcrowded with aged, can afford to pay.

I recall that when we held hearings on the Forand bill last July, one of the witnesses for the National Association of Social Workers was Dr. Charles I. Schottland, Social Security Commissioner from 1954 through 1958, and now Dean of the Florence Heller School for Advanced Studies in Social Welfare, Brandeis University. Mr. Schottland, a Los Angeleno, and director of the California State Department of Social Welfare before President Eisenhower appointed him as Social Security Commissioner, knows this problem of medical care as both a State and Federal administrator. Out of this experience he testified emphatically for the need for health care benefits for the aged and the administrative practicability of inclusion of such benefits in old age, survivors, and disability insurance.

Finally, I am including in my remarks a copy of a telegram from the Los Angeles Chapter of the National Association of Social Workers which reads as follows:

One thousand one hundred and fifty members Los Angeles Chapter, National Association of Social Workers, representing both public and private social agencies, endorse Forand bill as initially introduced. This endorsement agrees with thinking of 28,000 national membership of NASW. Please be assured of our concern and appreciation of any efforts you may exert in behalf of this bill.

International Language

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I wish to include an editorial from the *Pekin Times* of March 2, 1960 as follows:

THE EDITOR'S LETTER

(By F. F. McNaughton)

Maybe Americans can be scared into doing something about an international language—scared by Russia.

Russia is molding its grade school pupils into weapons for attack against the United States of America. How? By requiring them to learn languages. The Reds know that a Russian who speaks the third fellow's language can make friends faster than an American who doesn't understand a word that is being said.

The Russians are in a slow, apparently successful, campaign to take over all the world except Switzerland and the United States of America—then overwhelm us.

I have no hope that Americans have enough get up and go to learn foreign languages. It seems too remote. But the jet age has come.

Folk from India, Russia, Africa will be winging into America in hours. You and I will fly to Asia in 2 or 3 hours.

We need to be able to talk.

With this new urgency, may I repeat my hope for a plan that could have us all taking within 10 years. It is a simple plan: Have an international committee pick out 10 words to be introduced in every school in the world each autumn.

Let me illustrate:

The first word Ceil and I learn in any country is "where." It is "wo" in German. That is just the kind of international word we need. It is an emphatic word, easily said, short to speak or write, and already widely known.

For "is" they might use the English "is." It also is short. Of course it would be spelled "iz" like it sounds. Above all things they should avoid the spelling horrors of the English language. Imagine spelling "iz" "is."

Next word needed is "thanks." I don't know a short word for "thanks" but if the committee could not find one from Sanskrit to esperanto, they could invent one. It is used and needed so often that they might just use "o" for thanks.

In 10 years the whole world could say (in the new language) where, iz cafe, want, bed, bread, water, coffee, rice, fish, how much? hotel, sick, airport, tomorrow, and please and thanks, and 82 more words.

We'd be visiting. And let me forecast that once we got it started, we would be adding 50 instead of 10 new words each autumn. In fact, there are already dozens of words (like cafe, theater, chocolate, garage, telephone, and concert) that already are common in many of the world's languages.

'Twould be no trick at all to start a world language.

Let's do it.

What Goals for Africa's New Leaders?

EXTENSION OF REMARKS

OF

HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mrs. BOLTON. Mr. Speaker, truly 1960 promises to be an eventful year in Africa's march toward independence. Already this year self-government has been achieved by the Cameroun, with similar prospects awaiting Togoland, Somalia, Nigeria, the Belgian Congo, and possibly the Mali Federation of Senegal and the French Sudan later in the year. By the end of 1960 it is expected that virtually half of Africa's 220 million people will be living in countries which have gained their independence.

Simultaneous with this political revolution, Africa is undergoing equally profound economic, technological, and social

changes which are transforming the face of the so-called Dark Continent. Development programs are proceeding apace: Transportation systems are being modernized, new harbors are being constructed, and vast hydroelectric projects designed for aluminum production or other industrial use are either under construction or in the advanced planning stage.

As Africa emerges into independence and her leaders increasingly assume the responsibilities that go with freedom, the need for intelligent understanding becomes ever greater. In its "Great Decisions" for 1960 series, the Christian Science Monitor has published a most penetrating and informative article on Africa, entitled "What Goals for Africa's New Leaders?" This excellent article by John Hughes in the March 9 issue of the Monitor is certain to be of wide interest.

Under leave, I include the article in the RECORD, as follows:

[From the Christian Science Monitor, Mar. 9, 1960]

GREAT DECISIONS FOR 1960—WHAT GOALS FOR AFRICA'S NEW LEADERS?

(By John Hughes)

1. DYNAMIC MARCH TO INDEPENDENCE

CAPE TOWN.—In Ghana they call it "freedom." In the Belgian Congo it's "independence." And in East Africa "uhuru." But it all adds up to the same boisterous, confident African march to independence which is today the most dynamic and significant movement in this continent. The nationalism which liberated Asia from colonialism in the years following World War II has leaped the oceans and now is crackling through Africa.

Some observers say it should more properly be termed "Africanism." Britain's Prime Minister Harold Macmillan, on an African tour earlier this year, spoke of an "African national consciousness."

But whatever the terminology, the principal goal of Africa's new leaders is this assertion of the black African's right to rule himself. There is an exciting declaration of the African's new-found identity and individuality, and of his increasing influence.

This goal of African independence is well on the way to being fulfilled. By the end of 1960 more than half of Africa's 225 million nonwhite peoples will be sovereign.

Target dates loom

Already this year the French Cameroons has become independent. Following will be French Togoland, Italian Somalia, the vast Belgian Congo, Britain's West African colony of Nigeria with its 35 million people, probably the Mali Federation of Senegal and the French Sudan, as well as Madagascar and other French African states.

These will join the list of countries already independent—the West African Negro nations of Liberia, Ghana, and Guinea, as well as Ethiopia, the Sudan, Egypt, Libya, Tunisia, and Morocco. Another independent state, although white-dominated, is the Union of South Africa.

Many more Africans will be virtually governing their own affairs without having formally achieved independence. Tanganyika, for example, will achieve self-government under African rule in the latter half of this year, although still a ward of Britain. But even in these lands the lines are drawn, the target dates for independence are just around the corner, and it is only a matter of not too much time before they, too, are completely free.

Thus with the exception of a cluster of white-controlled territories at the southern end of Africa—the Union of South Africa,

Portuguese Angola, and Mozambique, and the Federation of the Rhodesias and Nyasaland—the achievement of this African freedom goal is a foregone conclusion.

Even in these expected lands it seems doubtful whether political responsibility and influence can be permanently withheld from nonwhites.

Thus tomorrow's Africa will be one dominated by the black man.

Colonial rule shrugged off

All this has been brought about by a political revolution as one country after another shrugs off colonial rule. There are two particularly interesting points about this revolution. Firstly it has come about with dramatic swiftness. The pressure of African nationalism has sent white plans tumbling and has compressed the colonial powers' timetables beyond anything that could be imagined 5 years ago.

The second point is that this great upheaval has taken place very often in an atmosphere of remarkable amity between ruler and ruled which permits a friendly relationship after independence. Ghana and Nigeria, with their cordiality toward Britain, are cases in point.

There have, of course, been tragic outbursts of violence, as in Kenya during the Mau Mau rebellion and in the Belgian Congo. Algeria, although a north African rather than black African territory, has an unhappy history of conflict. It is only realistic to recognize the explosive character of some other situations.

But nevertheless in vast tracts of Africa the transfer of power from white to African hands has gone relatively smoothly and peacefully.

African identity sought

After independence has come black Africa's debut into international affairs. The goal of African leaders like Ghana's Prime Minister Kwame Nkrumah and Guinea's President Touré is to establish an African personality. They are working for the recognition of a distinctly African dignity, culture, way of life, and outlook on world affairs.

Already the voice of black Africa is airing its views at the United Nations on issues from the H-bomb to Tibet. Less and less are Africans a mere appendage to the Afro-Asian bloc as in earlier days.

Yet, of course, they see eye to eye with their fellow nonwhite Asians on such burning topics as colonialism and racial discrimination. Africans have shown themselves particularly sensitive to color prejudice, whether in Little Rock, Ark., or London's Notting Hill district, or Blantyre, Nyasaland.

Thus leaders like Prime Minister Nkrumah feel responsible for helping to free Africans elsewhere who, despite the rapid pace of change in the continent, still are for the moment under white rule. This is another goal in which there is sustained interest in such West African capitals as Accra, Conakry, and Monrovia.

Finally a major goal of Africa's new leaders is to guard jealously the new freedom which their nations have so recently won. Thus there is not a single one prepared willingly and voluntarily to surrender this independence to foreign powers either Western or Communist.

At the same time, although publicly proclaiming a policy of nonalignment in world affairs, some may, like Guinea, indulge in a flirtation with the Communists for the sake of economic aid and material benefits. The danger is that in their overconfident inexperience they may find themselves too deeply involved to break off the association when they wish.

2. SIMULTANEOUS REVOLUTIONS

Africa's new leaders are caught up in several revolutions all at once. There is the political revolution, which is thrusting po-

litical power upon Africans so dramatically and swiftly. There is the social revolution which is disrupting not only the African's own traditional tribal background, but also the color bars imposed by white men during the colonization of the continent. And then there is the economic revolution which has jerked Africans out of conditions often primeval and dumped them down in the factories and machine shops and blast furnaces of the new Africa.

Quite a common sight in the South African mining capital of Johannesburg are strings of unsophisticated Africans being hustled goggle-eyed through the concrete canyons between the skyscrapers to the big mine labor compounds. These are Africans who have been recruited thousands of miles away, from as far distant as Mozambique and Tanganyika, to serve contracts of several months and more as laborers in the Transvaal gold mines.

They have been recruited in the bush, often straight from their village kraals, and theirs is literally an overnight transition to the 20th century. They are whisked in by aircraft, the first which most of them have seen, and plunged into a strange new world of streetcars and traffic lights and giant buildings with elevators. To some of these men, boots are a completely novelty, for they have never before worn them.

Basically underdeveloped

This is an extreme example of the journey many Africans are making from their mud-and-dung huts into the atomic age. Indeed, Africans under white supervision in the Belgian Congo mined the uranium for the Hiroshima and Nagasaki atomic bombs.

And there are Africans today ably flying airliners, captaining steamboats, conducting geological surveys, and performing many other complex jobs created by the economic revolution which is afoot in Africa.

But all this may be a little deceptive, for, despite these substantial achievements, the African Continent is basically an underdeveloped area.

Africa does, it is true, produce the bulk of the world's diamonds, more than half its gold, more than a fifth of its copper, and major slices of its chromite, manganese, and other minerals.

But the bulk of all this comes from the Union of South Africa, most developed country on the continent and perhaps the only one which can fairly be said to have an industrial economy. South Africa accounts for 43 percent of the mineral output of the whole continent.

Africa's other lands exist on predominantly agricultural economies. For millions of Africans this is agriculture at the subsistence level, grubbing merely enough from the sun-baked soil to meet the needs of their immediate families.

Per capita income is unbelievably low. Illiteracy is high, and life for the African peasant is burdened with poverty and hardship.

Potential wealth

Ironically, Africa possesses much potential wealth. It can grow most crops, is rich in raw materials and deposits of minerals, has some oil and, though there is not much coal, is fabulously wealthy in river water for hydroelectric power.

A major goal, almost without exception, for Africa's new leaders is to bridge this vast gap between poverty and prosperity, to harness their power, mobilize their resources, and industrialize their economies in the fastest possible time so that they can produce for their people tangible benefits of independence.

"We prefer poverty in liberty to riches in slavery," Guinea's President Touré told France's President de Gaulle on the eve of Guinea's independence. Yet Guinea, like every other independent African State, is

organizing desperately to ensure that poverty lasts as short a while as possible.

The most exciting, moving force in Africa today is the desire of black Africa for freedom and independence—the breaking of colonial ties.

From Nigeria, the Belgian Congo to Kenya and Tanganyika the drum beat of "freedom" is heard as Kwame Nkrumah in Ghana and Sekou Touré in Guinea move on the free Africa stage.

Balkanization decried

There is talk of a United Africa, a decrying of Balkanization. In the exciting atmosphere of independence, black Africans perceive vistas of Africa's potential contribution to the United Nations and the peace of the world.

Like Asian leaders, young Africans recognize the need to steer a course between the West (with its taint of colonialism) and the stranglehold of communism.

As Kenya's fiery Tom Mboya told a gathering of 4,000 Africans on his return from the London Conference on Kenya's future, Africans have been knocking on the door of freedom for 3 years, and now the door is open.

Ghana has its Volta hydroelectric scheme, Guinea its Konkouré, the Belgian Congo its Inga project—all the African lands have hydroelectric plans for aluminum production or other projects designed to swing their economies from an agricultural to an industrial base. Ghana, for example, currently is dependent on cocoa as its principal export. If the cocoa price drops, Ghana may be in serious trouble, hence its urgent need to diversify.

The challenge for these young African leaders is lack of capital, an absence of technological know-how, and an appalling shortage of technicians, scientists, and key administrative personnel.

Millions poured in

Colonial countries have poured in millions of dollars of development capital, and the World Bank loaned nearly \$540 million for African development projects between 1951 and 1959. But this totaled only 13 percent of the loans made by the bank, and there is a vast backlog in African development.

At the same time, dollars and pounds and francs are not alone the solution. Ghana currently is embarked on an ambitious \$957 million 5-year development plan, but many economists would be surprised if the Ghanaians are physically able to expend that amount even if they can find it. There is, for example, a limit to the capacity of existing transportation systems which must serve development projects. Similarly the shortage of technicians and administrators limits the expansion which many African lands can undertake in a given period.

The United Nations Economic Commission for Africa reports that African governments must themselves in many cases become entrepreneurs to stimulate development, yet the most serious shortage confronting these governments is that of trained administrators and managers.

These economic deficiencies already have attracted the attention of the Communists, who have been quick to offer emergent African states technical aid. Guinea and Ethiopia have accepted development loans from the Soviet Union of \$35 million and \$100 million respectively.

Thus the search for the ideas, the men, and the money which will serve as the catalyst for economic development is one of the principal tasks confronting Africa's new leaders.

3. AFRICAN SOLUTIONS FOR AFRICANS

What sort of Africa will Africa's new leaders build? What will Africa look like in 5 years or 10? Against the background of dramatic change in the past few years, it takes a bold prophet indeed to forecast. But we do know that great dams and engi-

neering projects and manmade lakes such as the 175-mile-long one at Kariba are changing the physical face of the continent.

It is doubtful, too, whether the present boundaries between various African countries will remain constant. Many of these were imposed arbitrarily and artificially by the colonial powers. Thus there are instances where a single tribe is strung across three or four international boundaries. Ludicrously, tribesmen may work in one country, live in another, and have relatives in a third.

Thus there are sometimes strong regional movements for tribal reunification which may modify existing borders.

At the same time, these comparatively minor alterations are a very different proposition from the United States of Africa concept, a fusion of independent emerging states, of which some African leaders like Ghana's Prime Minister Kwame Nkrumah dream.

There are indeed strong economic arguments for cooperation and closer association between African states but there are also some quite massive political obstacles to be overcome.

Rickety union formed

Ghana already has formed a loose union with Guinea as the nucleus of a type of West African federation. But the union is rickety and Guinea's President Touré has different ideas from those of Dr. Nkrumah on its future. M. Touré is also a thoughtful observer of various realignments in French Africa and it is perhaps there that his main interests may yet lie.

Meanwhile, Liberia's President Tubman, recognizing that the pan-African unity movement may yet become a significant force, has climbed on the unity bandwagon. But he seeks a cautious "association" of African states which would leave Liberian sovereignty and independence unimpaired.

In recent weeks, Dr. Nkrumah's unity overtures have been snubbed by his two neighbors, Togoland and the Ivory Coast. In October the big colony of Nigeria becomes independent to challenge Dr. Nkrumah's claims to pan-African leadership. And before Nigeria begins to think about submerging its newly won identity in a wider grouping of African States, it must consolidate national unity among its own diverse tribes, regions, and peoples.

This same problem of preserving national unity among clans and groups quite hostile to one another is one which looms for many another African country, as evidenced in recent intertribal warfare in the Belgian Congo. For although millions of Africa's black peoples are termed "Africans," it must never be forgotten that there are among them differences as great as between Frenchmen and Yugoslavs, Indians and Japanese.

Democracy's future

Thus although pan-African unity is a major goal of some of Africa's new leaders, there are major obstacles to its implementation.

Meanwhile, what of the future of democracy in Africa? Many African leaders have been schooled in American and British universities and are well-steeped in the atmosphere of democracy. Yet, though many of them say it is their goal, there is a distinct trend toward strong, one-party rule, toward the erosion of parliamentary opposition, and in some instances, toward government by decree.

Some observers are aghast at this trend. Others inquire whether it really is reasonable to expect African countries to achieve overnight the type of democracy which has taken centuries to mature in other lands.

Africans themselves frequently are amused at the debate, for they hold that colonial government rarely was democratic and that political opponents of the colonial govern-

ments were jailed, banished, harried, and deported.

Yardstick questioned

Further, they say that democracy is far from being practiced in the white-controlled Union of South Africa and the Federation of Rhodesia and Nyasaland. And, when emergent African nations are compared with countries outside Africa, Africans say the comparison is always with the most advanced democracies like Britain and the United States, never with some states with less creditable achievements.

Africans question whether "Western Christian civilization" really is a suitable yardstick for measuring the ability of an essentially non-Western person like a black African to run his own affairs in his own land. Although the application of many Western techniques to African problems may have beneficial results, one does indeed wonder whether it is realistic to assess African achievements by Western standards.

Thoughtful, and often anxious, white men in Africa sometimes ask whether the African accession to power, influence, and independence is not proceeding too swiftly. One wonders, however, whether that query really is pertinent any more. For this African landslide is no more than the reality of the situation in Africa today, whatever it may bring, and debate as to its desirability seems redundant.

Africa's new leaders certainly need white men, if only for the benefit of their technical knowledge and administrative experience. Nations like Ghana, where more white men now are living than in preindependence days, are seeking white specialists from overseas in large numbers, and they face no disability or discrimination under Dr. Nkrumah's African administration.

Equality, not privilege

But the proviso is that the white man must seek only equality, and no special privilege or political dominance, on account of his skin.

Thus the problems of these lands are problems essentially African, and the goal of their leaders is to solve them in a distinctly African way. This may mean the establishment of an African-style democracy different from that of the West. It may mean the steamrolling of tribal, chiefly rule by the eager young nationalist rulers.

There may be corruption and maladministration—not entirely unknown in lands elsewhere—and African leaders conceivably may be from time to time as imperious and hypersensitive and immoderate as other leaders before them in history.

Then, too, they may be less preoccupied with the conflict between Western and Communist worlds than Westerners and Communists themselves. For Africans are engaged in a struggle with neither of these forces. They have their own battle against poverty, underdevelopment, and ignorance among their peoples.

Although outside assistance may be gratefully received, the achievement of these goals is essentially the privilege of black Africans themselves.

Has Benson Worn Himself Out?

EXTENSION OF REMARKS

OF

HON. MILTON R. YOUNG

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. YOUNG of North Dakota. Mr. President, I ask unanimous consent to

have printed in the Appendix of the RECORD an editorial entitled "Has Benson Worn Himself Out?" which appeared in the Bismarck (N. Dak.) Tribune under date of March 5, 1960.

The Bismarck Tribune's very able editor, John Hjelle, has made some observations which I am sure will be of interest to Members of Congress and all others who are concerned about agriculture.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

HAS BENSON WORN HIMSELF OUT?

Secretary of Agriculture Benson has denounced as "political demagogues" those who are opposing his policies, thereby sticking to the defensive line which has helped stall on dead center all attempts to grapple with the American farm problem.

It is true that undoubtedly some of those who don't agree with the Secretary probably deserve the classification of demagog, and that many others disagree with and attack him for purely political reasons.

The Secretary makes a mistake, however, if he feels that all who refuse to buy his views do so for only demagogic or political reasons.

Much of what Secretary Benson has to say is true. The present farm program, given birth back in the depression days of Franklin Delano Roosevelt, has not brought us closer to solution. It has stolen wheat acres from North Dakota and given them to Eastern and Southern States which need them less. Costly surpluses are building up. The controls the program imposes are objectionable.

But all that Mr. Benson has to propose, basically, is the scrapping of all Federal efforts to equalize agriculture's position in the total economic picture and return to the laissez faire, or noninterference, policy which prevailed back in the early thirties. He says that if we were to do this everything would work itself out. But would it? It didn't then, and it probably couldn't now.

Secretary Benson's own Department has reported that 1959 farm net income dropped 16 percent in 1959, from \$13.1 billion in 1958 to \$11 billion last year. Production costs went up again while prices went down. Another drop of almost \$1 billion is forecast for 1960. Average net income per farmer in North Dakota was down 36 percent last year, the Department said Friday. Part of that was due to the short crop, but a lot more was due to the general income-outgo squeeze. And where and when will it end?

We have generally admired Secretary Benson's strict adherence to his principles, and supported him in his resistance to greater governmental interference with and control of the farming segment of U.S. economy, feeling that the ultimate answer lies in a freer functioning of the supply-and-demand, free market system. At the same time, it has been obvious that, inasmuch as every other part of the economy has its built-in governmental-protective devices, it would be disastrous to chop down only those intended to keep agriculture from falling into an even more inferior position.

Unfortunately, most of Mr. Benson's time is spent on the defensive. He may be right, but he has become a symbol of most that is considered objectionable. His talk in Yankton the other night had overtones of desperation. He is such an ardent crusader for what he believes that after 7 years of defending he seems incapable of understanding that there may be merit in other points of view. But while he defends, gaining few if any new defenders among farmers, farm income still slips.

The new administration which will come in next January may find that another name

and another face, even with the same general program, will gain ground where Benson would still be defending against losses.

Methodist Laymen in Bessemer, Ala., Opposed to Lowering of Racial Barriers

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. HUDDLESTON. Mr. Speaker, in a very strongly worded memorial addressed to the general conference of the Methodist Church, the Methodist laymen of the Bessemer, Ala., district have stated unanimously and unequivocally that they will not accept any action by the general conference which would lead to changes in the Methodist church jurisdictional system resulting in racial integration in churches. At a meeting last Tuesday night, March 8, 1960, the group, representing 25 Methodist churches in the Bessemer district, went on record in a manner that cannot be misunderstood by anyone.

Under leave heretofore granted, I am inserting herewith in the RECORD a newspaper article by the religion editor, of the Birmingham News, Mr. Claude Keathley, dealing with the meeting of the Methodist laymen, which appeared in the News on Wednesday, March 9:

WON'T ACCEPT JURISDICTION CHANGES—
METHODIST LAYMEN IN BESSEMER OPPOSED
TO LOWERING RACIAL BARRIERS

(By Claude Keathley)

The Methodist general conference was put on notice last night that Bessemer district laymen will not accept any action which will lead to changes in the Methodist jurisdictional system resulting in racial integration in churches.

Meeting at Fairfield First Methodist Church, the Bessemer district chapter of the Methodist Layman's Union of Alabama, adopted a strong memorial to the general conference stating its views.

The meeting, attended by about 450 laymen and laywomen from 25 of the more than 50 churches in the Bessemer district, unanimously adopted the memorial to be sent to the general conference. The general conference will meet April 27-May 5, at Denver.

"We submit this memorial to the general conference to be certain that this body unmistakably understands our views concerning the report of the general conference commission to study the jurisdictional system," the memorial said.

The general conference of 1956 set up the study commission to study the jurisdictional system and to recommend action to eliminate the racial segregation of Negro Methodists. Negro Methodists, under the present structure, are in a jurisdiction of their own, known as the central jurisdiction.

The study commission's report was released early this year. It recommended no basic changes in the jurisdictional system but did make recommendations which would ultimately lead to a breakdown of the organic system and force racial integration in Methodist Churches, it was pointed out.

The memorial declared: "It is our desire to preserve the unity of the Methodist Church, but we cannot, within the bounds

of self respect, indefinitely continue to be subjected to the condemnations, overt and implied, contained in the official pronouncements, church-school literature, and other sources speaking in the name of the Methodist church."

"We reject the principle that the separation of the white and Negro races is always and under all conditions contrary to the Christian religion and the spirit of Christ," the memorial vowed.

Recognizing the right of others to differ and to integrate churches according to their own desires the Bessemer lay group asked that the general conference give churches in the South the same right to not integrate if they so desired.

Firmly vowing that "we cannot and will not submit to integration of the races on any level in local churches as recommended by the study commission," the group asked the general conference to give "careful consideration" to the views of Methodists in the South.

The memorial also declared that "we cannot tolerate the use of world service benevolences or any other funds contributed to the general church or any of its agencies to support the recommendations of the study commission or to promote integration of the races in any manner."

The memorial also strongly urged the general conference to "be very certain that the Methodist Church, in making its decisions, does not become greatly influenced by or entangled in the affairs of national politics."

The memorial was presented by Dr. H. N. Carmichael, chairman, of the Central Park Church. Judge Ellis Brown of the Ensley First Methodist, Mosteller Cost, of Shady-side Church, Claud Smithson, mayor of Fairfield First Methodist Church, Mrs. Walter S. White of Ensley First Methodist Church, and Frank Parsons, District Layman's Union president, prepared and signed the memorial.

"It is with a genuine feeling of concern for our Methodist Church, and not in any excitable manner, that we present this memorial for your consideration," Dr. Carmichael said as he prepared to read the memorial. It was adopted unanimously.

Address by Adm. Arleigh Burke at San Jose State College

EXTENSION OF REMARKS

OF

HON. CHARLES S. GUBSER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. GUBSER. Mr. Speaker, recently San Jose State College, in my congressional district, was honored by a visit from one of the soundest thinking military men of our time, Adm. Arleigh Burke, Chief of Naval Operations.

In this day of controversy involving our military posture, the realistic words spoken by Admiral Burke at San Jose State College are of great significance.

I commend Admiral Burke's speech, which follows, to my colleagues:

ADDRESS BY ADM. ARLEIGH BURKE, U.S. NAVY, CHIEF OF NAVAL OPERATIONS, BEFORE THE SAN JOSE STATE COLLEGE, SAN JOSE, CALIF., MARCH 4, 1960

Addressing you this morning is a particular privilege—one I have looked forward to for quite some months. It is invigorating to visit this thriving southern bay region. Both

the climate and the exchange of ideas with young men and women are exhilarating.

American students have always been alert to the affairs of our Nation, both domestic and international. In recent years, ever since the mantle of free world leadership so clearly fell on American shoulders, young citizens of our country, in San Jose and throughout the land, have shown a deep interest in international affairs and in the problems that accompany them.

The fact that many of you will serve in the Armed Forces plays its part in creating this interest. But it is deeper rooted than that. Each college or university tries to stimulate students to think, to think deeply and well of the real values, of things past and present, of things academic and things worldly.

Paramount among such thinking is the current and future well-being of the United States and the problems which so deeply affect our well-being. The dynamic and ever-changing problems of national defense are a vital and important part of these considerations.

Today the adequacy of the composition of our military forces are public issues. People are interested, and this is good. It is good because defense is a serious business and defense problems are complex. They don't fall into neat, tidily packed bins, as much as some may want them to. There are no quick, easy solutions to these problems. They must be examined to be understood.

Defense problems start with the threat we face, and it is not simple. This threat has many aspects, many mechanisms, each of them constantly working, probing, pushing, each creating issues, presenting challenges which must be met.

The major threat facing the United States today is the grim dynamism of communism driving toward one goal—a Communist-controlled world. This is communism's major and self-proclaimed aim.

Working always with this goal in mind, communism's big problem is how—how to achieve it. The Communists will do anything, absolutely anything—to achieve world communism, to gain world empire. They recognize only one restraint, excessive risk. They will not do anything which gravely risks the destiny or existence of communism.

The Communists are bound by doctrine to choose means that keep this risk to a minimum.

That is what the cold war is all about. It is simply communism's day-to-day effort to achieve world domination by economic, political, psychological means, any means short of armed conflict. It is an effort just as deadly, just as fatal to freedom on this earth as are their overt attempts at aggression.

To the Communists, the cold war has two advantages. First, it keeps their risks to a minimum. Secondly, most cold war actions evade the headlines; they sneak past freedom everywhere. Unnoticed actions sneak by, but they keep adding up until their aggregate, the sum of many actions, forms a Communist major victory. This is the most insidious aspect of the threat we face.

The cold war is marked by constant Communist proberings for weaknesses—moral weakness, physical weakness, any lack of strength. When they find such a weakness they exploit it in every way they can, including the use of arms. Such aggressions by the Communists mark the spillover from cold war to limited war.

Limited war is more risky for the Communists than is the cold war. For this reason communism's masters will not lightly commit Soviet armed forces to such adventures. Instead they prefer to use puppets, stooges, whose loss would not endanger the cause of communism and whom they could abandon should the risks become too great.

But more than this, they keep themselves flexible; they can back down. Faced with strength, with increased risk, they do back down; they step away. By flexibility, by constantly pushing but stepping back when the going gets too rough, they know they can make progress. They once gave up Latvia, Lithuania, Estonia, even the Ukraine, but these countries are part of the Soviet Empire today. They have gained much of the world; they have gone a long way toward their goal.

The Communists have created their empire wholly by cold and limited war means. They have not had to undertake the grave risks, the very grave risks of general nuclear war.

The Communists have a nuclear punch. It is formidable, but it is not overwhelming. Nevertheless, their capability for general nuclear war is the most dramatic and consequently the most discussed aspect of the threat we face. As important as this is, it is but one part of the whole threat. The whole threat is more than just military. It involves every human endeavor. The Communist military forces play a very important role in that threat. They are what give it substance; they are the vital part of every intimidating Communist declaration.

These military forces can also be used to misdirect our attention to grab the spotlight while deadly things go on outside the glare of the world's attention. We must be alert to this. We must keep a constant eye on other things as well as Communist military activity.

One of the most important things we as a nation and as individuals must do is to keep the overall threat in perspective, to view each part in relationship to the whole. Otherwise, we can become so fascinated by just one small part which may be fearfully dramatic that we lose sight of the whole threat.

Not only must we view the threat completely, we must view our own capabilities similarly. Our capabilities, particularly our military capabilities are based on our needs. Our needs are not the same as communism's needs. The Communists hold nations captive; we do not. The Communists seek to control the world; we do not.

We rely upon the seas; the Communists do not. We want to see a world of order and justice, one in which freedom may thrive. The Communists want the opposite.

Thus our desires are not their desires; our needs are not their needs; and our military requirements are not their military requirements. This is why the United States need not match the Communists' bomber for bomber, missile for missile, division for division, or submarine for submarine. Our requirements differ throughout the whole spectrum of war.

Our military requirements for general nuclear war can be stated simply. We need sufficient strength to deter the Communists from starting general nuclear war or, failing that, to defeat them if they do.

The main thing in deterring any aggressor is for him to know that no matter what he does, no matter how hard he strikes first, he will be hit back, hit back so hard that his whole system will come falling down.

Aggressors must know that if they start general nuclear war there would be absolutely nothing they could do to prevent their own destruction. It would be inevitable. This makes starting such a war suicide; they dare not start it. This is what deterrence is all about.

Our deterrence of general nuclear war has been successful. It is successful right now, and it will continue to be successful in the ballistic missile era. We are a powerful Nation and we will remain powerful as long as we work at it, work hard at it.

The advent of the ballistic missile does not affect this. What it does affect is the rela-

tive vulnerability of nuclear delivery forces. This comes about because ballistic missiles can hit anything that stays in one place, once its location is known. On the other hand, ballistic missiles cannot hit anything that keeps moving or whose location is unknown.

When the location of anything is known, its address can be put into a ballistic missile. The missile can be aimed and fired. Just like a bullet leaving the barrel of a gun, a ballistic missile goes where it is aimed. Its aim cannot be changed in flight; it has to go where it was told to go. When the missile gets there, if the target is still at that place, it gets hit. If the target is not here, it does not get hit.

Thus, true mobility and unknown location are basic to invulnerability in the missile age. And in the missile age invulnerability is an indispensable part of a successful deterrent. It is indispensable because invulnerability provides the assurance that we can hit back at the enemy no matter what he does. And that is what keeps him deterred.

How do we stand on vulnerability relative to the Soviet Union? Once again our needs differ. Everyone knows we won't start general nuclear war, we are not aggressors. Therefore our retaliatory forces must be invulnerable so we can strike back and bring the aggressor to his knees.

The vulnerability of fixed launching sites will increase as the accuracy and power of ballistic missiles increase. But it will be a long, long time before any single attack will be able to wipe out all our fixed launching sites.

Launching many missiles from many sites to land simultaneously and accurately on many, widely dispersed targets is extremely complex, very difficult. Such a task is monumental and for the near future, highly doubtful.

It is almost impossible while liquid fuel ballistic missiles are the predominant type. There are a lot of steps in getting liquid fuel missiles ready to fire—they take time, some of them are sensitive. They must be done with care.

We have fired a lot of test missiles, under test conditions and on test schedules, but the number launched exactly at the time planned is small, very small. This is just handling one missile at a time. It is a condition that typifies missile development anywhere in the world right now. But trying to fire many, in salvo and with perfect confidence, like the broadside of a ship, is many times more difficult.

Until such a capability becomes real no one will be able, in one attack, to wipe out all our fixed base launching platforms. Some sites would be warned by the first hits on other sites; their weapons would be launched. Others might not be hit at all, certainly not on the first salvo. Their weapons too would get off. Fixed launching platforms in known locations will become more and more vulnerable in the missile era, but it will not happen overnight.

At the same time, mobile launching platforms remain virtually invulnerable. The more an aggressor shifts his nuclear weapon capabilities to ballistic missiles the less vulnerable mobile launching platforms become and the more they will be needed.

Launching platforms can be moved about on land. At sea they can go in any direction, can be truly mobile. At sea, too, we can keep the location of weapon launchers unknown. There, they can be dispersed, widely dispersed in millions of square miles of ocean and they can move at will. We have such mobile launching platforms right now. At sea in the Mediterranean and in the Far East are aircraft carriers with nuclear weapon delivery capabilities. The aircraft in these amazingly versatile ships out-

number the heavy bombers in the Soviet Union. Their weapons are many times more powerful than the atomic bombs used in World War II. This nuclear delivery capability is significant all by itself.

These carriers have the low vulnerability of all moving things. We exploit this. When international tensions mount we get an even greater number of carriers; more aircraft, and other ships at sea. We keep them moving, thus low in vulnerability. At sea, we enhance our strike-back capabilities.

The unique operational environment of the sea provides an ideal medium for mobility and for dispersal of retaliatory striking power. This is the why behind the new Fleet Ballistic Missile System Polaris. This wonderful weapon system combines two revolutionary developments, solid propellant missiles with nuclear powered submarines. It has the great advantages of concealment, of virtual invulnerability and of assured strike-back capability. It is testing out well, testing so well that the Navy has assured the Congress that there will be 2 Polaris-equipped submarines, 32 nuclear tipped missiles, operational, ready for sea, ready to be used, by the end of this year.

Polaris and the other sea-going retaliatory capabilities are wonderful things. They are significant in themselves, even more significant in the aggregate. Yet these capabilities are just a part of our deterrent capability.

The many aircraft in the Strategic Air Command have a tremendous capability to deliver nuclear weapons. There are more planes to carry nuclear weapons in the Tactical Air Command and their capability is significant. There are intermediate range ballistic missiles now deployed overseas and there are more coming. The sum of these strengths is mighty, no one has yet equalled it.

This is why it underrates our total strength to count only one type of weapon, one type of missile, and compare it alone with the number another country may have. Such exercises in one weapon arithmetic can distract our attention from the quality of weapons. They can distract us from considering the invulnerability of retaliatory systems. They can distract us from considering the total strength available to do the job in the many ways it can be done.

One weapon arithmetic can also create doubts of our own strength. When we really have strength, as we do now, and as we will in the future, doubting our strength is hazardous. It is hazardous because it fosters fear and fear, false or real, creates moral weakness.

Since the Communists exploit weakness, we must be strong and without fear because we are strong. Fear has no place on the American scene. We are stronger, far stronger, than any potential aggressor. This is true not only of our nuclear weapon capabilities; it is true of our whole military posture.

Our limited war capabilities too are strong and they start with the weapons we have been discussing. They start with these because the area destroying weapons, basic to our general nuclear war deterrent and strike back strength, are what keep limited wars limited. They do this well. But in limited wars, area destroying weapons have no other use.

In limited war, forces and weapons of precision are needed, weapons whose effects can be limited, weapons that allow discrimination. These we have in our forces at sea and in our forces based on land.

These forces stress mobility. They stress it because mobility allows us to get adequate military strength where needed, when needed. Mobility frees us from the neces-

sity to post sizable forces near every potential trouble spot in the world. Instead, we move forces to where trouble erupts and we move them out when trouble ceases. They are then ready to move to the next trouble. This is a significant capability and we have it.

We have mobility in our hard-hitting Navy-Marine Corps team. The Tactical Air Command has it and uses it. The Strategic Air Corps is predicated upon it.

Mobility is one of our most important capabilities in any type conflict. It is there for us to use. We need only exploit it and see that we keep it.

There is more to U.S. total strength than our weapons, our mobility, our forces. We have allies and friends. They add to our strength. Some of them are strong; some are not so strong now. But they all believe in freedom; they have men willing to fight for it. Men with the will to fight for freedom are vital, so are weapons, and so is training. But some of our allies are far better off in men willing to fight than they are in weapons and training.

Our military assistance program works toward providing both the weapons and the training for these men. It takes a lot of hard work, time, and effort here and abroad, but it is well worth it. Military assistance is worth it because while we help freedom-loving men develop the capability to preserve their freedom we also make our freedom more secure.

In talking to you today, I have stressed what the Navy can do in our total military posture. But this does not mean that anyone in the Navy ever thinks the Navy can do it alone. We can't.

We know that a strong, potent, able Army is the only solution to extensive land campaigns. We know, too, that the amphibious capability of our fighting Marines is unexcelled by anyone, anywhere. And that marines are good in any ground fight.

We know the Navy can and will back up the Army and the Marines as we did in Korea. But we also know that land fighting is their business; they are experts at it; they work hard at it, and they are second to none at it.

Every sailor knows too that any campaign on the surface of the earth, at sea or ashore, needs airpower. The Navy provides its share at sea, but the air support for large land campaigns, inland battles, comes from land-based airpower. The United States needs land-based airpower. We have it in the Air Force and it is potent and ready.

The Army, the Air Force, and the Marines, as well as our Navy, are each vital parts of our strength and a big reason for confidence in American strength.

Strength is important, for freedom, but so, in today's world, is vigilance. We must be vigilant to every aspect of the threat to freedom. In the words of Thomas Jefferson, the price of liberty is eternal vigilance. This is true. But today, the vigilance that is required is far more than an alertness to danger or a careful provision for our personal security. The vigilance that must characterize America as the leader of free society, demands, perhaps most of all, our willingness to recognize our national and international responsibilities.

We must recognize the hard work, the effort, the sacrifice that these responsibilities entail. We must grasp these responsibilities willingly and eagerly. We must use the strength, the courage, and the enthusiasm that our freedom insures to serve the cause of justice and peace in the world.

Proposed Stamp Honoring Ignace Paderewski

EXTENSION OF REMARKS OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. CHAMBERLAIN. Mr. Speaker, in the 169 years since the Polish people proclaimed their Constitution, there have been many reversals of freedom and fortune in that country. But the history of the struggle for democracy in Poland is symbolic of the struggle for democracy in all countries.

Therefore, with much humility, I have suggested to the Honorable Arthur E. Summerfield, the Postmaster General of the United States, that every possible consideration be given the issuance of a stamp in the "champions of liberty" series in honor of Ignace Paderewski. I believe it is fitting and proper that we Americans pay such tribute to Paderewski, a man dedicated to establishing liberty and independence in his beloved Poland. In honoring Paderewski, we would be honoring the Poles still striving for independence in their homeland, Polish-Americans who are endeavoring to help in restoring Poland to its proper place among the family of nations, and to freedom-loving peoples all over the world.

My letter to the Postmaster General is as follows:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 10, 1960.

The Honorable ARTHUR E. SUMMERFIELD,
The Postmaster General of the United States,
Post Office Department,
Washington, D.C.

DEAR GENERAL SUMMERFIELD: Just recently I had an occasion to read about the life of Paderewski and I was fascinated by it, particularly in view of the many fraternal orders, religious, civic, educational and political organizations representing Americans of Polish ancestry in Michigan's Sixth Congressional District. I know they would deeply appreciate an Ignace Paderewski stamp in the "champions of liberty" series.

Paderewski, whose 100th anniversary of birth is November 6, 1960, will be commemorated not only by Poles and persons of Polish origin, but by many thousands of all nationalities throughout the world for his selfless service to the cause of freedom.

Acclaimed and revered as one of the greatest artists at the turn of the century, Paderewski was instrumental in organizing an independent Polish Army, recruited in 1917-18 in the United States, France, Canada, and other countries, including some in South America. The army fought at the side of the Allies on the Western front and, in later years greatly contributed to the rout of the Bolshevik forces in the heart of Europe, known as the Battle for Warsaw or the Miracle on the Vistula. With the outbreak of World War II, Paderewski became the Chairman of the National Council of the Republic of Poland which, first in France and later in England, became the rallying point for the Poles in exile as well as a source of inspiration and faith for the Poles in the

homeland during their heroic struggle with the invaders and the terrible torments of occupation.

Paderewski died in New York on June 29, 1941, and his remains were consigned to a crypt in Arlington Cemetery until such time when his beloved country could receive them in freedom.

Surely a man of Paderewski's stature belongs to the Champions of Liberty. Honoring him in this series would have tremendous psychological impact on the people of Poland, still longing for deliverance from the Russian yoke and would be gratefully accepted by Americans of Polish origin.

I urge that every possible consideration be given to Ignace Paderewski as a real Champion of Liberty.

With my kindest personal regards, I am,
Sincerely yours,

CHARLES E. CHAMBERLAIN.

St. Patrick High School's First 100 Years

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. PUCINSKI. Mr. Speaker, I am very happy to call attention of my colleagues to an article which appeared in the Chicago Sun-Times on March 10 about one of the outstanding high schools in Chicago. St. Patrick High School, situated virtually in the geographical center of my district, will be observing its 100th anniversary next year.

It would be very difficult to enumerate the large number of Americans who attended this fine school in the past 100 years and who are today leaders in almost every field of our society, not only in Chicago, but throughout the country.

The Brothers of Christian Schools, a Roman Catholic order of men devoted to teaching and study, deserve the highest degree of commendation for maintaining this fine high school during the past century. They are particularly deserving of praise for the fact that despite great difficulties, they managed in 1953 to build the beautiful three-story structure in my district at a cost of more than \$2 million to replace the original St. Patrick High School.

Americans of all religious beliefs could take pride in the high educational standards which this school maintains and the great contribution that it is making toward America's intellectual and scientific development. This modern high school is indeed an inspiration to educators throughout the country who not infrequently, during their visits to Chicago, come to admire this modern structure and its very high educational standards.

The Sun-Times article follows:

ST. PATRICK'S FIRST 100 YEARS—CITY'S OLDEST HIGH SCHOOL ACCENTS SCHOLARSHIP

(By William Baldwin)

St. Patrick's High School is a study in contrasts. It is the oldest parochial secondary school in Chicago but is housed in strictly modern surroundings.

The school's 100th anniversary next year will be celebrated in a gleaming three-story structure of steel, stone, and glass.

Behind this bright facade lies an educational plant combining enlightened teaching with first-rate technical facilities. The result is high morale and rate of scholarship among students and faculty.

St. Patrick opened its doors in 1861 on Chicago's Near West Side. It remained in that area until 1953 when it moved to its new \$2,250,000 quarters at 5900 West Belmont. Three years later, in response to growing community needs, a freshman wing was built to accommodate 500 additional students.

The school is run by the Brothers of Christian Schools, a Roman Catholic order of men devoted to teaching and study. The order was founded in France nearly three centuries ago by Jean Baptiste de la Salle. Since that time the Christian Brothers—as they are better known—have increased to 20,000 members, instructing more than half a million students throughout the world.

St. Patrick is unique among Chicago Catholic high schools in that it draws its pupils from 50 designated parishes. This quota system was established by the late Samuel Cardinal Stritch to relieve attendance pressures on other schools in a heavily Catholic area of the city.

Each parish decides which elementary school graduate will attend St. Patrick. The school then accepts them regardless of their academic ability.

Despite its new facilities, St. Patrick is filled to overflowing with 1,825 students. They are instructed by 38 brothers, most of whom have at least one master's degree. In the last 5 years, 23 lay teachers have been added to accommodate the swelling student body.

FORTY BOYS TO CLASS

At their head is Brother Adrian, school principal, who has been at St. Patrick 5 years.

Unlike many school heads, Brother Adrian is not unduly worried about the pressure of larger enrollments.

"We have 40 boys to a class, which is about the maximum one teacher can handle," he said. "However, a number of schools will open soon in this area, and this should enable us to reduce our student-teacher ratio."

Though St. Patrick has a full sports program, its emphasis is on brains rather than brawn.

THE ROUNDHOUSE

"Sports are important and we try to develop our boys into fine athletes," Brother Adrian observed. "But we want to instill in them that they are here primarily to receive a well-rounded education."

All first-year students study together in the freshman annex, dubbed "The Roundhouse" because of its cylindrical construction. There, as throughout the school, pupils work in large, brightly colored rooms with outside glass walls. Ramps between floors and doors connecting study rooms allow students to move swiftly from class to class, saving extra minutes for instruction.

St. Patrick makes every effort to place the student in his proper academic niche. The school maintains a full-time guidance counselor who tests entering freshmen and places them in one of three "tracks" or ability groups.

Exceptional students are picked early and encouraged to take advanced courses to better prepare them for college. Students are required to take 4 years of religion, English and physical education, and a year of science, American history and mathematics.

In his junior year a student who maintains good grades may (with parental ap-

proval) choose his own courses. At this stage he begins to specialize in one of three fields—science, business or skilled trades.

Whatever field he chooses, he is provided with excellent facilities.

REBUILD MOTORS

Typical is the automotive shop. There, under the guidance of a brother trained in industrial crafts, students tear down and rebuild car engines and transmissions provided by the school. At times they are allowed to bring in their own vehicles and do extensive repair work.

In the Spanish-language classrooms are gaily decorated Mexican rugs and pictures on the walls. On the blackboard is a large mural, drawn by one of the pupils, depicting a Spanish religious scene. A sign above the doorway translates, "Leave Your English Outside."

In such pleasant surroundings students learn Spanish, using language recordings and special television programs to increase their proficiency.

St. Patrick, however, does not confine itself to a narrow academic path. Students can participate in numerous extra curricular activities, ranging from hi-fi and camera clubs to playing in the swing band.

Throughout the school year there are dances such as the Sock Hop, where the wild and wooly music of rock 'n roll is still very popular.

ABILITY REWARDED

But for most students the dominating thought is not Elvis but education, and they constantly seek out Brother Louis, chief student counselor, for advice on further schooling and job opportunities.

This year Brother Louis and student counselors from four other Christian Brothers schools in the Chicago area are initiating a series of lecture discussions for their schools' outstanding pupils.

Visiting speakers will discuss the role of the school in the education of the individual. During the series the students will be assigned selected reading and will discuss the material with their instructors and other talented pupils.

"In this way," said Brother Louis, "we hope our boys will gain new insights into the what, why and how of learning, and they will begin to realize the scope of reality, the challenge of learning, and the reward of attaining truth."

The Fate of Berlin

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 11, 1960

Mr. KEATING. Mr. President, with the spot light of public interest now concentrated on the problem of keeping Berlin free from the creeping imperialism of the Soviet Union, it is vital for all Americans to support their Government during the forthcoming negotiations at the Summit Conference. The problem of a free Berlin is inseparable from the greater question of the reunification of Germany, and in turn, the integrity of the free world of which Western Germany is a vital part.

An Associated Press dispatch from Jakarta, Indonesia, quotes Nikita S. Khrushchev as warning the West that unless there is an agreement on West

Berlin status, the Soviet Union will sign a separate treaty with Communist East Germany.

This news story is disquieting in view of the high importance attached by this Nation to the guarantee of the continued free status of West Berlin. If our support of this status should be withdrawn, or compromised, by terms of an agreement, we would be selling out not only the immediate future of several hundred thousand Berliners, but also ourselves as the symbol of freedom in the world today. The continued presence of our troops and the President's firm stand at Paris are the assurances Western Berlin and all Europe require that we mean what we say when we pledge ourselves to the cause of freedom.

Mr. President, I ask unanimous consent that this news dispatch, as published in the New York Herald Tribune, be printed in the Appendix of the RECORD.

There being no objection, the news dispatch was ordered to be printed in the RECORD, as follows:

[From the New York Herald Tribune, Mar. 1, 1960]

KHRUSHCHEV WARNS: AGREE ON WEST BERLIN—SAYS SUMMIT MUST SETTLE STATUS OR HE'LL SIGN A SEPARATE TREATY

JAKARTA, INDONESIA, February 29.—Nikita S. Khrushchev warned today the May summit meeting must bring agreement on West Berlin's status or he will sign a separate treaty with Communist East Germany. And in that event, the Soviet Prime Minister said, West Berlin—where the western Big Three have garrisons—would come under authority of the East Germans "because West Berlin stands on territory belonging to the (Communist) German Democratic Republic."

But at a free-wheeling news conference near the end of his Indonesian visit, Mr. Khrushchev vowed to work for "a successful conclusion" at the Paris summit, and declared:

"I do believe in the good intentions of President Eisenhower, Prime Minister Macmillan, and President Charles de Gaulle."

Mr. Khrushchev often has threatened to sign a separate peace treaty with East Germany. But this was the first time he had tied the threat to the Paris summit meeting.

ANSWERS QUESTION

He made the remark in answering a question about reports that he will insist at the summit meeting, scheduled to start May 16 in Paris, that the Western Allies leave Berlin regardless of any concessions they may offer to Soviet views on disarmament.

Mr. Khrushchev replied this was really two questions because disarmament involved the question of peace for the world while Berlin was "a question of doing away with the vestiges of World War II, a question whose solution has been dragged out for 15 years."

"How much longer can we drag this out? We will do our utmost to remove the vestiges of World War II and urge our former allies to do the same."

"If they do not understand, or, if they understand but do not want to agree, then we will sign a separate peace treaty with the German Democratic Republic, and all consequences of the last war enforced in Germany will cease to be valid, and that includes West Berlin because West Berlin stands on territory belonging to the German Democratic Republic."

The peril of a Soviet-East German treaty to the Allied position in Berlin is that the East Germans would take over control of the supply lines to the city—110 miles behind

the Iron Curtain. The three Western powers refuse to recognize the East German regime.

REJECTS PLEBISCITE

Mr. Khrushchev rejected the idea of a German plebiscite to choose between the Western and Soviet plans for German unification, a proposal said to be under study by American Secretary of State Christian A. Herter.

"We are not going to take part in such a plebiscite since this would be interfering in the internal affairs of another country."

The Soviet Union wants unification through negotiations between the two Germans. The Western plan calls for U.N.-supervised elections in both parts of Germany to elect an all-German government.

In a statement opening the news conference, Mr. Khrushchev said a stable and lasting peace is the main question facing mankind and 1959 "brought the easing of international tension." Referring to the Paris summit meeting, he added that 1960 "has started with good signs."

IN JOVIAL MOOD

JAKARTA, INDONESIA, February 29.—Prime Minister Khrushchev was in a jovial mood today when he exchanged final toasts with President Sukarno.

"We will take the Communist path and you will take your path, but let us be friends," he told the Indonesian leader. "It is true I always praise communism. We are prepared to be friends with capitalist countries. History will decide which social system is best."

Mr. Khrushchev told his hosts: "I am not calling on you to become Communists." But he added that "the old and the rotten will always fight with the newly emerged; but it is a law of history that the new must always win."

President Sukarno, in his response, indicated that Mr. Khrushchev plans another visit to Indonesia, although he did not disclose the date.

The Negro Crime Rate: A Failure in Integration

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ALGER. Mr. Speaker, dedicated and sincere citizens, including certainly Members of the House, are deeply concerned over the civil rights issue and the factors that lie behind it. Understanding and tolerance are very important. We Members of the House do not question the sincerity of other Members. Yet we are well aware that human beings make mistakes and a failure to understand is the rule not the exception in human relationships, particularly of the controversial nature typified by the civil rights bill. All American citizens believe in two basic principles: First, the rule of law, and second, equal justice for every individual.

It is axiomatic that good law must be based on fact, not prejudice nor emotion, without regard to fact. In this spirit of searching for the truth, I present for fellow citizens and colleagues an article from Time magazine, April 21, 1958, en-

titled "The Negro Crime Rate: A Failure in Integration." I respectfully present this article for the study and criticism of my colleagues and those who are interested in this grave problem. It follows:

THE NEGRO CRIME RATE: A FAILURE IN INTEGRATION

They are afraid to say so in public, but many of the North's big-city mayors groan in private that their biggest and most worrisome problem is the crime rate among Negroes.

In 1,551 U.S. cities, according to the FBI tally for 1956, Negroes, making up 10 percent of the U.S. population, accounted for about 30 percent of all arrests, and 60 percent of the arrests for crimes involving violence or threat of bodily harm—murder, non-negligent manslaughter, rape, robbery, and aggravated assault. In one city after another, the figures—where they are not hidden or suppressed by politicians—reveal a shocking pattern. Items:

New York (14 percent Negro): Of the prisoners confined in houses of detention last year to await court disposition of their cases, 44 percent of the males and 65 percent of the females were Negroes.

Chicago (15 percent Negro): In 1956 twice as many Negroes as whites—1,366 to 679—were arrested on charges of murder, non-negligent manslaughter, rape and robbery.

Detroit (25 percent Negro): Two out of three prisoners held in the Wayne County jail are Negroes. Last month 62 percent of the defendants presented for trial in Recorder's Court were Negroes. Of last year's 25,216 arrests resulting in prosecution, excluding traffic cases, Negroes accounted for 12,919.

Los Angeles (13 percent Negro): In 1956 Negroes accounted for 28 percent of all arrests, and 48 percent of the arrests for homicide, rape, aggravated assault, robbery, burglary, larceny and auto theft.

San Francisco (7 percent Negro): The victims in 896 of last year's 1,564 recorded robbery cases reported that the assailants were Negroes.

Negro leaders sometimes argue passionately that arrest statistics widely distort the comparative incidence of crime among Negroes and whites because cops are more likely to arrest Negroes for petty crimes or on mere suspicion. Protests Executive Editor Charles Wartman of Detroit's Michigan Chronicle, a Negro weekly: "The number of Negroes booked is at least partially indicative of subconscious if not conscious racial persecution on the part of police officers."

But inequality of treatment by the police may actually tend to shrink rather than inflate the statistics of Negro crime. Says Newsman Wartman in the next breath: "When Negroes violate social morals—sex, drinking, gambling—white cops bypass this as typically Negro." Many Negro leaders protest that the police are far from diligent enough in dealing with crimes committed against Negroes—and Negroes are the victims in a great majority of Negro crimes of violence. Since Negroes even when they are victims or innocent bystanders, are often wary of calling the police, many offenses of disorder and assault go unreported when committed by Negroes in the depths of a ghetto.

Whether the statistics of Negro crime overstate or understate the reality, they are shrouded from public attention by what a Chicago judge last week called a conspiracy of concealment. In many cities, Negro leaders and organizations such as the National Association for the Advancement of Colored People put pressure on politicians, city officials, and newspapers to play down the subject. Fearing loss of Negro votes, few elected officials dare to resist the pressures.

Abetting the concealment campaign is the feeling shared by many whites that it is unfair, inflammatory, and even un-American to talk about Negro crime. This feeling is reflected in the widespread newspaper practice of not mentioning a criminal's race unless he is at large and the fact would help in identifying him.

In hiding the facts about Negro crime, the conspiracy of concealment helps blur the causes of it. Negro leaders themselves often put forward explanations that are oversimple. Some hold that Negro crime is largely the result of migrations from the South: in the unfamiliar environment of the North, the argument runs, Negroes tend to be more crime-prone, just like white immigrants from abroad. But in fact, some studies have shown that, contrary to popular conviction, crime rates among foreign-born whites were lower than among U.S.-born whites.

Most often, Negro leaders point to poverty as the No. 1 factor in Negro crime. As Editor Louis Martin of the Chicago Defender sees it, the main cause is poor and crowded housing. But the moderate crime rates among European immigrants, subject to similar stresses of poverty and bad housing, suggest that other factors may be more important.

Providing better housing for impoverished Negroes is a necessity, but it would not solve the problem of Negro crime. Crime rates run high in the Negro slums of Harlem and South Side Chicago, but they also run high in the Negro districts of Los Angeles and San Francisco, where the houses are comparatively decent. As many a public-housing official has learned to his dismay, better housing does not automatically bring about the improvement in character and conduct that do-gooders used to predict. Slum dwellers who move into brand-new public-housing projects often turn them into new slums as verminous and crime-ridden as the tenements they left behind.

Negro leadership could make a start toward lowering Negro crime rates by abandoning the conspiracy of concealment and urging full disclosure of the facts to be met. Once they faced the facts, Negro leaders and organizations—including the NAACP—could help by wholeheartedly undertaking short-term efforts of rehabilitation, by accepting responsibility in an area where they habitually look the other way.

But even heroic efforts by Negro leadership could only dent the Negro crime problem, because essentially it is a white problem. And it will remain a severe problem until northern whites, private citizens as well as civic officials, recognize that Negro crime is basically a symptom of a failure in integration, and start attacking discrimination in the North with the same fervor they show in arguing for civil rights in the South.

Unlike the caucasian immigrant of an earlier day, a Negro can scarcely ever hope, even in the North, that the white society will really accept him on his human merits. Negroes are more prone than whites to break the laws, rules, and customs of society because they are excluded from full membership in it. In gross and subtle ways, from unwritten ban on employing Negroes to the faintly patronizing tone that even liberal-hearted whites take toward them, Negroes are made to feel alien and inferior. This pervasive discrimination holds down capable Negroes at the top of the social ladder, dims their voices among their own people, builds up tensions and resentments inside the Negro society, and keeps great masses of Negroes segregated in ghettos where the standards of personal morality, discipline, and responsibility are lower than those in the white world outside.

"Slam enough doors in a man's face, and he may break one of them down," said San Francisco's Negro deputy city attorney, R. J.

Reynolds, last week. The way to reduce the percentage of Negro crime, he believes, is to stop slamming the doors, or at least, as a start, give the Negro a new hope that maybe the next door won't be slammed. Spreading the message of that new hope, he says, is a responsibility that Negro leaders will be very glad to assume.

Federal Referee Vote Proposal Restores Carpetbag Rule in the South

EXTENSION OF REMARKS

OF

HON. GEORGE HUDDLESTON, JR.

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. HUDDLESTON. Mr. Speaker, under leave heretofore granted, I am inserting herewith in the CONGRESSIONAL RECORD a very fine discussion of the Federal referee vote proposal presently under consideration in the House of Representatives, by our friend and colleague, Ed WILLIS, of Louisiana. This article appeared in the Birmingham (Ala.) News on Wednesday, March 9, 1960, and I commend it to the careful study of every Member of the House. There is more to this proposal than meets the eye.

The article follows:

FEDERAL REFEREE VOTE PROPOSAL RESTORES CARPETBAG RULE IN THE SOUTH

(U.S. Representative EDWIN H. WILLIS, Democrat, of Louisiana, a constitutional lawyer of wide experience, and a member of the House Committee on the Judiciary, analyzes the so-called Federal referee voter registration plan in the following article. The referee proposal, aimed at the South, is the center of a Senate controversy leading to the current filibuster.)

(By Hon. EDWIN H. WILLIS, Member of Congress)

WASHINGTON.—Very few people have had the opportunity to read and study the voting referee provision of the pending civil rights bill rigged up by the U.S. Attorney General and so-called liberal groups. It is one of a series of punitive political measures designed to penalize the Southern States in order to appeal in the coming presidential election to the organized minorities in the large cities of the North and West.

This effort to make the Southern States the political whipping boy is participated in with equal vigor by leaders of both the national Democratic and Republican Parties. PROPOSAL GOES BACK TO CARPETBAG FORCE BILLS

Fundamentally, it restores the old force bills of the chaotic Reconstruction days following the Civil War when the people of the South lived under a government by carpetbaggers. The pending bill was conceived by the same minds and the same U.S. Department of Justice that induced the President to commit the tragic error of sending the Army into Little Rock.

The bill was cleverly drafted and hastily introduced, and is sought to be grafted without hearings, on a comparatively moderate bill reported out of the House Judiciary Committee. The desperate filibuster now being conducted in the Senate hinges around this new bill, proposed, devised, and written by people outside of the legislative bodies. It takes from the States and vests in Federal authorities the supervision and control of elections, Federal and State, from the jus-

tice of the peace to the Governor of the State.

Here is how the bill will work if enacted into law:

Upon complaint, the first step will be, upon request of the Attorney General, for the Federal court to "make a finding" whether discrimination exists against Negro voters "pursuant to a pattern or practice."

BILL REMAINS VAGUE IN DEFINITION OF TERMS

The bill does not define what constitutes a pattern or practice and the decision on this question is left entirely to the discretion, whims, or prejudices of a Federal judge. It does not require that the Federal judge shall be a local one. A judge from any other State in the Union may be designated to preside and supervise the local elections. It will be remembered that a Federal judge from North Dakota was designated to preside over the hearings that led to the Little Rock incident.

There is a total lack in the bill of any provision of how this finding shall be made, or the rules, procedures, or evidence under which it is to be done. After the Federal judge, under the guidance of the Attorney General and without any specific provision for a hearing on the part of the State involved, makes a finding that a pattern of discrimination exists, the decree would establish a conclusive presumption that all Negroes, who were not even parties to the initial proceeding, have in fact been discriminated against. It would make it totally unnecessary for them to prove any alleged discrimination on account of race or color. That is the rub, the crux, and the very heart of the bill.

In the next step, the referee, appointed by the Federal judge takes the statement of the applicant and the specific language of the bill requires that "the applicant shall be ex parte," which means that the other parties, the State and the authorities in the locality, are denied the opportunity to be heard. The first bill introduced on the subject specifically required that these referees be selected from persons outside of the State. This was such an obvious carpetbagger requirement that in the revised bill that provision is omitted. But there is no provision in the present bill that the referee shall be a local person with knowledge of local people and it still permits, although it does not require the court to appoint carpetbagger referees from out of the State.

The next step in this cunning scheme compels the referee to presume that the applicant has been denied the right to vote on account of race or color and to accept as true his representation or misrepresentation as to his age, residence, etc. The referee really does not referee anything. He hears only one side of the issue.

CONFRONTATION RIGHT DENIED TO THE STATE

The bill, in violation of all standards of due process, denies local registrars of voters or State officials, who are presumed to have denied the right of an applicant to vote on account of race or color, the right to be present with counsel at the so-called hearing and the right to confront and cross-examine their accusers.

In the next step, the referee reports the result of his phony hearing to the court. At this point only, the attorney general of the State is invited to file exceptions to the report, but since the report contains only the self-serving declaration of the applicants, without the right of confrontation and cross-examination, this investigation is practically meaningless.

When all of this unprecedented procedure has been carried out according to plan, the court gives to the Negro a certificate that he is a qualified voter and then authorizes the referee or such other person or persons as he may designate to attend the election at all polling places, look over the shoulders of

the State authorities and see that the person is voted, and that the vote is counted. State law requires election officials to keep people a stated distance from polling places and voting booths, so that under the bill, if they admit the Federal agents, they go to State jails, and if they exclude them, they go to Federal jails.

ELECTION OFFICIALS DENIED TRIAL BY JURY

Likewise, in all other respects, if complaint is made by a Negro voter that the judge's orders have not been carried out to the letter, the State election officials may be hauled into court on a contempt citation and sentenced to jail, or fined, or both, and deprived of the right to trial by jury. It is a frightening prospect that in the United States our Federal jails could be filled with political prisoners consisting of State officials.

Such is the devil's brew that is cooked up for consumption for the Southern States alone. It is utterly unconstitutional. It is devastating. It is the sure breeder of racial troubles of untold proportions.

Address of Hon. John E. Fogarty

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the Open Forum on the White House Conference on Aging, sponsored by the American Association of Retired Persons and the National Retired Teachers Association, at the Coliseum, St. Petersburg, Fla., on January 18, 1960:

WHAT I EXPECT OF THE WHITE HOUSE CONFERENCE ON AGING

(By Hon. JOHN E. FOGARTY, Congressman from Rhode Island)

Dr. Andrus, Miss Adkins, Mr. Whittier, distinguished guests, and friends, it is a real privilege to have this opportunity to participate in this open forum on the White House Conference on Aging. The National Retired Teachers Association and the American Association of Retired Persons deserve high praise for sponsoring this meeting to provide the occasion for older persons to share their rich experiences and to make suggestions and recommendations that will contribute to the success of the conference scheduled in Washington, D.C., January 9-12, 1961.

As you know, I have a deep personal and official interest in the results of this, the first White House Conference on Aging. I am personally interested to the extent that I introduced H.R. 9822 calling on the President to hold such a conference and my official interest is that of chairman of the Appropriations Committee of the House of Representatives.

For the last 14 of my 20 years in Congress, I have been active on the Health Subcommittee on Appropriations. During this time I have derived a great deal of satisfaction in having a part in establishing broad, forward-looking programs of research in the medical and biological sciences.

Throughout these years it has been a very exciting and humbling experience to witness the progress that has been made in the prevention and control of dreaded disease.

We know for example that:

One cancer patient out of three can now be saved, as compared with one out four in

1938, which means that there are now 800,000 persons living in the United States who have been saved from cancer.

Advances in research now permit significant reduction in disability and premature death among those who suffer from heart attacks and high blood pressure.

Thousands of individuals born with heart defects, once doomed to invalidism and early death, are leading useful and productive lives because of advances in heart surgery.

Progress in the infectious and communicable diseases has revolutionized medical and public health practices in these fields, as illustrated by recent advances against tuberculosis, poliomyelitis, and rheumatic fever.

Because of new medical and surgical treatment now available, approximately 80 percent of all people with epilepsy are capable of regular productive employment in a wide range of jobs.

Research has led to methods that can reduce tooth decay by 50 percent.

A major cause of blindness among infants has been discovered and eliminated.

With new drugs and methods of treatment and diagnosis, it is possible to prevent crippling in 70 percent of patients suffering from rheumatic disease.

For the first time discharges from mental hospitals have outnumbered admissions, based on new methods of treatment resulting from research.

The progress in medical research has not only performed literal miracles in the health field, but prevented the loss of goods and services to our economy that is measured in billions of dollars.

You must be impressed as I am with the fact that the examples I cited are not diseases of any one age group—but are threats to us all. It is true that some are more prevalent in the young and old but the research into the basic disease affects people of every age.

Sincerely concerned with the depth of the problems which are represented in the programs that come before my committee for supporting funds, I have frequently encouraged the increase in appropriation requests for research, study, and demonstration to meet the challenges of a dynamic economy.

I firmly believe that the health of all our citizens must always rate one of the top priorities in our efforts to improve the State of our Nation. There are, however, other areas that demand the attention of the most experienced and capable minds of our people.

There are many who say that the role of American education must be redefined and strengthened to maintain our position in the family of Nations and achieve the intellectual and social challenges of our time. I do not have to stress the problems confronting us in the field of education to this audience. We are, however, just beginning to be effective in having lifelong education accepted as the pattern for our lives rather than the academic concentration for limited periods.

This new approach to education was one of the many fine results of the White House Conference on Education. We must continue in our efforts to place education in its proper perspective for all age groups, and I believe your associations can be expected to give leadership to such a national program.

Everywhere there is mounting concern for equal employment opportunities for those who are willing, able and desire employment. Perhaps in no other field is "aging" more flexible. We must recognize that employment as a problem associated with aging must not be regarded as a special handicap for those in their later years. True, it becomes more acute, but we must recognize that our definition of age or aging must be related to the situation and the person on an individual basis.

We must come to grips with the prevailing practice of mandatory retirement. There are real problems to be solved on the basis of seniority and insurance costs. It is unfair to compulsorily retire a person by reason of age alone.

Our statistics have proven the worth of older employees, life expectancy has been extended, medical care and research have practically insured a longer, healthier life—and yet almost nothing has been done to eliminate or delay compulsory retirement beyond the age of 65 which was psychologically established by the passage of the 1935 Social Security Act.

The amount of income needed to maintain a decent standard of living has never been fully defined or broadly accepted. The best studies do document that too many retired individuals are living on incomes that are inadequate to provide for minimum health care and the necessities to maintain a self-respecting independent role in the community. The threat of inflation to those on fixed incomes is very real and must be given more understanding consideration in our tax programs, social security benefits, limitation on earnings, and provisions for hospital and medical care.

One cannot review the problems facing the Nation without including the place and importance of housing and its influence on the family and its members of all ages. There have been demonstration projects, but the balance in providing living accommodations for all of the age groups has not been maintained. The needs of the older members of our society have been overlooked, neglected, or ignored until recently—and today plans to meet the backlog of suitable housing at prices they can afford have not been forthcoming.

Perhaps this appears to have been a devotional approach to "What I expect from the White House Conference on Aging." Rather, it is an attempt to show the needs that became apparent to me as chairman of the House Appropriations Committee.

I was convinced that in the public interest, legislation was needed immediately to improve and develop programs "to permit the country to take advantage of the experience and skills of older persons; and to create conditions which will better enable them to meet their needs."

It is not necessary for me to develop the statistics of the aging for this audience. Within the age limits that qualify individuals for membership in your associations, there are more than 30 million persons 55 years of age and over in our country representing approximately one-sixth of our total population.

I have been very critical of the lack of breadth and scope in the Federal programs in the field of aging, and have encouraged the expansion of staff and facilities to meet the challenge. It became evident during hearings on appropriations and during the hearings conducted by Congressman Wier on bills relating to the aging, that Congress would have to take the initiative if it were to be done—before it was too late.

The bipartisan support given my bill in both Houses of the Congress is almost without parallel in the history of major legislation. It is a tribute to their interest and desire to accept their full responsibility as the representatives of the people to act in their best interest and for the good of our Nation.

I would like to add also that the appropriations for the White House Conference on Aging have been made available in the amounts requested. I have even asked if additional funds were needed to make this conference the most effective to date. I have been determined from the beginning that everything that we could do at the congressional level to assist and support this important meeting would be done. It has the

potential of being one of the most significant national conferences ever held.

To earn this distinction certain very specific things must take place—before—during—and following the meeting.

Before the meeting, each State must survey its needs, involve its ablest leaders at every level within the State, to determine what are the resources and the potential of its people. This must also include the direct expressions from older persons themselves, as we are seeking here—not others speaking and thinking in their behalf.

Responsible national organizations must identify their role and educate their members to the important contribution they can make as an informed group at the local, State and regional meetings. Those responsible for the overall planning at the Federal level must provide the leadership needed to assist the States and organizations in their task and structure a conference in 1961 that can truly be the crescendo of all the effort and results that will have developed from the "grass roots"; been strengthened at the State conferences and culminating in a meeting that will in every sense be a "Citizens Forum."

During the Conference every effort must be made to take full advantage of informed delegates. The broad representation of interests must result in conclusions that are improved by the strength of cooperative judgment and not decisions of any special interest or partisan group or overzealous individuals.

Positive action programs must be proposed and adopted to keep this conference from the fate of too many others held in the name of aging. I said at the time of introducing my bill that the greatest accomplishment in the field of aging to date had been the production of words. I would not want to have been a contributing factor to furthering this claim. The words that result from this White House Conference must be symbols for action.

Following the conference, I would like every delegate to consider that he has a mandate to interpret the conference to those he represents and to initiate the steps necessary to implement the recommendation within the State or at whichever level the program is directed.

I think it is important to emphasize that the primary responsibility for meeting the challenge of aging is that of the State and communities.

I do admit to a great deal of optimism over the results of the conference, but I must also share some of the thoughts that trouble me in the planning and activities to date.

There are indications that the bipartisan support given in the Congress is not being maintained in some of the appointments and designation of persons responsible for conference leadership.

Some of the developments at the State and local levels seem slightly superficial and have not carried out the grassroots approach that was hoped for in our goals.

It is natural for organizations of divergent points of view to want to be well represented, but I would question the results of any conference that were influenced by delegates committed to a narrow point of view rather than the best interests of the age group for whom the conference was called.

It is also disturbing to hear of planning that appears to be directed toward the Conference as the goal in itself. The Conference will be the beginning of a national, balanced program in which government at all levels, organizations public and private, and individuals will know their important role and prepared to undertake the challenge and opportunity that our increasing number of older persons present to each of us.

In summary—the White House Conference on Aging must not be another "hand-writing" demonstration of pity for the prob-

lems of the aging. It must be a forum dedicated to positive action that will be carried out wherever older people are working and living and want to remain independent, respected members of the family, community, and Nation.

These are not the demands of a special interest group—but rather the aim for Americans of all ages.

I am convinced that when blueprints have been forged out in the communities and States, they can be brought together and shaped into a comprehensive program for the guidance of the whole Nation and an example to the whole world.

Enlisted Men in Armed Services Deserve Respect

EXTENSION OF REMARKS

OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. KOWALSKI. Mr. Speaker, the American public is understandably indignant over press reports of an incident in Germany in which the young son of an Army colonel was allowed to take part in an official inspection of troops and to find fault with the men.

An excellent editorial on this incident was carried on Wednesday, March 9, by the Hartford Times, one of New England's leading newspapers.

The Times points out that the incident is more serious than the Army apparently considers it to be. The basic issue, the editorial says eloquently, is the right of the enlisted man in the armed services of the United States to respect.

In our services, Mr. Speaker, we have the finest young men in the world. They are a credit to the uniforms they wear, and for their uniforms and for their role as defenders of democracy they are entitled to the respect of all of us, including their officers. The large majority of military officers maintain this respect for the enlisted man, but those who regard him as somehow of a lesser breed are doing the Defense Establishment and our country a grave disservice.

The American enlisted man wants to do his share in our national defense. He wants to feel that he is part of a common team effort. He knows that when he is assigned to be a personal servant in an officer's home, or when his job is to bag groceries in a commissary, or when he must serve as a bartender or a waiter, or when an officer's small son, in uniform, is allowed to inspect his unit—he knows then, Mr. Speaker, that instead of contributing to our defense his services are being wasted.

I wish that every policymaker in the Pentagon would read this editorial from the Hartford Times and take its message to heart.

The editorial follows:

DISCIPLINE THE COLONEL

If the respect of enlisted men of the 22d Ordnance Company in Munich for their officers has dropped to near zero, it's understandable. Men of the company were inspected recently by Col. K. E. Juergens. It

was a barracks inspection, and the men stood at attention while the colonel looked over their barracks bags and uniforms.

Behind the colonel came a strange sight, the colonel's 11-year-old son Richard wearing the full uniform of a lieutenant, complete with swagger stick and campaign ribbons. He pawed through the bags and chewed out at least one man for not having a shoulder patch on his parka. The colonel, the Army claims, didn't know Richard was making his own inspection.

The soldiers naturally got sore. Some of them griped to their Congressmen. The Army seems inclined to pass it off as lightly as possible. One official statement was that there was no violation of Army regulations in the unauthorized wearing of the uniform.

This is a much more serious matter than either the colonel or the Army seems to believe. The uniform is a mark of honor. If Army regulations don't punish its misuse, Federal law does. We do not mean that Richard should be hauled into Federal court; a spanking which was suggested by one sergeant who witnessed the inspection, would suffice. However, his father has a heavier responsibility. If he didn't know that Richard was inspecting the troops, he knew the boy was wearing a uniform to which he was not entitled—indeed, the colonel had it tailored for Richard.

Richard's actions reflect an attitude he must have learned at home. They betray a lack of respect for the enlisted man of the U.S. Army. Unfortunately, there are some officers in every military service who believe they are of a breed different from the common species of which enlisted men are members. They forget that the salute is a gesture of respect for the rank, not for the officer until he has earned it.

There is a difference between dignity and snobishness. Colonel Juergens and his family should be taught what it is.

Florida's Good and Bad Schools

EXTENSION OF REMARKS

OF

HON. ROBERT L. F. SIKES

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. SIKES. Mr. Speaker, I would like to call to the attention of my colleagues an article appearing in the Florida Education magazine, January 1960 issue, entitled "Florida's Good and Bad Schools," written by Mr. Ralph E. Odum, assistant attorney general, State of Florida. Mr. Odum has a lot to say and he says it well:

FLORIDA'S GOOD AND BAD SCHOOLS

(By Ralph E. Odum)

I am happy to accept your invitation to talk about Florida schools. I am vitally interested in this subject, both as a parent and as an assistant attorney general assigned by Attorney General Ervin, to handle the legal work for both the State department of education and the State board of control.

There is a furniture dealer in central Florida who has a good, honest sign over his store. The sign and his advertising read, "Good and bad furniture."

This businessman has enjoyed unusual prosperity over the years and I cannot help but believe his candid appraisal of his merchandise has contributed to this success.

I also believe that such an honest appraisal of our Florida schools would be helpful. We have both good and bad schools available

and the customer can take his choice, depending upon what he wants and how much he is willing to pay.

Today I am going to assume that you as school customers—as all of you are either directly or indirectly—are discriminating in your tastes both in furniture and schools and are not interested in being shown a bad product in any category. As a cross section of business and professional leaders in this city, I have no reason to think you are shopping for anything cheap or inferior so I am going to talk about Florida's good schools.

I have another reason for deliberately showing you our best quality schools and the best things about our school system.

In checking newspaper files in recent years I find that a large part of printed comment about Florida schools, both editorially and in the news columns, has been concerned with our bad schools.

Doctors, lawyers, editors, businessmen, farmers, statesmen, and even schoolteachers have been having a wonderful time accentuating the negative. Much of this criticism has been well founded and constructive. Some of it has been based on fancy rather than fact, but even constructive criticism, necessary as it is, can be overdone.

A growing boy sometimes needs a dose of castor oil or some other potent therapy, but a steady diet of castor oil, with never any ice cream and cake might stunt his growth and have other undesirable results.

This report on Florida education is going to be ice cream and cake and I believe it is justified. I have tried to find out everything good I can say about our schools in the time allotted—but I reserve the right to go back to the castor oil treatment at some other time and place if I want to.

One of the best ways to get an idea of how well our schools are doing is to look at them through the eyes of impartial authorities outside of Florida.

Last year Dr. Benjamin Fine, writing an education editor of the New York Times, said that Florida has shown more improvement on every level of education, from elementary to graduate schools, than any other State in the Union.

In the examinations for the first Air Force Academy class several years ago, Florida's 78 nominees ranked No. 1 as a group among the States. The five nominees who were selected as cadets in the first class also ranked No. 1 as a group.

A few weeks ago Mr. Zollie Maynard, State supervisor of health and physical education, attended a meeting at the Air Force Academy as a member of President Eisenhower's National Committee on Physical Fitness.

The Registrar of the Academy told Mr. Maynard that to officials of the Academy, Florida is the most interesting State in the country. He said by way of example that if all admissions to the Academy had been made on purely a competitive basis, they would have had to admit fully 50 percent of all Florida applicants since the opening of the Academy.

The astonishing accomplishments of students in Brevard County schools have been the subject of articles in outstanding magazines such as U.S. News & World Report and Time and in the national press.

Let's take a short look at just three of the literary hundreds of Florida graduates who right now are achieving national recognition in one way or another of their scholastic accomplishments.

Paul Hendrick was born in Mayo, Fla. He graduated from Jasper High School on May 26, 1958. In March of 1958 he applied for a State teaching scholarship loan and scored in the top 2 percent on the scholarship qualifying examination using national norms. At the beginning of the 1958-59 term he entered the University of Florida as a freshman in teacher education.

In the spring of 1959 the U.S. Department of Agriculture, the U.S. Department of State, and the Department of Commerce decided to participate in the International Agricultural Fair to be held in Burma, India in 1960. The three departments appointed a joint committee to plan the U.S. participation. They decided to send four boys and four girls to describe the exhibits to the fair visitors. They divided the United States into four regions—northwest, northeast, southwest and southeast. Each State selected from all farm youth the one boy and one girl they felt to be most outstanding. Their academic records were forwarded to the committee in Washington and the committee selected one boy and one girl from each region.

The southeastern region contains 56 percent of all farm youth in organized Future Farmers of America and 4-H work in this country. This region is composed of 13 States. From this intense competition Paul Hendrick was selected as the outstanding farm youth from the southeastern region and one of the group to represent the United States at the fair.

Paul and the others in the group are in Washington at the present time being trained by the State Department for their work. Paul plans to return to the University of Florida at the beginning of the 1960-61 term to continue his teacher training program.

From the other end of the State, Enith Vardaman was born in Miami and reared in that city. She graduated from Miami Edison Senior High School on June 6, 1958. In March of 1958 she applied for a State teaching scholarship loan and on the examination scored in the top 2 percent as did Paul Hendrick. She entered Stetson University at DeLand as a freshman in teacher education at the beginning of the 1958-59 term. At the end of the term she had earned the highest grade point average of all freshmen students at Stetson and was awarded the academic council class award for that year.

Out in west Florida, David A. Sellers was born in Bonifay in 1940. He started to school in Chipley and graduated from the Chipley High School. Last year he scored the highest score in the Nation on the competitive examinations for the U.S. Coast Guard Academy and then for good measure passed the U.S. Air Force Academy examination, finishing first among the Florida applicants, which means he must have been first in the country or close to it. Congressman Bob Sikes nominated David for the Air Force Academy and he accepted the nomination.

Considered as a group, Florida students who are given State teaching scholarship loans are important as evidence of academic excellence in many of our Florida schools. They also provide an indication of the caliber of some of the people who will be our future teachers.

A report from Florida State University for the 1957-58 school year showed that the average score on the statewide 12th grade test for all students at the university was 315. When 441 recipients of State teaching scholarship loans were considered as a group, their average score was 407. Studies now in process show that the average score is higher now than at the time of the 1957-58 study.

Only applicants scoring in the top 17 percent (using national norms) on the scholarship qualifying examination are considered for a State teaching scholarship loan. The median percentile score for the 287 awards for the 1959-60 term was 96. This means that one-half of those entering teacher training on State scholarship loans at the beginning of this school year were in top 4 percent of the students in the Nation with reference to academic ability and achievement.

The ratio of applicants to scholarship loan vacancies during the past 4 years has been about 7 to 1. Each year about 50 percent of the applicants have earned a test score which qualified them for an award; however, there have been scholarship loans for only 13 percent of the applicants.

Eighty percent of the scholarship graduates at the end of the last 2 years accepted teaching positions in Florida public schools. Ten percent entered military service or qualified for a 1-year deferment. Only about 1 out of 10 elected to return to the State in cash the funds received and not to teach. There is no evidence of any teacher scholarship program in the Nation which equals this record of effectiveness.

Quite a number of instructional materials developed in Florida for Florida teachers have attracted national attention and in many instances have pioneered the way for instructional improvements in other States. For example, the book "Functional Mathematics in the Secondary Schools" which we began using 10 years ago, contains many of the proposals for upgrading mathematics instruction to an advanced level which are now beginning to be recommended nationally.

This may help explain why in 1958 although only 46 percent of Florida white high school seniors scored above the national average on general ability or intelligence tests, 67 percent scored higher than the national average on achievement tests in mathematics and 68 percent scored higher in the natural sciences.

In 1943 a comparison was made of general achievement of a 5 percent random sampling of high school seniors throughout the United States and it was found that the average rating of the Florida students was ninth from the top. The same kind of study was made again in 1955 and Florida ranked sixth from the top. These facts are derived from a report to the States based on an analysis of the general educational development test scores made by Bloom and Statler at the University of Chicago. If a similar study were made this year, my guess is that Florida would show even more improvement.

This guess is based on the following facts: Florida was one of the first States to make science a required subject in elementary schools as well as secondary. Advanced courses in mathematics and science are now available to 95 percent of all senior high school students in Florida. Last year seven-eighths of all students in Florida high schools were enrolled in schools offering foreign languages. Some offer as many as five foreign languages—for instance, some schools in Brevard County. More and more Florida schools are starting foreign language instruction in the elementary schools—to name a few, Collier, Okeechobee, Orange, and Bay Counties.

Certain schools in every area of the State are doing an outstanding job and I do not know of any county school system which has not shown impressive improvement during the last 10 years.

Coral Gables High School, for example, was rated in Time and Newsweek magazine reports as among the 38 outstanding schools in the country based on schools producing 20 or more finalists in national merit scholarship competition. Students in this school received various scholarship awards last year totaling \$502,373.

This year some 550,000 students in more than 14,500 high schools throughout the country took the national merit scholarship qualifying test. On the basis of this test, approximately the top 1½ percent were selected to enter the semifinal competition, some from each State prorated according to senior high population.

In Florida the winners of this high scholastic honor came from city schools and country schools, large and small, scattered over the State. Specifically, they came in

varying numbers from the following places: Baker County, Bartow, Bradenton, Clearwater, Coral Gables, Crestview, Daytona Beach, DeLand, Ft. Lauderdale, Ft. Myers, Gainesville, Gulfport, Hialeah, Hollywood, Jacksonville, Lakeland, Lake Worth, Largo, Melbourne, Miami, Miami Beach, Milton, Mount Dora, New Port Richey, North Miami, Panama City, Pensacola, Plant City, Pompano Beach, Rockledge, Sarasota, Shalimar, St. Augustine, St. Leo, St. Petersburg, Tallahassee, Tampa, Tarpon Springs, Umatilla, West Palm Beach, Wimauma, Winter Garden, Winter Haven, and Winter Park. Here in Orlando, Edgewater High School had eight students who qualified and Boone High had three.

The important thing to remember about this is that schools located in each of the 45 places listed above have one or more students, totaling 187, who rank scholastically in the top 1½ percent of the more than half million high school seniors in the United States who took the examinations.

Perhaps an even more significant indication of schools that are doing an outstanding job are the ones with a high percentage of students whose scores on achievement tests are in line with or above their showing on ability tests.

In fact, I intend to suggest to the State board of education that it establish an honor roll of Florida high schools each year on this basis, along with such other reasonable criteria as could be established. Last year the following schools could have been on the honor roll of this kind: Boone High in Orange County, Palm Beach High, Leon High in Tallahassee, Plant High in Tampa, Coral Gables High in Dade County, Boca Ciega High and Clearwater High in Pinellas County, Fort Lauderdale High, Northeast High in Pinellas County, Hillsborough High in Tampa, Columbia County High, Pasco County High, Winter Park High in Orange, Bradford County High, Dan McCarty High in St. Lucie, Clay County High, Walton County High, Choctawhatchee High in Okaloosa County, Martin County High, Kathleen High in Polk County, East Bay High in Hillsborough, Turkey Creek High in Hillsborough, St. Cloud High in Osceola, Lake Weir High in Marion, University High in Leon, Quincy High in Gadsden County, Charlotte County High, Williston High in Levy, Ponce de Leon High in Holmes, P. K. Yonge in Alachua, Hernando County High, Cottdale High in Jackson County, Clewiston High in Hendry County.

Florida is fortunate with respect to the organizational structure of its school system. A statutory provision made by the judgment and foresight of the 1947 legislature, which was enacted at the same time as our famed minimum foundation program, insured not only the success of this program but set the tone for local control by the counties.

In the same omnibus bill with the minimum foundation program itself was a section which abolished 703 small school districts in Florida and created 67 districts whose boundaries are coextensive with those of the counties themselves.

Mr. Tom Morgan of the State department of education tells me that by comparison, there are many otherwise progressive States which still suffer from this confusion of the "horse and buggy" era. California is one of these. The State of Illinois at one time had the incredible number of over 12,000 small school districts. Within the past few years Illinois happily reported that this number had been reduced to six or seven thousand districts.

In Florida the picture prior to the 1947 law was dismal and confusing. Take for example Polk County where I grew up. Official records show that Polk County in the fiscal year 1941-42 had 40 districts levying constitutional millages for support and

maintenance of schools. By 1946 Polk had reduced this number to 37 by local referendum. Each one of these small school districts could issue its own bonds and had its own separate budget. They pretty well selected their own teachers and paid them according to their own ideas without any countywide policy to guide them. Sometimes they would levy enough taxes to run the schools and sometimes they wouldn't. The records show that the bond districts in Polk at one time exceeded the support and maintenance districts in number. There was at one time a district No. 54 in Polk which collected taxes for the retirement of bonds. At a later date No. 48 was the highest number shown as collecting taxes for principal and interest due on bonds, this reduction being due to consolidation of some of the districts.

This administrative nightmare gives some idea of the improved system we now take for granted in Florida; an administrative system which in terms of better instruction for each child is definitely tied in with efficient organization, particularly with respect to financial support by both county and State.

When I was in Lakeland High School in 1930 we were the only school in the county which had a gymnasium. As I recall, there were at least a dozen other high schools in Polk County at that time and they used to consider it a great privilege to play basketball against Lakeland, for the simple reason the kids wanted to see how it felt to play on an indoor court. Dr. J. T. Kelly who is now with the State Department of Education was principal and coach of the Haines City High School that year and he told me he joined the National Guard primarily to get the Guard to let his kids play basketball in the armory.

We had a tin gym and a chemistry lab at Lakeland but no school library. Very few schools in the State had any of these things. There were no free school buses, free textbooks, audiovisual aids, publicly supported school lunchrooms and 18 percent of the high school principals in the State had not finished college. In fact, about 5 percent of the teachers had only a high school education or less.

In 1930 we had 10,960 teachers in Florida and 7,285 of them were teaching in elementary schools for a school term which averaged 6½ months. Most of them were lady teachers whose annual salary was about \$750. For a while in Lakeland and many other places, the teachers were not paid in money but in something called "scrip" which could be traded for groceries for about 50 cents on the dollar if they had a friend in the grocery business.

Today we have approximately 40,000 teachers and 98.12 percent of them have a 4-year college degree or more. They are required to teach a full 9 months by Florida law and they are paid an average annual salary of \$4,948. I doubt there are many principals, if any, who do not have a master's degree.

When I was in Lakeland High School in 1930 there were 7,080 seniors in the entire State. Last year we graduated approximately 30,000.

Since 1895 we have spent an estimated \$489,054,346 buying land and building buildings for public schools.

Since then and especially during the last 10 or 15 years land in Florida has multiplied in value and the cost of construction has skyrocketed. In recent years Dade County has had to spend as much as \$100,000 per acre for land to enlarge a Negro school. I believe a most conservative estimate of the present-day value of school property in Florida would be well over \$1 billion and this does not include the cost of such things as school buses. Florida operates a transportation system in order to get its children to school which requires more vehicles than all the interstate bus companies operate in Florida combined, and is certainly one of the safest in the

country from the standpoint of driver requirements and bus specifications.

We now take all these things for granted, along with educational television in many areas of the State, driver education, summer school programs which the Kefauver committee said have made a major contribution to reduction of juvenile delinquency in Florida, a program for handicapped children which in 1958 provided specially trained teachers for 44,604 children who although able to learn cannot be properly taught in the regular classroom, vocational and evening schools for 211,562 people during the past year, 16 junior colleges with an enrollment last year of 12,592 whose graduates show up considerably better scholastically when they transfer to the universities than the average college student, kindergartens in 11 counties, an athletic and physical fitness program that is considered excellent by many other States, and a school band and music program that will hold its own in any competition.

These things and many other school services which the people of Florida demand and the legislature has required by law help me to understand why we are now spending (not counting building costs and paying for bonds) about twice as much to educate each child as we did 10 years ago. The estimated expenditure per pupil for operating expenses in 1958-59 placed Florida 34th among the States. Personally, I think that in most counties, we are getting more than our money's worth.

In 1948 we had 368,587 children in school and spent \$58,305,345 for current expense which amounted to a cost per pupil of \$158.19.

Last year we had 814,888 children in school and spend for current expense \$239,705,500 or \$294.16 per pupil.

Although Florida ranked 16th among the States last year in the amount we paid our teachers, we did provide them with probably the best retirement system in the country.

For example, let's compare Florida with California, which is one of the top States salarywise. A Florida teacher who retires at age 60 with 35 years' service and a 10 years' average salary of \$6,950 would be paid a monthly retirement income of \$405 and she would have contributed \$7,428 of her own money in the retirement fund.

A California teacher in the same category would receive \$388 per month retirement pay and it would have cost her \$10,698.

Florida during the past 10 years has embarked on one of the largest school construction programs in the country. It had to in order to keep up with the population increase which keeps doubling and redoubling in many counties.

Florida's modern, functional school buildings have attracted nationwide attention and have been the subject of many articles in national publications. Latest to draw praise are school buildings in Sarasota County called by Time magazine a "showcase of school architecture."

And yet, generally speaking, construction costs of school buildings in Florida run about 20 percent less than in Northern States.

Another major development in Florida schools recently is its effort in pioneering in the development of salary schedules which recognize exceptionally meritorious teaching ability and service.

Efforts along this line have been made from time to time in other States but have generally failed because of administrative difficulties. There is good reason to believe that the approach recommended by Governor Collins and approved by the Legislature will prove to be successful.

I think probably Florida's major contribution to schools throughout the Nation, however, has been its massive Minimum Foundation Program which was enacted into law by the Florida Legislature in 1947. This was

truly an all-important breakthrough in school administration which has revolutionized the schools in this State and is serving as a model in many other States.

These are a few of the things going on in Florida schools which sometimes get overlooked in our agony of adjustment and reappraisal but which lead me to believe that we may not be doing so badly after all.

We have come a long way in the past 10 years but I believe we will have to travel faster in the next if we are going to provide even an adequate education for our youngsters who are already living in the space age whether we like it or not.

The bright ones are concerned with abstract ideas for which the education of your day and mine does not even provide a means of communication. If you do not believe me, ask your high school math student what is a googolplex and what it's for, as I had to do when I first heard the word.

One thing I know, I do not intend to use the castor oil treatment again when discussing education until I have found out a lot more about what I am talking about than I know now.

I intend to find out to the best of my ability because I know of nothing more important as far as the affairs of this earth are concerned than how we use and transmit the knowledge which has been loosed upon us. I think this knowledge must be used and conveyed in such a way as to preserve the fundamental values which transcend knowledge but which can be destroyed in this day by either a perverse knowledge or lack of knowledge.

Civil Rights

EXTENSION OF REMARKS OF

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. GILBERT. Mr. Speaker, I am gratified on this, my first day as a Member of this great deliberative body, to have the privilege of participating in the important debate on civil rights, and to lend my support to H.R. 8601, which is now before the House for consideration.

During my years of service in the New York State Legislature as a member of the assembly and the senate, I lost no opportunity to champion the cause of civil rights; my efforts will be continued here. It is admitted that flagrant discriminatory practices abound in public housing, public schooling, in voting, job opportunities, as well as in other fields. This is a sad and awful commentary on the integrity of our Nation, where our Constitution guarantees equality of all our citizens. Until every vestige of discrimination is wiped out, the honor of our country is in doubt, in the opinion of all freedom-loving peoples of the world.

The time for moderation and compromise is past; we must end the unconscionable discrimination, harassment, intimidation, and other human indecencies which are being inflicted upon a vast segment of our population. We cannot claim to have true democracy in our country, equality of men, equality of

opportunity, freedom as guaranteed by our Constitution, until all discrimination because of race, color, or religion is abolished.

Congress is the special guardian of the right to vote and I trust that this Congress will meet its obligation fairly and courageously, and pass a strong, effective civil rights bill which will deal fairly with our Negro citizens and finally provide machinery by which the rights of Negroes to vote will be protected, and which will give countless citizens, now discriminated against, other necessary protection as provided in H.R. 8601. We must not fail to take decisive action now, for not only those discriminated against, but also all right-thinking citizens, demand that we do so.

Senator Lyndon B. Johnson and Civil Rights

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. ANFUSO. Mr. Speaker, the city commissioner of Birmingham, Ala., Mr. Eugene "Bull" Connor, recently warned Senator LYNDON B. JOHNSON that if he lends his support to the "voting referee plan or any other of those northern radical Senators' plans for civil rights, you can expect to lose the solid South" for the Democratic nomination for President. This is, of course, bullheaded, shortsighted, and biting one's nose to spite one's face.

It is ironical that Senator JOHNSON should be the object of threats of losing the solid South because of his advocacy of civil rights for all Americans. The answer to this is in the feeling prevalent in enlightened quarters throughout the Nation that his championing of the cause of civil rights has won many friends for Senator Johnson and that, furthermore, it is helping to educate the South.

As an example, let me cite the Florence Times of Florence, Ala., which in an editorial published in its issue of February 18, 1960, urges southerners to stop acting as political crybabies for the time has come for southerners to act like Americans.

If civil rights are eventually to be accepted by the South, the man who should get the credit for it—perhaps more so than anyone else in the country—is most certainly Senator LYNDON B. JOHNSON. It is he who is providing the guidance and the leadership in these trying moments. It is he who maintains a calm and commonsense approach to an emotionally charged issue which could flare up and cause untold harm to our Nation at a very crucial period in our history.

As a northerner, who has always fought for equality of opportunity for all Americans and for the elimination of racial and religious prejudice, I want to

congratulate Senator JOHNSON on his demonstration of able and responsible leadership which the whole Nation sorely needs. Those in the South who are threatening him or trying to stab him in the back, will only discover that they will hurt themselves and the South more.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the editorial referred to above:

[From the Florence Times, Feb. 18, 1960]

ALABAMA DEMOCRACY IS IN A SORRY STATE

How to make enemies and turn people against you may not be the title of any book but it aptly describes the antics of some of our southern politicians when it comes to dealing with so-called civil rights measures, now again before Congress.

For the so-called friends of segregation in the South, more particularly Alabama, continue to follow the very lines of action that will most rapidly tear down the State's accustomed way of life with the ultimate jamming of one civil rights measure after another down our collective throats.

We are fast getting into the position of the man who was surrounded by enemies—and deserved every last one of them.

What good does it do for State officials to make their appearances in Washington expressing their adamant opposition to all civil rights proposals when they do nothing at home to correct the very abuses civil rights legislation is designed to correct?

While it is true that denial of civil rights is a national and international problem, it is further complicated in the South by the unusual form in which our society has evolved before, during and since the Civil War.

But the South is not going to get fair treatment unless it goes to Washington with clean hands.

As we have said before, we have found much sympathy among the people outside the South for continuance of segregated schools, provided really and truly equal educational facilities are provided our Negro citizens, but we have never found one American outside the South who failed to exonerate our failure to allow qualified Negroes to vote as we do in some counties.

Read what Senator THOMAS J. DODD, Connecticut Democrat, said on the Senate floor the other day regarding Macon, Bullock, Barbour, and Lowndes Counties:

"I will not detain the Senate with a detailed account of the long and cumbersome voting procedure which each Negro applicant faces in Macon County nor of the complicated voucher system requiring that each new voter be vouched for by another registered voter. Suffice it to say that even if the board were functioning continuously, it would take 203 years under current regulations to register all of the county's unregistered Negroes."

He then told the Senate of the arrest in Bessemer of Asbury Howard, Sr., a Negro, who had ordered a sign painted urging Negroes to register and vote; of his subsequent arrest for publication of "libelous and obscene" material and of the assault upon him by "between 40 and 50 white men carrying knives and blackjacks" as Howard left the courtroom. He also mentioned the order by then Attorney General John Patterson (now Governor) denying voting records of Macon to the U.S. Civil Rights Commission, and of then Judge George Wallace's threat to jail Justice Department officials who came to Bullock County to look at records.

He cited similar instances in other Southern States.

Of course, the Federal Government is not going to sit on its hands and permit this form of tyranny to endure. It will, in the final analysis, do whatever it wills to do to

end these abuses regardless of the opposition offered by the Deep South's handful of Senators. The small bloc of southern Senators can no more stop civil rights legislation in the end, than can one man stand in the middle of a regional blizzard and stop the snow from falling with his outstretched hands.

It is this futile defense of wrongdoing that has brought about the condition in which neither the Republican nor Democratic Parties has nominated a southerner for President for many long decades.

Right now the South is suffering grievously from this very thing. Perhaps the most qualified man in either party for the Presidency this year is Senator LYNDON B. JOHNSON of Texas, but astute political observers say it will be nothing short of miraculous should he be nominated.

Even now as Senator JOHNSON is trying to negotiate through the Senate a compromise civil rights measure that makes some sense, Birmingham City Commissioner Eugene (Bull) Connor, a candidate for Alabama Democratic national committeeman, warns JOHNSON:

"Of all the candidates who have been mentioned as the Democratic nominee for President this year, without a doubt you are the only one that the solid (?) South could support this fall. But if you lend your backing to the Eisenhower voting referee plan or any other of those northern radical Senators' plans for civil rights, you can expect to lose the solid South, and without the southern delegates' votes at the convention, you wouldn't stand a chance to be nominated. Senator, we in the South are depending on you to use every resource you have to defeat these antisouthern bills."

Of course, this is nonsense. Those who hold the attitude of Commissioner Connor are the very ones who will bring about the destruction of Senator JOHNSON's candidacy.

And after they have succeeded in destroying the sons of the South who will we vote for in November? Of course, for the nominees of the National Democratic Party or the Republican Party, whose sympathy for our peculiarly southern problems is nil.

We are destroying ourselves by defending practices against which there is no defense in any decent democratic society and in the process we are striking down, decade after decade, our most noble sons on the governmental front. We are following the path of political suicide.

Will we wake up only after our house has been pulled down upon us and the South is left in political shackles and political shambles?

Even closer at home the State Democratic executive committee at its recent meeting in Montgomery again left the way open for so-called Democratic(?) presidential electors to vote for John Doe or Sam Jones or anyone else, if they so desire, following the general election next fall. We want to be members of the national Democratic Party but we want to play the part of a bunch of undisciplined political brats who pick up their marbles and go home whenever we can't force our will upon the majority in defiance of the rules of the game.

How much respect do you think our delegates to the Democratic National Convention will command when they report in at Los Angeles? They will be looked upon as political cry babies for that is the very role we are choosing for ourselves.

We suspect we are not alone in thinking that the time has come for southerners to act like Americans. When we get our house in order at home we can oppose punitive civil rights measures in good conscience.

When we are ready and willing to play the political game according to the precepts of democracy then, and only then, will we command the political respect our great Southland so sorely needs.

Civil Rights and Senator William E. Borah

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. DORN of South Carolina. Mr. Speaker, the late William E. Borah, Republican of Idaho, stands down the corridor in our Statuary Hall of Fame. His was not only a profile in courage, but a profile of justice, honor, and patriotism. Mr. Speaker, here is what Senator Borah had to say about the punitive, vindictive, and unnecessary legislation of his day:

ADDRESS OF HON. WILLIAM E. BORAH, OF IDAHO, ON JANUARY 7, 1938

Mr. BORAH. Mr. President, this measure, in a slightly different form but embodying the same principles, came to this body about 25 years ago. At that time I was a member of the Judiciary Committee of the Senate and was appointed by the late Senator Nelson, chairman of a subcommittee to pass upon the measure, particularly its constitutional features. I shall not at this time go into the history of the action of the committee at that time. It may be necessary to do so later in order to throw light upon some features of this matter. It is sufficient now to say that I reached a conclusion as to the merits of the bill, which conclusion I still entertain.

Heretofore I have confined my remarks upon this bill largely to the question of its constitutionality. Those questions still interest me, and probably I shall discuss them later. Today, however, I desire to address my attention for a time to the policy involved in this measure. Assuming for the purpose of the argument that we have the constitutional power to pass such a measure as this, I desire to invite the attention of the Senate to the wisdom of doing so. I think it only a little less important, perhaps no less important, than the constitutional question itself.

Notwithstanding anything that has been said or that may be said to the contrary, this is a sectional measure. It is an attempt upon the part of States practically free from the race problem to sit in harsh judgment upon their sister States where the problem is always heavy and sometimes acute. It is proposed to condemn these States and the people in them because it is claimed that they have failed properly to meet and adjust the most difficult of all problems. No more drastic condemnation could be offered by a measure than that which is offered by the measures now before the Senate.

It proposes to authorize the National Government to enter into the States, and to take charge of and prosecute as criminals the duly elected officials of the States, from the governor down. It proposes that the Federal Government shall be the sole judge of the guilt or innocence of State officials.

In my opinion that requires a review of some unfortunate history, and the recalling of some unpleasant facts. These States are not to be pilloried and condemned without a full presentation of the nature of the task which fate and circumstances imposed upon them, and not without a complete record as to the weight and difficulty of the task, what has been done, and with what good faith it has been met. I shall contend that the southern people have met the race problem and dealt with it with greater patience, greater tolerance, greater intelligence, and greater success than any people in recorded history, dealing with a problem of similar nature. Let us inquire what it is that the

South has had to do, how it has done it, and what reason there is now, after 70 years of great effort, to pass censure or condemnation of those great States and that great people.

Paraphrasing the language of one of the most eloquent of men, when the Confederate soldier pulled his gray cap over his brow, and lifted his pallid and tear-stained face for the last time to the graves which dotted the hills of old Virginia, and started on his slow and painful journey home, what was he to find? What were the problems, what was the task, what were the conditions which confronted him? His home was destroyed, his plantation devastated, his help gone, his money worthless, his civilization imperiled. This was the condition in addition to the other problem with which we are more particularly concerned today, and which confronted the South as it entered upon its great task of rebuilding.

I shall not go into details as to the reconstruction period. I recall it sufficiently and only that we may understand something of the antecedents of this problem and something as to the good faith and the ability with which it has been met. I recall a single instance in the way of illustration. When Congress met in December 1865, the then leader of the House—perhaps the most complete master of the House of Representatives that history records—Thaddeus Stevens, outlined the program with reference to the then pending situation. Among other things, he said:

"The future condition of the conquered power depends upon the will of the conqueror."

He said further that the conquered provinces were to be admitted as States—

"Only when the Constitution has been amended so as to secure the perpetual ascendancy of the party of the Union"—

The Republican Party—

"Every government is a despotism. . . . The Constitution has nothing to do with it [the program]. . . . I propose to deal with you [the South] entirely by the laws of war. . . . The conquered people have no right to appeal to the courts to test the constitutionality of the law. The Constitution has nothing to do with them or they with it."

Thus they were to take up the work of rebuilding and of carrying the race problem with the threat of having all constitutional guarantees withdrawn.

Mr. President, I have always felt that in many respects the Reconstruction period is the most regrettable page of American history. Had Abraham Lincoln lived through his second term, it probably would have been the most readable page, one of the noblest pages in all history. It would have been characterized by wide sympathy, by breadth of understanding, and by that wisdom which flows from the heart as well as the brain, which passeth all understanding. It would have been free from that blind partisanship which disregards constitutions and constitutional limitation as well as national honor and national unity.

A short time before the Great Emancipator was removed from the scene he had outlined his views on reconstruction. What a different story would have been written had those views prevailed. What a different national life would have been lived had those views obtained. But before his body had reached Springfield the committee had met and had determined upon the complete rejection of the entire policy theretofore announced by the dead President. Ben Butler's views superseded those of Abraham Lincoln; and a more tragic thing could not happen in a crisis confronting a nation. These measures with reference to reconstruction therefore were written from the standpoint of partisanship not unmingled with a desire to punish.

The measure now before the body embodies the same principle upon which those measures were founded. The same arguments are made in support of the pending measure, to wit, that the southern people are to be distrusted and are incapable of local self-government.

We know now what those measures in those days did. They retarded and frustrated the coming together of the people of the different States. They gave us the solid South. They separated us politically, which separation continues until this day. They implanted a sense of bitterness in the minds of those people, not because of what had happened upon the field but because of what happened in Congress.

It is not in the interest of national unity to stir old embers, to arouse old fears, to lacerate old wounds, to again, after all these years, brand the southern people as incapable or unwilling to deal with the question of human life. This bill is not in the interests of that good feeling between the two races so essential to the welfare of the colored people.

Nations are not held together merely by constitutions and laws. They are held together by mutual respect, by mutual confidence, by toleration for conditions in different parts of the country, by confidence that the people of the different parts of the country will solve their problems; and that is just as essential today as it was in 1865 and 1870.

In the beginning, Mr. President, I reject the pending measure as fundamentally not in the interest of the white people of the South, not in the interest of the black people of the South, not in the interest of national unity nor of national solidarity, not in the interest of eliminating crime. History has proven that it will be a failure, and those who suffer most will be the weaker race.

Mr. President, the race problem is the most difficult of all problems, and, in addition to the conditions which I have outlined briefly, the southern people had placed upon them the race problem under circumstances and conditions never before experienced by any people, so far as I know, in recorded history. In addition to and on top of all other problems the South had to grapple with the race problem. How well has it dealt with it?

At the close of the Civil War there were a little over 5 million white people in the South; there were 3,500,000 Negroes. In Mississippi there were 100,000 more colored people than white people. In South Carolina there were something like 150,000 more colored people than white people. There were the two races, living upon the same soil, now equally free under the Constitution, one of them untrained and unschooled in the affairs of state, and untrained in citizenship. The problem had to be met. Was it easy of solution? Can one conceive of a more difficult problem placed before a people? I wish we could place ourselves in their position. It will help us to be sympathetic, sane, and just.

I call attention to some facts which lead up to the question of lynching. History shows that in the North in 1889, 1 Negro in every 185 was in jail; in the South, 1 in every 446. In the North the percentage of Negro prisoners was 6 times as great as that of the native whites, in the South 4 times as great.

Monroe S. Work, of Tuskegee College, has said:

"There is a much higher rate of crime among the Negroes in the North than in the South."

That speaks volumes for the southern Negro and no less for the whites.

Professor Johnson, of Fisk University, has said:

"The rate for Negroes is much higher in the northern States than in the southern States as to crime. Judging by the figures

alone, for a 10,000-Negro population, the commitments were 88 in the South, 283 in the North."

In a volume entitled "Negro Housing" published in 1932, I find the following:

"The extent of property ownership by Negroes has in the past been greater in the South than in the North."

It will be disclosed that in some of the southern cities the percentage of Negro ownership of homes runs as high as 45 percent of the Negro population; in other places as high as 30 to 39 percent of the Negroes own their own homes.

In a bulletin issued by the Department of Agriculture in 1930 we find the statement that the value of land and buildings of farm property owned by Negroes increased from 1910 to 1930 as follows, giving the round figures:

	Percent
Virginia.....	58
North Carolina.....	140
Georgia.....	11
Florida.....	29
Louisiana.....	142
Texas.....	97
Mississippi.....	68
Alabama.....	54
Oklahoma.....	41
West Virginia.....	37

I mention these figures to show the progress of the Negro throughout the South in an economic way, for, after all, only in proportion as he acquires property and economic power can he hope to be secure in his political rights. That is just as true of the white man as of the colored man. And in proportion that he advances in education, in the acquisition of property, and in the acquisition of economic rights, in that proportion he will come to be regarded as an essential factor of the southern civilization, and treated as such; and to accomplish that has been the aim of the southern Negro, encouraged and assisted by the white people of the South.

I shall now read from a little volume to which I called attention a few days ago during the debate on the farm bill, a volume written by Gerald W. Johnson, who, I have been informed, is one of the editors of the Baltimore Evening Sun. He has written a remarkable volume upon the questions which pertain to the southern portion of the country. On page 8 of the volume he says, referring always to the South:

"The problem of public education, for example, has not been solved. It is further from solution in the South than in any other region. But when one considers that the South has to teach more Negro children than there are children of all kinds in New England; and when one notes that it is spending far more of its total income on schools than is spent by any other region, its effort, even though but half successful, must command respect and admiration."

They must educate more Negro children in carrying this load than all the children of New England, and they are doing so; and by educating them they are fitting them for citizenship, schooling them against crime, and they are laying the only sure foundation there is for the extinguishment of crime among the Negroes. They are laying at tremendous cost the foundation for the good citizenship of the Negro, and while lynching can never be justified, nevertheless there is no more successful approach to the ending of lynching than through education, through bringing both races to understand their responsibility to society. I know of no finer sense of duty than that displayed by the South in the help it gives the Negro in bettering his condition as to property, as to economical strength, and as to education.

I read again from this able writer:

It has been the fashion in some quarters to assume that the Southeast has remained

almost completely inert in the presence of its social problems. This is far from the truth. A mere glance at the educational statistics of the region is enough to dissipate the impression that the Southeast has been indifferent or lethargic in this respect. The State of Florida, for example, spends 5.76 percent of its total income for school purposes, and North Carolina 4.38 percent; this is the largest percentage that is spent for similar purposes by any other States save the Dakotas. * * * The Southeast spends 3 percent of its total income for higher education, the highest percentage in the Nation. It enrolled more high-school students in 1930 than the whole country did in 1900, and there are more accredited high schools in this region than there were in the United States at the end of the century. Its present army of 60,000 high-school graduates annually represents an increase of 500 percent within the last two decades.

I pause to say that, if we knew as much about the South and what they have done and are doing as we pretend to know, we would not be so free to criticize. It is a horrible thing to see the body of a Negro burned to a crisp, swinging from the limb of a tree; it is a horrible thing to have a daughter or son, perhaps a mere child, snatched from your home, carried into hiding, perhaps murdered. These are our problems, pressing for consideration, and they are making as determined an effort to clear the stain from the honor of the South as we are to rescue our honor in the North. "Why beholdest thou the mote that is in thy brother's eye but considerest not the beam that is in thine own eye?"

During the last session of Congress we had under consideration in the Committee on Education and Labor what is known as the educational bill, and, of course, it vitally affected the Negro people of the South, and they appeared in great numbers before the committee. At that time Senator Black, now Justice Black, was chairman of the committee. The most difficult problem was to work out absolute protection for the colored children in the enjoyment of the fund proposed to be set up. I must say that I never knew a person more meticulous, more determined, more vigilant to protect the colored students in the enjoyment of that fund than was Justice Black. I was impressed with the fact that there was a determination upon his part to reach the Negro at that point in his life where he could best serve him not only with reference to general citizenship but as to the reduction of crime. Mr. Johnson states further in this volume:

"The most conspicuous characteristic of the southern population, however, is its bi-racial character. A group of 8 million people of a different color from the other 17 million is a feature so startling that it may be expected to attract more attention than perhaps it deserves."

"The inevitable result has been enormous waste of the Negro's potential value to the social structure. Not all of this is the fault of the white South by any means. The hasty and ill-advised effort made in the sixties to project the newly emancipated slaves into a political and social position they were not prepared to occupy has made any realistic treatment of their position extremely difficult. Not only did it create appalling prejudices but it erected very substantial legal barriers against any direct and forthright approach and forced southern political and social polity into a sinuousness that has been productive of a thousand evils."

"This is, however, water over the dam. What confronts the Southeast today is the problem of making the best possible use of 8 million blacks."

"Only comparatively recently has any considerable effort been made to treat the dis-

ease, rather than to alleviate its symptoms—or, rather, only recently has the idea begun to spread that perhaps there isn't any organic disease, but only a series of functional disturbances. Since the turn of the century the Southeast has been making real, if not always adequate, efforts in the field of Negro education. With the rise of the Negro in the cultural and economic scale there has come also an appreciable reduction of the rigor of civil and social disabilities. And with both there is a strengthening belief that perhaps the traditional approach to this situation has been faulty."

Everywhere we find a determination to find the right way. The Negro is there. He is there to stay. The South knows that he is there to stay, that he is a part of the wealth of the South. We in the North may be interested in the Negro politically. We care little about him economically. But he is an indispensable factor in the economic development of the South. They can and will do for him far better without our interference or advice than with it.

Mr. President, the Negro has had a hard road to travel ever since he was given his freedom. A hundred-and-odd years of slavery afforded poor training for citizenship in the most advanced of nations. Almost overnight he went from slavery to take up the obligations of a freeman in a free country; but, everything considered he has done well; his advancement has been marked. Restricted, not by the Constitution of his country or the decisions of its highest courts, but restricted, almost cabined and confined, by the iron laws of society, nevertheless he has made progress. And where has that progress been greatest? In the South. In spite of prejudice and statements to the contrary, facts and figures show it has been greatest in the South. In the acquisition of property and economic advancement generally the Negro has fared better in the South than elsewhere.

It is true, as is contended here, that at times he has suffered from mob violence in the South, but it is equally true that he has suffered from race riots in the North. But in all things which make for the advancement of the race as a race, the North has no advantage over the South in the story of the advancement of the Negro. We have shown no greater patience, no greater tolerances, no greater ability to deal with this race than have our brothers of the South. And now, because there is the power, because there are the votes, because it is possible to do so, it is proposed to call these great States and these people before the bar of public opinion and, after 70 years of arduous effort on their part, condemn them as unfit and unwilling to deal with this great problem, condemn them for having failed in the essential principle of home government, of home rule. After these 70 years, and after 150 years, taking the Government's history as a whole, we now come to the time when we are asked to say that home rule or local government has broken down in a number of the States of the Union. We call these States and these proud people to judgment before the whole world and spread upon the records of the Congress our condemnation, our judgment that in the most vital things of free government they have failed.

Broken down. Why? Because eight Negroes were lynched last year. There were 30 kidnapping cases in the United States last year. After all the efforts of the States and all the efforts of the Federal Government, taking charge of those who crossed State lines, we still had 20 kidnapping cases as against the 8 lynching cases in the South. Is that an indication that the South is not in good faith and with honorable effort trying to protect the colored race and to give it the same protection that it gives the white race?

Lynching is the one crime, Mr. President, that is distinctly and markedly on the decrease in the United States.

I shall take time to read briefly some facts and give some figures.

Prof. Charles S. Johnson, of Fisk University, says:

"Taking the period of 1889 to 1893 as 100 percent, it is of interest to note that every 5-year period has shown a decrease in the total number of individuals lynched."

He then gives the figures showing that from 1924 to 1928 there was a decrease of Negro lynching amounting to 84.8 percent. He concludes by saying:

"It will be discovered from the accompanying graphs and tables that at the present rate of decrease lynching will apparently cease to be a problem in race relations due to its disappearance."

Further, he says:

"In the 30-year period from 1889 to 1918, inclusive, there were 2,522 Negroes lynched."

That is about 84 a year.

He then calls attention to the fact that in 1924 the number had dropped to 16. Last year the number was 8. In many of the Southern States lynching has practically disappeared. Virginia had only 1 case in 10 years. West Virginia had none during the past 5 years. South Carolina had none during the past 3 years. Oklahoma had 1 in 10 years. North Carolina had 2 in 7 years. Arkansas had 3 in 9 years. Maryland had 2 in 10 years, and none for the past 3 years.

I call your attention to a statement from the great Tuskegee Institute located in the State of Alabama. It reads:

"There are a number of interesting features to be noted. From 1882 to 1885 there were more whites lynched than Negroes. Concerning the decline of lynchings in the United States, I call attention to sheet No. 2, 'Lynchings, white and Negroes, by periods, 1882-1936.' You will note that there has been a steady decline in the number of lynchings for each of the 10-year periods, 1887-96 to 1927-36. Judging from the trends shown in this table, there is every reason to believe that there will be a further decline in lynchings."

"There are probably three major factors that have contributed to this decline. The first of these is the tendency for frontier characteristics in the South to disappear (lynching was a special characteristic of the frontier in America, both in the West and in the South). Second, the breaking down of isolation in the South by increased facilities: (1) Rural free delivery; (2) more telegraph offices; (3) more telephones in small towns and rural areas, and (4) recently the radio and paved roads. Third, increasing agitation within the South during the past 40 years against lynchings. This has resulted in an increasing sentiment against the evil. This sentiment has expressed itself in the increasing efforts to prevent lynchings."

"From 1914 to 1919 the number of persons lynched was much greater than the number of persons prevented from being lynched. From 1920 to the present the number each year prevented from being lynched has greatly exceeded the number lynched."

"These facts and trends seem to indicate unquestionably that there will continue to be a decline in lynchings in the United States. Not only in these statistics but in many other ways is there employed a growth in the humanitarian attitude of the American people. This growth, I believe, has paralleled the development of educational and social agencies, all of which bid fair to rid this Nation of the barbaric practice of lynching."

In other words, the problem is being met, the problem is being solved, and it is being solved in the way that America solves her problems when they are local and of a local nature; and that is through the activity and

the cooperation and the determination of the people themselves.

Mr. President, suppose Congress passes this bill; suppose it becomes a law; where must we go for its enforcement? The bill may be passed by votes from other States, but for its enforcement we must go to the juries in those communities which we condemn. The bill may be passed in the theoretical atmosphere of Washington, but it must be enforced down among the people in the realistic atmosphere of the Southern States. There will be the southern district attorney, the southern judges, the southern juries, and they must be depended upon for the enforcement of the law. Do Senators think they will more likely enforce the law when they have been condemned in the sight of all the world, and in face of such condemnation, than when they are appealed to from the standpoint of the sense of duty of their State and their sense of duty of citizenry?

We get back, after all, to the people themselves for the enforcement of the law. We have had an experience in this country showing that we cannot enforce a law when public opinion is not behind the law. The only way in which we can hope to have the law enforced is by the method that is now pursued by the southern people—that is, to educate the people up to an understanding that it is to their interest and to their honor to maintain law and order in their communities—and that they are doing.

Some years ago a great southerner discussed this question, and I cannot refrain from calling attention to some of his language. It seems to me fair, just, and so in accordance with the sentiments of the true patriot that it is worth while for us to stop and hear the voices of those who are wrestling with the problem at home.

Mr. Henry W. Grady said:

"Nothing, sir, but this problem and the suspicions it breeds, hinders a clear understanding and a perfect union. Nothing else stands between us and such love as bound Georgia and Massachusetts at Valley Forge and Yorktown. . . ."

"I thank God as heartily as you do that human slavery is gone forever from American soil. But the freeman remains. With him a problem without precedent or parallel. Note its appalling conditions. Two utterly dissimilar races on the same soil—with equal political and civil rights—almost equal in numbers, but terribly unequal in intelligence and responsibility. . . . Under these, adverse at every point, we are required to carry these two races in peace and honor to the end."

"Never has such a task been given to mortal stewardship."

Is that not true? Can we find anywhere in history a task such as was assigned to the southern people at the close of the Civil War, with slaves for 100 years released, free as they should have been, but given the power to participate in politics without any training and without any experience? It was beyond their capacity, as it would have been beyond the capacity of any race immediately to assume in full, and properly discharge, the duties of citizenship. But those were the conditions which confronted the South, and with which they have been dealing.

"The resolute, clearheaded, broadminded men of the South . . . wear this problem in their hearts and brains, by day and by night. They realize, as you cannot, what this problem means—what they owe to this kindly and dependent race—the measure of their debt to the world in whose despite they defended and maintained slavery."

"If you insist that they are ruffians, blindly driving with bludgeon and shotgun to plunder and oppress a race, then I shall sacrifice my self-respect and tax your patience in vain. But admit that they are

men of commonsense and common honesty, wisely modifying an environment they cannot wholly disregard—guiding and controlling as best they can the vicious and irresponsible of either race . . . admit this, and we may reach an understanding without delay."

Let us admit that the South is dealing with this question as best it can, admit that the men and women of the South are just as patriotic as we are, just as devoted to the principles of the Constitution as we are, just as willing to sacrifice for the success of their communities as we are. Let us give them credit as American citizens, and cooperate with them, sympathize with them, and help them in the solution of their problem, instead of condemning them. We are one people, one Nation, and they are entitled to be treated upon that basis.

Mr. President, I now turn briefly to another feature of this measure. I shall discuss it later in more detail, referring to court opinions. But I call attention to this feature now which must be of concern to every Member of this body, to everyone who believes in our dual system of government. This bill as it is drawn—observe my language—this bill as it is drawn strikes at the very heart, at the very life of local self-government. I ask Senators to reread the bill in the light of that assertion. It would place a construction upon the 14th amendment never contemplated by the men who wrote it—in fact, specifically rejected by them—and which, in my opinion, a fair construction in no sense sustains.

The bill openly and professedly declares in effect—and that is the theory upon which it rests—that the people in these States are either unwilling or unfit to maintain the most ordinary principles of organized society, and that in the face of the facts which I have shown, that they are really solving the problem.

Permit me to say here before I go further that I make no contention but that the 14th amendment has forever placed it beyond the power of any State to deny any person the equal protection of the laws, or to deprive any person of life, liberty, or property without due process. I recognize also that the State acts and speaks through its officers, legislative, judicial, and executive. I am not going to take refuge in technicalities, but I contend for what I believe to be a fundamental principle, and that is that while you may call a State thus acting and thus speaking to account, you cannot take jurisdiction over or deal with acts and deeds not done by the authority and by the direction of the State. It must at all times be State action. You cannot deal with acts under the 14th amendment not done by and under the authority and direction of the State. The dereliction of an officer in violation of the laws of the State, in disregard of the sworn duty exacted of him by the State, and subject to punishment by the laws of the State, cannot by any possible construction, either in law or in conscience, be the act of the State. To establish any such principle would be to undermine and break down the integrity of every State in the Union. If a State may not be entrusted exclusively with the authority and relied upon to exercise the authority to punish those who violate its own laws, public or private persons, then there is no such thing as local government, because the State is deprived of the very instrumentality by which it maintains State integrity.

Since this proposition first came before Congress the Senators from the Southern States have borne the brunt of the debate. They have been made to feel the criticism of those who look upon opposition as mere local prejudice. We are all prone to consider the race question as peculiarly a southern problem, and we leave our southern

friends to deal with it without very much sympathy or interest. But assuming that we are going to continue this narrow and selfish course, when we come to read this bill it is found that it goes an arrow's flight beyond any race question. The way it is drawn and its legal terms lift the bill out of the region of the race question into the region of governmental principles.

I do not contend, of course, that the authors of the bill or its supporters are taking advantage of the horror which we all feel toward the crime of lynching to strike a blow at our dual system of government, but that is precisely what is happening; that is precisely what will happen in view of the manner in which the bill is drawn. The constitutional feature of this bill under its terms is just as vital to Idaho as to Alabama; it is of just as much concern to Massachusetts as to Georgia. If the Federal Government can send a U.S. marshal into the State of Tennessee to arrest a sheriff because he failed to protect a colored man from violence, it can, under the same principle, send a U.S. marshal into the State of New York to arrest a sheriff, or other officer on whom the duty is imposed, because he neglected to protect the life of a citizen against the violence of thugs. It is just as much the duty of the State to protect the citizen from violence not under arrest or not assailed by three but by two or one. The Constitution does not classify crimes. It does not say that lynching is subject to the terms of the Constitution and that death by the act of thugs is not.

What does this bill provide? There is not a word in it which indicates that the failure to protect in any instance was due to the fact that the prisoner was a Negro. There is no provision indicating that the States of the South or their officers maintain one rule of conduct for the Negro and another for the whites. There is nothing to the effect that the laws of the States favor the whites and do not favor the Negro. There is no indication or intimation in the bill that the failure of the officer to act was due to the fact that his prisoner was a Negro. This bill is not based in its terms upon discrimination against the Negro, because of unequal treatment of the Negro, but upon the theory the States have broken down in maintaining order and protecting life. That is not a local question but a national question. If the States no longer protect life and property not because of discrimination but because of failure to execute laws regardless of race then we have a great national problem to be met by constitutional amendment. The 14th amendment does not cover any such question.

In all the cases which are cited in the briefs sustaining this measure there will be found a specific provision in the statutes concerning the failure of the officer to act being due to the fact that the party in interest was a Negro. There is no such provision in this bill. This is a general proposition, dealing as much with one race as with the other. Let me read from the bill:

"Sec. 3. Whenever a lynching of any person or persons shall occur, any officer or employee of a State or any governmental subdivision thereof who shall have been charged with the duty or shall have possessed the authority as such officer or employee—"

That would include the Governor and all his subordinates in the executive department—

"to protect such person or persons from lynching and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or persons from lynching and any officer or employee of a State or governmental subdivision thereof who shall have had custody of the person or persons lynched and shall have willfully neglected, refused, or failed to make all diligent efforts to protect such person or per-

sons from lynching, and any officer or employee of a State or governmental subdivision thereof who, having the duty as such officer or employee, shall willfully neglect, refuse, or fail to make all diligent efforts to apprehend, keep in custody, or prosecute the members or any member of the lynching mob, shall be guilty of a felony and upon conviction thereof shall be punished by a fine not exceeding \$5,000 or by imprisonment not exceeding 5 years, or by both such fine and imprisonment."

Where is the provision there that deals with the lack of equality between the races or discrimination as to the races? There are no provisions in the bill requiring a showing that the failure of communities to protect a person was due to the fact that he was a Negro. In all the cases cited, there will be found a statute specifically requiring a showing that the officer refused to act or failed to or did not act because of the fact that race was involved and that a Negro was the person involved.

Let us carry this a little further. It is the first duty of a State, is it not, to enact laws to provide officers to protect life, liberty, and property? That is the first duty of every State. Suppose that a man is killed by thugs, we will say, in one of the great cities, without mentioning any particular one—and while the South lost eight Negroes by lynching last year the North lost hundreds because of acts of violence committed by thugs—and suppose that the State failed to take proper action under its laws and by its officers to protect the citizen on the highway or in his home against the acts of thugs; may we not, under the principle of law invoked in this bill, send an officer into that State to take charge of those police officers? What is the distinction in this bill between violence committed by a combination of thugs and violence committed by those who are combined into a mob? We are somewhat at a disadvantage in discussing the bill, because its authors have been entirely silent in presenting those features, and I am having to present it upon the briefs which I have read.

I think it might not be out of place here to call attention to another matter. The proponents of the bill are undoubtedly maintaining that the Federal Government will protect men in the South better than will the local communities. They are undoubtedly basing the entire measure upon the proposition that the Federal Government will execute the law. Well, we have the Federal Government in control of the city of Washington, which now, if not the first, is at least the second, capital city of the world which is most plagued with crime. Seventy-five people here have been robbed of their property in 1 night. How close the police were I do not know. I understand the police escaped being robbed.

We can all recall instance after instance published in the papers of young women disappearing and their bodies being found outraged and the criminals never being intercepted. Why is there any reason to believe that the Federal Government can enforce criminal laws better than can the State governments? The enforcement of law and the punishment of crime depends upon the will and purpose of the community where the crime is committed. Those advocating this bill are on a venture. They are going to take the responsibility away from the people in the South; they are going to say to them, "You are not ~~able~~ or willing to do the work; we are ~~going to~~ do it." Where is the record which shows that they will do it? What is the record?

We have now at the head of the crime department, if I may call it that, in the Department of Justice, perhaps the greatest specialist in the world in the running down of crime and criminals; we have a Federal kidnapping law by reason of the fact that

kidnaping crimes generally pass State lines; but last year, 1937, there were 20 kidnaping cases in the United States, with the State and Federal Governments both working, and Mr. J. Edgar Hoover says that there never will come a time when there will not, in all probability, be kidnaping in the United States; that it is impossible to wipe out the crime; that so long as greed and the appetite for money are found in the human system, there will be kidnaping. Mr. Hoover very frankly states that it is impossible to wholly wipe out such crimes. They can be reduced to a minimum and lynching has been reduced to a minimum in the South.

Coming back to our Capital as an example of Federal enforcement, I read from a local paper:

"The criminals of Washington are taking \$30 million a year from the citizens of this city."

They are being deprived of life, liberty, and property, certainly without due process of law as that term is applied here. And the men in charge of the District seem to have thrown up their hands; they do not know how to deal with the situation. Yet, the Federal Government is in control here; the Federal Government is back of them. They are by any means doing as well as are the people of the Southern States in meeting the crime problem.

Mr. President, we are dealing with the race problem. We need not blind our eyes to that fact. And the race problem is a problem which does not readily yield to legislative solution, to the rigid demands of the law. Take, for instance, the colored girl who, under great handicaps, has earned the right to be employed by her Government upon an equality with everyone else. She goes with a certificate of competency from the Civil Service Commission to one of the departments here in Washington—here in Washington, under the aegis of the Federal Government—and when she enters the door and her color is discovered, she is told that the place is filled, which is probably false. That happens not once but many times. She suffers injustice at the hands of her Federal Government. But that is a race question, and no law was ever made tight enough or strong enough to remove all its harshness and to eliminate all its injustices. Only the patient process of education, the uplifting power of religion, the tolerant, noble-minded men and women who give their thoughts to the cause, can remove or mollify such injustices or such harshness. And that is being done; it is being done in the South; that result the South is achieving; the record so shows; and the people of the South are entitled to our commendation and not our condemnation. They are entitled to our cooperation and support.

This Mr. President, is another compromise with a vital principle of our dual system of government. It is bartering the future for the supposed and transient demands of the present, and at a time when the present is taking care of the problem. It is another instance in which our confidence in our scheme of government is not strong enough to say to all races, all creeds, all groups, and all factions: "Your problems, however serious are subordinate to the principles of this Government; and you must work them out within the compass of the long-tested and well-accepted principles of democracy."

Every American must feel a slight sense of guilt, if not a sting of remorse, when he reads the Premier of Italy's reference to the bellowing herds of democracy, to free institutions as the decadent breeding grounds of insincerity and confusion. The fundamental principles and precepts of popular government are not in doubt. There is no confusion there. The confusion arises when we depart from those principles. It was the embodiment of the precepts and principles of popular government in the Constitution

of the United States which put confusion to rout in this country, gave ordered liberty to the people, and strength and direction to government. For centuries prior to the declaration that the powers of government are derived from the consent of the governed, and the dedication of a new continent to that sublime conception, there had been nothing but confusion, nothing but turmoil and misery, nothing but brute force and enslaved masses. And all that will happen again if the advocates of arbitrary power, now inveighing against free institutions in the presence of their assembled slaves, have their way and the world again comes under their sway. Contrast the conditions of those periods with the period since the adoption of the Federal Constitution, with its establishment of law and order, the spread of contentment and happiness among the masses, with its unprecedented progress in the arts and the sciences, and you not only have your answer to those whose sole right to rule rests upon the law of force, but you have the most powerful appeal that can be made by mortal man to those who would compromise or weaken the safeguards of popular power.

I am perfectly aware, as we all are, of the tide which seems to be running against popular government everywhere, of the base betrayal of the people in many countries where they once had at least some authority and hoped for more, of that profound egotism which regards as of no significance the bitter experience of men and women in their long quest for liberty. But against all these things, if we have the confidence in our form of government which we profess, we can place, not theory, not hopes, not ideals merely, but 150 years of achievement, of demonstrated popular rule, with its wealth of human happiness and human progress. How puny and hollow and fleeting in comparison are the achievements of usurped power, every hour of whose existence depends upon the continued suppression of human liberty.

And, Mr. President, in conclusion, the progress, the development, and the advancement of the South, including the last 70 arduous years, her history from Washington and Jefferson down, rich with the names of leaders, orators, and statesmen; her soil, her sunshine, her brave and hospitable people, her patient and successful wrestling with the most difficult of all problems, are all a part of the achievements of our common country and constitute no ignoble portion of the strength and glory of the American democracy. I will cast no vote in this Chamber which reflects upon her fidelity to our institutions or upon her ability and purpose to maintain the principles upon which they rest.

She Loved Children

EXTENSION OF REMARKS

OF

HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, February 8, 1960

Mr. DADDARIO. Mr. Speaker, a tragic accident occurred this week in Berlin, Conn., in my district. It took place at a grade crossing of railroad tracks shortly after 8:30 a.m. Killed were Mrs. Emily Whitaker, of Berlin, and seven schoolchildren—six of them her state wards. She was driving the children to meet a school bus when she came to the crossing. She waited

for a freight train to pass, then started across and was hit by a fast passenger train headed from Hartford to New York City.

Mrs. Whitaker had done a wonderful job in her lifetime of caring for children who might otherwise have been homeless. In 14 years, she and her husband had cared for 18 foster children. In 1957, the Catholic Transcript praised the work she and her husband were doing.

Another article appeared this week in the Transcript; I think the story itself is a remarkable lesson for this world, and I include it in my remarks so that all of us may take its message to heart:

SHE LOVED CHILDREN AS OWN

(By Joseph A. Owens)

A woman who clearly saw her purpose in life—to care for unfortunate children—died Tuesday morning with seven children brought into the world by other women. All these children knew 57-year-old Mrs. Emily Whitaker as mother.

The grim facts of one of the Nation's most tragic train-automobile crashes were rapidly broadcast across the country. Newspapers used their boldest type; newscasters, dramatic tones. Seven schoolchildren and a foster mother had died at an unmarked railroad crossing in the central Connecticut town of Berlin, while the woman's husband, John Whitaker, watched in anguish a few hundred feet away.

Had the accident not snuffed out the lives of this woman and her loved ones, Mr. and Mrs. John Whitaker would today be living the simple, model life that they had known together for years.

In December of 1957 I visited Mr. and Mrs. Whitaker in their small farmhouse home on Norton Lane. They reluctantly consented to the interview. They didn't want publicity.

However, they put their personal feelings aside. If by reporting what they were doing might interest other Negro couples in becoming foster parents, the Whitakers were willing. As they talked, it was strikingly obvious that these were unusual people; a man and woman with tremendous capacities for love, a couple with inborn qualities of sacrifice.

The surroundings were humble and spotless. Three preschool children living with the Whitakers at the time were home. Four others were at schools. The toddlers enhanced the atmosphere.

The story wrote itself. These kind always do. Here are a few of the highlights from the page one article which appeared in the Catholic Transcript of December 5, 1957:

"A child doesn't ask to be born, but he does need care."

"This simple statement opens the door on the happiness shared by Mr. and Mrs. John Whitaker, of Berlin. They love children—especially the unfortunate and homeless."

"The Whitakers are rich in only one respect—love. Both are converts who recognize the responsibilities of their faith as well as the fruits."

"Caring for children brought into the world by an unwed mother or parents now living apart makes the life of the industrious Whitakers full. In some 14 years as foster parents they have had 16 children under their protection at various times. Fatherly and motherly love has never been rationed."

"When they come here they are my children, the same as my own flesh and blood," stated Mrs. Whitaker, leaving little doubt about anyone's status.

"To Mrs. Whitaker, a choir member at St. Mary's, New Britain, there is nothing unusual about this outlook. 'Our Jesus loves all of us. Why shouldn't we share our love

with each other? I'm only a small spot down here on earth. Maybe the only reason I am here is to take care of unlucky children."

"Shortly after the first children were placed with the Whitakers the wage earner was out of work for several weeks because of a strike. Supporting the entire group emptied a small bank account which was intended as a downpayment on a home. The money was never replaced, but there are no complaints—the Whitakers, remember, are endowed with true love of neighbor."

"Many times friends pointed out to Mrs. Whitaker that the weekly board money does not result in a profit for her. Without hesitation she retorts:

"If you think about life in terms of what you are going to get for yourself, you won't get anything."

A flat tire prevented Mrs. Whitaker from taking her children to Mass last Tuesday morning. Six of the children will be with Mrs. Whitaker in St. Paul's Church Friday morning at 9 a.m. as a Solemn Requiem Mass is celebrated.

Mr. Whitaker will be there, too. A man left with nothing but memories.

The Dignity of the Postal Vocation Must Be Maintained

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. FINO. Mr. Speaker, I am happy to enter in the Appendix of this Record a statement made by Mr. Andrew T. Walker, president of Branch 1, United National Association of Post Office Craftsmen, entitled "The Dignity of the Postal Vocation Must Be Maintained."

Mr. Walker is a gentleman who has dedicated more than 60 years of his life in fighting for the rank and file in the postal service.

The statement follows:

THE DIGNITY OF THE POSTAL VOCATION MUST BE MAINTAINED

(By Andrew T. Walker)

The largest employer in the Nation and perhaps in the world with a working complement of 2 million men and women spread out in a vast network reaching far beyond our shores and into the innards of Europe as well must of necessity set an equitable working pattern for its employees.

It is significant too that from this vast group has come more than its share of manpower and women, too, for our Armed Forces in time of peace and war. And that nowhere will there be found a more dedicated public service minded group of employees. Certainly it is not the underscaled civil service salary which keeps these men and women on the job, but I do know it is a form of fierce loyalty and stick-to-it-ness so often encountered in civil service but found lacking in private industry.

Our ranks of civil service people form an integral part of community life in every hamlet, town, and city of the Nation. They have families, pay their taxes, take part in community life and in general contribute in a multitude of ways to the betterment of the country and its citizenry. One characteristic of postal and Federal people is that they intensely hate Communists and all they stand for.

As a whole every governmental agency has shown over the years a marked awareness of the human rights, working morale and welfare of its dedicated employees. The postal service as well in the past has demonstrated a similar understanding, that is up to a few years ago. I can readily speak with faculty since I myself have served 50 years in a service I have grown to love. All the more reason for feeling so distressed over the actions of those in command of the Post Office Department in recent years. As a representative of members of the United National Association of Post Office Craftsmen I am mindful of the many unnecessary changes made in the Postal Manual aimed at the curtailment of the employees and the tightening up of requirements. As an example are the insertions regarding the raising of the scheme passing mark from 95 percent right, out of a hundred to 97 percent right out of a hundred cards in a scheme examination; limiting the use of rest bars in certain mail operations. The restbars are a sort of half chair and half standing bar to rest the back of mail distributors.

Another instance when the private check-cashing services in many cities had a holiday collecting from 80 cents to a dollar for cashing the checks of postal employees when Lincoln's Birthday fell on a Friday. Since all of the banks were closed in many parts of the country on Friday, February 12, payday, postal employees had no place to cash their checks other than these check-cashing places. Several days before the 12th National President Joseph F. Thomas had asked the Department to relax the rules and advance the issuance of checks on Thursday, February 11, 1960, but to no avail. Result many had to wait till Monday, February 15, to cash checks or pay the check fee on the 12th. The employees would have been grateful for this small concession to advance the check day. It was a deserving request.

It might well be that the Department is so absorbed in its giant steps to modernize the service for the tremendous loads of mail yet to come with the expansion of business, but certainly these small human considerations are the items that go far in building up that valuable asset—esprit de corps—and top morale without which any business cannot properly function. Clerks who have been for years sincerely and conscientiously doing a good job are now confronted with a new chore of keeping cards on their person and keeping a daily check, hour by hour, of what and how much they are doing. These figures are finally condensed, at a central point in a large room full of clerks rattling away at machines or bending over charts, to a 28-day average for every distributor in the service where the guide system is being used.

It is true that we have been promised the distribution guide system is not intended to be a punitive program, but one cannot help but wonder what the daily work check and the 28-day average is meant to be used for after the next few months. Certainly, any organization or place of business is entitled to know through the time cost analysis pattern whether or not they are making or losing money. That is good business sense, but no such business would continue such a survey on an unlimited time basis. It would be far too costly and against good sound business procedure. The piles of records would keep mounting and mounting and in time would not be worth the space it takes up for storage.

Letter carriers are treated to a mail check from time to time, custodians are time and work checked, and certainly postal clerks would have no objection whatsoever if the Department wanted to check their production at stated intervals to evaluate production. That is management's right, but to continue such an individual survey day by

day for an unlimited period would create the atmosphere of resentment and dissatisfaction among employees. Such a check hour by hour, tray full of mail by tray full of mail, would instill fear in the minds of distributors. Fear that the worker on the right or left is doing more than normally possible through apprehension. For those in the elderly group having 30 or more years of service, a fear that the younger man would soon put him far behind, and so it goes—female worker against the male, young against the old, handicapped trying to keep up with the able. A sense of insecurity on the part of the older worker and its dreadful effect on morale.

It is apparent that private industry would not for an instant tolerate such a measuring standard or evaluation on a continuing basis. The net result would be a resentment strike in outside industry but those of us in Government cannot avail ourselves of this weapon and must therefore look to the Congress for remedial relief if a compromise cannot be reached with the administrative heads of an agency.

There is a common meeting ground on this all-important issue. Let management in the postal service sit down with representatives of organizations to work out a solution. As I said before, if a check is necessary let it be on a spot check basis. Invoke it at certain stated intervals. In any event national postal leaders want to share in the progress of mail improvement, but it must be in a spirit of harmony and give and take. The National Unapoc Staff in a true democratic fashion wants to work things out with postal officials. Let us hope that that time comes soon.

Family Farm Income Bill Contains Principles of Good, Workable Farm Program

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, when James G. Patton, president of the National Farmers Union, testified February 29 before the House Agriculture Committee, he reviewed the basic elements of the farm income problem and noted how the proposed Family Farm Income Act of 1960 would meet the various parts of that problem. Under leave to extend my remarks, I include part of Mr. Patton's testimony in the Record:

STATEMENT OF JAMES G. PATTON, PRESIDENT, NATIONAL FARMERS' UNION, ON GENERAL FARM-INCOME-IMPROVEMENT LEGISLATION, BEFORE THE HOUSE COMMITTEE ON AGRICULTURE

Mr. Chairman, we have noted with commendation the large numbers of excellent farm-income-improvement proposals introduced the past 14 months by members of the House of Representatives. Moreover, we have been gratified and encouraged by the recent introduction of the proposed Family Farm Income Act of 1960 by such a large group of eminent and distinguished Members from various farm regions and from cities. My personal thanks to all who did so.

This Family Farm Income Act of 1960 incorporates many of the basic principles that

I feel to be essential for a good and workable farm-income law to handle the situation of commercial family farmers with units large enough to engage in efficient operations.

The current and prospective farm situation, and the causes for it, are quite familiar to the members of this committee. You know as well as I that farm income has dropped seriously over a period of years when farm costs and the incomes of almost all other groups in society have been going up.

You are aware, and many of you have pointed out the facts in dramatic ways, that prices received by farmers have fallen, while prices paid by consumers in the grocery store have gone up.

You are also fully aware that Federal Treasury costs of the farm program have soared as farm income dropped and Government ownership of farm commodities increased severalfold. This is perhaps the first time in history that all of these things have happened at once.

I have read many of the statements made by authors of the Family Farm Income Act. They have made a strong and persuasive case for the preservation and improvement of the family farm and its place in the American way of life. I cannot improve on what they have already said, nor could I improve the policy statement in section 1 of the bill.

We must immediately take heroic measures to strengthen the bargaining position of the family farm or we shall lose it. If we don't reverse this movement toward the so-called free market, we shall see a rapid revolution toward an industrially integrated agriculture within which the values of the traditional family farm will be lost to the Nation. As I see it, the basis of the farm income problem is farmers' almost complete lack of bargaining power in an otherwise administered-price economy.

Lacking market strength based on bargaining power, farmers sell for less and less as they continue to place more supply on the market than will balance demand at a fair price. When farm prices fall, farm income falls with them.

The implications of the free market to farm prices and income are abundantly clear by the scientific study conducted by economists and statisticians of the Department of Agriculture and the land-grant colleges and presented in Senate Document No. 77. I commend it to your reading, if you have not already done so. Their conclusion is that the free market for farmers would mean less than half the family income from farming they had in 1958.

Various of the bills pending before your Committee, including the proposed Family Farm Income Act of 1960, meet the major element of the farm income problem face on. They propose a workable and effective series of measures to solve the commercial farm income problem by authorizing and enabling farmers to strengthen their market bargaining power.

Our goal is to establish, legislatively, the ways and means by which the net family income of farmers from farming can be maximized, within the general national welfare and specific consumer safeguards as a long-term proposition. Our fundamental aim is not just a fixed price or volume of marketings. Rather, what farmers need is a rational and workable way to manage the abundance they produce so as to get a parity of income for the hours they and their family members work and on the capital investments they have made.

For some commodities, the marketing order approach has worked satisfactorily for both the general public and the producers involved. The right of farmers to make use of this proven procedure on a nationwide basis should be extended to other commodities in addition to those now specified in the Agricultural Marketing Act of 1937.

The producers of some commodities may not care to avail themselves of the opportunity to set up nationwide marketing orders. In the case of many commodities, some other approaches to reach similar results by using somewhat different techniques may be more effective than marketing orders.

For those commodities whose producers do not choose to use nationwide marketing orders, I suggest general enabling legislation that will permit and require the Secretary of Agriculture, working with producer committees elected by producers, to develop needed bargaining power through income and supply stabilization programs, for each commodity. Closely related commodities, such as feed grains, should be combined in joint programs. Appropriate safeguards for consumers and the taxpayers should be spelled out in the enabling legislation, with the details of administration left to the Secretary and the farmer committee.

I note with gratification that many of the bills provide for an expanded foods utilization program. This has our full support. I would have preferred that the purposes of this program would already have been initiated under the national food allotment stamp plan drafted by your committee and enacted into law in 1959. Unfortunately, however, the legislation adopted last year is not being carried out.

If specific mandatory authorization is required to activate the operations covered in the discretionary stamp plan program, with local purchases and reimbursements provided for, by all means it should be enacted. The agricultural conservation practices program should be expanded.

This move will be welcomed by farmers and people in rural America generally. As you know, the soil bank has not been generally popular in areas where it was used to the greatest extent.

We must put the emphasis back on conservation and land use adjustment within the fence lines of operating farms. Doing so will avoid the defects that have shown up in operation of the soil bank.

I think farmers generally will welcome the opportunity to make a voluntary contribution of a specified part of their tillable acres to help solve the farm supply imbalance that now exists. Such a program should be voluntary, rather than mandatory; but it is only right that only those who make this contribution of tillable acres in behalf of conservation and adjustment should be eligible for the benefits of the income improvement program. Crops covered by nationwide marketing orders or other special programs should be excluded from the tillable acreage definition.

Any farmer who is willing to contribute additional acres to augment conservation and agricultural adjustment should be encouraged to do so up to not more than 2 or 3 out of each 10 of his tillable acres and receive an augmented ACP cover-crop payment thereon. On both producer-contributed and Government-rented acres, the producer should receive regular ACP cost-sharing payments.

If special provision is made for payments in kind, such provisions should make it optional with the producer whether he is paid in cash or in kind. I see no purpose in a broad application of payments in kind especially for cotton. However, if they increase a farmers' net income, they should be used.

Not long ago, I spent some time in the Philippine Islands. I was greatly impressed by an adverse condition that would worry me greatly if we should allow it to redevelop in this country.

In the absence of an effective supply management program operated by neither the Government nor by producers' cooperatives,

the price of rice fluctuated greatly within each marketing season. A few days before the harvest began, the price of rice would be several times as high as it would be several days after harvest started. Then as the season wore on, the price of rice would rise a great deal more rapidly than justified by the cost of storage, until it reached the extremely high point just before the next harvest.

The consequence of this kind of thing is that the price is abnormally low when the farmer has something to sell and does not rise to a fair level until after the middlemen have taken over the harvest from the farmer. This contributes to low-farm income and high profits of speculators.

To meet this need, provision must be made for some kind of loan or other stabilization device to prevent large seasonal fluctuations in commodity prices. Specifically, I am concerned that some provision be made to assure that farmers may be able to obtain full value for their commodities when they sell them by having some means to hold them off the market until the fair price is approximated in the marketplace.

Such a device is essential whether farmers' returns are protected by compensatory payments or not.

We are also concerned that necessary provisions be made to enable the establishment of adequate and workable programs for those commodities which must be sold domestically and in export in competition with industrially produced synthetic substitutes. The major one of these that I have in mind is cotton. With presumably quite elastic long-term demand in relation to price, cotton needs the kind of program proposed in the bill introduced several years ago by Congressman POAGE. The provisions of the legislation must be sufficiently broad and permissive to allow the establishment of the kind of program we must have for cotton. Similar provisions will be needed in application to other major export crops such as wheat, soybeans, and rice and possibly for other import commodities in addition to wool and sugar.

As a matter of fact, in my way of thinking we should make separate provisions apart from the farm program, for three major types of programs the costs of which have been chalked up to farm price and income stabilization. I refer to:

1. The establishment and maintenance of the needed national supply reserve or security stockpile of food, fiber and biological oils. This should be in the province of the Director of Civilian and Defense Mobilization and the National Security Council. The costs of such storage programs should be charged to disaster relief and national defense.

2. Domestic welfare-type food utilization programs such as the food stamp program, food distribution and the school lunch and childrens' milk programs. These should probably be in the province of the Secretary of Health, Education, and Welfare, and it should be his responsibility to prepare and justify the budgets used for these purposes.

3. The entire operation of farm commodity exports, export subsidies, Public Law 480 aids and donations, international commodity agreement, and food for peace, generally. These should probably be in the province of the Secretary of State. The Secretary of State should have final responsibility for determining these needs and should prepare and defend the budgets required for such purposes.

These officials should be charged with determining quantities of each farm commodity required for needs under their jurisdictions and remit it to Congress for appropriation to pay for such purchases and utilization.

The Real Castro—VI

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the sixth installment in the series currently being published in the New York Daily News on the Cuban dictator, Fidel Castro. The following article is from the issue of March 11, 1960:

DID FATE OR FIDEL DO IN MAJOR?

(By Joseph Martin and Phil Santora)

The disappearance of Maj. Camillo Cienfuegos, former head of Castro's revolutionary army, has been swathed in mystery and speculation ever since the small plane in which the popular Cuban hero was flying from Camaguey to Havana vanished 5 months ago.

Did his plane crash or was he liquidated? During its probe of the Castro regime, the News team talked to Matias Farias, the officer who was in charge of the official investigation of the incident. He charges that Cienfuegos was shot down. His testimony is corroborated by Maj. Pedro Diaz-Lanz, ex-head of the Cuban Air Force.

When Castro took over, Farias was training in Texas as a Cuban Air Force cadet. On February 26, 1959, he went back to Cuba and was assigned as a first lieutenant to a B-26 squadron in Camaguey.

Promotions were coming fast in the Castro regime and young Farias became chief of the small airbase at Camaguey. Last August 8, after Castro forces put down a budding revolt in the city of Trinidad, Farias and three other pilots—Jorge Requeny, Adolfo Leon, and Luis Munoz—fell under suspicion as enemies of the government. They were sent to Columbia military prison.

Matias now admits he was a member of a conspiracy and knew others involved in a plot to overthrow Castro.

"One of the men," he said, "was sentenced to 30 years and the rest of us were fired from the air force. However, there was a peculiar turn of events. At 3 a.m. on October 30, shortly after Cienfuegos had disappeared, I was summoned to headquarters at Columbia. There was a shortage of pilots and they needed men to help look for him.

"I reminded them I was fired as a pilot and they said to forget that. Either fly or go to jail. Then they told me to go to Camaguey and try to find out what had happened. A couple of guards went with me to make sure I got there."

Never was an investigation launched under such odd circumstances—with the officers in charge under guard.

"We were supposed to look for the missing plane," Farias said, "but it was dark and that was impossible."

At Camaguey, Farias went directly to the control tower. The tape that records all arrivals and departures showed that Cienfuegos and his pilot, Luciano Farinas, known as a poor navigator, had taken off in a Cessna 310 on runway 7 at 6:01 p.m.

CLAIMS HE WAS JUST PRACTICING

"The tape also showed that a much faster plane—a British-made Sea Fury fighter—had taken off at 6:11. The pilot was Blas Dominguez, who had been Raul Castro's personal pilot," Farias said.

As the investigation continued, an odd point developed.

"Usually, there is masking tape covering the mouth of the 20-millimeter cannon on a Sea Fury. It is removed only when the cannon are to be used. When Dominguez's plane returned to Camaguey after the 45-minute flight, there was no masking tape. Furthermore, the cannon showed evidence of being fired. Blas claimed he had been practicing.

"Capt. Roberto de Cardenas was in charge of the base. He didn't believe Blas' story and had him placed under arrest on suspicion of having shot Cienfuegos' plane down.

"Fidel arrived the day after the incident and ordered that no one be allowed to talk to Dominguez. He also talked to the man who had been in charge of the control tower at the time the Cessna and the Sea Fury had taken off.

"Less than 24 hours later, the man shot himself. The newspapers said he committed suicide because he was ill. This I do not believe.

ARGUED AGAINST THE EXECUTION

"Blas was released from jail and promoted to first lieutenant. Capt. de Cardenas was thrown into prison for exceeding his authority. He was kept there for a month."

There are stories to support Farias' contention. The week before Cienfuegos' disappearance he and Raul Castro had had an argument, during which blows were exchanged.

Cienfuegos was an easygoing man who enjoyed women, good food, and the company of convivial friends. He had been a bus boy in San Francisco, a dishwasher in New York, and he was a live-and-let-live kind of a man who frequently argued against the executions ordered by Castro as "unnecessary."

Consequently, he was admired by many Cubans—and the popularity of others never made Fidel happy. A few weeks after Cienfuegos' disappearance and a widespread hunt for him—in which Castro even asked the help of U.S. authorities—Osmani Cienfuegos, a brother, was appointed minister of public works. It was clearly an attempt to soothe suspicious Cubans.

Farias spent 3 days in Camaguey. Then he flew home to Havana. En route, the left engine of his B-26 conked out. The plane struck a TV antenna on the roof of a building near the Havana Airport and just about made the airstrip.

"I was met by Raul Castro," he said with a grin, "and he told me to keep my mouth shut about why I had been fired. But I was in a flight suit and photographers were taking pictures. The fact that I had brought my plane in on one engine made me a hero. Raul was on a spot.

"The next day I was made a captain—me, who had been kicked out of the Air Force a week or so earlier. They couldn't do much else, I guess.

"But I felt my friends would misunderstand my promotion. I couldn't let them think I had sold out. As a captain, I was assigned to a crop-dusting plane. They would fill the gas tanks only part way so I couldn't fly out of Cuba.

On December 11, I said the hell with it and I took off for Key West. There were no instruments in the plane. Not enough gas, but I had to make the try.

"I had less than 5 minutes fuel left when I spotted a ship that later turned out to be a Norwegian ship, the *Fromhill*. I made a belly landing in the water and finally got aboard. I found out then that I was off course and would have missed Key West even if I had enough gas.

"I said to the captain, 'If you're going to Cuba, for God's sake give me a boat.' I was willing to row to the United States. Fortunately, he was going to Florida."

There's a sequel.

Major Naranjo, a close friend of Cienfuegos, had been asking questions, conducting his

own investigation. A few days after Cienfuegos' disappearance, he showed up at Camp Columbia with two other officers and demanded to see Raul Castro.

HE REFUSED TO BE A CASTRO STOOGES

Naranjo and his two friends were promptly machinegunned to death by a guard. The official version was that Naranjo reached for his gun—but when authorities got to the scene, it was found he had only his identification card in his hand.

Maj. Pedro Diaz-Lanz, who quit as head of the Cuban Air Force rather than deal with Communists, corroborated Farias' story in every detail but one—he said he believed the masking tape on the 20-mm. cannon of the Sea Fury fighter was shot away, not removed in advance.

Diaz-Lanz is another of the many patriotic Cubans who are neither pro-Batista nor pro-Castro. There is a misconception that men who criticize the Castro regime are disgruntled Batista exiles.

Only one confirmed Batista follower—Roldando Masferrer—was interviewed by the News team. The rest are dedicated to freedom for Cuba and to their own high principles.

Diaz-Lanz is typical of the Cuban who gives up his career, his home, and his friends for an ideal. He could have stayed on as the respected chief of Castro's air force if he had just kept his mouth shut and followed orders. This he refused to do.

He testified before a House committee in Washington last July 14 with regard to the Communist threat to the United States through the Caribbean.

Diaz-Lanz, 33, flew into the Sierra Maestra Mountains some 18 times with arms for Castro.

"Before I ever heard of Castro, I was bringing in arms for Carlos Prio Socorras," he said.

"I've been anti-Communist all my life. My father was anti-Communist. He was formerly Minister of the Interior. When I saw Prio living lavishly while his men were having a tough time, I became disillusioned. I took sides with Castro—only to be disillusioned again later on.

THEN FIDEL LAUNCHED INTO A LONG SPEECH

"I remember the first trip I made to the Sierra. I flew in machineguns, M-1 rifles, Browning automatic rifles and ammunition. It was the 31st of March 1958, and I had to land a C-46 in a cow pasture. It was damaged and I had to burn it after it was unloaded.

"The men were crying out of gratitude. They were without weapons and ammunition until I arrived. Fidel congratulated me. He said, happily, that now he could do something. He launched into a speech, talking about restitution of the constitution and free elections. He said the barbarities would cease. He didn't want to be part of the government, he told us—he was too young to run the country. He was convincing, as usual.

"I found out many things about Fidel during those days. He had been raised in a Jesuit school, but he didn't believe in God. He was a great admirer of Che Guevara and even I knew that Che was a professional Communist.

"When we arrived in Havana after the revolution, women pinned religious medals on Fidel and El Che asked him what they were. Fidel told him not to scoff, that 90 percent of Cubans are Catholic and that 'this sort of thing can mean a lot to us.'

"For the first time, I became aware that this was not the kind of a man I wanted to follow. I had been duped—just as the Cuban people are being duped now but do not yet realize it.

"Raul and El Che are more bloodthirsty than Fidel. Originally, they wanted to purge

more than 40,000 Cubans. Fidel objected, saying this would not sit well with the Cuban people.

"One day, they sent a man to my headquarters. He said his job was to help indoctrinate the air force. I objected, but he had been sent by Raul and he stayed. It now became known that I was against the regime.

DAYS ARE NUMBERED AND HE KNOWS IT

"One day Fidel told me, 'Pedro, I'm going to give you a supervisor. I think you're getting too noble for your own good.' I began to argue, but he cut me short with, 'I don't want to hear another thing about it, or you'll face charges of insubordination.'"

It was 2 days later that Diaz-Lanz developed typhoid and was confined to his bed for a month. When he recovered, he tried to forestall possible court-martial on trumped-up charges but knew that his days were numbered.

There was one last heated session with Castro. Diaz-Lanz told him: "You are not the owner of this country. We fought to be able to say and do things when we want to. I'm against communism and you don't seem to like that."

"He became very angry and said he would take action against me. I knew that my hot temper had forced me too far. Two days later, I skipped the country."

Diaz-Lanz and his wife, Tania, now live in Miami. He is still active in the fight against Castro and many pilots who have defected are in constant touch with him in the event "we have a chance to strike a blow" against Castro.

Cyrus Eaton Asks President Eisenhower for Immediate Ending of Nuclear Tests as Essential First Step in Disarmament

EXTENSION OF REMARKS

OF

HON. BYRON L. JOHNSON

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, Cyrus Eaton, in a well reasoned letter to the New York Times on Friday, March 4, 1960, has called on President Eisenhower to conclude an agreement for the immediate ending of nuclear tests as the essential first step in disarmament. Mr. Eaton terms the President "the one man who can make the fateful decision."

Mr. Eaton's most recent public expression of his views on this vital subject has been featured by the New York Times on Friday, March 4, 1960, as the leading letter to the editor, as follows:

TEST BAN PACT URGED—HAZARD TO MANKIND SEEN IF AN AGREEMENT IS NOT REACHED

To the EDITOR OF THE NEW YORK TIMES:

At the time of the first Pugwash Conference of nuclear scientists the United States, the U.S.S.R. and the United Kingdom were the sole possessors of the dread secret of the bomb.

Over a 4-year period, five Pugwash scientific conferences have brought together 112 eminent specialists from 23 major nations, East and West, all of the unanimous opinion that weapons of mass annihilation must be universally banned, and that delay can only lead to the eventual possession of the worst forms of weaponry by every country of consequence around the globe.

With the recent French explosion in the Sahara, membership in the nuclear club has increased to four. Unless international agreement is reached soon to prohibit tests and ban nuclear weapons, each of the other 19 nations on the Pugwash list, along with others, will in all likelihood be equipping itself with nuclear weapons. All of these countries now have the requisite scientific manpower and industrial capacity in the key fields of electric power, steel, chemicals, engineering, and large-scale construction.

PRESSURE EXERTED

Grave considerations dictate the urgency for the early conclusion of a clear-cut test ban agreement at Geneva, where negotiations have been dragging along for 15 months. There can be no hope whatever of agreement at Geneva as long as pressure for further testing, however limited, continues to be successfully exerted on the White House and the Congress by the United States Defense Department, the Atomic Energy Commission and the small handful of official scientific advisers with a vested interest in urging the United States to run the risk of more tests.

America's closest Western allies have restrained themselves from open criticism of the U.S. position with the greatest forbearance, but now seem determined to convince world opinion that they, for their part, favor a different course. The Canadian Government has just announced a straightforward new foreign policy calling for the end of all nuclear testing and the complete prohibition of nuclear, biological and chemical warfare. At the same time Great Britain is giving every evidence of intending to follow the Canadian example promptly.

The rivalries that now seem to loom large between the United States and the U.S.S.R. will be overshadowed by the terrible hazards that will confront mankind if 23 or more nations become manufacturers of their own nuclear arms. The eyes of the world are focused on the President of the United States, the one man who can make the fateful decision. Let us hope that his concern for humanity and respect for world sentiment, coupled with his profound knowledge of weaponry and broad experience in warfare, will tip the scales toward the immediate end of nuclear testing as the first step in disarmament.

CYRUS S. EATON.

CLEVELAND, OHIO, February 29, 1960.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Daily Digest

HIGHLIGHTS

Both Houses received President's message on postal rate raise.

Senate continued on civil rights, acting on two amendments.

House debated civil rights.

See Congressional Program Ahead.

Senate

Chamber Action

Routine Proceedings, pages 4839-4862

Bills Introduced: 15 bills were introduced, as follows:
S. 3177-3191. Page 4841

Bills Reported: Reports were made as follows:

S. 3005, relating to the length of time by which the Federal Maritime Board may suspend tariff schedules (S. Rept. 1159);

S. 2669, to extend the period of exemption from inspection for certain vessels operating in inland waters of southeastern Alaska (S. Rept. 1160); and

H.R. 10743, second supplemental appropriations for fiscal 1960, with amendments (S. Rept. 1161).

Page 4841

President's Message—Postal Rates: Message was received from the President pointing out that postal deficits are increasing each year, urging that the Post Office Department should be made self-supporting, and advising that the Postmaster General is transmitting to Congress proposals for increases in postal rates on first-, second-, and third-class mail to yield an estimated \$550 million of new postal revenues in fiscal year 1961—referred to Committee on Post Office and Civil Service.

Page 4853

Corrupt Practices: S. Res. 285, to authorize investigation of certain election charges, coming over from a previous day under the rule, was laid down and considered, but at conclusion of morning business at 1 p.m. the resolution went to the calendar under the rule.

Pages 4862-4863

Public Land for School Purposes—Civil Rights: Senate continued consideration of H.R. 8315, directing the Secretary of the Army to lease certain property in Missouri for school purposes, after adopting the following amendment and motion:

By 65 yeas to 19 nays, Lausche amendment to section 1 (regarding obstruction of certain court orders) of

Dirksen substitute bill, as amended, so as to make the language applicable to obstruction of any court orders rather than solely those having to do with question of school segregation; and by 49 yeas to 35 nays (motion to reconsider tabled), Morse motion to table section 1 of Dirksen substitute bill, as amended (in effect rejecting this branch of the substitute). Pages 4864-4895

Record Votes and Quorum Calls: During Senate proceedings today two record votes and four quorum calls were taken, which appear on pages 4861, 4882-4883, 4879, and 4889.

Nominations: One nomination in the Foreign Service was received, and one Foreign Service nomination was withdrawn. Page 4895

Program for Monday: Senate met at 11 a.m. and adjourned at 6:02 p.m. until noon Monday, March 14, when its unfinished business will be H.R. 8315, to lease certain property in Missouri for school purposes. Page 4895

Committee Meetings

(Committees not listed did not meet)

CCC GRAIN STORAGE OPERATIONS

Committee on Agriculture and Forestry: Special Agriculture Investigating Subcommittee resumed its hearings on grain storage operations by the Commodity Credit Corporation, having as its witnesses Earl C. Corey, former Director of the Portland, Oreg., Office of the Commodity Stabilization Service; and W. George Goold, Assistant Director of Personnel, Department of Agriculture.

Hearings were recessed subject to call.

APPROPRIATIONS—MUTUAL SECURITY

Committee on Appropriations: Committee held executive hearings with regard to proposed fiscal 1961 budget

Appendix

West Virginia Admirably Situated for Marketing and Has Readily Adaptable Labor Force

EXTENSION OF REMARKS
OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. RANDOLPH. Mr. President, the Charleston (W. Va.) Gazette, the editor of which invited me to prepare an article evaluating West Virginia's location, its raw materials, and its labor force, published my observations on March 11, 1960.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA ADMIRABLY SITUATED FOR MARKETING AND HAS READILY ADAPTABLE LABOR FORCE

(By JENNINGS RANDOLPH, U. S. Senator from West Virginia)

Fundamental problems of unemployment in West Virginia are not due solely to mechanization by the coal industry and primary manufacturing. This fact was emphasized in prior articles of this series in which it was suggested that much of our difficulty is attributable to the lag in the development of secondary manufacturing, as well as slow growth of service industries, including construction and trade. When referring to secondary manufacturing the connotation is satellites of our primary coal, chemicals, timbering, and metals industries.

This is a problem not necessarily unique to West Virginia—except in the matter of degree. The conditions we face today—very acutely in some parts of the State—will be confronted by many areas of the country within the next decade.

By 1970, the United States must provide 13.5 million new jobs to accommodate the growing population, and this will necessitate a rate of increase in our labor force 50 percent greater than that of the 1950's. West Virginia must accomplish its proportionate share of fulfilling the mission which this problem will pose.

The bulk of the requisite new jobs probably will have to be provided by economic activities other than manufacturing, transportation, public utilities, mining, and agriculture—industries which now comprise approximately 43 percent of our national employment and which provide approximately 61 percent of West Virginia's total jobs. The implication seems clear that we must look beyond this group of job-producing industries if we are to achieve sustained improvement of the total economy.

A consulting economist with whom West Virginia's situation was discussed last year referred, during the course of the conversation, to the mining psychology of much of the business and financial community of our State. His thesis was that many West Vir-

ginians, having earlier become accustomed to the quick and high returns on capital investment in coal, oil, and gas are reluctant to invest in other businesses which take longer to develop and offer lower returns. Thus, he suggested, much of West Virginia's savings, instead of going into new enterprises, go out of the State into government bonds and other investments. Meanwhile, the economist suggested, too much of the development of West Virginia's business and industry is left to outside capital.

How much of this is speculative and how much is factual, I am not prepared to say—although I do believe that, if it is true, it is more an attitude of the past than of the present or the future. One of the most recent indications that the future may see more West Virginia savings invested in our State is noted in the chartering of the West Virginia First Small Business Investment Corporation under the Federal Small Business Investment Act. With a capitalization of \$160,000, this firm, with principal offices in Huntington, will be able to lend up to \$500,000 to business firms in West Virginia, consistent with provisions of the act.

One field which might be fruitfully explored for the development of more locally owned businesses is the lumber industry, with its yield of approximately half-a-billion board feet per year. In spite of such a large cut, our State conservation officials declare that the annual new growth is almost double the amount cut, exceeding the loss by more than 494 million board feet. Yet, 80 percent of our commercial timber is shipped to out-of-State users.

West Virginia, situated in the center of the great eastern marketing area, has an abundant supply of raw materials, as well as a labor force readily adaptable to its use in fabricating. This latter point was made dramatically clear to me by a letter I received about 4 months ago from the manager of one of the newer industries of the State.

Several years ago, I participated with other citizens in the creation of the Elkins Industrial Development Corp. In our activities of seeking new industries for the community, we were successful in bringing to Randolph County the Metalab Labcraft Division of the Norbute Corp., manufacturers and engineers specializing in scientific and laboratory equipment.

Last November I received a letter from the plant manager, John P. Russo, which clearly expressed his belief in the advantages West Virginia offers for industry and business. Russo states: "As you probably may remember, Metalab Labcraft settled in Elkins just 2 years ago this month. At that time we had a backlog of orders which amounted to several million dollars. We had no trained source of labor and were in reality engaged in fulfilling these contracts with no qualified personnel. The most remarkable fact concerning this situation was that we employed immediately approximately 75 persons with no past experience or skills in our industry, (who), within the period of 6 months, produced all of the items required for our backlog of work at that time.

"At the present we are employing approximately 250 local people. We have just recently completed an expansion to our facilities, giving us approximately 50,000 additional square feet of working space. Our an-

nual payroll at the present time is approximately \$750,000 and the anticipated payroll in perhaps another year will probably reach \$900,000 annually.

"As a personal observation, let me state the following: I have been involved in our industry for the past 24 years. During that time I have been located in approximately eight different parts of the country and exposed to the qualifications, capabilities, and aptitudes of the labor pool in those areas. I also estimate that during this period of time that the number of people who have been under my direction, either directly or indirectly, approximately 5,000 persons. I say without equivocation that I have never before seen a group of people who have combined their zeal, attitude, cooperation, and native capabilities to achieve the measure of performance that we have here."

The experience of Mr. Russo is not unique. It has been duplicated by many others who have had experience with the industriousness and adaptability of the men and women of West Virginia.

On May 30, 1955, I had the privilege of introducing Henry J. Kaiser when he addressed Ravenswood's celebrated annual "\$5 banquet" and told why the Kaiser Aluminum & Chemical Co. selected its site near that West Virginia community for its huge aluminum mill. Mr. Kaiser said—and I quote from his text: "We like the location. We like the transportation facilities. We like the wealth of natural resources. We like the geographical relationship which Ravenswood holds to our vital eastern markets. Most of all, we like the people here . . . the spirit of cooperation and a substantial evidence that we would be welcome."

Walter T. Phair, assistant to the vice president of Kaiser Industries, who verified the quotations, further advised me in a February 18, 1960, letter:

"I would like to underscore Mr. Kaiser's remarks by stating that from the time of the ground-breaking ceremonies, the area people who make up at least 98 percent of our work force have contributed immensely to the success of the reduction-fabricating operations. From the start we have found the workers to be quickly adaptable to aluminum operations, energetic, enthusiastic, productive, and loyal."

Also last month, in correspondence with F. J. French, president of the General Chemical Division of Allied Chemical Corp., concerning matters affecting that firm's operation at Nitro, near Charleston, it was encouraging to have received this comment from that experienced industrialist who heads a highly successful organization: "My company's opinion with respect to the opportunities for industry to thrive in West Virginia is best illustrated by the fact that our hydrofluoric acid plant at Nitro, put into operation as a new plant only 14 months ago, is now in the process of being substantially expanded."

Yes, there are countless numbers of persons and firms familiar with the quality and adaptability of those who form the labor force in our State and are well satisfied with their experiences.

I am equally confident that the success of the Elkins Industrial Development Corp. is not unique. Other business and industrial development groups such as those organized in Clarksburg, Beckley, Bluefield, Fairmont, Grafton, Huntington, Wheeling, and elsewhere in West Virginia will improve

the economic growth of their communities. And these are but a few of some 120 local development efforts in our State.

This fact—the existence of such a number of community development and improvement bodies—is perhaps the most effective testimony of the faith of West Virginians in the continued vitality and the promise of our State's economy.

Toward Christian Attitudes on World Order

EXTENSION OF REMARKS

OF

HON. WILLIAM H. AVERY

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. AVERY. Mr. Speaker, the following is a sermon given by Rev. W. Cecil Findley, pastor of the Evangelical United Brethren Church, Manhattan, Kans., for World Order Sunday. In addition to his duties as pastor, Reverend Findley serves as minister to students who attend Kansas State University in Manhattan. I am certain that all Members of Congress will find Reverend Findley's sermon most penetrating and thought provoking.

Reverend Findley has made the following comments regarding this outstanding sermon:

I am not personally a committed pacifist, nor is my church one of the historic peace churches, but this is an area in which I have become greatly concerned because I am seeking to apply Christian principles to all of life. If the remarks in this sermon are critical, they are not intended to criticize one administration or party, but are critical of all of us.

The sermon follows:

TOWARD CHRISTIAN ATTITUDES ON WORLD ORDER

Walter Rauschenbusch talked long ago about "the knights of the washbowl," that venerable order which stems from Pilate's washing of his hands before the people, allowing Jesus to be crucified, but declaring at the same time, "I am innocent of this man's blood." We too, ask for the washbowl rather than accepting our hardest responsibilities. As Christians, confronted with the issue of war or peace in our world, we rejoice that we can have refuge in the order of the knights of the washbowl. We will wash our hands of the matter, that is what we will do.

But the problem still persists, and still grows more urgent. It does not go away if we wash our hands of it; it persists even if we shut our eyes and hope it goes away. And this is World Order Sunday, when our very schedule clamors for a word to be spoken that is both Christian and relevant to the world situation.

And so we venture to see the world situation today from a Christian perspective. We not only renounce the ancient and venerable order of knights of the washbowl, but we even stray away from our office as Curators of the Cubbyhole—where we put our faith in one cubbyhole and world problems in another, and comfort ourselves with the magic formula, "Never the twain shall meet." In doing this, we have three things to say about Christian attitudes in this area of world order.

I

First, if we are truly Christians, and if we are in any meaningful sense a Christian nation, then our Christian faith should be the basic determinant in our attitudes toward this problem. Christ calls us to no halfway discipleship, where we give Him our hearts but not our minds. He brooks no secondary loyalty, where we let Him clear supreme in some areas, but keep him clear out of others. Christ is either Lord of all of life, or He is not Lord at all. If He said anything that has bearing on our attitudes toward the world problem, obligation is laid upon us as Christians to listen to Him first of all.

Hear Him: "You have heard that it was said, 'You shall love your neighbor and hate your enemy.' But I say to you, Love your enemies and pray for those who persecute you, so that you may be sons of your Father who is in heaven; for He makes His sun rise on the evil and on the good, and sends rain on the just and on the unjust."

Or again: "Blessed are the merciful, for they shall obtain mercy. Blessed are the peacemakers, for they shall be called sons of God."

We could multiply quotations from Jesus, but it appears that the requirement laid out in these few words is both clear and demanding. If we are to get our basic approach to life from the Master, we are to be—in whatever the situation—persons of love, persons of the kind of active good will which will promote peace, rather than war, kindness rather than enmity, understanding rather than strife. This active good will is not to be withheld from any because they are our "enemies"; we are bid explicitly to include them within the circle of our concern.

If these statements from our Lord are said to be too idealistic for the harsh realities of our modern world, if we claim that they are not relevant in the situation in which we live, then it is as simple as this: We have forfeited the right to be called Christians.

Far too often we of the church—in good Knights of the Washbowl tradition—have abdicated our responsibility in the formation of attitudes toward peace and war. There are those in our land who have eagerly seized upon the opportunity left by our failure as a church, and have shaped attitudes according to other principles than those of Christ.

To put it frankly: Our attitudes toward war and peace and foreign policy are shaped more by the military than by all others, including Christ.

Look at our present approach to the problem. We frantically produce more and more weapons and armaments, even though we could already obliterate civilization with what we have. We live with constant reminders that Russia could push the button any time which would start the war, so we must be ready to destroy Russia. Our greatest expenditures are for military preparations.

Is all this because Christ has bid us kill and wound and maim as many of the enemy as possible if he starts anything? Are the most gigantic military preparations in the history of mankind being made today because we have accepted Christ's idea that active love is the most powerful force in the world?

To be sure, there are those who insist that we have gotten these ideas from our Christian faith—God is a great commander in chief, and Christ is his chief of staff. One minister during World War II was laboring with the text "God is love," and concluded that saturation bombing of enemy cities—dropping bombs indiscriminately on all men, women and children—may be one expression of the divine compassion. Harry Emerson Fosdick, who reports this example of ration-

alization, goes on to comment, "Such preaching, obliterating all difference between Christ and Mars, and making the church a mere adjunct to the war department, seems to me a complete negation of Christ's teaching." To which we only add, Amen.

The plain fact is that our policy and attitudes are built in disregard of Christian principles. We have made the charge that the military leaders of our Nation have wielded more influence on our attitudes toward war than have the prophets of Christendom. Let's look at this charge.

Col. William Neblett, who was stationed in the Pentagon for a number of years, wrote a book in 1953 called *Pentagon Politics*. In this book he asserted that the Pentagon planned a nationwide campaign to create the impression "that we were living in a state of undeclared emergency; that war with Russia was just around the corner, and that we not only had to keep our military strength, but we had to increase it." You can judge for yourself how successful this planned campaign has been.

We all like the feeling of power, of running things, and military men are no exception to this. They have gloried in the fact that they have virtually taken over things. The Army and Navy Bulletin of 12 years ago already said, "Today the army has virtual control of foreign affairs."

In 1953 there were 67 army generals and colonels assigned to civilian agencies of government. By 1957, the number had increased to 200 generals or admirals, and 1,300 colonels or naval personnel of comparable rank, plus 6,000 officers of lower grade. Progressively, the military viewpoint has been gaining more and more control in all phases of our Government's program.

The results of this militarization of our thinking are evident in many ways. One way is seen in the virtual universal military training we have, under which every young man has to face the prospects of military service, even though we are technically at peace. This is necessary to maintain the peace, we are told, even though the judgment of history is clear, that "to be prepared for war is to be predisposed to war." That is, every nation in history that has given its energy to preparations for war has ended up fighting.

After World War II, Congress failed to pass the selective service bill that the military wanted. One general spoke of the "appallingly bad judgment" of the "old men" in Congress "who would have been eliminated in any other nation." There is here the sinister hint that Congress had better do what the military asked or run the risk of elimination. Congress took the hint, and in the face of a huge propaganda effort by military men, made selective service a permanent institution in 1951.

I would like to mention one other way in which the military influence is being felt right here where we are, at Kansas State University. Our Government is spending over \$30 million to keep over 300,000 students in ROTC. The aim is quite frankly that of indoctrination. It has been pointed out that the system is very inefficient in producing officers, since 73 percent serve only the minimum term and then quit; actually the Armed Forces use ROTC for indoctrination and propaganda purposes. I say this realizing that some of you have been indoctrinated with this military system so that you will dislike my saying this to you. I oppose the idea of compulsory ROTC as a part of education, because the aim of true education and the mark of an educated person is the ability to make intelligent judgment and to have critical understanding. Any system of indoctrination or propaganda is out of place in creating these qualities.

This is perhaps more than enough substantiation to my charge that we are letting

the military call all the shots for us. My reason for including all this in a sermon is to leave us with this question—please get this: Is our basic orientation military, or is it Christian? Do we get our fundamental notions on how to solve our problems from those who say, "You must be prepared to fight, or from him who taught us to try the way of redeeming love? Is our approach to our enemies to be learned from a manual of military discipline, or from the words from the cross, "Father, forgive them?"

II

The second thing that must be said about Christian attitudes toward world order is that the Christian way does not mean to give in weakly to evil. It does not mean that we must be irresponsible in the face of our obligations to the world and to our own future generations. Surely the Christian of all people is responsible to do all that he can to promote the good and defeat the evil.

But this idea of Christian responsibility in resistance to the forces of evil does not mean putting our trust in the weapons of force and violence. Is this the way of responsibility, to rely on a system that has us more insecure than ever, to count on a way out which would leave over 50 million Americans dead and countless others wounded and dying, should we have to actually use it? It seems clear that the way of responsibility to ourselves, to the world, and to our future generations, lies down another path.

We must resist the forces of evil, but we must find better means of doing it. Communism is our present enemy, but why must our so-called Christian Nation stoop to the methods of the godless in combating them? Our point is that the Christian attitude is not based on cowardice that refuses to resist the advance of evil, but it is a resistance based on Christian lines.

Recent history has provided us with a powerful demonstration of resistance without bitterness or violence. The Negroes of Montgomery, Ala., were the victims of subhuman treatment on the buses of their city. Finally the time came when they could stand it no longer, and they refused to ride the buses until they were guaranteed courteous treatment. They walked and caught rides as they could for a year; but the amazing thing is that during their whole protest, it was only the white community that reacted with violence. Martin Luther King was a Negro leader in the movement, and he made it clear that the people must resist the evil, but they must not hate their white brothers, and must not react with violence. Perhaps the crucial test came when his own home was bombed, and a mob of Negroes gathered, ready to start a violent race riot. Martin Luther King, standing on the porch of his bombed home, could have spoken the word to start one of the worst race riots this country has seen, but instead he said to the assembled mob: "We must love our white brothers, no matter what they do to us. We must make them know that we love them. Jesus still cries out in words that echo across the centuries, 'Love your enemies; bless them that curse you; pray for them that despitefully use you.'"

The crowd that had gathered for violence went home peacefully. They who had come with blood in their eye demonstrated that you can resist evil best when you refuse to fight.

May we learn and demonstrate this truth as a Nation in the sphere of our national responsibilities. May we learn that we cannot advance the cause of righteousness with the tools of evil; that we cannot promote peace by fighting. The question of how to do this leads to our third point.

III

The third thing we must say is that the Christian will do all he can to understand the nature of our struggle, the responsibilities upon us, and the requirements of our faith in this situation. Uninformed good will does not do the job. An approach not grounded in the realities of the situation may meet the requirements of piety without actually saying anything to help us find a way out of our dilemma. There is no excuse for a Christian refusing to give his best thought to this problem.

It seems clear that this very study of the situation indicates that a nonmilitary solution must be found. The deputy chief of our Central Intelligence Agency, whom the United Press calls one of the best informed Americans on what the Russians are doing, states emphatically "that Russia is neither ready for war nor preparing for war, that the Kremlin does not want a war, though the Communists will fight if they are forced to." The point is, he says, "that peace is essential to the accomplishment of Communist aims." What they want to do is to win the world by economic development and technical aid in underdeveloped countries. They know that all would be losers in a global war, but they are confident that they can whip us by outdeveloping, outproducing us, and by using the fruits of their peacetime production to win the world.

This means, you see, that we are playing right into their hands when we refuse to set up a balanced peacetime economy. We further their chances for expansion by pouring the vast bulk of our resources into those military preparations which can do nothing for the betterment of the world.

Instead of using our energy and resources in the preparation for war, we must begin throwing the same kind of energy and the same extent of resources into preparations for peace. It is only when we get seriously to work to create conditions throughout the world that make peace possible that we will be doing that which thwarts the spread of communism.

We must show real Christian concern for the needy of the world. We must demonstrate to the world that we stand for those things which they need. Along this line, what could better demonstrate to the colored majority of the world the integrity of our faith than to grant first-class citizenship to the Negroes within our own land? I am suggesting simply that when we learn to regard others, not as objects of exploitation for dollars or for military advantage, but as brothers under God, then we can hear the words, "Blessed are (you) peacemakers."

I am not an economist, nor is this a political science lecture. My suggestions are not that we must follow any particular strategy of foreign aid or economic development.

But I am a minister of Jesus Christ, and my call to you is that we must follow those approaches which are in keeping with the spirit and aims of our master. My contention this morning has been that not only is this our imperative, but that this is the only practical way open to us, to lay down our arms of war, and pick up our tools of peace.

The prophecy can yet come true: "And they shall beat their swords into plowshares, and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war any more." This prophecy can come true, but not until we want it to come true, and work for it with all our energy.

The World Court and the Connally Amendment

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Connally Amendment," published in the Sumter (S.C.) Daily Item of March 10, 1960. The Sumter Daily Item is one of the permanent newspapers of my State and is edited by the very able H. D. Osteen, its publisher.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CONNALLY AMENDMENT

"I have seen no argument in favor of repealing the Connally reservation which has any purpose other than to establish world government over the United States," says George Sokolsky, well-known columnist.

We were delighted to see that a number of South Carolina county Democratic conventions, including Sumter, adopted resolutions urging the defeat of the resolution offered by Senator HUBERT HORATIO HUMPHREY. As Mr. Sokolsky says, the passage of the Connally reservation "disappointed those who had sought to develop the United Nations into a world government."

The resolution adopted by the Sumter County Democrats (similar resolutions were adopted by other county conventions) expresses the view we believe of the masses of the people in this section. The resolution says:

"Whereas the World Court was established by the United Nations with the intent that it should be superior to all domestic courts of each participating nation in those matters within its jurisdiction; and

"Whereas in adopting the resolution committing and binding the United States to participate in and accept the jurisdiction of the World Court, the Congress of the United States would have no jurisdiction over disputes with respect to matters which are essentially within the domestic jurisdiction of the United States as determined by the United States; and

"Whereas Senator HUBERT HUMPHREY, of Minnesota, has introduced a Senate resolution calling for the elimination of the words 'as determined by the United States'; and

"Whereas if these words 'as determined by the United States' are eliminated from the agreement of this Government to accept the jurisdiction of this World Court, the United States will have virtually surrendered its Constitution and its national sovereignty and accepted the dictation and control by foreign governments of its internal affairs; Now, therefore, be it

"Resolved by the Sumter County Democrats Convention:

"(1) That this convention urges the Senators representing the State of South Carolina in the U.S. Senate and the Foreign Affairs Committee of the U.S. Senate to oppose repeal of the Connally amendment and to defeat Senate Resolution 94.

"(2) That a copy of this resolution be forthwith transmitted by the secretary of this convention to U.S. Senators OLIN D.

JOHNSTON and J. STROM THURMOND and to the chairman of the Foreign Relations Committee of the Senate with the request that it be called to the attention of the whole committee and that the delegates from Sumter County are requested to present this resolution to the State Democratic convention."

The Item has on several occasions expressed its strong opposition to any repeal of the Connally reservation and we were delighted to see the Democrats of the county take a stand against it.

Federal Aid to Education—Financial and Educational Folly

EXTENSION OF REMARKS

OF

HON. ELMER J. HOFFMAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. HOFFMAN of Illinois. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Mr. Lloyd Morey, president emeritus and former comptroller of the University of Illinois and former Illinois State auditor.

Mr. Morey's background eminently qualifies him as an authority to speak on the ramifications and end result of proposals for broad extension of so-called Federal aid to States and communities in all levels of education. His candid appraisal is as follows:

URBANA, ILL., March 9, 1960.

HON. ELMER J. HOFFMAN,
House Office Building,
Washington, D.C.

DEAR MR. HOFFMAN: I am deeply concerned over the proposals for broad extension of so-called Federal aid to States and communities in all levels of education. I firmly believe that for the most part such actions would be both unnecessary and highly undesirable. My reasons are these:

1. Actually there is no such thing as "financial Federal aid." All the money thus provided comes sooner or later from the same taxpayers who provide the funds for State and local financing. To channel it through the National Government increases overhead costs and tends to centralize decision and supervision in others than those who bear educational and management responsibility.

2. While the Federal Government has done much for education in the past, the major burden of both financial responsibility and educational development has rested with and been assumed by communities, States, and private institutions and agencies. This is as it should be. To place this responsibility and authority in any degree in a central government would seriously reduce the independence of spirit and action on which our system of education has been built and has flourished.

3. The progress made by the States and citizens in solving their own problems of educational finance in recent years is impressive. There is no reason to believe this will not continue and generally be adequate. Federal help would tend to reduce their feeling of responsibility for their problems, and encourage them to rely on a mythical source which really amounts only to giving them back their own money.

4. By almost common consent, inflation is the greatest burden upon the country at the present time. Inflation is not caused solely by Government expenditures or

deficits, but it is materially increased by them. Educational expenditures are not the sole cause of Federal deficits, but they contribute to them. To create a new and major addition in the face of present deficit and debt, without revenue to meet it, would increase the financial instability of the Government and the consequent burdens of inflation.

There may be a few areas in which local resources are sufficiently behind the general average and local educational conditions are sufficiently in arrears to warrant temporary and selective outside assistance. If such there be, as determined by demonstrated need and conclusive evidence of inability to meet their own problems in reasonable time, such aid may be warranted from the Federal Government. To make these few situations the excuse for general Federal grants to all States is both financial and educational folly.

Your very truly,

LLOYD MOREY,

President Emeritus and Former Comptroller, University of Illinois, and
Former Illinois State Auditor.

Address by Senator Wiley Over Radio Station WGN, Chicago

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. WILEY. Mr. President, the adoption of more public service programs by radio and television, as now being undertaken by the major networks and independent stations, represents, I believe, a most commendable effort by these information media to better serve the American people.

In this age of fast-changing events, the task of keeping our citizenry informed and up to date on issues of vital importance is difficult and complex.

Consequently, we, as a people, need information media that include discussions, reviews, and analyses of as many of the major problems before us as possible.

From time to time, I welcome the opportunity to participate in such programs.

Recently, for example, I had the opportunity to discuss major problems including defense, disarmament, mutual security, and other aspects of the challenge in the international field, on "Your Senator Reports," over the fine facilities of station WGN, Chicago.

I ask unanimous consent to have the text of my remarks on these current issues printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY HON. ALEXANDER WILEY, REPUBLICAN OF WISCONSIN, RANKING REPUBLICAN OF THE SENATE FOREIGN RELATIONS COMMITTEE, OVER RADIO STATION WGN, CHICAGO, ON MARCH 6, 1960

Fellow Americans, the decade of the 1960's, now opening to us, offers great promise of progress, prosperity, and opportunity to build a better life.

As you well recognize, there are also serious challenges on the horizons—at home and abroad.

These promises of the future, however, can only be attained: (1) By dedication of the necessary energies and resources; and (2) by preventing world war III with its disastrous effect upon the globe.

Regrettably, the choice of peace or war, the most momentous of our age, is not solely a free world decision.

Instead, peace—indeed, survival of mankind—may be determined by the mind, or the trigger finger of conquest-happy Communists, although we pray that this will not happen. These are the facts of life, however. We must—in our time—do everything possible to discourage such a foolhardy act, and to guard against it. At the same time, we need to design ever more effective programs to prevent the Communists from attaining a world takeover through persuasion, subversion, economic penetration, and other devious tactics.

This is a touch and go business.

The task will be complex and difficult; yet, we can do no less than succeed.

MAJOR DECISIONS AHEAD

Briefly now, I would like to review some of the major decisions we will face in the days ahead. These will include: The need to devise ever improved programs to create ever greater retaliatory strength in missile-nuclear space defense; strengthen the alliance of free nations in their efforts to oppose communism; effectively utilize all deterrents, military, economic and psychological, to curb communism; make further efforts to find safe guaranteed agreements for reduction of armaments; and, finally, we must assure a sound, strong program for the economy in this country.

Despite the fact that—to rational men—it would be foolish, if not suicidal, to "touch off" a world conflict, the chance nevertheless exists—particularly if our avowed enemy, communism, feels that we are weak, and could be overcome easily—with little damage to them.

As a result, we—the United States and the free world—must maintain a strong, effective deterrent power.

Although it may seem contradictory, history has shown that one of the most effective ways of discouraging attack by a would-be aggressor is to develop the strength to carry out, if necessary, a devastating counter-attack.

That is why we must remain strong.

This can be accomplished by a two-pronged program: (1) Creating an ever-stronger, hard-hitting defense; and (2) further strengthening the free world alliance—militarily and economically—to enable the countries to better withstand the economic, industrial and cultural expansionist pressures of communism.

Question: "Senator WILEY, as a member of the Senate Space Committee, I recall that you and your colleagues have held joint hearings with the Preparedness Subcommittee on the status of our defense. Do you feel that we have a good defense now?"

Answer: "Yes. Fortunately, there is almost unanimous agreement among our military experts that the military strength of the free world—at this time—is of tremendous magnitude and power. In effect, that it is now a strong deterrent."

Question: "We recall, of course, that there was considerable difference of opinion on the adequacy of our defense for the future. What is your view?"

Answer: "Now, I am not a defense expert. There are, however, wide difference of opinion on the adequacy of our defense now. There are also sharp differences of view as to just what kind of defense would do the job for the future."

"The intercontinental missile will, in all likelihood, be the workhorse, by and large,

around which will be centered the defense of the future.

"We recognize that the Soviets have developed tremendous thrust for launching their intercontinental ballistic missiles. However, in this complete technological age, an effective defense cannot depend upon a single weapon—even the powerful ICBM.

"Instead, there are a wide variety of other weapons for defense systems for detection of enemy approaches and capable of retaliatory counterattack that must be kept at the ready if we are to be adequately protected.

"The objectives of President Eisenhower, in recommendations to strengthen our defense, however, has not been to put all our eggs in one basket—that is, rely entirely, for example, on intercontinental ballistic missiles—now only in the early stages of development—with present models in all likelihood becoming obsolete in the near future—not to burden the American taxpayer with a crash program in every field—as is being proposed by the critics. Rather, the effort is to provide the United States with a well-balanced defense system involving a wide variety of systems.

"These include an up-to-date radar system for detection of approaching enemy planes or missiles; maintenance of a well balanced, striking power, including jet planes, ICBMs, intermediate-range missiles, air-to-air, ground-to-air, and air-to-surface and other missiles; submarines equipped with rocket launchers; adequate numbers of aircraft carriers for launching of jet planes bristling with nuclear weapons and missiles; mobile, atomic firepower for air, ground, and sea forces.

"The maintenance of an adequate defense system to deter aggression—now and in the future—is one of the major challenges confronting the Nation. Because of its significance, it is absolutely essential that there be balance and perspective in our thinking and planning.

"Even among experts, however, there are differing opinions on: (1) What is an adequate defense; and (2) is the U.S. program sufficiently strong—particularly in relation to the Soviet Union?

NEEDED: A STRONG MUTUAL SECURITY PROGRAM

Question: "Senator WILEY, you mentioned also a strong mutual security program. What do you feel are the real benefits of relying upon our allies?"

Answer: "There are, of course, a great many advantages. These include: More manpower than the United States itself could muster; missile-bristling bases placed strategically around the Communist orbit—closer to the potential target—less likely to be knocked out than if the bases were concentrated only on U.S. soil; bases close to the cause of possible trouble, too, enable us to utilize ready-to-go intermediate-range missiles, while we are shaping up our intercontinental ballistic missiles for the arsenal of peace; in addition, the programs provide more sea and air power than could otherwise be obtainable. Although it amounts to less than 10 percent of our U.S. defenses along, the mutual security program has been proclaimed by well-qualified individuals from nearly all walks of life who have studied the program as, dollar-for-dollar, our best investment in defense.

SIGNIFICANCE OF A STRONG PROGRAM

In addition to its military significance, the enactment of a strong mutual security program would signify:

1. The dedication of the United States to world peace;
2. A sense of responsibility in carrying out our role as leader of the free world;
3. Assuring our allies that we stand shoulder-to-shoulder with them against aggression;

4. Assurance to less developed nations that we recognize a need for establishing a world climate in which they, by self-determination, can attain their national goals.

Overall, the effort, too, will keep alive the ideal of America.

OTHER DETERRENTS TO COMMUNIST EXPANSION

Question: Senator, you feel then that militarily we have adequate strength now; and that, as we face the challenges of the future, we will be able to meet the growing power in the Communist bloc?"

Answer: "Yes. While it is not, of course, possible to foresee the future, I am confident that we will meet the challenge."

Question: "Are there any other deterrents, Senator WILEY?"

Answer: "Yes. Frankly, I believe there are a number of other deterrents which are often overlooked—as we plan ahead for the long-range struggle against global communism.

"First of all, we must not forget that a great many people under Communist domination maintain an inherent resistance to tyranny—whether Communist or in other forms.

"If war can be forestalled, the yearning for freedom of these people—nearly 1 billion of them—will be our allies—so to speak.

"From the so-called neutral countries also, I believe that we can expect in the years ahead a larger support for our efforts to halt the spread of communism. The moral pressures of a world disillusioned, and by nature against totalitarian communism, will, I believe, eventually make itself felt in world affairs.

"We realize, of course, that these pressures—as deterrents—are for the allies for the 'long haul.' Nevertheless, I am confident that time is on the side of freedom."

DISARMAMENTS

Question: "What about disarmament, Senator WILEY? What are the prospects for a real reduction of arms in the world?"

Answer: "Naturally, we all look forward to the time when we can beat our swords into plowshares, when we can lift the great burden of costly, deadly arsenals from the sweating backs of humanity; when, at long last, we can channel the vast human and natural resources, now going into armaments, into constructive programs for building a better life for the people of the earth.

"In considering the reduction of arms, however, the question is: In dealing with a tricky, deceptive adversary, how can we safely reduce our security forces?"

"As you know, the United States recently presented at Geneva a proposal for ending of nuclear weapons tests 'in all the environments that can now be effectively controlled.' The plan, if accepted, would end: all nuclear tests in the atmosphere; in the ocean, in space, and beneath the surface of the earth.

"At the same time, the program provided for joint research and experimentation by the United Kingdom, U.S.S.R., and the United States for the detection of tests—to safeguard against violation by any power."

Question: "Do you feel that Red China should be included in 'reduction of armaments negotiations'?"

Answer: "Recently, President Eisenhower—and wisely, I believe—stated that he thought that once there had been agreement on measures on general disarmament between East and West, it would be necessary to find a means of including Communist China."

Question: "Why?"

Answer: "With a population of about 650 million people, in the future Communist China can expect to exert more and more pressures in world affairs, particularly in the economic and military spheres.

"Realistically speaking, the development of disarmament plans that would not include all the potential powers of the globe would not be effective.

"However, inclusion of Red China in such plans would not necessarily mean either: Recognition of Red China; or admitting that Communist nation to the United Nations.

"In view of the belligerent policies of Communist China's leadership, however, it would certainly not be wise to ignore the threat to world peace which that nation would eventually be—if not included in a general disarmament program.

"Despite the difficulties involved in reaching disarmament, the Western Powers—constructively, I believe, are making a real effort toward arms reduction—aimed at lessening the possibility of war."

CONCLUSION

These, then, are a few of the major aspects of the national and international problems confronting us—as a nation, and a leader of the free world.

Now, I would like to stress one more point: It is absolutely essential that we maintain a sound forward-looking economy at home. Unless we can accomplish this, we cannot support the efforts to meet the needs of our citizens domestically—to provide them with an ever better life for the future; nor will we be able to successfully meet the international threat to our security posed by communism.

Thank you, friends, for the opportunity to discuss these issues with you.

Storing Insanity

EXTENSION OF REMARKS

OF

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. CAHILL. Mr. Speaker, a great many of us who are opposed to the farm subsidy program have wondered what the actual cost per day is to the American public for storage of commodities under this program. I read with interest in the Wall Street Journal the following editorial which illustrates the exorbitance of this program. Its title is "Storing Insanity" which I think is a very apt title and reads as follows:

STORING INSANITY

Would you care to know how much it costs the taxpayers every day for storage of commodities Uncle Sam has on hand because of the farm program's high price supports?

Let's ease into this with two low ones: honey and tobacco. Uncle Sam pays out only \$131 a day for honey and only \$238 a day for tobacco, which, if it indicates anything at all, suggests that people smoke nearly all the tobacco that's grown here and that the bees aren't nearly as busy as the peanut farmer.

The peanut storage costs come to \$6,000 a day; flaxseed and rye costs come to \$7,000 each a day. Oats cost the taxpayer \$15,000 a day for storage; rice \$17,000 a day; soybeans, \$23,000; milk and butter fat, \$29,000; barley, \$64,000 a day and cotton \$78,000 a day.

But even these are peanuts compared to the big boys. Have a good look:

Grain sorghums cost \$262,000 a day for storage.

Corn costs \$444,000 a day for storage.

And wheat cost \$579,000 a day for storage.

That's every day. None of these costs include what was paid by the taxpayers, through their agent, Uncle Sam, for the stuff. It's just storage costs.

Total cost of storage for all these commodities comes to \$1,547,000 a day or better than \$550 million a year—and that, in anybody's book, is a lot to pay for storing up our harvests of insanity.

Seventy-fifth Anniversary of University of Arizona

EXTENSION OF REMARKS OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES
Monday, March 14, 1960

Mr. GOLDWATER. Mr. President, on March 1 of this year the University of Arizona observed its 75th anniversary. I recognize that compared with the institutions of higher learning in the eastern part of our country this is by no means a long life but in the comparatively new West, 75 years of service is a remarkable accomplishment. To properly recognize the importance of this event the university invited one of Arizona's first two Senators, Henry Fountain Ashurst, to deliver the principal address. Henry Fountain Ashurst is one of Arizona's most beloved sons, not only because of the immortal impression he left on this body but also because of his long and notable record of public achievement in the legislative body of Arizona. It was while serving in the territorial legislature that he was instrumental in forming the favorable opinion that resulted in the establishment of the University of Arizona and the Arizona State College at Flagstaff. His has been a full life devoted to the betterment of people everywhere and all Arizonians are proud of him and his accomplishments. So that the readers of the RECORD might better understand this pride, I ask that the address by the Honorable Henry Fountain Ashurst made at Tucson on this occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF HENRY FOUNTAIN ASHURST ON MARCH 1, 1960, AT THE FACULTY CONVOCATION COMMEMORATING THE 75TH ANNIVERSARY OF THE FOUNDED OF THE UNIVERSITY OF ARIZONA, TUCSON, ARIZ.

Mr. President, my first duty is to you, to Governor Fannin, to the board of regents, and to the faculty for the doctoral degree you have so graciously conferred upon me. Such an authentic honor comes so seldom and to so few that it is difficult to express the measure of one's gratitude, hence I shall employ that beautiful phrase: "Thank you" and I am making no attempt to conceal my emotion on this occasion.

This institution of learning is now and for many, many years has been an object of my pride and affectionate solicitude and I may be pardoned this effusion of sentiment when I perceive how from meager but worthy beginnings this university has grown in grace, dignity, and strength. From this university there have been graduated many

persons now famous for their moral and intellectual achievements.

In stately ceremony with the buoyancy and confidence of youth, many young ladies and young gentlemen, educated and equipped with cultural and social resources and skills, have from these doors entered into a busy and, thank Heaven, a commercial and competitive world. I emphasize the importance of habits of industry and I commend the goddess of hard work. She loves her votaries and few be they who, following her precepts, come away from her altars empty handed or visit her shrine in vain.

"Consider how time's vastly corridors
Ring with the words of famous orators.
Are their epigrams spontaneous
Off the cuff, extemporaneous?
Or do they while in the shower or while shaving
Think up some brilliant phrase worth saving,
Then roll it on the tongue and smile
And store it away for future file;
Not even the great Churchill, without notes
Could stand and deliver such golden quotes.
Had he not learned in his earliest boyhood days
To store away many, many a brilliant phrase.
And when he stood before the throng
He could draw upon a treasury of phrases
all day long."

The flowers of art which gave fragrance and beauty to the world—the great institutions of learning and culture did not evolve in ease, comfort and sweetness—as did the flowers in the meadow—but were evolved through years of patient toil and hard labor.

An attachment to the fascination of bygone days is a sentiment found in all civilized peoples. Romance clusters around the history, the genesis, of every one of the States of our Union but it is doubtful if, in the history of any other State, there may be found—characters more vivid, dramas more poignant, actions more heroic than those clustering around Arizona.

I have no pen dexterous enough, and neither silver tongue nor golden larynx is eloquent enough, adequately to portray the contributions made by Arizona's pioneer women. In hunger, in thirst, in childbirth pain, in cruel isolation, in peril of savage men and savage beasts, the Pioneer women walked their uncomplaining way and, with a courage beyond the range of eulogy, cheered their men onward, in Arizona's panoramic settlement and development.

The same sun splashes its genial brilliance upon this landscape—the same mellow moonlight glows as softly as 75 years ago, but all else, how altered. I will remember the year 1885; in that year this University was founded; in that year Grover Cleveland was inaugurated into the Presidency of the United States; in that year President Chester Alan Arthur, one of the most urbane and debonair of our Presidents, left the White House. Arthur is now forgotten as fame is a fickle jade. In that year General Grant died; in that year Mr. Thomas Bullock, a distant kinsman of President Theodore Roosevelt's mother, began the construction of a railroad into Prescott, then the capital of Arizona Territory; in that year the Aztec Land and Cattle Co. brought 9,000 head of cattle from Texas into northern Arizona and established the hashknife brand. It was the largest thundering herd that ever came into Arizona and the 50 Texas cowboys, who brought the herd, were spicily and chivalrous men. In that year I reached the age of 10 years.

All the characters who had to do with the Arizona Territorial Legislature of 1885 founding this university have completed their earthly journey; have gone beyond the twilight's purple haze to that vast realm where the innumerable dwell. Some of the pioneer men may, at times here have trod-

den a tangled trail but they were gay, gallant, and generous and are now, beyond doubt, happy on the serene and shining pathway of the stars.

In attempting to describe the grand drama of Arizona's settlement one is reminded of the lines in the prolog of Shakespeare's play, "King Henry the Fifth": "O for a muse of fire that would ascend the brightest heaven of invention! A kingdom for a stage, princes to act and monarchs to behold the swelling scene."

In the rhythm of life we revere bygone days and try to reconstruct their scenes, and when one speaks of Arizona's early days, one needs not garnish one's narrative with prismatic allusions, that is: one is not tempted to overstatement—the simple facts require no embroidery and the wildest hyperbole—the wildest rhetorical exaggeration could not make our territorial days seem more romantic and glamorous than they really were.

To survive the pioneer must needs be resourceful and of fortitude and endurance as well; life for many of them was necessarily a life of severe isolation hence the lonely ranchman, prospector, teamster, cowboy, and sheepherder frequently took refuge from loneliness by entering into the domain of the imagination—that faculty of the human mind—where ideal experiences are possible without objective restraint—where globes of gold expand and float—glittering towers up-thrust themselves—that domain peopled with a phantom throng—invisible to all persons but the eye of the imaginer, and thus many pioneers became endowed with intellectual power and tremendous personal charm.

I am not attempting to recite a history of Arizona—competent historians will discharge that duty—but I am certain that you will not deem it amiss if I try to present a thumbnail sketch of some of the characters, events, and customs of Arizona's bygone days.

Although territorial days were filled with tragedy and fantastic exploits, courtesy and good manners were the rule. The pioneers, generally, were intelligent, many of them were fairly well educated; they were good humored and were hospitable toward religion, science, and literature.

Most of the pioneer men would have been at home in any metropolitan club and most of the pioneer women were familiar with art forms, cottage industry, domestic science, and with the fashion edicts of New York, London, and Paris.

Nowadays, it is frequently said by world-weary persons that the glamour and high emprise of long ago days have departed and that in this highly mechanized 20th century there is nothing that savors of the romantic or fabulous.

When, however, we make a careful survey, we perceive that high emprise and romantic exploits are occurring all about us; that opportunities for achievement are ever present in our world of today and are at the beck and call of all those persons who will woo those opportunities. The lovely enchantments of bygone days are with us here and now; there is much in everyday life that inspires and gives a mighty upsurge to the human spirit, and as for my single self, I should prefer to live in this present epoch rather than any other epoch this world has known.

We thrill to read of the dramatic advance of Arizona, likewise we thrill to read of the birth and progress of liberty in America, and is it any wonder?

Until the birth of the U.S. Government, nations generally had an unregistered birthdate. Their beginnings were legendary or obscure. They had no birthday celebrations because through the centuries they had at some unknown date severally emerged from some dim, mysterious region supposed to be peopled with giants or heroes, but the beginnings of our Nation are well known.

We know the names of the founders of the U.S. Government, where they were born and where they were educated. We know that the founders were not chasing any will-o'-the-wisp; they were not idle dreamers out on a holiday excursion; they knew mankind cannot construct a society where all persons shall be equal as to intellect, ingenuity, adaptability, temperament or ambition. They knew that a government cannot redeem the ruined spendthrift by filling his pockets with money. They knew that a manmade law cannot give to the nightingale the talons of the eagle nor give to the eagle the art of trilling the beautiful midnight minstrel of the nightingale; that freedom, liberty and livable conditions of life do not come from the graceful wavings of a magician's wand, but that these things—like our daily bread—must be earned.

It would be a fascinating drama in the realm of fancy to see pass before us in review all the men who wrote our Declaration of Independence and also all the men who wrote the Constitution of the United States and the Bill of Rights—documents of grandeur in world annals. All the characters of men known to history, biography of fiction would appear.

Some men wearing brocaded waistcoats; some wearing silken breeches, with silver buckles at the knee and instep; the powdered wig, lace cuffs, the ivory snuffbox. The quick, razor-edge tempers, the punctilious pride, the scholarship, the statesmanship; some of them could have outshone Lord Chesterfield in an exhibit of graceful manners. Brilliant rhetoricians shaping sentences like daggers of jade; world stylists; some of them spoke like a sweet-singing wasp.

Many of these men comprehended the garnered wisdom of the ages and were familiar with the history of the republics of the antique world. Not a few had been graduated from colleges in the Colonies; Harvard, King Williams School (now St. Johns College), Yale, William and Mary, Princeton, Kings (now Columbia), and the Pennsylvania College; some had been graduated from English, Irish, and Scottish universities, and one need not be acutely fanciful to seem to hear the eager and eloquent oratory, the vibrant words and gorgeous rhetoric of that romantic long ago. Some of these men ascended the steep acclivity from obscurity to far-shining fame. Some of them with steady hand at sunrise, held dueling pistol and with same steady hand, at sunset, held mint julep or hot-buttered rum. Nearly all were devoted equestrians—good riders who daily printed their horses' hooves into the receiving earth. They were men of courage, fortitude, and self-esteem, of energy and action with bold inquiring eyes, projecting noses and sunburned faces. They were drawn from the various trades, professions and occupations, and were shrewd to a remarkable degree. They were fiercely determined to set up a government assuring civil liberty, and they launched mankind's first major Republic since the days of ancient Rome. They bravely raised the banner of a republic at a time when the entire world seemed forever fixed in autocratic systems of government. The principles of their Declaration and the guarantees of their Constitution and Bill of Rights have withstood the mutations and vicissitudes of time, and have beaten back the wildest storms that ever blew because they embody the inborn, invincible sentiments of those persons who respect the dignity of human freedom and the sacredness of human life.

The founders attempted to guarantee freedom of opportunity only, and thus they guaranteed the right and the privilege of every citizen to employ that opportunity and to try to earn or win as many of the prizes of this life as character, intelligence, zeal,

skills, creative imagination, courage, and luck might bring.

Lack of monetary wealth does not necessarily indicate lack of success in life. Many persons who have not accumulated riches live happy, noble, useful lives and are truly good and truly great. Multitudes of American men with the purse of a peasant carry themselves with all the politeness, pride and bearing of a prince.

Multitudes of American women with meager financial resources walk with courage and spread mercy and kindness with a charm and grace that any queen might well emulate. Conversely, now and then, some indifferent person by the legerdemain of chance of the impishness of the dice of destiny is awarded a fortune.

Frequently some worthy person by industry, integrity and business judgment earns a fortune and believe me when I say that if the refreshment of adventure, risk and hazard were eliminated, life would become flat, insipid and almost unbearable and it is also quite true that success in all departments of life generally gravitates toward those who are competent, industrious and patient.

I take no stock in the gloomy Jeremiahs so constantly chanted that the human race will destroy itself; I do not subscribe to the defeatist attitude which declares that human beings are nothing but the helpless zanies of a witless fate and thoughtless chance which will overthrow the wisdom of the wise, overthrow the valor of the brave and the trophies of the truth. I utterly reject such philosophy and assert that mankind is endowed with God-given conscience, with reason, judgment and ample power of self-direction and has his fate in his own hands. We make our world quite as much as we are made by it.

No nation—no group of nations—can destroy civilization. America does not belong to the past—the past belongs to her and every American may proudly exclaim: Mine is the majestic past, mine is the shining future. Paraphrasing a great character: "All things for America; she is the vital axle of the restless wheels that bear us onward. Beyond the map of America our hearts can travel not but fill that limit to its utmost verge."

Mankind is inexterminable and there is everywhere a conservation of moral and spiritual energy that preserves the core of every noble resolve and worthy action and molds them into a beneficent achievement aiding the human race in its arduous struggle to conquer all the arts and sciences.

4 years, might hope for something dramatic. We do not believe Mr. Khrushchev does.

The nations represented at Geneva will be 10 in number: 5 representing the West and 5 representing what Moscow wants. They will be there in verbal harmony with a U.N. Assembly resolution unanimously passed last October expressing "the hope that measures leading toward the goal of general and complete disarmament under effective international control will be worked out in detail and agreed upon in the shortest possible time." The phrase "general and complete disarmament" was Mr. Khrushchev's, and it was manifestly intended to please the eye and ear without involving any trouble for Mr. Khrushchev himself. Everybody, including Mr. Khrushchev, knows this.

We must, however, make whatever progress we can toward the ancient goal of disarmament if only for the simple reason, expressed some time ago by President Eisenhower, that there is more risk in building up armaments than in any probable program of disarmament. This country is in general accord with the British plan, expressed at the U.N. last fall by Foreign Minister Selwyn Lloyd, of a step-by-step program.

In the preparatory stages four of the Western allies had a little difficulty in agreeing with France, which at the moment desires quite a large conventional army to operate in Algeria and is inclined to put the emphasis on restricting atomic weapons carriers rather than the atomic weapons themselves. But as the Western negotiators prepared to move up to Geneva, their differences had been ironed out as far as words would do it.

The disarmament meeting cannot be wholly disassociated from the three-power nuclear weapons discussion which has been plodding along in Geneva with a recess or two since October 1958, nor from the summit conference that is set to take place in May. If there were even a little movement toward agreement among the 10 powers meeting at Geneva, we could feel more hopeful about nuclear disarmament and a more stable relation between the Communist East and the non-Communist West.

Communism is new, disciplined, and temperamentally aggressive. The real question remains: Is it willing to turn its aggressiveness away from the military field into the realms of economics and psychology? War and preparation for war are played out. Does Moscow realize this? We look to Geneva for some indication of an answer.

The Plowshare and the Sword

EXTENSION OF REMARKS

OF

HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. LINDSAY. Mr. Speaker, under leave to extend by remarks in the Record, I should like to bring to the attention of my colleagues the following excellent editorial which appeared in the New York Times on Sunday, March 13, 1960:

THE PLOWSHARE AND THE SWORD

The world's swords will not be beaten into plowshares as an immediate result of the 10-nation conference that will begin in Geneva day after tomorrow. Some who recall Mr. Khrushchev's speech at the U.N. Assembly last September, in which he proposed the abolition of all armaments within the next

Fish and Wildlife in the California Water Program

EXTENSION OF REMARKS

OF

HON. CLAIR ENGLE

OF CALIFORNIA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. ENGLE. Mr. President, the State of California, as I think most of the Senators know, is embarked upon a gigantic water development program on its own responsibility and at its own expense, which will, of course, supplement and be coordinated with the continuing programs of the U.S. Bureau of Reclamation and the Corps of Engineers in my State. I am particularly pleased that the State water plan is truly multiple purpose in scope—that it includes, for instance, full recognition of recreation, fish and wildlife values.

A good description of the place of fish and wildlife in the California water program has been presented by William E. Warne, former director of the California Department of Fish and Game, who is now director of the State Department of Agriculture in Sacramento. I think everyone concerned with the relations of fish and wildlife conservation to water resource development will be interested in this clear presentation which I wish to offer for publication in the RECORD.

Mr. Warne's statement was presented recently before the California Senate Factfinding Committee on Water, and in slightly different form before a field hearing of the U.S. Senate Select Committee on National Water Resources.

I ask unanimous consent that the statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE PLACE OF FISH AND WILDLIFE IN THE CALIFORNIA WATER PROGRAM

(By William E. Warne, director, California Department of Fish and Game)

Next year the voters of California will go to the polls to vote on a \$1,750 million bond issue. With its passage the State will embark on a water development program unequalled in size and complexity in this country. Under Gov. Edmund G. (Pat) Brown's leadership and through action of the State legislature this State water program has been conceived. It is bold and comprehensive and it is cut to fit the out-sized requirements of California's immediate future. It has been advanced to the point it has reached today not one single day too soon. The people expect much of this program. As it moves into and through the construction stage, the people will be watching eagerly, anticipating the great benefits the program will produce.

A multitude of questions involving policy that will govern the program, costs, benefits, and repayment methods are being asked and answers must be forthcoming very soon. Your committee is involving itself in a timely manner in the study needed to provide the answers. I am pleased to come before you and to render such help as I can.

Included in the costs of development of the project will be those related to recreation, fish and wildlife. That large expenditures will be both necessary and desirable for fish, wildlife, and recreation will be inescapable.

Major fish and wildlife and recreation benefits can be made to flow from the State water program. For millions who have learned to take their drinking water for granted, the recreational benefits may actually seem dominant. In any event, the program is truly multiple-use in its conception and any frustration of any of the uses would be unworthy of the plan.

With reference to the development of policy as it will apply to fish and wildlife and to recreation, certain basic concepts are required. I set these considerations down in an appearance before the Kerr Committee on Water Resources of the United States Senate in Los Angeles, October 16. I will state them again here:

1. No renewable resource should be destroyed in development of or in controlling another. For example, fish should not be destroyed in controlling a stream for irrigation. Mind you, I use this example deliberately, though I have been and am an irrigationist and though others might be cited. Conflicts in uses that require destruction of

a resource, I can assure you from 25 years of experience in the field of water planning and projects, are rare indeed, and usually are merely apparent because of lack of advance planning. The rule I have stated is sound and is compatible with irrigation, power, flood control, domestic water supply and other uses, as well as fish and wildlife.

2. Each manipulation of a renewable resource should be made to serve the maximum number of human desires and needs. This means we have outgrown the "single purpose" project. Certainly there is no place for it in California's State water program.

3. Enhancement of one resource, or improvement of one use of a resource, while developing or controlling another, should be made a part of the basic plan for the primary purpose of the development.

For example, power developers should not be permitted to overlook fish and wildlife or other benefits in which they are less directly interested when they make their plans.

4. Esthetic values should be recognized in terms other than those of economic values. To do otherwise is to price all of our scenery, songbirds, wildflowers, and little fishes and beasts at no dollars and cents. That is not the way we measure their worth in our civilization. We should not try to measure their worth so in our water projects.

5. Fish and wildlife, a publicly owned resource, belongs to all of the people and, therefore, fish and wildlife is the responsibility of all of the people. When the responsibility is so diffused, sometimes the people wake up too late to do anything about a loss they have sustained. We need strong policy now and sound execution to avoid such occurrence with regard to the State water plan.

6. Water for fish and wildlife is a beneficial use of water. This sounds like a truism, for who would doubt the benefit of having fish in our streams or a place for the deer to drink? Remember, however, that "beneficial use" when applied by law to water has become a term of art. It is only in the last 2 months, since a new law has become effective in September, that fish and wildlife has been included in this significant and specialized meaning of the term.

A GOOD START HAS BEEN MADE

Legislation already on the books sets the precedent for conversion of the philosophies I have expressed into specific laws.

Section 1243 was added to the California water code this year and provides that: "The use of water for recreation and the preservation and enhancement of fish and wildlife resources is a beneficial use of water. In determining the amount of water available for appropriation for other beneficial uses, the State water rights board shall take into account, whenever it is in the public interest, the amounts of water required for recreation and the preservation and enhancement of fish and wildlife resources."

"This section shall not be construed to affect riparian rights."

Section 1257 of the Water Code provides that "in acting upon applications to appropriate water, the State water rights board shall consider the relative benefit to be derived from all beneficial uses of the water concerned, including, but not limited to, use for domestic, irrigation, municipal, industrial, preservation of fish and wildlife, recreational, mining and power purposes, and may subject such appropriations to such terms and conditions as in its judgment will best develop, conserve, and utilize in the public interest the water sought to be appropriated."

Section 233 of the Water Code says: "No plans or proposal for authorization of a project for construction or operation by the State shall be submitted to the legislature

by the department of water resources unless the plans or proposal includes (1) the comments and recommendations, if any, of the department of fish and game, and (2) provision for any water or facilities necessary for public recreation and the preservation and enhancement of fish and wildlife resources that the department of water resources determines to be justifiable in terms of statewide interest, and feasible, as a non-reimbursable cost of the project."

Sections 12880 through 12891.1 of the Water Code provides the mechanics and the funds for a large program of local water development. It is particularly significant that, among other things, this State-aid-to-local-projects program provides for grants for (a) the part of construction costs of the project properly allocated to the enhancement of fish and wildlife that are incidental to the primary functions of the project, and (b) the construction cost of the dam and reservoirs of the proposed project properly allocated to recreational functions of statewide interest that are incidental to the primary functions of the project.

Several of these provisions of the law were recently adopted by the Legislature.

COMMON REFERENCE POINTS ESSENTIAL TO UNDERSTANDING

Let us consider some definitions in order to be sure we have a common understanding of problems and proposals. Some distinctions between recreation, fishing, and hunting on the one hand, and fish and game on the other, are needed. Most certainly, otherwise, my discussion would result in adding to an already unfortunate confusion. Lumping of fish, game, hunting, fishing, and other considerations into the catchall term of "recreation" has been responsible for many misunderstandings.

To establish some common reference points and terminology, let us define a few terms.

Fish and wildlife: The renewable resources of wild animal and fish life belonging to the people, here the people of the State of California. This is a commonly owned resource which survives in, or whose existence depends upon water in varying quantities. "Game" are those few species of wildlife which may be taken by hunting.

Fish and wildlife measures or facilities: Those measures or facilities taken or constructed and operated for the maintenance or enhancement of fish and wildlife or the mitigation of losses thereto in connection with water project development.

Hunting and fishing: These are methods of harvesting or utilizing the natural resources of fish and game. Hunting and fishing for sport are considered recreation. Hunting and fishing for food and profit are considered commercialized harvesting of the resource.

Recreation: Water-associated recreation is comprised of all of those outdoor enjoyments obtained by people as a direct or indirect result of the presence of water including such things as water skiing, swimming, boating, sport fishing, hunting, esthetic enjoyment, as through camping and picnicking, etc.

Recreation measures or facilities: Those measures or facilities taken or constructed and operated for the purpose of making water-associated recreation available and usable by the public.

Maintenance (or protection) of fish and wildlife resources: This refers to the measures necessary to protect the existing fish and wildlife resource, and to maintain natural productivity in connection with a water development project.

Mitigation (or compensation) of fish and wildlife losses: Those measures taken or facilities constructed and operated for increased production of fish or wildlife as compensation for an unavoidable loss to the re-

source as a result of water development. Provisions for a fish hatchery to compensate for lost spawning areas; provision of a larger minimum pool in a reservoir to compensate for reduced flows in the project stream, such can be considered as mitigation measures.

Enhancement of fish and wildlife: This means the improvement of conditions for fish and wildlife; making the habitat better than it was under natural or preproject conditions resulting in increased postproject populations of fish or game. Improved streamflow maintenance below a project dam would be a typical enhancement feature.

SEPARATION OF FISH AND WILDLIFE FROM RECREATION

From the foregoing definitions I believe you can begin to see the dangers of generalizing under the term of "recreation," especially when generalization involves a discussion of cost repayment.

FISH AND WILDLIFE MAINTENANCE COSTS

The maintenance of fish and wildlife in the process of developing water resources has long been recognized as the responsibility of the sponsor of the project in question. Very old sections of the Fish and Game Code relate to this. The maintenance of the State's fish and wildlife resources will be incorporated into the planning and will be one of the accepted features of the State water program.

The constructing agency, whether public or private, must provide downstream water release or take other measures or provide suitable facilities to prevent reduction in fisheries and wildlife values from the construction of any project. This policy is equitable and has application to State projects.

The costs of maintaining existing resources are considered an integral part of the cost of the project and appropriately should be included in the costs allocated to each major project purpose; for example, municipal water supply or irrigation. Thus such costs would become repayable by the recipients of project vendible services just as would the cost of the concrete that goes into the dam. I believe there is question that State funds can be expended for such purposes. If any such questions exist anywhere they should be specifically dispelled by action of the legislature.

COST OF MITIGATING LOSSES TO FISH AND WILDLIFE

Mitigation of unavoidable or accepted losses to fish and wildlife will also be a standard feature of State water development as is maintenance. Similarly, mitigation costs should also be considered part of the basic project costs repayable by the recipients of project vendible services such as power or flood control.

To our knowledge no legislation has ever been enacted which authorizes any water development agency, either public or private, to destroy fish and game resources without compensation or mitigation. The principle seems well established. There are examples of failure to apply it, however. There should be no such failures in the execution of the State Water plan.

COST OF ENHANCEMENT OF FISH AND WILDLIFE

Unlike maintenance or mitigation, enhancement of fish and game should not be repayable by the recipients of vendible project services. Enhancement of the publicly owned fish and game resources should be financed by the State on a non-reimbursable basis. Where enhancement is desirable and justified, it should be included as a project purpose to be paid for by the people from General Fund appropriations and not repayable by the water users. Enhancement of fish and game should be considered as a wise investment in the improvement of a State resource or property. The Department of Fish and Game is financed by revenues of licenses and fees, excepting that capital

improvements are financed through Wildlife Conservation Board funds, made available from the tax on horse racing.

Fishing and hunting licenses cannot be increased and decreased to meet the needs of construction programs governed by considerations of the State Water Plan, even if it were desirable or theoretically necessary. Since the resource is owned by all the public, warranted expenditures in enhancing it should be borne by all. This is the de facto breakdown of the present financing of the Department's activities. Hunters and fishermen pay their fees for their specialized use of the resources involved.

RECREATION COSTS

Now we turn to recreation, that big mushrooming, booming activity which is big business in California, and is apt to be bigger. Recreation in all its phases must be looked upon as a desirable, beneficial use of both undeveloped and developed watersheds. With increased leisure time and with growing complexities in our daily lives, recreation can only become each year more important to each of us and to all of us.

Water development, especially that which results in the creation of large, low elevation reservoirs, automatically creates a recreation attraction for swimmers, boaters, water skiers, and fishermen, and often waterfowl hunters. Such uses are apt to come whether on a planned or unplanned basis. I urge the more orderly, economical, and public service approach of the planned program. So much more in the way of use then can be accommodated.

I want to make a special point of acquiring land for a freeboard around reservoirs and other water sites as a routine practice in the State water plan. Unless this be done, the public may and often will be denied recreational use of the project facilities. It should be a cardinal principle that the construction agency must protect the public interest by providing a freeboard for public use and development. This, I believe, should be a part of the project costs.

Facilities necessary for an orderly use of the recreation potential of a given water project should be constructed as a part of the project. These include toilets, campgrounds, docks, and boat ramps, to name some that are typical. I believe their cost should be borne by the State as a whole and not charged against the contractor for vendible uses.

LOCAL PARTICIPATION DESIRABLE

I support those who advocate operation of State constructed recreational facilities by and at the expense of local governmental agencies under agreements which would insure satisfactory operation and care of the facilities. Generally speaking, and based on our admittedly meager experience in this field, I would be inclined to favor a program whereby the costs of operation were defrayed by fees levied on those using or benefiting from the recreation facilities. Although repayment of capital costs of recreation facilities through fee charging might sound attractive, I believe it would be unwise to adopt it as a policy in the State water development program. Assurance of repayment capacity would be extremely difficult to forecast and could very well become the damper on a program badly needed by the general public.

ACTION HAS BEEN TAKEN

The Department of Fish and Game has already gone into action to fulfill its obligations under the provisions of the law on water planning and use. We are reviewing, commenting on, conducting studies on, and making recommendations for the maintenance and enhancement of fish and wildlife resources and proposals for mitigation of losses thereto on all segments and on each unit of the California water plan.

We are seeking better ways to maintain and improve these resources in connection

with the plan. For instance, we are carefully weighing the possibilities of developing artificial spawning beds for salmon below Oroville Dam on the Feather River, and energetically seeking other means of maintaining the valuable salmon and steelhead runs of the Sacramento River. We will not lose the Sacramento runs as we did those in the San Joaquin.

We will seek to obtain maximum utilization and production of fish in our existing reservoirs and in the scores of new reservoirs and other project waters envisioned in the State plan. These waters probably must provide for most of California's future freshwater angling, if population trends are the criteria.

The potential of these waters is high and fishing can almost certainly be improved in them. We have retailed plans ready to go for experimental reservoir management to create this better fishing. We will seek to learn how to "farm" these aquatic pastures more effectively than in the past.

The department of fish and game has been adjured and encouraged to make these preparations by the legislature, which has enacted new laws, by Governor Brown, who has earnestly sought each of the affected departments to be alert and active in efforts to make his water plan fulfill its great promise, and by the Fish and Game Commission, which has adopted succinct policy guides for us.

I, personally, see the possibilities that are opened, and because of my long connection with water development, get excited about realizing them.

Never before has so young a civilization as ours in California had opportunity for developing vast natural resources in a way planned to bring maximum benefit to its people. The techniques have all been developed for us and are known. It is not necessary for us to narrow our water development plans to single purposes and to experiment and suffer painful losses. We can look far to the future and mold our splendidly conceived water development projects for the preservation and improvement of all values, including the esthetic, recreational, and fish and wildlife values so often in the past ignored or overlooked.

Negro Crime

EXTENSION OF REMARKS OF

HON. JOSEPH W. BARR

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. BARR. Mr. Speaker, it seems to me that the following column written by Mr. Henry Butler should be included in the records of this Congress while we are debating the civil rights issue. It sets forth an honest and objective exposition of a subject that is often handled loosely.

[From the Indianapolis Times, Feb. 22, 1960]

THE WORLD'S A STAGE

(By Henry Butler)

I wish to enter a protest against loose talk about "the increase in Negro crime."

A couple of years ago, Time magazine, in one of its frenzies of shrill clairvoyance, had a story on the subject. The story proved nothing. It merely gave another twirl to the old hatewheel with its evil little flags.

"Negro crime," the phrase, becomes in the popular mind an "entity," as doctors say when they talk of a disease. "Negro crime"

is something the white mind easily accepts. The phrase fits into a place long prepared for it.

You don't hear about an "increase in white crime." "White crime" is merely "crime."

This begins to sound almost jazzy, and indeed the whole thing is ridiculous enough to be parodied. But it has potentially disastrous ingredients.

You might think it unnecessary to restate here unbiased opinions of sociologists. "Negro crime," they say, "is a loaded phrase inseparable from prejudice."

Item: Negroes, being physically conspicuous in a white environment, easily become targets of suspicion. Add suspicion to die-hard racism, and you have an attitude that stifles truth.

Item: Negro crime is presented in percentage rates. Related to the entire Negro population, the crime figures may seem alarming. That's if you compare them with the crime figures for the entire white population.

But suppose you compare—and I doubt if anybody's done it—the white crime figures with only that percentage of the white population living at or near the Negro's depressed economic level.

In other words, can anybody prove that whites would statistically behave any better than Negroes if they were treated like Negroes.

And there is another dimension to this problem. Note how discussions of Negro crime invariably quote Negro leaders on the subject.

Ever hear of a white leader being quoted on white crime? Ever hear President Eisenhower say, "We whites must mend our ways"? It might be a good thing if we did, but the President isn't saying that.

Since we don't talk about white crime, but do talk about Negro crime, we're hiding some cards. We're being intellectually dishonest—a favorite American pastime, and not just in the Deep South.

We're viewing the problem of crime not as a problem affecting all American citizens (whether or not they're permitted civil rights). We're viewing it as a problem largely, if not mainly, concerned with an imagined black threat to white society.

If self-deception and wallowing in prejudice were simple and harmless matters, like rooting for one ball team against another, much of this talk could be laughed off.

And if there were any indication this country's white majority is going to use more sense and see more clearly, the talk about Negro crime as being responsible for deteriorating race relations might be passed over.

But there's too much embedded nastiness in the white mind. Granted hostility is not one-sided, yet the modern trend of middle-class whites moving from cities out to suburban apartheid is significant. White folks (like most white churches, in the opinion of a cleric I recently talked with) want no part of social responsibility.

They want out, leaving Negro ghettos behind them.

Nobody seems to understand the price you have to pay for rejection. If ever there was a fate worse than death, it is the fate of being rejected. This is the supreme, the mortal insult. None of us white folks can understand it, never having been rejected because of our pallor.

With all the colored races on earth now in a mood to tear the world apart—mainly in reaction to centuries of rejection and exploitation by whites—it's time we palefaces wised up.

Shaking Out a Compromise

EXTENSION OF REMARKS

OF

HON. A. WILLIS ROBERTSON

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. ROBERTSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Christian Science Monitor of March 10, 1960, entitled "Shaking Out a Compromise."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SHAKING OUT A COMPROMISE

Much current comment on the Senate filibuster overlooks basic facts about the American system. When tempted to assume that whenever a count of heads shows a majority in favor of any proposal that measure should be made law forthwith, we should take another look at the Constitution. For the Founding Fathers set up a republic, not a simple democracy. And they built into the Constitution a whole series of brakes to protect minorities and guard against hasty, moblike action.

True, the filibuster does not appear in the Constitution. But it is in accord with the whole system of checks and balances there provided. And it derives much of its power from recognition of the framers' consideration for dissident views. They had just broken away from a government which had made too little effort to obtain "the consent of the governed." At every step in shaping the new Nation they moved with the aim of obtaining as much agreement as possible. Included was disproportionate representation in the Senate—which helps make filibusters possible.

Let's note some of the other checks on simple majority rule. First, it is a dual system, divided between Federal and State governments. The National Government is basically separated into three sections—legislative, executive, and judicial—each having power to delay the others until compromises are worked out. The President has a veto—much used these days. So does the Supreme Court. The electoral college is republican, not democratic.

It can be argued that this combination designed to get action through compromise is too slow for cold war times and should not be encumbered further by filibusters. But actually when foreign danger has been apparent the system has functioned well. It is on domestic affairs where the problem is getting acceptance of changes deeply disturbing to one section of the population that delays have usually occurred.

This is because experience teaches that successful operation of new laws requires a large measure of agreement on their justice and wisdom. That is why the Senate sanctions filibusters. That is why it refuses to shut off the current talkathon—even though most Americans believe it is using poor tactics in a poor cause.

Of course, filibusters are not always justified. Of course they have been abused. But they can serve useful purposes. They expose the intensity—and exaggerations—of opposing views. They can clarify the meaning of proposals. They can shake out workable compromises. The current filibuster has not appeared to do these things very well. Indeed, it has often displayed fine men doing such silly things and talking

such arrant nonsense as to present a damaging spectacle in the eyes of the world. It suggests that this braking process costs too much.

Yet informed opinion expects a good civil rights bill to emerge from it. So let's look at the filibuster process in the perspective of the American system. Let's not condemn all filibusters but try to understand why they are used and prevent misuse.

Give Ex-Presidents Senate Seats?

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the McClatchy newspapers of California on February 15, 1960 with reference to the proposal of James A. Farley of New York:

GIVE EX-PRESIDENTS SENATE SEATS?

(By Gladstone Williams)

Big Jim Farley has come forward with a proposal for utilizing the services of our former Presidents which if not entirely new has the merit of being extremely timely.

He would have Congress take the necessary action to give every former Chief Executive a seat in the U.S. Senate upon his retirement from the White House. Each would be a lifetime Member representing the country at large rather than any individual State, with all of the privileges and prerogatives of the Senate except the right to vote.

Similar proposals have been advanced for years but nothing ever has been done about them. Farley's recommendation is particularly timely because after next January 20 the country will have three former Presidents, assuming all still are living at that time.

President Dwight D. Eisenhower will join the list of Ex-Presidents when his term expires in January. The other members of this exclusive club are Harry S. Truman and Herbert Hoover. It will be the first time in years that the country has had so many living past Presidents.

Farley, who was generalissimo of Democratic forces under the Roosevelt New Deal and is recognized as one of the shrewdest political experts in the country, discussed the subject fully in a recent article in *This Week* magazine. He said it is "a tragedy" that we are not availing ourselves of "the wisdom and experience of our former Chief Executives."

The Senate, he urged, "would be a proper place for using the services of our past Presidents."

"In the Senate," he wrote, "a former President would be constantly available to Congressmen needing his help and advice. And a former President, whatever his party and whatever his record, acquires a vast amount of information and insight that Members of Congress and the general public can never have. This is the priceless experience that we are wasting."

Big Jim, as he is affectionately known to his old associates points out that the Senate would be an excellent forum for former Presidents to use in speaking out on major policy questions. This would be especially important, he says, in

foreign and military affairs, as well as in other areas where a retired chief executive would have special knowledge.

He makes the further point that a past President, by not representing any State or section and not having to bother about being reelected, could speak with more force and freedom than most Senators. In other words, he would not be guided by the political restraints which apply to those who have to seek reelection every 6 years. That in itself would add a refreshing note to the Senate, where political considerations are too often uppermost.

Many Presidents have left the White House with years of useful service ahead of them. Former President Hoover is a striking example. Although he retired from the White House 27 years ago, in 1933, he is still active at 85. Truman also has been out of office since 1953 and still is going strong.

Among our other Presidents a number lived long after retirement. To cite only a few, John Adams survived 25 years after leaving the Presidency, Thomas Jefferson 16 years, Andrew Jackson 9, U. S. Grant 5, Grover Cleveland 12, and Theodore Roosevelt, who was only 50 when he retired, lived for 9 years.

Congress only a short time ago made provision for our former Presidents by giving them a pension of \$25,000 a year, together with office accommodations and secretarial assistance. Since we are continuing to pay them, why not make use of their counsel and experience, asks Farley.

The Filibuster and Robertson

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. STENNIS. Mr. President, several times during the course of the debate on the pending so-called civil rights bills, many of us have listened with great interest and profit to the very fine legal and constitutional arguments made in the Senate by the distinguished Senator from Virginia [Mr. ROBERTSON].

I am very much interested therefore to read an outstanding editorial entitled "The Filibuster and ROBERTSON," which was recently published on one of the truly great newspapers of this Nation, the Richmond Times-Dispatch. I agree so heartily with the substance of the editorial, as well as the points made by Senator ROBERTSON as quoted therein, that I think it is worthy of circulation throughout the country. I therefore ask unanimous consent to have it printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Richmond Times-Dispatch, Mar. 13, 1960]

THE FILIBUSTER AND ROBERTSON

The discussion which has been proceeding for weeks in the U.S. Senate in connection with the civil rights bills is far from being the all-out session of whole windjamming that is normally associated with filibusters. We aren't being regaled with discussions of how to fry oysters or what George Sisler's batting average was in 1920—as has been the case on some previous occasions.

On the contrary, the 18 participating southerners are addressing themselves, by and large, to the issue in hand. Some will disagree with their contentions, but it is impossible to deny that most of what they are saying has a direct bearing on the meaning of the civil rights bills, their constitutionality, and their probable impact. True, occasionally unduly long extracts from history books or other works are quoted, but they usually have a bearing on the question under notice.

In other words, the 18 Senators are not "speaking merely to consume time"—the phrase used in Webster's definition of "filibuster". They are consuming time, of course, but they are bringing out many salient facts concerning the pending legislation. One of those who did depart at great length from the subject was Senator J. WILLIAM FULBRIGHT of Arkansas, who took occasion to assail the Eisenhower foreign policy. But there have been few, if any, other such instances.

Virginia's Senator A. WILLIS ROBERTSON, for example, has been truly impressive in his scholarly interpretation of the proposed legislation and its relationship to the Federal Constitution. In three major addresses, each lasting several hours, he has probed into legal, political, and social history, quoting from the Magna Carta, the Federalist, Blackstone, Edmund Burke, Thomas Jefferson, and Daniel Webster, as well as from numerous Supreme Court decisions.

Senator ROBERTSON's addresses dealt, respectively, with the referee voting proposal, the fair employment practices proposal, and the proposal to abolish jury trials in certain civil rights cases. They were delivered February 29, March 3, and March 8, with the text of each published in the CONGRESSIONAL RECORD.

Lest Mr. ROBERTSON's position be misunderstood, we quote from his address of March 8:

"The two Senators from Virginia have made it crystal clear that they consider the right to vote to be a vital constitutional right which should be granted under State law without discrimination on account of race or color, and they have pointed with pride to the fact that in Virginia, on the basis of population, the percentage of non-whites registered to vote is nearly as high as the whites."

We congratulate Senator ROBERTSON on the manner in which he is representing Virginia and the South in this historic debate. Recognized as an authority in the fields of conservation, taxation, the tariff, and banking and currency, he has also acquired genuine stature as a constitutional lawyer. He reflects credit on the Commonwealth.

Polaris Missile Can Revolutionize Our Defense and Cut Costs If We Let It

EXTENSION OF REMARKS

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. HOSMER. Mr. Speaker, in this age of the ballistic missile, two basic considerations come to the fore either in attack or retaliation, namely, first, mobility of missile launching platforms and second, concealment of launching site. At the certain risk of "parochialism" charges from some quarters, I wish to discuss Polaris, the Navy's answer to

both mobility and concealment. The very oceans themselves permit instant maneuverability of guided missile surface ships and the complete concealment of the Polaris submarine.

On land, the U.S. Air Force's Strategic Air Command, enjoying no such natural advantages as offered by the oceans, has announced its solution to this vexing two-fold problem is to shuttle railroad trains back and forth over present railroad lines for mobility and to sink huge post holes in the ground for concealment.

The Air Force does not disclose how a silo would be reloaded for additional firings if required. In the case of missile firings from the sea, both submarines and ships are designed to carry racks of missiles which can be hurled one after the other. The present Polaris submarine is designed to fire 16 missiles before the necessity of restocking supply.

Comparisons between the solutions offered by the two services simply cannot be made for Polaris is not just another weapon system, it is a means by which our entire strategic situation can be improved immeasurably. Writing under the title "The Question of National Defense" Prof. Oskar Morgenstern put it this way:

If the system were better understood, the Navy and the country would press harder for it. We seem to be a long way from the point where the other services, the Department of Defense and the National Security Council realize how profound an entire strategic situation can be improved. To them Polaris is apparently only another weapon system.

Explaining why Polaris is not just another weapon system, L. Edgar Prina, military editor of the Washington Star, has written masterfully under the title "Missile Accomplished" in the latest issue of Navy magazine.

This competent and respected military author takes a second look at the current political missile gap in which the United States is supposed to find itself and finds as follows:

That missile gap is pointless prattle if the onready submarine Polaris weapon system is installed on appropriate surface ships of the striking fleets.

That the furor over the missile gap is not much different than the bomber gap of a year ago, a gap that never occurred.

That land-based "Cassandras" are heedless of the fact that refinements in the seagoing Polaris will permit this missile to span 3,000 miles.

That ship-carried Polaris is a better proven war deterrent than land-buried ICBM's locked in concrete, because of mobility.

That cruiser-based Polaris is a better proven retaliatory weapon than a parlor car equivalent aboard exposed tracks.

That ship-based Polaris in addition to submarine Polaris would give the Navy 100 additional Polaris missiles using a minimum of 8 cruisers for launching platforms.

The text of Mr. Prina's excellent article is as follows:

MISSILE ACCOMPLISHED

(By L. Edgar Prino)

For less money than it takes to buy 15 copies of the billion-dollar-a-wing B-58 medium bomber, all talk of a missile gap could be transformed into an exercise in pointless prattle.

No magic wand is needed. A decision to exploit more fully the most mobile, least vulnerable ballistic missile system now within our grasp could do it. In short:

Put the solid-fuel Polaris intermediate range rocket into appropriate surface ships of the striking fleets.

While the Pentagon talks of putting large ICBM's on special railroad cars, if feasible, in 1965, it could have combat-ready Polaris missiles roaming the world's oceans on speedy cruisers early in 1962, if the decision were made now.

This would give the Nation the quickest, most secure additional deterrent force for the least expenditure.

But this is a presidential election year, and defense has become a political football subject to the most violent partisan kicks. The chant of "missile gap" again reverberates over Capitol Hill. No surcease is likely before November.

Critics have been charging for more than a year that the administration is deliberately allowing the Soviet Union to attain a wide superiority in intercontinental ballistic missiles. They predict that the United States will, therefore, face extreme peril in the 1962-63 period when the gap will be at its widest.

These critics are the same Cassandras who predicted a bomber gap some years ago, a gap that never occurred. Now they are beguiled by ICBM's. They ignore other retaliatory weapons, including even the 1,500-mile Polaris which, because it can be brought up close to the Soviet Union for firing, is an ICBM-equivalent.

The answer to the gap, in their minds, is to produce more 85-foot Atlases and 100-foot Titans (when available in 1961) and bury these first-generation liquid-fuel monsters deep in concrete-lined holes. They advocate, too, a desperate, extremely costly stopgap measure: An immediate airborne alert for a substantial number of B-52's.

On its side, the administration contends its new intelligence estimates of what the Russians probably will do make unlikely any meaningful Soviet superiority in numbers of ICBM's. And there will be no deterrent gap at all.

The administration earlier had decided to increase ICBM production by one-third, giving us a total of 270 Atlas and Titan missiles by 1963. This augmentation will cost upward of \$750 million, perhaps as much as \$1 billion.

Why this continued investment in vulnerability when a much more secure alternative can be had more quickly and for less money?

Will it be any real consolation to know that we have 270 ICBM's on 27 zeroed-in bases rather than 200 on 20?

We may never get a satisfactory answer to the first question, but a junior high school pupil can provide the proper one to the second.

Anyone with half an eye can see that big fixed bases, no matter how deep you dig them and no matter how much concrete you pour over them, are finished. ICBM accuracy is already phenomenal. The recent Soviet shot in the Pacific roared 7,800 miles to within 1.25 miles of the target. Our Atlas has been landing, on the average, within a 2-mile circular error probable. These accuracies can only be bettered. And new and more powerful booster engines will mean larger hydrogen warheads.

The Navy has pushed hard, but perhaps not hard enough, for money and permission to build more missile submarines and to put Polaris on surface ships.

The fight for money has been pressed only to a point because of the ridiculous percentage freeze whereby each service gets roughly the same portion of the defense dollar year after year, despite major new weapons developments.

For the Navy to go all out, in the circumstances, for strategic weapons, might mean starvation for other vital needs, such as new aircraft carriers and antisubmarine warfare tools.

In addition to money, there is another problem. It must be acknowledged that not every one at the Pentagon—or in the airplane and concrete business—is happy over the inevitable shift of a major part of our deterrent/retaliatory force from fortress America to mobile bases at sea.

Thus, one hears high-ranking officers dwell on various unsolved problems facing Polaris, which is actually ahead of even its accelerated schedule. But these officers, who seek to belittle the real significance of the Navy's rocket, express no doubts whatever about weapons systems of their own service which are 3 to 5 years away from combat-ready status and are, therefore, destined to be only indevelopment spectators during the most critical period of the so-called missile gap.

Under present administration plans, there will be 15 atomic-powered Polaris missile submarines, each carrying 16 of the hydrogen-tipped rockets, at sea by the end of 1963. This would mean a total of 240 missiles, each 15 times more powerful than the A-bombs which devastated Hiroshima and Nagasaki, ready for instantaneous or, if desirable, leisurely retaliatory fire.

The Navy could have 100 additional Polaris missiles at sea in 8 cruisers, including the nuclear-powered *Long Beach*, in the same time period. The cost: About \$450 million. This is less than the cost of one-third of a wing of golden B-58's, planes which might never get off the ground in the event of a surprise missile attack. It is less than the cost of 6 months of an airborne alert for only 100 B-52's.

Even if the Kremlin was convinced it could destroy our fixed-base missiles on the ground—and unless we somehow build a foolproof instantaneous warning system in the next couple years—this is a definite possibility—340 Polaris rockets would give it cause for pause.

There are 156 cities in the U.S.S.R. with a population of 100,000 or more. All these cities are, or will be, within range of Polaris. An arsenal of 340 would provide slightly more than two missiles per target. Even the piddling 20-kiloton Hiroshima bomb could destroy 95 percent of any one of these Russian cities, if exploded at the right point.

What advantages are to be gained, aside from bargain rates and a speedy addition to our mobile deterrent force, by putting Polaris in surface ships? Here is a partial list:

1. It would saddle the enemy with a new and urgent defense problem. Fighting our atomic Polaris subs with his conventional types is one of his headaches; fighting far-ranging task forces of surface ships carrying ballistic missiles is another he has not yet had to face. It would drain off men, money, and materials from other military missions, offensive or defensive.

2. There would be no danger of unsuccessful shots landing on the United States or Canada, a hazard with our land-based ICBM's.

3. Any enemy attempt to destroy Polaris launchers at sea with nuclear weapons would not give him bonus kills of American citizens through radioactive fallout.

4. Polaris has a maximum flight time of 15 minutes as against half an hour for a U.S.-based ICBM. This means less reaction time for Russian defenses.

5. Polaris would not be vulnerable to sabotage. (This will be a tremendous worry to the Air Force—and to John Q. Public—in

1965 when it hopes to begin putting its Minuteman ICBM aboard railroad launching cars for random travel over a network of 100,000 miles of the Nation's tracks.)

6. The space and weight for a Polaris installation has been reserved in the U.S.S. *Long Beach*. If the decision were made now to go ahead, it would save time and money.

7. The current Polaris is in the Model T stage. A version soon to follow will have a 1,700-mile range and, by 1964-65, the weapon will be able to reach out to 3,000 miles. This will make Polaris even more attractive as surface ship armament. Important note: Ranges up to 3,000 miles can be cranked into Polaris without changing the size of its canister. Increased warhead size and improved guidance also may be expected.

8. It would give the Navy, in the words of Adm. Charles R. (Cat) Brown, "a visual symbol of power * * * a big war, small war, cold war weapon, all in one."

In lauding the projected B-70 bomber recently, Gen. Thomas D. White, Air Force Chief of Staff, said the big jet plane, unlike a submerged submarine, would be seen by our friends and allies and would, therefore, contribute to free world solidarity and confidence.

Although one may wonder how many persons would be able to see a 2,100-mile-an-hour plane at 70,000 feet, the general had a point. And it is pertinent to the Polaris-on-surface-ship proposal.

The decision against the Navy for surface-ship Polaris is not final. As the missile continues to tick off successful firings, there is a growing appreciation among high Government officials of the need to put more of our strategic deterrent to sea.

Dr. George B. Kistiakowsky, top scientific advisor to President Eisenhower, called Polaris a "unique strength," a sure, secure deterrent.

Dr. Howard A. Wilcox, Deputy Director of Defense Research and Engineering, recently told the American Ordnance Association:

"These strategic deterrent weapons should best be lodged in the ocean, where they are most invulnerable to knocking-out by enemy action and where they can retaliate without requiring instant communication, instant intelligence and instant early warning."

"The retaliatory capability, if lodged in the ocean, does not depend upon the integrity of the parent continental United States any longer, and this gives it an inevitable nature which I believe will most strongly act as a deterrent to all-out war."

More importantly, perhaps, Defense Secretary Thomas S. Gates, Jr., has told Congress that the administration would expand and accelerate the Polaris program, "no matter what the cost," whenever tests provide "a little firmer basis on which to proceed."

The Polaris is proving out. Recent shots have demonstrated amazing accuracy—a circular error probable of less than half-a-mile. Testing is said to be running a month or two ahead of schedule. The missile may be pronounced operational late this summer.

Augmentation of the submarine building program and a green light for Polaris installation in a number of cruisers could come before Congress adjourns. It would be none too soon.

Homesteading in Alaska

EXTENSION OF REMARKS

OF

HON. ERNEST GRUENING

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. GRUENING. Mr. President, a year ago, there was a good deal of pub-

licity about a number of families from Detroit who went to Alaska to settle. A great many of them were unaware of the difficulties they would encounter. They were unprepared for some of the physical hardships and other obstacles which homesteading pioneers will meet on the last frontier.

Alaska welcomes men and women of the pioneer type and spirit; but we feel it important that they be prepared, not merely for the rugged conditions of terrain and climate, as well as the financial realities, and also for some of the man-made obstacles which homesteaders in Alaska have long encountered.

An informative article dealing with this particular group appeared in the Parade magazine of the Washington Post, yesterday. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

ALASKAN PIONEERS—1 YEAR LATER

(By Sid Ross)

TALKEETNA, ALASKA.—Last year, 41 American families very much like your own made national headlines by turning their backs on civilization. Like many people, they had heard of homestead lands free for the taking in Alaska, so they quit their jobs and sold their homes around Detroit to head for the frozen frontier.

A newspaperman, in tribute to our pioneer ancestors, dubbed them the "Fifty-niners"—and the name stuck. Their first caravan, flying "Alaska or Bust" banners, left just a year ago this month.

How are the Fifty-niners doing, after a year in the rugged north?

A few weeks ago I traveled to their settlement near here, 115 miles north of Anchorage, to find out. I lived for nearly a week in the Fifty-niners' crude cabins and sampled their daily hardships. And I watched what began as a bright new dream sputtering, flickering and dying out.

The Fifty-niners' goal was a prosperous "New Michigan," a cooperative community in which all hands would pitch in to clear the land and to build creamery, clinic, church, and school.

But today, I found, the community consists of only four families and three "winter bachelors," strung out along 16 miles of gravel road. And I found that after a year of weary struggle, these few are nearly broke. They live on a minimum diet in which eggs, milk, and meat are luxuries. They live without even the most fundamental of amenities—such as an outhouse.

Yet I also found an amazing record of accomplishment and courage. Each family independently has dug in and built with bare hands at least the beginning of a new life. Each has done so in the face of total inexperience and incredible hardships. And while the Fifty-niners have bickered, they have not belittled.

"I guess Nature has thrown just about everything possible at us," said Gerry Donaldson, one of the diehards, one night as we huddled around his oil-drum stove. "We've even had earthquakes. But my wife and me, we're sticking it out. After this year, I don't fear anything Alaska can do."

Donaldson, 47, a tile contractor in Detroit, was so green at first he even brought golf clubs. Yet he has hewn out his own cabin of foot-thick logs, harvested a small crop, dug a well, and beat back an acre of wilderness. He has found Nature a savage, unyielding enemy. But like the other Fifty-niners, he has found another formidable enemy in man.

A SNUB IN THE COLD

During my stay, I lived with Marino Sik, 33, a descendant of northern Michigan Swedes, who had been a repairman back in Detroit. Donaldson immediately came by; the next day, I talked to Nick Rubino, a former pipefitter who has a road gang job for the winter, and later to Eric Eklund, an ex-clerk working temporarily in Anchorage. Three other Fifty-niners—Bill Orzechowski, an plumber; Ray Kula, a former machinist, and Steve Pankewicz—never appeared.

This surprised me since Alaskans are proverbially friendly. Then one day Sik and I were standing by the road when a family came by on a horse-drawn sled. To my amazement, Sik and the other man ignored each other. I asked Sik who the man was.

"That was Ray Kula," he said. From that incident and others, I gradually realized that the Fifty-niners today seldom speak and rarely cooperate. Thus they have added a new hardship—one that may doom their dream if others do not. For each must now do, wastefully and arduously, what all might have done easily together. Just this winter several grimly built their own livestock shelters although a completed community barn stood half-empty.

Perhaps the falling-out among the remaining Fifty-niners was inevitable. For theirs has been an odyssey of breakdowns enroute, disappointments on arrival and hardships here.

The Fifty-niners' original destination was the Kenai Peninsula, south of Anchorage. A scout had told them Kenai was "like an indescribably beautiful painting." But what the scout had omitted was that Kenai had nowhere near enough unclaimed land for all of them.

Only in the Susitna Valley was good land available in such quantities. But settling here would mean the city-dwellers would be miles farther from civilization, isolated most of the year by the "godawful" Susitna River, and confronted by a far harsher climate.

THE SUSITNA SHOWDOWN

Such a raw existence was more than most of the colonists had bargained for. Some wanted to turn back to Detroit. Others said they were too far committed and hadn't the funds. Squabbles broke out over the community treasury and the community equipment.

After much arguments, 16 went back to Detroit; 7 chose Kenai; 8 took city jobs in Anchorage. Fifteen families voted for Susitna, but only 11 actually made the trip; and 4 of these never crossed the river. Three who did gave up. Shortly afterward, 76 new Fifty-niners made the same disappointing discovery; all gave up the idea of homesteading.

The handful left cooperated at first, then began bickering. Today it focuses on the depleted treasury, on who should lead and on personalities. "These people had better grow up fast," one veteran homesteader said to me. "Alaska don't fool around with little kids." And the Fifty-niners have much to fight without fighting among themselves.

When I arrived in Talkeetna, it was the coldest night of the year. Etched by a brilliant moon, the snowscape looked so brittle you thought it would crack at a touch. I wore sealskin mukluks, three pairs of socks, three suits of underwear, wool pants and a wool shirt, a jacket, a lined parka with a hood, a knitted helmet and two pairs of gloves.

The thermometer read 52 degrees below zero when Sik, his wife Carol and I set off on the 2-mile walk across the frozen Susitna. Sik piled my luggage on a small homemade sled, added three bales of hay he had bought for his livestock and slipped into a crude rope harness. He handed me a pushing pole, and we set out through feathery snow along a barely visible trail.

My every breath was agony. My glasses froze up almost immediately. The earpieces were so cold, despite my two head coverings, that afterward I found I had been frostbitten where they touched. Every few minutes we had to pry our frozen eyelids apart.

"At least there's no wind," Sik gasped during one stop. I lost all track of time and steps. At 4 a.m., we stopped for coffee at the cabin of veteran homesteader Shorty Bradley. (In Alaska doors are always open, for to be stranded outside can mean freezing to death.) At 7:30 we reached Sik's. Including the stop, it took us 6½ painful hours to travel 5½ miles.

Inside I saw a three-sided log box tacked onto a house trailer, which served as fourth wall and bedroom. At one end, Carol Sik, feeding spruce slabs into a stove, cooked flapjacks—a staple in a diet that is mostly potatoes, bread and soup. The floor was packed earth. The cluttered living area, sparingly lit by kerosene lamps and Coleman lanterns, centered around a cozy oil-drum stove.

Near the door stood two pans of water, and I asked Carol about them.

"That's the washroom," she laughed. "Our well went dry 3 weeks ago and we have to melt snow to drink and to wash in. It's a chore. I manage to bathe Lindy (their 20-month-old daughter) every other day, but I haven't had a real bath myself since September."

I had been told in Anchorage that "anyone who comes to Alaska with little kids is nuts," and I asked Carol how she managed. "Oh, Lindy's a good kid, she entertains herself around the cabin pretty well," Carol said. "But we really worry about her getting sick. The nearest doctor is at Palmer—70 miles. And we have that godawful river to cross."

"You saw the river on a good night," Sik said. "It's full of ice much of the year and really boiling. When we need to cross, Shorty Bradley sets off a charge of dynamite to signal the bush pilots. They charge \$7.50 or \$10 for the trip. But the signal doesn't always work. It didn't when Bertha Donaldson got sick."

That night I heard the story from Bertha Donaldson herself. One day she came down with a high fever and pains in her arms, legs and chest. Bradley set off a dynamite charge, and then another. When neither brought a response, he tried flares. Two days passed, and Gerry Donaldson, in desperation, coaxed an old Alaska hand into braving the river in a skiff. Mrs. Donaldson was in bad shape when the bush plane finally arrived and whisked her to Anchorage. With modern medical care, she recovered quickly.

"When we got here, the ice was beginning to break up, and the current was 10 or 12 knots," Sik told me later. "Everyone said we couldn't possibly cross."

MY LAST CIGARETTE

"Well, we worked night and day, all of us, for 3 days. The tractors hauling the trailers had to weave their way, dodging soft places and open water. On the third day, it was so weak we couldn't even use tractors."

"Finally, we just carried things in our arms—men, women, kids. Two men would carry a stove between them. And the ice was cracking and shaking all the time—we were all afraid we might drop into 18 feet of cold water at any minute."

"I still remember Ray Kula standing on the bank, joking about 'smoking my last cigarette.' Well, all of us did fall in—I changed clothes at least three times—but we got everything over but one trailer."

Sik went on with his narrative, telling of first shoveling away 2 feet of snow, then trying to clear the land amid rains and insects and 100-degree heat, of carrying water a half mile and learning by trial and error to plow and to plant. And he led me to

inevitable questions: Why in the world did he choose such a bleak existence? Why in the world did he stay?

"You think I should go back to Detroit?" he burst out. "Listen, back there I worked all day for this gas company and then till 2 a.m. as a policeman at a drive-in. And where was I getting? Why, the only time I saw Carol was when she came to the movie."

"Now, up here, sure it's a tough go, but at least we're working together on it, and we're going to have our own land, 160 acres of it, in the end."

Under the homestead law, Sik explained, the Federal Government will grant you 160 acres if you clear and cultivate 20 acres within 3 years. You must have a habitable dwelling on your claim at the end of a year. The next year, you must clear and cultivate 10 of the 160 acres. The third year, you must clear and cultivate 10 more. Total cost: \$10 for filing fees.

These requirements are stiffer than they look, as Alaska's land records show. Today only about half of the State's available homestead lands are occupied. The other half never have been claimed, or have been claimed and then abandoned.

To make a go of homesteading, I was told in Anchorage, takes 20 years' hard work and a \$65,000 investment. One official told me, "What this State needs is young, vigorous childless couples with about \$10,000 in the bank." Clearing is a formidable task for a lone man. Hiring men and machines costs \$150 to \$350 an acre. The fifty-niners cannot afford such prices.

"Everything is tough, or costs money," Sik sighed one afternoon. "None of us ever had been farmers, or well diggers, or loggers before. I cleared 1 acre last year, and I borrowed a bulldozer to do it. We've had to learn everything the hard way. Carol's had to learn canning, preserving, butchering, even how to bake bread. I never handled livestock until I bought my cows and my horses."

"If Shorty Bradley, the oldtimer, hadn't been here to help, I don't know what we would have done."

GETTING A HEAD START

Already, Sik showed me, he is getting ready for the Fifty-niners' make-or-break year. Vegetable seeds are germinating in window boxes to get a head start since next winter the Siks must live on what they can grow. Sik has mentally marked off 10 acres for clearing with chain saw, hand axe and his team of horses.

The cabin must be made more liveable, and a new well and outhouse added. And he must try to rustle up part-time jobs for he has only \$50 left.

Let one of these projects fail, and his whole venture may fail.

My last night, a gay little get-together was thrown at the Donaldsons' just-finished cabin. Visiting and reading old comic books and television magazines are virtually the only Fifty-niner recreations so I had hoped the party might bring all the Fifty-niners together for once, but the gap was still too wide.

The next day, Sik and I headed back across the river—on snowshoes this time—and he gave me one more shot of the faith that had carried the Fifty-niners so many miles. "We'll make it through this winter and the next one, too," Sik said grimly. "Sid, you come back in 10 years. One of these days, they'll build a bridge across this river, and we'll have roads to take our crops to market and we'll have schools to educate our kids. We'll have a real flourishing community, with all the things we planned."

I left him in Talkeetna and slugged off toward the train. I hoped his dream would come true, although I couldn't help feeling that the odds were rather long. But I

hoped—as I still do—that Sik and all the Fifty-niners would work together to attain it. For only that way, I felt, can they ever build a New Michigan, hacked with their own hands out of the wilderness.

RLCA Press Release Charges Undermaintenance by Railroads Creates Dangerous Condition

EXTENSION OF REMARKS OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the CONGRESSIONAL RECORD the text of a press release issued March 1, 1960, by the Railway Labor Executives' Association:

PRESIDENT OF BROTHERHOOD OF MAINTENANCE OF WAY EMPLOYEES CHARGES UNDERMAINTENANCE BY RAILROAD HAS CREATED DANGEROUS CONDITION

President Harold C. Crotty of the Brotherhood of Maintenance of Way Employees said today that "the drastic extent to which the railroads have curtailed the maintenance of their tracks, bridges and structures in recent years has created and is perpetuating a dangerous situation."

In an article written for the President's Page of the March issue of the Brotherhood of Maintenance of Way Employees Journal, Crotty said that he was confident that a thorough inspection of railroad tracks and structures by a competent and neutral authority would more than bear out this opinion.

"Deferred maintenance of tracks and bridges is difficult to determine in the aggregate unless one has access to the records and reports of the maintenance engineers on each railroad or is in a position to make complete and detailed inspections of railroad facilities," Crotty said.

"No data is now compiled by the ICC to indicate directly the degree of undermaintenance. There are, however, several general indicators which reflect the extent to which maintenance work is or is not being done."

MAINTENANCE WORKERS CUT IN HALF

Pointing out that, obviously, the roadway plant cannot be maintained without an adequate number of employees, Crotty cited the following statistics in support of his contention that there has been "a serious deterioration of safety standards" for maintenance by the railroads:

1. Maintenance-of-way employment on class I line-haul railroads declined from 256,748 in 1946 (ICC midmonth count of 16 classes) to only 119,728 in 1958—a decrease of 137,020 or 53.3 percent.

2. The reduction in maintenance forces was not due to a comparable reduction in railroad traffic—freight traffic on class I railroads aggregated 551 billion revenue ton-miles in 1958 as compared to 591 billion revenue ton-miles in 1946.

3. In 1958 class I railroads replaced only 16 million cross-ties compared to an average of 34.5 million annually in the 5 years from 1946 to 1950 and 27.3 million annually from 1951 to 1955.

4. Only 920 thousand tons of rail were laid in replacement during 1958 compared to an annual average of 2.6 million tons from

1946 to 1950 and 2.1 million tons from 1951 to 1955.

"Adequate maintenance of track requires that ties and rail be renewed regularly as they wear out," Crotty said. "During recent years, these renewals have declined severely, a condition which would naturally be expected to accompany such heavy reductions in force."

DIVIDENDS TO STOCKHOLDERS NEARLY DOUBLE

Crotty noted that railway maintenance officials admit that much needed track and bridge maintenance has been and is being deferred and said that the railroads generally contend that this is due to lack of money.

"Yet during the years the standard of maintenance has been permitted to deteriorate so seriously," he said, "the payments of dividends to stockholders has increased substantially. In 1946, when class I railroads had 256,000 maintenance-of-way employees in the service, replaced more than 37 million cross-ties and laid 2.5 million tons of rail, they declared dividends of \$234.6 million. In contrast, during the year 1958, when they had less than 120,000 maintenance-of-way employees, replaced only 16 million cross-ties and laid only 920,000 tons of rail, they declared dividends of \$418.8 million."

"It is quite apparent that the railways consider the payment of dividends to their stockholders of much more importance than the safe maintenance of their roadway or the welfare of their employees."

When employment figures for 1959 are available, they will show a still further decline in maintenance-of-way employment, Crotty predicted.

SAFETY STANDARDS IGNORED

"Dieselization, improved materials and work methods, centralized traffic control, mechanization, automatic protection of traffic at highway crossings—these, and particularly mechanization, are the major causes for the gradual decline in maintenance-of-way employment through the years," he said. "They do not, however, account for the fact that maintenance-of-way employment decreased from more than 225,000 in 1953 and 170,000 in 1956 to less than 120,000 in 1958 and even less in 1959."

"Beginning in the fall of 1957 and continuing through 1958 and 1959, the railroads have cut maintenance forces to the bone. It is my opinion—and I think this is readily apparent from the figures I have given—that the bare skeleton forces being presently maintained by the railroads are not sufficient to keep their tracks, bridges and structures in safe condition."

Crotty said that the standards of safety varied from railroad to railroad with some being high, some adequate, and some barely adequate, adding, "It is my opinion that the standards for roadway safety now being maintained by many railroads are marginal and border on the dangerous."

Legislation is now pending in Congress to authorize the Interstate Commerce Commission to inspect railroad trackage and, if found unsafe, to order the railroad to make necessary repairs or alterations. In the absence of such a law, the railroads themselves are the sole judge of the condition of their trackage.

"We have found," Crotty said, "that in allocating money for maintenance work the railroads are often motivated by considerations other than safety."

BACKED BY RLEA

Crotty's views were given the endorsement of the Railway Labor Executives' Association, which represents 23 standard railway labor organizations. A. E. Lyon, executive secretary of the RLEA, said that the RLEA's committee on safety has repeatedly expressed grave concern over the failure of the railroads to maintain their trackage and

equipment up to adequate safety standards in recent years.

Lyon released, on behalf of the RLEA, four tables prepared by Crotty which show the serious decline in maintenance-of-way em-

ployment, the steady drop in the hours of maintenance work per mile of road and the big jump in the average number of miles of road operated per maintenance employee, the amount of ties and rail laid in replace-

ment, and the steady decline in the budget for maintenance of way and structures as contrasted to the steady rise in railroad dividends to stockholders.

These tables follow.

TABLE 1.—Employment trend, by classifications, maintenance-of-way department, class I railroads in the United States, 1946 and 1958

Classification	Average number of employees, middle of month count		Decrease ¹		Classification	Average number of employees, middle of month count		Decrease ¹	
	1946	1958	Number	Percent		1946	1958	Number	Percent
Bridge and building gang foreman.....	4,100	2,892	1,208	29.5	Gang foremen (extra gang and work-train laborers).....	4,136	2,459	1,677	40.5

Loyalty Oath in National Defense Education Act of 1958

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a set of editorials commenting on the effort being made through S. 2929, the Kennedy-Clark-Javits bill, to rescind the disclaimer affidavit provision in the National Defense Education Act of 1958. There has been an increasingly strong body of editorial opinion regarding this matter during recent months, as this selection of editorials well indicates.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Providence (R.I.) Bulletin, Nov. 21, 1959]

THE LOYALTY OATH SHOULD BE DROPPED FROM THE DEFENSE EDUCATION PROGRAM

The decisions of Harvard and Yale Universities and Oberlin College to drop out of the Federal student loan program are welcome acts of academic courage in the face of a threat to a basic American freedom—freedom of thought.

By their action, the three schools dramatize the urgent need to cut the loyalty oath requirement out of the National Defense Act of 1958, the Nation's answer to sputnik and the Soviet intellectual challenge.

In purpose, that act is good. Indeed, it was overdue. For too long, the United States has wasted one of its most precious assets—brainpower—because of the limited capacity of colleges to provide loans to able but needy students.

The defense education law attempted to meet that need in American higher education by providing accredited schools with a total of \$1 billion over a 4-year trial period to minimize brainpower wastage in the fields of science, math, languages, and teaching. Such assistance clearly would serve to strengthen national security at a basic level.

But as long as the loyalty oath remains, it is a bad law, with a greater potential for harm than good.

The oath itself, requiring a loan recipient to disclaim belief and membership in and support for "any organization that believes in or teaches the overthrow of the U.S. Government by force or violence, or by any

illegal or unconstitutional means," reads innocently.

In fact, however, it subtly inhibits free thought by suggesting in negative terms that there are areas of intellectual heresy that must be avoided, or risk aid loss, disgrace, and perhaps even jail for unintentional perjury.

The oath is offensive in many other ways. It is discriminatory since it singles out needy students from the list of Federal loan recipients, ranging from businessmen to farmers, by requiring a loyalty pledge. Dangerously unspecific as a legal document, it encourages a confusion between nonconformity and disloyalty that threatens to throttle independent thinking, the root of America's greatness. It also is futile and generally fatuous.

But the foremost objection to the oath requirement is that it seriously, if subtly, transgresses the spirit of free inquiry central to the American academic tradition and to democracy itself.

This is not an idle or theoretical concern. Most responsible educators opposed the loyalty oath provision from the beginning, but accepted it the first year in view of the urgent need for scholarship funds, in the hope that the affidavit proviso would be eliminated by Congress during the last session.

The effort, sparked by Senator KENNEDY, not only failed, but the 1960 appropriations bill even had tacked to it a rider prohibiting public schools from buying Communist-made science and other teaching equipment with Federal funds, or even State funds used to match Federal school grants.

Thus, the oath became confirmed as the thin edge of a wedge by which zealots in Government might use the law to gain greater control of education, with the danger of subjecting thought to the tyranny of orthodoxy or actually forcing it into channels of revolt.

Many universities and colleges like Brown have chosen to remain in the program while continuing to fight for an amendment of the act, and that is an acceptable, if expedient course. But Harvard, Yale, Oberlin, and the other 11 schools that have either withdrawn from the program or never accepted it are serving America well—at great cost to themselves and even damage to some students—by dramatizing what could prove otherwise a dangerous compromise with America's idealism, its Constitution, and its strength.

[From the Boston Herald, Nov. 24, 1959]

STUDENT AID

It is being said in some quarters that the refusal of Harvard and other leading universities to participate in the Federal student loan program does no harm.

The universities' objection to the affidavit of disbelief in communism, it is alleged,

merely saves the taxpayers money. It is no skin off anybody's nose if students fail to accept loans under the Federal program.

But the issue is not that simple.

The purpose of the National Defense Education Act, which set the program up, was not primarily philanthropic. Congress was concerned, and rightly so, because our educational system was producing so few scientists, mathematicians, and foreign language specialists.

It had heard its own Atomic Energy Committee declare that the atomic energy program would be in serious danger unless something was done to expand the education of engineers and scientists. It had heard the President's 20-man Committee on Scientists and Engineers say that our scientific training must be stepped up if our scientists and technologists were to remain on a par with the Russians.

So Congress was thinking of the national safety, not the need of individual students, when it launched its aid program. In a policy statement written into the bill, it spelled its purpose out:

"The Congress hereby finds and declares that the security of the Nation requires the fullest development of the mental resources and technical skills of its young men and women. The present emergency demands that additional and more adequate educational opportunities be made available. The defense of this Nation depends on the mastery of modern techniques developed from complex scientific principles. It depends as well upon the discovery and development of new principles, new techniques, and new knowledge."

In view of this, how can it be said that the withdrawal of 16 colleges and universities from the program, some of them the best scientific training institutions in the country, doesn't matter. The withdrawals are defeating the program.

When Congress meets again, it should ask itself whether the negative affidavit, the piling of oath on oath, which is what most of the colleges object to, is worth what it is costing. A simple oath of allegiance by student borrowers surely should be enough (and many will question whether even this is necessary).

The need to draw more talented young people into science education is real. If we fail, we may lose the cold war by default.

Congress must take the refusal of the universities to participate in the loan program seriously, and do something about it.

[From the Madison (Wis.) Capital Times, Dec. 3, 1959]

DR. PUSEY—THE KIND OF COURAGE EDUCATION NEEDS

One of the most remarkable young men in education today is President Nathan Pusey, president of Harvard University.

In recent days President Pusey, along with a few other courageous school administrators, has told the Federal Government it can keep its student loan and scholarship funds if the offensive loyalty oath must be taken by a student applicant as a condition precedent to getting the loan.

It would be an easy thing for a man in Pusey's position to ignore the principle involved and take the Federal money. It would help some of his needy students and it would undoubtedly be popular with the overwhelming majority of the conservative Harvard alumni.

But Dr. Pusey has not made a habit of ducking principle and doing the popular thing.

We remember him best in this State for his courage in the days when the McCarthy scourge was driving everyone into the storm cellars.

Pusey then was president of Lawrence College, a very conservative small college in McCarthy's hometown of Appleton. A book was published by a group of citizens who wanted the people of Wisconsin to know the truth about McCarthy.

The book dealt with McCarthy's public record.

There were scores of people in this State who knew that the book told the truth about McCarthy, but they declined to allow their names to be used as sponsors. They felt, and with considerable justification, that if McCarthy denounced them in the hysteria that existed they could be ruined.

But Dr. Pusey showed no hesitation. He became a sponsor of the book and prime target of McCarthy. Shortly thereafter, at the height of McCarthy's power, Dr. Pusey was named president of the oldest and perhaps greatest university in this country.

There is an interesting story about this. A man who was on the Harvard board that hired Dr. Pusey called a Wisconsin resident seeking information about him. He was told of the Pusey troubles with McCarthy.

That was all he needed to sell him on Pusey and it appeared to have clinched the appointment with the other members of the board.

Dr. Pusey is carrying on in the tradition he established in Wisconsin. He takes his stand on principle. Education should cherish men of high principle such as this. They are so rare.

[From the Christian Science Monitor, Dec. 5, 1959]

AGAINST STUDENT OATHS

Politicians have had a strange faith in non-Communist oaths. It has not been supported by any persuasive evidence of their value in weeding out Communists. Instead there is reason to believe that a Communist not already exposed would hardly balk at one more lie for his cause. The risk of perjury penalties he is likely to take even more lightly than did the 100 citizens who lied about TV quizzes. Yet last year when Congress adopted a plan for loans to worthy college students it not only required them to take the oath of allegiance to the Constitution but to make an affidavit of non-allegiance to any organization seeking overthrow of the Government.

Now it may seem that even if this is not effective it is harmless. But students ask why only they among the many groups of citizens who get Federal loans—farmers, homeowners, etc.—are required to make two affirmations of loyalty. And a growing number of colleges object that this kind of demand conflicts with their efforts to encourage students to seek the truth for themselves.

At the start several courageous small colleges refused to enter into the loan plan under such conditions. Recently they have

been joined by Harvard and Yale, with Presidents Pusey and Griswold making strong and reasoned statements of protest. Last summer a repealer of the double oath narrowly failed in the Senate. Now President Eisenhower has added his respected and nonradical voice to the pleas for repeal.

We trust Congress will heed them. For this requirement is discriminatory. As the college revolt grows it could seriously hamper the aim of the loan program. The double oath also tends to work against its own purposes by fostering disrespect rather than loyalty. Indeed, what kind of loyalty can be so purchased?

[From the Boston Herald, Dec. 18, 1959]

THE OATH AND LIBERTY

There is a side to the oath and affidavit requirement of the Federal student loan program that has not been much touched upon. Yet it concerns a principle of the profoundest import.

You will recall that to qualify for a loan, the student must (1) take an oath to "bear true faith and allegiance to the United States," and (2) swear to an affidavit that he does not believe in and is not a member of and does not support "any organization that believes in or teaches the overthrow of the United States by force or violence or by any illegal or unconstitutional methods."

The colleges, which must match with 10 percent the 90 percent Federal funds, are required to administer the oath and affidavit. About a score have refused, including Harvard.

The pro and con have been much discussed, and will be further debated when the Kennedy-Clark bill to repeal the oath and affidavit requirement comes up in Congress again next year.

The affidavit requirement has been called futile, discriminatory, degrading and an affront to freedom of thought and conscience. It has also been called a reasonable condition for Federal assistance and an aid to the prosecution of Communists by means of a perjury indictment.

What has not been sufficiently stressed is that the Government is here laying down boundaries to intellectual exploration. It is saying to the student, "Think on revolution only at your peril. In fact, don't even think on anything in association with revolutionists."

These may seem like mandates that any government interested in surviving might reasonably make. Particularly the Government might seem justified in not wishing to have its own funds used to subvert it.

But this view defames the spirit of the American democracy.

The right of the people to alter or abolish a form of government for just cause was recognized in the Declaration of Independence, and the signers carefully specified their just cause.

The eternal right to review the basis on which this Government is set up surely is implied by the Declaration. It was never intended that certain areas of thought should be put out of bounds for exploring minds.

Those who advocate a Constitutional Convention in Massachusetts do, in the precise meaning of the words, believe in the overthrow of the present form of State government by an unconstitutional method. They are appealing to the people to set up a new form of State government.

They are acting in the spirit of the Declaration of Independence. The oath-affidavit provision is not in that spirit.

The colleges and universities are among those institutions that ought to be particularly free to make a continuing audit on the American form of Government. The oath-affidavit provision is calculated to re-

strict that freedom, and to make the Government less answerable to the people.

It would tend to destroy the "monuments of the safety with which error of opinion may be tolerated where reason is left free to combat it."

The Political Grass Seems Greener in the Other Cabinet Officer's Yard

EXTENSION OF REMARKS

OF

HON. BURR P. HARRISON

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. HARRISON. Mr. Speaker, there is good reason to evaluate the intense interest of Secretary of Labor Mitchell in the situation of the seasonal agricultural worker as a political rather than humanitarian phenomenon, but, for whatever reason, it is a disgraceful situation when the Congress is obliged to consider legislation to restrain a member of the President's Cabinet from attempting to do what the Congress never intended him to do.

Secretary Mitchell has had considerable experience in the labor relations field, particularly in the building trades and in retail merchandising, but his acquaintance with the problems of farmers in assuring the rapid and efficient harvesting of perishable field and orchard crops has not been established. His proposed excursion into the regulation of seasonal agricultural employment not only has caused grave apprehension among farmers who must depend on seasonal labor, but has prompted objections from Secretary of Agriculture Benson.

Those of us who have been engaged for some time in the effort to curb Mr. Mitchell's plans to move in on agriculture are encouraged to find Republican Members of this House joining in the sponsorship of legislative restraints on this unwarranted grab for regulatory power.

In this connection, under leave to extend my remarks in the Appendix, I include an excellent summary of the situation written by Matt Triggs, assistant legislative director of the American Farm Bureau Federation, which appears in the March 1960 issue of *Nation's Agriculture*:

Of grave concern to farmers who obtain workers from other areas through the Federal-State employment service are new farm labor regulations approved by Secretary of Labor James P. Mitchell.

These new regulations became effective December 20, 1959.

Farmers who do not depend on the employment service may disregard the new regulations.

The regulations are of particular significance to farmers producing fruits, vegetables, cotton, and sugar beets. Farmers producing other commodities are not usually dependent upon the employment service for workers.

The regulations would require any farmer wishing to recruit workers through the employment service to:

1. Pay prevailing wages.
2. Provide housing meeting State standards. If there are no State standards the

State employment service shall establish standards, giving full consideration to specified Federal standards.

3. Offer to pay transportation to workers in accord with prevailing practice in either the area in which workers are to be employed or in areas which recruit workers from the same service.

4. Provide other terms and conditions of employment not less favorable than those prevailing in the area.

The full implications of these rules will not be apparent for many years.

For example, how are prevailing wages to be determined? Indications are that the Department of Labor will use the same formula (the 40-51 formula) used to determine prevailing wages for purposes of the Mexican farm labor program.

This formula works this way: If 40 percent of the workers in an area are paid one wage rate, this is the prevailing wage. If this is not the case, the prevailing wage will be determined by examining an array of wage rates to determine the range in which the 51st percent of all workers, counting from the bottom of the array, will be found. For example, let's assume that wages in a particular area are as follows: 10 percent at \$1.05 an hour, 20 percent at \$1 an hour, 25 percent at 95 cents an hour, 20 percent at 90 cents an hour, 15 percent at 85 cents an hour, 10 percent at 80 cents an hour.

If we start counting from the bottom in the above illustration, 45 percent of workers are paid 90 cents an hour or less and 70 percent are paid 95 cents an hour or less.

The 51 percent falls within the 95 cents an hour range. The prevailing hourly wage rate in this area would therefore be determined to be 95 cents.

All farmers who recruited workers through the employment service would be required to pay at least 95 cents an hour.

Needless to say, the actual determination of prevailing wages is far more complicated than indicated in this simple example, particularly when piecework rates are under consideration.

The most important aspect of the situation is not what is in the regulations as now issued, but the fact of their issuance.

These regulations were issued under the asserted authority of the Wagner-Peyser Act of 1933. This is the act which created the Federal-State employment service.

It is doubtful that any single Member of the House of Representatives or the U.S. Senate who voted for the Wagner-Peyser Act had any idea that there was anything in the act that could be construed to authorize what Secretary Mitchell is now undertaking.

Certainly if there had been any supposition that the Wagner-Peyser Act might be so interpreted, the legislative history of its enactment would have so indicated. The complete silence of the legislative record on this point is persuasive.

It is, or should be, axiomatic that it is Congress that should decide important policy issues, and that the heads of agencies should endeavor to administer laws in accord with the actual intent of the Congress.

If this sound principle is violated, the heads of agencies are in effect engaged in writing legislation by Executive order.

The history of the freedom of man is the history of the substitution of government by law for government by men.

The arbitrary actions of Secretary Mitchell in this respect have been regarded with concern by the White House and by congressional leaders of both parties.

Secretary of Agriculture Benson says the proposals "retain the concept of Federal intervention and administrative control and regimentation that is contrary to the principles of this administration."

As might be expected, the AFL-CIO and the various organizations subsidized by

AFL-CIO have applauded Secretary Mitchell's action.

If the present regulations are valid, there is no discernible limitation on the authority of the Secretary of Labor to issue whatever regulations he may choose in the future. Since Congress did not suppose the act would be so construed, it did not provide standards, criteria and limitations on administrative authority.

This is too much power over farmers to be vested in one man.

The Mexican farm-labor program, authorized by what is commonly termed Public Law 78, has also been used as a means of extending regulation to the employment of domestic farmworkers.

This statute contains a provision that the Secretary of Labor must determine that the Mexican farm-labor program is not adversely affecting wages and working conditions of domestic farmworkers.

To an increasing extent this authority is being used by the Secretary of Labor to require either increases in wages paid Mexican workers to avoid adverse effect on domestic workers or to require employers to do certain things for domestic workers as a condition of eligibility for employment of Mexican nationals.

Public Law 78 contains no criteria or standards to be followed by the Secretary of Labor in administering this authority. His authority is therefore without limitations.

Again, this is too much discretionary authority to be exercised by one man.

Well, what's the answer?

One answer is legal action. As yet no approach to legal action has yet developed which holds promise of successful accomplishment.

The other answer is legislative.

Farm Bureau will promote a positive legislative effort to terminate the asserted authority of the Secretary of Labor in this respect.

What appears to be the most immediately feasible legislative approach is presented by the fact that the legislative authorization (Public Law 78) for the Mexican farm-labor program is scheduled for extension in 1960 or 1961. The present authority for this program expires June 30, 1961.

Farm Bureau recommends that the bill to extend this program be amended in several key respects, as follows:

1. That neither Public Law 78, nor the Wagner-Peyser Act shall be construed to authorize the Secretary of Labor to regulate the wages, perquisites, transportation, or other working conditions of domestic farmworkers.

2. That the Secretary of Agriculture should participate with the Secretary of Labor in joint approval of any farm-labor regulations issued by the Secretary of Labor.

3. That Public Law 78 be amended to provide legislative criteria and standards to be used in determining "adverse effect."

Bills to accomplish this objective have been introduced by Congressman Dixon of Utah (H.R. 9869), by Representative McIntire of Maine (H.R. 9875), and a somewhat different approach by Congressman GARNINGS of Arkansas (H.R. 9871).

Hearings will be held on these bills in the near future.

Widespread understanding, among all farmers in all areas, of the significance of these efforts by Secretary of Labor Mitchell to regulate farmers, is a necessary prerequisite to successful legislative action.

It should not be presumed that the present regulations are all that we need be concerned about. If the Secretary of Labor is successful in this reach for power, the next step toward subjecting farmers to regulation may be uncertain as to time and character, but inevitable as to eventual action.

Award of Honorary Degree of Doctor of Laws to Arizona Supreme Court Justice Levi S. Udall

EXTENSION OF REMARKS
OF

HON. CARL HAYDEN

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. HAYDEN. Mr. President, on March 1 of this year, the University of Arizona bestowed an honorary degree of doctor of laws on the Honorable Levi S. Udall, a justice of the Arizona Supreme Court. I have known Judge Udall for all of the 29 years which he has devoted to the Arizona judiciary. He has a reputation for eminently fair and learned decisions, and is highly respected by the bar of Arizona.

Judge Udall is from a pioneer Arizona family which has given many members to the courts and the legal profession in my State. All of his sons are lawyers, and one of them, the Honorable STEWART L. UDALL, has been a Member of the House of Representatives from Arizona for the past 5 years. I ask unanimous consent that a column by Claiborne Nuckolls which appeared in the Arizona Republic on March 6, reporting on Levi Udall's career, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE STATE WE'RE IN

(By Claiborne Nuckolls)

When the University of Arizona last week conferred upon State Supreme Court Justice Levi S. Udall the honorary degree of doctor of laws, the distinction added a new peak to the career of one of the State's most distinguished jurists.

This column joins his many friends and admirers in saluting this tribute to a deserving and completely dedicated man who has devoted much of his life to the cause of right and justice.

Justice Udall, all who know him agree, exemplifies the high type of men Arizona has been fortunate in having on the bench of its highest appellate court.

The honor bestowed on him is all the more fitting because Justice Udall is a self-made man. Born and raised on an Apache County farm, as a young man he knew very well what hard work was. Early in life he developed an interest in law and, while clerk of the superior court of Apache County, he studied law on his own time under the tutelage of the late Judge A. S. Gibbons.

Admitted to the bar in 1922, he subsequently was elected county attorney, then to the superior bench, where he spent 16 years before being elevated to the supreme bench by Arizona voters in 1947. He now is the court's senior member.

During his 29 years as a member of the Arizona judiciary, he has earned the respect of attorneys, fellow jurists, and the public for his learning, integrity, and strong sense of justice. His outstanding record as a trial judge is borne out by the fact that 70 percent of his decisions and judgments which were appealed were affirmed by the supreme court.

Reporters who cover the supreme court welcome his written decisions for their clarity and understandability. If some legal point confuses their laymen's minds, Justice

Udall is always willing to take all the time necessary to explain it. His pen can drip acid when occasion calls for caustic comments. On the other hand, his kindly, understanding nature is revealed in many of his decisions, such as his recent discussion of the role human emotion properly may play when a trial judge imposes sentence and judgment on an offender against law and society.

Levi Udall is a patriarch of the famed Udall clan of Arizona, often referred to as Arizona's royal family. He also is a patriarch of the Phoenix North Stake of the Church of Jesus Christ of Latter-day Saints, whose precepts of humanitarianism, right living, and helpfulness to others he has always followed to the letter.

As was stated during ceremonies attending the conferring of the valued honor he now holds from the University of Arizona: "No Arizonian of his generation has better exemplified the ideal of able and devoted public service."

Justice Udall admits being a little nonplussed at this and several other honors bestowed upon him in recent months. Last November the same school awarded him its medallion of merit in recognition of his leadership in a number of fields of endeavor. Last February, the Roosevelt Council, Boy Scouts of America, awarded him its highest honor, the silver beaver award for distinguished service to boyhood.

"A friend," Justice Udall remarked, "humorously asked what else I had to live for after receiving all these honors on top of those the Arizona public has bestowed on me by repeatedly electing me a trial judge and a member of our supreme court."

"My answer is this: I have all the more to live for to endeavor to prove myself worthy of these honors."

Arizona, say those who know him well, needs many more men like Justice Levi S. Udall.

Prayer in House by Rt. Rev. Theodore J. Kojis

EXTENSION OF REMARKS OF

HON. CHARLES A. VANIK

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. VANIK. Mr. Speaker, I am pleased to inform my colleagues that the prayer opening today's session of the House was delivered by a distinguished resident and religious leader of the congressional district which it is my honor to represent. Serving as today's guest Chaplain, the Right Reverend Theodore J. Kojis, O.S.B., abbot of St. Andrews Abbey in Cleveland, Ohio, represents the Slovak community of America which today commemorates the 21st anniversary of the proclamation of Slovak independence.

Abbot Kojis' prayers are offered as an inspiration of hope and courage to Slovaks behind the Iron Curtain whose misfortune and enslavement are a constant reminder to freedom-loving people everywhere of how precious is our liberty.

We cannot take our democracy for granted. We need only look around the world at those regrettable instances where sovereign peoples embraced an ideology only to find that they surrendered their freedom and lost their national integrity.

New England College Story One of Pioneering

EXTENSION OF REMARKS

OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. BRIDGES. Mr. President, New Hampshire has long been proud of her outstanding institutions of learning. Over the years many noted individuals have been graduated from New Hampshire's schools of higher learning and have gone on to seek their rightful place in the world.

The most recent arrival on the educational scene in my State is New England College, located in the town of Henniker. Although founded only 14 years ago, this school has fashioned an outstanding record under the capable guidance of its president, Dr. H. Raymond Danforth.

Recently an article appeared in the Boston Herald outlining the great strides this institution has made in recent years. I ask unanimous consent that the article, entitled, "New England College Story One of Pioneering," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW ENGLAND COLLEGE STORY ONE OF PIONEERING

(By Haydn Pearson)

HENNIKER, N. H.—Vice President RICHARD M. NIXON probably did not realize. But when he stopped at New England College in this small, typical Granite State village he gave the college national publicity. Mr. NIXON was on his way to dedicate the huge Hopkinton flood-control dam.

From President H. Raymond Danforth the Vice President of the United States accepted a symbolic key to this growing institution. The story of New England College is a story of pioneering. Founded in 1946, it has grown to an enrollment of 260. There are 14 girls and they have their own modern home, tastefully decorated, and with their own cook.

HEADQUARTERS IN INN

Headquarters building is the oldtime Henniker Inn. Probably some of you have eaten there. In its heyday it was a widely known smalltown hostelry. Now it houses the president's office, secretarial offices, commons for the freshmen, the dean's office, and 38 students.

As I sat in his office and talked with Dr. Danforth I could feel the drive and dedication that is behind the growth of this non-denominational institution.

New England College was founded in the fall of 1946 with a faculty of 8 and 63 students. All but one of the students were veterans. Today, with an enrollment of 260, the faculty comprises 15 full-time and 13 part-time professors and instructors. The college has 14 buildings, an athletic field, and recently made plans for its first new men's dormitory on a 100-acre campus site beside the Contoocook River.

At present the college offers a 3-year accelerated program and the more usual 4-year program. Tuition is \$750 for the academic year. Room charge for the 13-week term is \$70 to \$80.

Courses of study are offered in three divisions: Liberal arts, in which the student earns a bachelor of arts, or a bachelor of science degree if he specializes in science;

business administration; and civil engineering.

"Education on any level is a challenge," Dr. Danforth said. "We have an excellent faculty and a good, solid educational program. Anything less in an education endeavor is false. Education is a developmental situation for the individual, and here we can give individual attention to each student. In everyday language, we want to help our young men and young women to develop their abilities and become productive members of society."

A VERY ACTIVE MAN

Dr. Danforth, former superintendent of schools in Nashua, N.H., who is a dynamic, forward-looking educator with deep sympathy for the lad who is working hard for an education.

Some years ago before he became superintendent of schools, he lived in Acworth, N.H., commuted 23 miles each way to Claremont to teach in the high school. While in Acworth, Dr. Danforth was chairman of the board of selectmen, chairman of the school committee, and overseer of the poor. And just to keep himself busy, he served as lay preacher in two churches.

"Somewhere along the line," he said, "we have lost something in American education. Perhaps it is a part of the era in which we are trying to learn to live without working."

"We do not have the traditions of the Ivy League Colleges, but we are making our own traditions. We don't have the ivied halls and impressive buildings, but in their village homes, converted into dormitories and classrooms, and meeting in small groups, our students are learning many lessons that will stand them in good stead."

"I want to ask an important question," I said.

Dr. Danforth leaned back in his chair and laughed. "Go ahead. I tell the boys to speak what is on their minds."

"How come you left a position as superintendent of schools in Nashua, N.H., to take one that I can see is a real battle?"

He looked at me with a quizzical expression. "Don't you ever feel you would like to leave the security of the Boston Herald column, and to do a Henry Thoreau stint?"

I wanted to say that the readers of the Boston Herald keep me on my toes and sometimes rock my security—but I didn't. I knew what Dr. Danforth meant.

"Here is a new college," he said. "You've seen and talked with some of the students. You can sense for yourself what I mean when I say this is a challenge. Here is a school that is going to grow. We can do many worthwhile things for young men and young women."

"The Nation's population is growing rapidly and the standard of living is rising. We shall need more and more colleges, and we hope to make New England College one of the outstanding institutions of its type. Maybe it's a bit corny, but you have heard of the American dream. Look at those young men and young women out here. They have the American dream—and we want to help them make that dream true."

Trucker Offers Railroad a Lift

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. VAN ZANDT. Mr. Speaker, in the March 13, 1960, issue of the New York Times my good friend and home-

town neighbor, William W. Ward, Altoona, Pa., was the subject of an interesting article by Robert E. Bedingfield on the subject of "Togetherness."

The article which explains Mr. Ward's proposal also outlines his highly successful career in the transportation field where he is recognized as one of the outstanding trucking executives in the Nation.

The article referred to is as follows:

PERSONALITY: TRUCKER OFFERS RAILROAD A LIFT—WARD EXTENDS HAND OF "TOGETHERNESS" TO THE PENNSY

(By Robert E. Bedingfield)

William W. Ward is an Altoonan who turned his back on the curve that made Altoona, Pa., famous, and now has become an Altoona landmark himself.

Approaching that central Pennsylvania city nowadays, the wriggling mountain roads are bordered with signs bidding: "Welcome to Altoona, Home of Ward Trucking Corp. and the Horseshoe Curve." Until a few years ago the sweeping reentrant curve, which the Pennsylvania Railroad employs to get over the Alleghenies that crest nearby, had solo billing.

Already sharing the hometown spotlight with the Nation's biggest railroad, Bill Ward, 53, founder and president of Ward Trucking, has aspirations to coster his company with the Pennsy in a much broader role.

His company, unlike the Pennsylvania Railroad, is not the No. 1 in its industry. It is not even among the top 10. It is, however, one of the biggest in Pennsylvania. Its high-density routes through that State and New Jersey into New York City, together with its high operating efficiency, have enabled it to rank among the most profitable in the Nation in ratio of gross carried through to net.

PROponent of COOPERATION

Mr. Ward is one of his industry's foremost exponents of the contention that rail-truck cooperation in getting freight from door to store must come through coordinated routes and rates of separately owned rail and truck systems.

"It is the answer to the problems of surface transportation," he said last week.

In the West, this concept of "togetherness" in routes and rates has been embraced to a limited extent by the Chicago, Rock Island & Pacific Railroad and Consolidated Freightways, Inc., of Menlo Park, Calif. Few railroads and intercity truckers in the East believe it would work in their area. Mr. Ward hopes to break down Eastern resistance with his home ground of Altoona as a starting point.

He hopes to interest the Pennsylvania in integrating its merchandise freight traffic there, and allow his trucks and trailers to take it over the hills of the 16 central western Pennsylvania counties in which he has certificated operating routes.

"The Pennsylvania," Mr. Ward said, "could save itself several hundreds of thousands of dollars if it had a joint through rate system with us at Altoona. The railroad would be able to eliminate considerable dead mileage and at the same time give its shippers much better service—daily service, rather than the two or three times a week it now provides."

The reason for this, of course, would be that in the area Mr. Ward serves it is a lot easier to find a buyer for a truckload of freight than for a carload. Moreover, while the carload is the billing unit, a railroad lets the car wait until there's a train going its way.

STILL IN TALKING STAGE

Mr. Ward explained last week that his proposal to the Pennsylvania still was in an early talking stage. He said he believed he

had more than one willing ear listening to him among the railroad's operating officials. However, with the rails pleading for Government permission to operate their own common carrier motor routes and the truckers—with Mr. Ward right out in front—fighting this suggestion to the fullest, he is prepared for the Pennsy to move thoughtfully before adopting his project.

It is only since the war that the truckers themselves have been interchanging their trailers under joint through-traffic agreements. And there still is reluctance on the part of most trucking lines to interchange more than 35 percent of their freight.

Mr. Ward contends that his company's success while interchanging something more than 60 percent of its freight disproves this fear—that it's a matter of balancing terminal and over-the-road costs and dividing tariffs equitably.

Ward Trucking was founded by Bill Ward in 1931. He was then 24 years old and had been forced out of his job as a Chevrolet automobile salesman because of the deepening depression. He was newly married and to make a living he had taken on a distributorship for automobile cylinder lubricants, working a route with an old three-quarter-ton panel truck for which he had paid \$100.

"It wasn't much of a living," he said. "I knew I had to get something else. I used the three-quarter-ton truck for a down payment on a one-ton truck and started to haul coal and sell 50-gallon empty oil drums to oil distributors, continuing the lubricant distributorship as well."

"I still wasn't making ends meet and so I created a chicken and egg route to New York. I charged \$1.15 a crate. I'll never forget it if I live to be 1,000 years old. Competitors moved in on me and undercut my rate steadily. They finally took the rate down to 35 cents. I was returning from New York one night after delivering a cargo of chickens and eggs and after paying traveling expenses had \$77.50 left. And out of that I still had to pay my helper, Bob Kelley."

Mr. Ward and Mr. Kelley had about reached the decision to quit trucking and to try something else. But the next day the business got its first real break. The J. C. Blair Co. of Huntingdon, Pa., one of the largest manufacturers of converted paper products, became a customer.

"Blair was our first customer as a common carrier," Mr. Ward said, "and we've still got them as a customer."

Other customers were obtained. In a year the business had grown to the point where two additional trucks were needed. The customers multiplied regularly thereafter. So did the trucks. Today Ward's fleet consists of 119 tractors, 61 trucks and 196 trailers, and this year's capital budget call for purchasing 20 more trailers and 15 more tractors.

Mr. Kelley, Mr. Ward's first employee, now manages the line's Harrisburg, Pa., terminal, one of six on the company's routes. Where the business was started with one employee, now there are 425 and the company, Mr. Ward believes, is the only one in the industry with a profit-sharing program for its workers.

He has had many attractive proposals made to him over the years to merge or sell out his company, but he has refused them all.

GROWS FROM WITHIN

"We have not increased either by purchase or new authority our original operating routes granted by the Interstate Commerce Commission in 1936," he said. "Our growth has been entirely from within, and I might add that being located on the main line at a key point on the Nation's largest railroad hasn't made the task easy."

Bill Ward's reputation doesn't stop at being a successful trucker. He is one of the most civic-minded businessmen in Altoona

and is determined to help make his native city a cleaner, happier and better place to live. Recognizing his efforts along this line, the city's businessmen service clubs three times since 1954 have named him the Altoonan of the year.

He is a director and past president of the Altoona Chamber of Commerce, a director of the Community Chest, the American Red Cross, the Pennsylvania Association for the Blind, Pennsylvania State Chamber of Commerce, the Altoona Symphony Society, a trustee of the Mercy Hospital in Altoona, and chairman of the board of advisers of St. Francis College in neighboring Loretto, Pa.

With all his other activities, Mr. Ward is a farmer too. He owns a splendid 135-acre chicken and dairy farm on Brush Mountain, the highest point in Blair County, 5 miles from Altoona, overlooking the Horseshoe Curve. There he has built not only a home for himself and his wife, but one for each of his two married sons.

Connally Amendment to Ratification of the World Court Statute

EXTENSION OF REMARKS

OF

HON. BARRY GOLDWATER

OF ARIZONA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. GOLDWATER. Mr. President, the people of America continue to express their concern over Senate resolution 94, which calls for the abolition of the so-called Connally reservation. Many newspapers across the country have expressed this concern. One of the most active of these has been one of Arizona's leading newspapers, the Arizona Republic. I ask unanimous consent to have printed in the Appendix of the Record an editorial entitled "To Find Rule of Law," published in the March 9, 1960, edition of that newspaper.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

TO FIND RULE OF LAW

The argument that the rule of law should be established among the nations of the world is being used as a reason for seeking the repeal of the Connally reservation. This is the amendment to the ratification of the world court statute by which the United States reserves to itself the right to determine whether a dispute with another nation is international in nature and thus subject to world court jurisdiction, or domestic and thus to be settled by negotiation or the national courts of the nations involved.

The rule of law is indeed a desirable objective. So it is worthwhile to examine carefully the question whether the attainment of that objective would be hastened by repealing the Connally reservation at this time.

The nearest approach to the rule of law existing anywhere in the world today is probably in the United States. It is a rather general assumption that the rule of law and not of men is precisely what governs in America. This assumption is based on the premise that the Constitution provides a basic set of standards which prevail, which are enduring and reliable, so that these fixed standards rather than the ideas or whims of the men who happen to be in power are the basis of the systems of justice and law.

How true is it that the Constitution is an enduring and reliable standard? There prevails widely today, and reaches into the solid majority of the Supreme Court, the philosophy that the Constitution is a living document. What is meant by this is that the Constitution's meaning should change with the changing times. Related to this philosophy also is the common judicial practice, prevalent in this Supreme Court, of seeking to go behind the words of a law or the Constitution itself to find that the writers intended to say something which will support a desired finding which cannot be supported by what the law or the Constitution actually does say.

Is this rule of law? Emphatically not. It is rule by the opinions of the men who happen to be interpreting the law at the moment.

What does the World Court have to serve as the basic foundation for a world rule of law? It has precedent which has been established in prior international dealings, running the gamut from the common law of Great Britain and America to the ukase law of absolute monarchs and the decree law of Communist and other dictatorships. It has the Charter of the United Nations which contains among other things a set of vaguely defined human rights to such things as full employment, higher standards of living, and economic and social progress.

The Charter contains a provision that the United Nations and its subordinate agencies shall not in any case interfere in the domestic affairs of member nations. But this has not in the least deterred the writers of the human rights covenant and the Genocide Convention from seeking to thrust the activities of the U.N., and the jurisdiction of the World Court, very deeply into the domestic affairs of member nations. The Genocide Convention, which was once rejected by the U.S. Senate but nevertheless still lies before it, would give the World Court criminal jurisdiction over individual citizens, who could be taken from their native lands and tried secretly in distant chambers of the International Court. The human rights covenant would expose property rights to destruction, and would reduce other human rights to the level of meaningless platitudes to which Communist delegates were willing to agree.

This is the manner of rule of law which could be expected from the World Court, if its jurisdiction over the United States and other nations were compulsory and absolute. And there is no appeal, none at all, from the decisions of the World Court.

In order to advance toward universal rule of law, the first and most vital thing to do is to preserve and strengthen rule of law where it exists. It does exist to a substantial degree in the United States. In order to preserve it, the Connally reservation by all means must be kept in order that the United States may at any time prevent any attempt to reach in and damage or undermine American rule of law through the actions of the World Court, to which rule of law means something quite different from what it means to Americans.

The Sky Is Falling In

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE
OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1960

Mrs. ST. GEORGE. Mr. Speaker, the following article "President's Message,"

appeared in the March issue of "Navy", the official publication of the Navy League of the United States, and is written by Frank Gard Jameson, president of the Navy League.

Mr. Jameson has said briefly and factually many things that need to be brought into focus this election year.

Politics, and vote getting especially, have no part in the defense of our country, and we had better realize it before it is too late or it may be that the politicians will bring about a tragedy that they will be powerless to stop.

The article follows:

[From Navy magazine, March 1960]

PRESIDENT'S MESSAGE—THE SKY IS FALLING IN

We wonder, from where we sit, how many of our readers recall the children's fable of Chicken-Little and the day the sky fell in—or, at least, it was rumored the sky was falling in by Chicken-Little who spread barnyard panic with his estimate of a false situation.

At this time in our defense affairs it is recommended that this and "Missile Accomplished" (this issue) be required reading for the calamity howlers of this country's defense posture.

Playing it strictly by ear and memory, the story had to do with a fuzzy chick who wandered beyond the barnyard and rested under an oak tree. A ripening acorn dropped and struck poor Chicken-Little on the noggin.

He took off in high gear for home and barnyard yelling: "The sky is falling in. The sky is falling in." And what do you think happened then? Why panic, of course. And there was a grand exodus into the outer-world because their own world was not safe. The sky was falling in.

With this as their chant the ill-assorted pilgrimage made its way to the forest where a sly old fox was waiting and chuckling to himself at the manner in which deliverance of coveted succulence came unto him in the form of some very plump fowl.

So, when Mr. Fox was invited to join the panic-fleeing fowl because the sky was falling in, he said: "Sure, pals, I'll join you. And I know a safe place to go to save us all from the falling sky. Thanks for the warning—follow me."

And they did. The end.

Moral: The defense program of our country is becoming a political football and it behooves every mature American to listen carefully and eschew pushing the "panic button" and so walk into a trap of our own making.

The country is not in imminent danger of attack because the Russians do not now have, nor in all probability will have for many years, the quantity of accurate missiles to knock us 100 percent out. By the time they have the capability, if ever, our Polaris equipped fleet ballistic missile submarines will be built and at sea providing a power able to knock out Russia. This will deter her from action against us.

It is one thing to have laboratory research and development type missiles with the theoretical ability to launch at a moment's notice and to program correctly all the way to a target halfway around the world, but it is certainly another to have 300 foolproof missiles that you can count on to each work as planned.

I am sure that even today with our Atlas missiles at Vandenberg Air Force Base on the pads, we could not say even on a Wednesday that we would fire the missile on Friday morning at 10 o'clock and be more than 50 percent sure it would fire on schedule although the Atlas is a great missile. The Russians have the same problem and even after they would fire 300 of them in

future years they would not be sure that they would all hit their targets. We will always have plenty of strength left to knock Russia out and they know it.

The Strategic Air Command will come up with what I think is a good idea soon to put two or three big bombers at each big civilian airport in the country capable of handling them and thus have triple the diversification of targets for the Russians to shoot at and triple the chance of having plenty left in case of an attack. This makes much more sense than an air alert which will keep one-quarter of their planes in the air and many of the rest on the ground unready due to maintenance to keep up the air alert.

The Polaris fleet ballistic missile submarines will be operational in October of this year and it is the official position of the Navy League that more should be built than those 15 presently scheduled. We need 45 for full deterrence and should expedite construction.

We are all going to hear much election year propaganda. Some of it will take this angle: "It is not can we afford increased defense costs but can we afford not to have it" and other such "I-love-my-mother" type talk which is difficult to argue against because of the generalities. Specifically we must put increased dollars into certain projects like more B-52's, ASW work, Polaris FBMs and Minuteman missiles and certain Army weapons but we must cut out others such as Nike, Bomarc, continental air defense, which were designed to combat the Russian manned-bomber threat which has never materialized.

We must also be sure that the "theory boys" do not cut out our practical JCS system. With the Secretary of Defense sitting with the JCS on all problem areas of disagreement we have pricked the balloon of any single Chief of Staff argument.

Democrats' Statement

EXTENSION OF REMARKS
OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Los Angeles (Calif.) Evening Herald Express, Feb. 17, 1960]

DEMOCRATS' STATEMENT

Many loyal Democrats in California must be dismayed by the astonishing statement of policy which emerged from the California Democratic Council Convention in Fresno, and which must be assumed to be the key to Democratic Party campaigning for the big election in November.

Probably the most astounding feature to many thousands of Californians is the policy of opposition declared in the statement to measures which for years have been regarded as strengthening the security and safety of Americans from the dangers of communism.

Take, for instance, the policy statement passed by the delegates favoring world disarmament to this fantastic degree:

That if the negotiations at Geneva should fail, then the United States should take unilateral action; in other words this Nation should scrap itself of military weapons and stand forth naked of any defense against Soviet Russia or any other attacking nation.

To Mr. K., this would seem too good to be true. All he would need to do would be to just carve the turkey.

One is reminded of an episode in Allen Drury's best selling novel, "Advise and Consent," in which a U.S. Senator becomes a strong supporter of a Communist-front movement in the United States and makes a passionate appeasement speech in which he says:

"I would crawl on my knees all the way to the Kremlin to prevent the Russians from dropping the bomb."

In the book the climax comes when patriotic U.S. Members of Congress and other leaders refuse to be cowed by Soviet threats of destruction.

It was notable at the Fresno meeting that Senator STUART SYMINGTON, despite his desire to get the backing of California Democrats for the Presidency, could not stomach the radical nature of the disarmament statement.

SYMINGTON agreed that the world arms race should be ended, but he warned that it would be dangerous for the United States to strip its defenses with no assurance that Russia would do the same.

The California Democratic Council also called for the repeal of the Connally amendment under which the United States reserves the right to refuse to submit to World Court jurisdiction on domestic or internal matters which it feels are not subject to international law.

CDC also urged remodeling of the United Nations into a world organization "that can enact world law, interpret it, and enforce world law upon individuals and governments alike."

Can one imagine Soviet Russia agreeing to such outside domination?

Also, can one imagine this is "Dateline, America," where the Democrats' statement asserts that Russia is serious in its "policy of peaceful negotiation," while America's disarmament position appears "divided, weak, and inadequate"?

The council asked for repeal of State and Federal "nondisloyalty" oaths now required of public employees, candidates for public office and applicants for educational grants or loans as well as other requirements for loyalty oaths.

It approved the proposal to abolish the House Committee on Un-American Activities, which has done so much over the years to expose American Communists.

It took a stand against any action to "nullify" U.S. Supreme Court decisions "upholding the Bill of Rights." There has been a wave of public and official criticism directed against Supreme Court decisions regarded as greatly weakening the Nation's defense against the cancer of internal communism.

The Democratic council asked President Eisenhower to review the conviction of Morton Sobell, sentenced to 30 years in prison for conspiracy to commit espionage, after he was tried with Julius and Ethel Rosenberg, the atom bomb spies who were executed. The campaign for a review of Sobell's conviction has long been a favorite of leftist and Communist units.

Outside of subjects within the scope of national security was that statement of policy by the CDC which urged abolition of the death penalty, a movement which has been supported by Gov. Edmund G. Brown and Attorney General Stanley Mosk, but which was turned down definitely at the 1959 session of the California Legislature following heavy public protests.

Believe it or not, these were some of the highlighted accomplishments at the convention of California Democrats which was attended by Governor Brown and U.S. Senators Kennedy, Humphrey, and Symington.

There can be little doubt that the California Democratic Council statement is sensational. There must have been quite a few Democrats that we know who were not present.

Objective Analysis Reveals Strength of America's Defenses

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. KEATING. Mr. President, one of the finest and most objective studies I have seen concerning America's defense posture was recently penned by Paul Martin, who is chief of the Washington Bureau of the Gannett News Service. In brief and cogent terms this outstanding journalist and student of national affairs set forth the strong points of our defense establishment vis-a-vis the Soviets.

At a time when far too many people tend to make an emotional or partisan thing of our military might, dispassionate and knowledgeable analysis is very much needed. That is exactly what Mr. Martin has done and his able presentation deserves a wide readership. I therefore ask unanimous consent to have his article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rochester Democrat & Chronicle, Feb. 28, 1960]

UNITED STATES HELD STRONGEST IN DEFENSE SETUP

(By Paul Martin)

WASHINGTON, February 27.—The defense posture of a nation comprehends a great deal more than just its armed forces.

It includes the morale and skill of the civilian population, the capacity of its industry and access to raw materials, the strategic territory available for deployment, and the quality of its allies.

Ask any responsible military man this question: "Which would you rather have—the defense posture of America, or that of the Soviet Union?" You will get a resounding and unanimous affirmative in favor of the U.S. position.

In the great debate today over national defense, it is strange that more consideration has not been given to the combined assets of the free world, measured against the internal weaknesses of the Sino-Soviet bloc.

Adm. Arleigh A. Burke, Chief of Naval Operations, brought up this significant issue in testimony before the Senate Preparedness Committee.

GREATEST DETERRENT

"The greatest deterrent to war is not military," Burke said. "Khrushchev has got to think of the psychological effect of his actions on other nations, the economic situation in his own country, and what other countries will do if he makes a move."

"Maybe Khrushchev doesn't intend to strike this country. Maybe he proposes to take over the world by peaceful means, as he says he intends to do."

Vice President RICHARD M. NIXON traveled 5,000 miles through the Soviet Union last summer, where he was able to observe some of the strengths and weaknesses of that Communist citadel.

Accepting the annual patriotism award at Notre Dame University, Nixon said that the nonmilitary struggle between the United States and world communism is a greater problem than any threat of an armed attack.

The Vice President warned that any attack on this country would result in swift annihilation of the aggressor.

UNRELIABLE TERRITORY

Consider this:

The Soviet Union is bounded on the west by seven East European satellites plus three forcibly annexed Baltic States containing 100 million persons, none of whom have voted to accept Soviet domination or communism in free elections.

Khrushchev knows this would be completely unreliable territory for the Soviets in event of war. The fact was spelled out for him by the Hungarian freedom uprising of 1956-57, the public demonstration for Nixon in Poland last summer, and various revolts against Communist oppression in East Germany and other satellites.

On the east the Soviet Union joins Red China, second big member of the Communist bloc. The Soviets have been unwilling to arm their unpredictable Chinese allies with atomic weapons, or to contribute extensively to the buildup of Red China as a competitive industrial and military power.

FEAR IN ASIA

Khrushchev is traveling through southeast Asia, trying to undo some of the fear and suspicion of communism in the "neutral" nations of India, Burma, and Indonesia created by hostile acts of the Chinese Communists in Tibet, Laos, and on the Indian border.

In event of a general war, the whole Asian situation most certainly would be opened up, with a three-front assault on Red China from Korea, Formosa, and Vietnam.

These free-world forces, supported by the United States from a variety of land, sea, and air bases, can count on an atomic capability in a growing family of nuclear weapons which could be used to pinpoint military targets.

Inside the Soviet Union today, there is a great demand for more consumer goods, a higher standard of living, better housing, more freedom from Communist controls, and above all a deep longing for peace.

WHOLE ARMIES SACRIFICED

The Russians suffered much greater manpower losses during World War II, sacrificing whole armies to the Nazis to buy time, than anyone in the West ever realized. Between 6 and 8 million Russians died during the war.

In addition, approximately 20 million of the Soviet population were liquidated during the great Stalinist purges immediately before and after the war, when Khrushchev was Stalin's executioner in the Ukraine.

Friends and families of those who perished in the Communist atrocities, as well as former members of the Politburo whom Khrushchev has deposed in his climb to power, remain a large, sullen, and uncertain element inside Russia.

SIGNIFICANT LETTER

A significant letter by an anonymous Russian author recently was published by the Sunday Times of London. It purports to give a picture of how the Russian people really feel about life inside the Soviet Union.

The writer refers to the tyranny of the omnipresent, hundred-headed Russian State—under the czars or under the Communists—as the "hydra." He says in part:

"The present Russian Government has not the slightest authority among the people. Anecdotes about Khrushchev, Furtseva and the others have become almost a sign of good form in the most varied circles. If Stalin was feared, he was also respected (and many believed in him) Khrushchev, even if he is feared a little bit (he is an expert with the brick!), is not in the least respected. It is impossible to respect him."

"The complete collapse of the hydra's authority has enormous consequences. In

the first place, war has become impossible. The people will sweep the hydra away if he risks such a monstrous adventure. In conditions of atomic war with the dispersal of ground forces, nobody would fight, when he was away from the hydra's eye."

NO MORE GAINS

Since the conquest of China in 1949, the Korean war in 1950-53, and the division of Vietnam in 1954, the Communists have made no territorial gains at the expense of the free world. They have aroused suspicions in Asia, and lost strength in the internal Communist parties of the Western democracies.

Bottled up by the U.S. mutual security program, vexed by internal troubles in East European satellites, and challenged by Chinese Reds as the ideological leader of communism, there is reason to believe that Khrushchev had reached a dangerous point insofar as his own position was concerned, when we gave him new stature and respectability by inviting him to visit America, and talk on equal terms with President Eisenhower.

The Sino-Soviet bloc is ringed today by free world military power strategically deployed over vast land and sea areas, including the U.S. Strategic Air Command, long- and medium-range missiles, aircraft carriers and nuclear submarines, and special purpose ground forces with a versatile atomic capability.

The overall defense posture indicates that if the Soviets should launch a general war, while the United States and Western Europe might sustain considerable damage, it would result in the complete destruction of everything the Communists have struggled to achieve since the 1917 Bolshevik revolution.

It is hardly likely that Khrushchev is going to choose that route, as a deliberate and calculated policy. The greater danger is that such a war might occur through miscalculation.

Federal Aid to States and Uncontrolled Spending

EXTENSION OF REMARKS OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES
Monday, March 14, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two articles published in Life Lines of March 9, 1960. The first article is entitled "Federal Aid to States"; the second, "Uncontrolled Spending."

Life Lines is edited by the very able writer, Mr. Wayne Poucher.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Life Lines, Mar. 9, 1960]

FEDERAL AID TO STATES

More and more the States and cities of this Nation are learning that the so-called free money they are getting from Washington is far from free. They are at last discovering that every time they get a Federal grant it costs them money in the long run.

Every year Washington's giveaways get bigger. The domestic spending program is the fastest growing item in the entire Federal budget. And now some State and local taxpayers are wondering if they can afford

to accept any more Federal aid. They are wondering if the Federal Government isn't luring them down the primrose path that leads to bankruptcy.

When you ask State and municipal officials why they can't cut expenses, they reply: "If we don't match the free money the Federal Government offers, we lose out and some other State or city will get it. We can't afford not to increase our spending if that means we get more free money."

The truth is, of course, that these Federal grants are never free and they are hardly ever even cheap.

In public housing and slum clearance projects, the Federal Government requires the cities to exempt the land from local taxes. Slum clearance projects also demand donations from the cities equal to about 50 percent of the Federal grant.

Even on school lunches—where the Federal Government donates surplus foods and, in some cases, cash—the schools must provide \$3 for every \$1 that comes from Washington.

UNCONTROLLED SPENDING

There is a growing realization that many, many Americans are deeply concerned about taxes that never go down and a Federal debt that keeps going up. This is a time for people who feel this concern to inform themselves as fully as possible about the basic causes of our Government's financial plight.

One reason is to be found in the appropriation processes which have the effect of transforming our responsive government into irresponsible government.

In the first place, the appropriation process followed by Congress is piecemeal in nature. Each detail of expenditure is approved after the case in favor of it has been made by those who will benefit from the spending. No cross-examination is conducted from the standpoint of overall governmental cost. Proposed expenditures are not weighed against each other in the entire picture to see which are the more important expenditures and which are the less important.

Secondly, means have been developed by which expenditures can be authorized without going through even this inadequate and piecemeal process of appropriation. This is what is called the back-door method of appropriating and spending public funds.

In the third place, Congress does not set annual expenditure limits on various items of spending. The total is not controlled—in fact, it is not even officially estimated—until after Congress has adjourned.

Fourthly, there is no congressional machinery for relating authorized or annually controlled expenditures to estimated revenue. Neither is there any way of assuring an overall fiscal policy involving spending, taxes, and debt. The whole process is haphazard and almost impromptu.

All these factors add up to a sorry situation in which the Government is responsive to the spenders and not to those who pay the bill.

A Lesson for Americans

EXTENSION OF REMARKS OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Monday, March 14, 1960

Mr. FLOOD. Mr. Speaker, for a number of years I have noted a growing reluctance on the part of many of our political leaders to stand up and proclaim

the principles on which the Constitution of the United States is based—life, liberty, and the pursuit of happiness.

It was, therefore, with special interest that I read excerpts from an address by Senator Arturo Uslar Pietri in the Congress of Venezuela, extolling the constitutional principles and history of the United States. These were quoted in an editorial in the March 5, 1960, issue of the Tablet, the well-known weekly newspaper of the Roman Catholic diocese of Brooklyn, N.Y. They show that the virtues of our great country are appreciated beyond its borders better than we realize and that we have thoughtful friends to the south of us despite the current turmoil.

The editorial follows:

[From the Brooklyn (N.Y.) Tablet, Mar. 5, 1960]

A LESSON FOR AMERICANS

"The United States has been the greatest military power of the world, has decisively won the two greatest wars in history, and it is the only country that has made no colonial acquisitions in the shadow of such great victories, when innumerable countries of much less military and economic might have immediately transformed their military victories into territorial conquests."

Was the speaker an American Fourth of July orator? No, he is Senator Arturo Uslar Pietri, who arose in the Venezuelan Congress to reply to an attack on the United States by a Communist senator. Senator Pietri continued:

"The United States is a country which was founded in the name of principles respected by all men. Those principles are liberty, respect for human dignity, representative government, observance of law, repulsion of violence, acceptance of justice."

In this day when quite a few Americans (not so many, really, it just seems so because they get into the public print and onto radio and television so often) seem to be almost ashamed to be Americans, it remains for a Latin American to tell us the truth about our own country. To continue with Senator Pietri's splendid statement:

"The history of the international life of the United States is extraordinarily clean when compared with any other great power."

True, every word of it.

But how long is it since you have read or heard such words from those voluble Americans who wish to surrender portions of our national sovereignty to some international organization?

Or from those strange creatures who would have us quit nuclear tests permanently, and unilaterally, in the vain hope that Russia would then follow suit?

Or from those Americans who, appearing to be suffering from an inexplicable guilt complex because this country is so far advanced beyond others, feel that we should tax ourselves heavily in perpetuity to help the remainder of the world?

The Battle of the Budget

EXTENSION OF REMARKS OF

HON. STYLES BRIDGES

OF NEW HAMPSHIRE

IN THE SENATE OF THE UNITED STATES
Monday, March 14, 1960

Mr. BRIDGES. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excerpt

from the radio transcript of Life Line of December 23, 1959, relative to the battle of the budget.

Life Line, the patriotic and religious educational movement which features the very able Wayne Poucher as Life Line minister, has become a vital force in stimulating thought and discussion among the American public.

This particular broadcast states succinctly and accurately the necessity for placing the fiscal house of this Nation in order, and I recommend it not only to Members of Congress, but to all others as well.

There being no objection, the excerpt was ordered to be printed in the RECORD, as follows:

Again in 1960 the battle of the budget will make headlines in Washington and all over the country. Here in the Nation's Capital the lines are already being drawn. There is a growing realization that many, many Americans are deeply concerned about taxes that never go down and a Federal debt that keeps going up. This is a time for people who feel this concern to inform themselves as fully as possible about the basic causes of our Government's financial plight.

One reason is to be found in the appropriation processes which have the effect of transforming our responsive Government into irresponsible Government.

In the first place, the appropriation process followed by Congress is piecemeal in nature. Each detail of expenditure is approved after the case in favor of it has been made by those who will benefit from the spending. No cross-examination is conducted from the standpoint of overall Governmental cost. Proposed expenditures are not weighed against each other in the entire picture to see which are the more important expenditures and which are the less important.

Second, means have been developed by which expenditures can be authorized without going through even this inadequate and piecemeal process of appropriation. This is what is called the "back door" method of appropriating and spending public funds.

In the third place, Congress does not set annual expenditure limits on various items of spending. The total is not controlled—in fact, it is not even officially estimated—until after Congress has adjourned.

Fourth, there is no congressional machinery for relating authorized or annually controlled expenditures to estimated revenue. Neither is there any way of assuring an overall fiscal policy involving spending, taxes, and debt. The whole process is haphazard and almost impromptu.

All these factors add up to a sorry situation in which the Government is responsive to the spenders and not to those who pay the bill.

The spending machinery is such that it creates a fertile field for the machinations of the various pressure groups. It also gives rise to the fallacious argument that if one group is getting something from the Government, other groups have a right to get something as well. Thus, the foreign aid program becomes an excuse for greater domestic spending—with not much attention given to questioning the need or wisdom of foreign aid. Thus, a subsidy to one group becomes an excuse for a subsidy to another group.

Of course this kind of unreasonable reasoning ignores the fact that one expenditure reduces the resources prudently available for another. Your family has to adjust its spending to the family resources that are available. The Federal Government's present money troubles grow out of a continued refusal to recognize that same necessity with respect to public funds.

These are matters we need to learn about. Reform of congressional budget procedures would not immediately and automatically reduce taxes and cut the national debt. But it would be a long step in the right direction. It would mean that Government officials must meet squarely their responsibilities in setting spending, tax, and debt policies.

With everybody's taxes so high, there is a great deal of tax consciousness among Americans. But there is a great deal less controlled spending consciousness. Yet we cannot escape the fact that the high taxes and the heavy debt are a direct result of uncontrolled spending beyond our national means. We need Federal Government budget procedures that will make the people tax conscious and spending conscious at the same time.

Department of Defense Does It Again— Another Silly Guidebook

EXTENSION OF REMARKS

OF

HON. FRANK KOWALSKI

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. KOWALSKI. Last Thursday, Mr. Speaker, the Manpower Utilization Subcommittee, under the chairmanship of our esteemed colleague, Hon. MELVIN PRICE, of Illinois, opened hearings on the subject of military manuals.

At our session, Secretary of the Air Force Dudley C. Sharp and the Air Force Chief of Staff, Gen. Thomas D. White, gave us firm assurances that new procedures had been adopted to place the issuance of manuals under strict, responsible controls. They further assured our subcommittee that they renounced any implication in any manuals that any nonclassified information should be kept from the American people.

It now develops, Mr. Speaker, that at the very moment our subcommittee was receiving these assurances, the Air Force and the Army were jointly issuing a guidebook—on how to boost public support of the post exchange system. It bears the approval of the Chiefs of Staff of the Air Force and the Army.

This handbook, while purportedly encouraging general release of information about PX's, cautions information officers against release of information about the sale of beer or comparisons of PX prices with those of civilian stores.

What the Air Force and Army are saying, in effect, is that the American people should be told only what is, in their minds, favorable. Anything that might lead to criticism, they are saying in this guidebook, should be kept secret or played down. The Pentagon is playing the role of censor.

Let me quote one priceless passage from this guidebook:

Any emphasis on beer trade, whether in photographs or in news stories, should be avoided. Emphasis should be placed, instead, on such information as the number of soda fountains, snack bars and the like.

Mr. Speaker, something is organically wrong in the structure of the Department of Defense, and in the structure of the individual services, when these man-

uals and guidebooks continue to appear. One would think that the furore over earlier manuals would have alerted the services to the need for precautions against publications that are irresponsible or worse.

In an editorial this afternoon, the Washington Daily News asks justifiably, as a result of this latest guidebook, "Who are they kidding?"

Mr. Speaker, I commend to the perusal of my colleagues the editorial in tonight's Washington Daily News:

[From the Washington (D.C.) Daily News, Mar. 14, 1960]

THEY KEEP ON KIDDING US

Air Force Secretary Dudley Sharp and Gen. Thomas D. White, the Chief of Staff, marched up to Capitol Hill the other day and deplored the manual craze afflicting the Air Force in recent years.

"There has crept in a tendency," said General White, putting it softly, "to try to write a manual on every conceivable subject."

In recent weeks, Air Force manuals of just about that much variety have been brought to public attention. There was a manual telling airmen how to set the table, mix drinks, and take care of officers' dogs. There was one on marriage and romance. Another clumsily linked the National Council of Churches and Communists, and flatly said the idea that the people had a right to know what was going on was "foolish."

Now, according to Secretary Sharp and General White, the Air Force will reduce the number of manuals (to essentials, we hope) and subject each to a rigid review (for commonsense, we hope).

But the same day another manual, a joint job by the Army and the Air Force, turned up. This 10-page guide, prepared for military press agents, apparently is designed to "sell" the folks on post exchanges (PX's), which sometimes have been under fire from Congress and from neighboring merchants who didn't like the cut-price competition.

This pamphlet advises playing down beer sales and playing up PX soda fountains. Emphasis should be on the "service mission" of PX's, rather than sales promotion. And for goodness' sake don't anybody go around comparing PX prices with civilian store prices—it stirs up trouble.

Who are they kidding?

Paradise Key and Everglades National Park

EXTENSION OF REMARKS

OF

HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. HOLLAND. Mr. President, in the Saturday, March 12, edition of the Miami Herald appears a fine article by Mr. Nixon Smiley, relative to the Everglades National Park and to the very fine job of preservation and restoration of natural wildlife in that subtropical area which is now being accomplished by the National Park Service, and which was earlier handled in a more limited way by the Florida State Federation of Women's Clubs, the State Park Service, and the Audubon Society. For the information of all Senators, I ask unanimous consent

that Mr. Smiley's fine article, "Man Aids Paradise Key in Staging a Comeback," may be made a part of my remarks and may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MAN AIDS PARADISE KEY IN STAGING A COMEBACK

(By Nixon Smiley)

Some years ago I fell heir to a paper-covered bulletin entitled "Natural History of Paradise Key and the Nearby Everglades of Florida," by W. E. Safford of the U.S. Department of Agriculture.

It was part of a Smithsonian report of a study made by Safford in 1917.

Although Safford was an economic botanist, whose specialty was useful plants, his bulletin takes in the total biology of the key located just inside the Everglades National Park. In 57 pages he deals with the soil, climate, plants, snails, spiders, moths, butterflies, ants, wasps, fish, frogs, snakes and alligators, and he winds up with something on the mammals, including ancient man and the relics he left behind. The bulletin has 64 pages of plates of photographs.

I like to thumb through this little volume after a visit to Everglades National Park. It's interesting to compare conditions as Safford found them with conditions today, and to consider the changes which have taken place in the intervening years.

Safford described Paradise Key as a "remarkable example of subtropical jungle within the limits of the United States in which the primeval conditions of animal and plant life have remained unchanged by man."

That was written 43 years ago. A lot has taken place since.

Although the key was periodically guarded by a State warden, collectors cleaned out most of the colorful tree snails and most of the orchids. Disastrous fires swept through the hammock, destroying most of the giant, orchid-laden live oaks and nearly all of the 100-foot royal palms mentioned by Safford and earlier writers.

Naturalist Charles Torrey Simpson counted 500 royal palms when he visited Paradise Key soon after the start of the century. Early photographs show colonies of these palms standing high above the large live oaks of the hammock.

But fires struck the hammock in the 1920's and 1930's, killing every living thing in large areas and destroying the humus which lay heavy over the limestone floor. Today only a few big live oaks and tall palms remain.

Under the protection of the National Park Service, the key is rapidly returning to something of its former self. But it will take many years for the hammock to be like it was before the Everglades were drained, resulting in a lowering of the water table so that fire could sweep across the sawgrass and burn through the hammock's dry floor during times of prolonged drought.

And, yet, if you were to take Safford's bulletin and spend day comparing your own observations with those of Safford, you would find, in several instances, an encouraging similarity between 1917 and 1960.

If Safford could take a stroll today along Anhinga Trail, a walk made into a slough bordering Paradise Key, he would see as much wild life as he did in 1917. And he would be able to see it more closely, since the birds, alligators, snakes, and turtles have become used to people and do not dash for cover.

A photograph of the slough, made by Willson Popenoe, shows the willows and water plants to be just about the same as they are today. But there is no sign of wildlife in his picture.

Today, one might see large alligators sunning themselves along the banks of this area, while coots and gallinules swim about nearby without apparent fear of the monsters. And there is a good chance of seeing egrets, herons, and bitterns, as well as the anhinga, or water turkey, for which the trail is named.

On the hammock trail, which begins near the very modern-looking ranger station built by the park service, one would see the same species of tropical and subtropical trees which Safford saw and listed. And, if one looked carefully, there's a good chance of seeing a golden miranda spider, which Safford described as "a beautiful, black and yellow" resident. The female eats the smaller bridegroom as soon as the honeymoon is over.

But the tree snails are scarce and one has to look sharply to see even an ordinary variety. Only a few orchids may be seen. And very few of the giant live oaks Safford saw can be found today. They fell after the big fires and, if one were to go far enough into the hammock, some of their reclining forms might be found, rotting away while smaller trees grow thickly about them.

Among Safford's photographs is a color plate of the roseate spoonbill, under which he noted was "fast disappearing from the Everglades."

Whether Safford actually saw a roseate spoonbill in the vicinity of the key he does not say, but at that time biologists thought this bird was headed for extinction in Florida, along with a number of other water birds. Fortunately, the roseate spoonbill has come in large numbers and apparently is now safe from possible extinction, thanks to the efforts of the park service and the Audubon Society.

Safford, we are glad to report, would see many more birds in the 'glades today than he saw in 1917.

All of which should make us pleased to realize how much enlightenment has taken place—how we have come to appreciate and support conservation—since Safford wrote his interesting bulletin on Paradise Key, just 43 years ago.

Rails to the Rescue

EXTENSION OF REMARKS OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CUNNINGHAM. Mr. Speaker, it is interesting to note that when the going gets rough, it is the railroads that go through. It is the railroads that carry the load when other means of transportation fail.

The Government, especially the Post Office, and private shippers and travelers in their day-to-day operations look around for the fastest or most convenient mode of transportation when everything is normal and weather is fine. But as soon as the weather is bad, everyone depends on the railroads, sometimes exclusively.

At the close of my remarks I am inserting an editorial from the Philadelphia Inquirer of March 5 entitled "Rails to Rescue When Snow Falls." I commend it to my colleagues.

I believe we all know how often the Post Office Department is unable to rely on any form of transportation except

the railroads. While there are times when the railroads may not get through, it is usually long after all other forms of transportation have ground to a halt. Usually it is the rails alone who carry the burden of private and Government business when all other modes fail.

I have introduced H.R. 9488, which would forbid the transportation by air of mail on which airmail postage has not been paid. The 6-year-old experimental airlift of mail on which airmail postage has not been paid has diverted millions of tons of mail from the rails and other surface media. I do not believe this experimental program should be allowed to continue. It is a penalty on the railroads when they need our help and support.

The people of the country choose the basic type of carrier they want when they affix a postage stamp to their letters. Millions have selected surface transportation but instead have run the risk of having their mail dumped at an airmail terminal until weather clears or until it is sent to the train depot, where it belonged in the first place. They run the risk of an airplane crash which could destroy their letters. They lose the advantage of en route distribution and sorting carried on in the RPO cars.

At the same time the railroads lose revenue which they badly need and to which they are entitled. Yet when an emergency arises, we all turn to the railroads and expect them to work the miracles they almost always are able to do and handle mail, freight, and passengers which in other times are spread among other modes.

[From the Philadelphia (Pa.) Inquirer, Mar. 5, 1960]

RAILS TO RESCUE WHEN SNOW FALLS

As residents of the Philadelphia area and other metropolitan centers dig their way out of snowdrifts this weekend they should thank their lucky stars that the railroads were on the job when other means of transportation failed—as they nearly always are in a winter weather emergency.

Philadelphia would have been paralyzed without the rails. Trains and subways not only operated very close to schedule throughout the storm and its aftermath but shouldered a heavy additional burden. Thousands of persons who usually do not ride on trains turned to them in time of need as the only reliable all-weather mass transit system. The relatively few minor delays on the rail lines were due more to the sudden increase in patronage than to the snow.

Meanwhile, motor traffic was stalling or crawling everywhere. Some bus lines shut down and others operated far behind schedule. Buses couldn't get by the jams of autos.

The traffic situation was worse in New York City where the snowfall measured 14 inches. Thousands of vehicles were choked to a standstill and bus service on many lines was halted at the peak of the evening rush period on Thursday. There, as in Philadelphia, trains and subways came to the rescue. They were the only dependable means of transportation.

Detailed accounts of the transit picture in Philadelphia, New York, and other cities during the past few days should be required reading for Members of Congress. The rail commuter lines could be doomed to extinction if Congress fails to enact legislation to save them. Supporters of the rail aid bills—which would correct tax injustices, provide loans for new equipment and authorize other

worthwhile programs to keep the commuter trains rolling—should call the attention of Congressmen to the railroads' role in saving snow-covered cities from isolation.

It should be noted also that many long-distance travelers patronized the railroads when it became apparent that autos, buses and planes could not get through the storm.

Our hats are off to the many commuting motorists in suburban Philadelphia who sensibly left their cars at home or the nearest railroad station parking lot and took trains to the city Thursday and Friday. They saved themselves a lot of grief. It is possible that some drivers who went by rail in the emergency were favorably impressed by the speed and convenience of trains and will use them regularly.

The closing of schools in the Philadelphia area was another good move that reduced traffic on treacherous highways. In many communities the Friday school closings were announced late Thursday, which was better than waiting until Friday morning and causing some mothers to miss the message and send children to closed classrooms.

Philadelphians, in both city and suburbs, came through the big storm in good shape for the most part. This was due in large measure to quick action by well-prepared municipal officials and wise decisions by motorists to apply chains or, better still, leave the car at home.

Most important of all was the reliable rail transportation. The Nation was given another spectacular example of why commuter trains are the lifelines of big cities and must be preserved.

Pioneer V Scans Outer Space

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. KEATING. Mr. President, the launching of Pioneer V last Friday indeed constitutes a marvelous American scientific achievement.

The recording and transmitting equipment in this space hurtling artificial planet will greatly increase man's understanding of the mysteries of outer space. Hopefully, this date will hasten the day when human beings will travel the heavens.

Mr. President, the achievement of Pioneer V and the job which it is intended to do are not easily understood by the layman. It is for this reason that I want to call attention today to an excellent and very clear statement about Pioneer V which was written by William L. Laurence and which appeared in this Sunday's New York Times.

Mr. Laurence's article makes us all junior spacemen—and at the same time gives us good reason to be proud of the American scientists responsible for the solar orbiting Pioneer V.

I commend Mr. Laurence for his fine article and ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PIONEER V IS LAUNCHED—ARTIFICIAL PLANET WILL ORBIT SUN AND RADIO INFORMATION TO EARTH

(By William L. Laurence)

The United States successfully launched its second artificial planet, named Pioneer V, at 8 o'clock Friday morning from Cape Canaveral, Fla. The beachball-sized aluminum package, weighing 90 pounds and measuring 26 inches in diameter, will orbit at a distance of 75 million miles from the Sun between Earth and Venus.

This is the second planet launched by the United States. The first, Pioneer IV, launched March 3, 1959, weighed only 13.4 pounds. Russia launched the first artificial planet, Lunik I, on January 2, 1959. It weighed 3,245 pounds and carried instrumentation weighing 794.8 pounds. It is orbiting the Sun on a 15-month cycle. The second Soviet Lunik hit the Moon, while the third circled the Moon and then returned to orbit around the Earth. Both Pioneer IV and Lunik I are orbiting the Sun between Earth and Mars.

STRONG RADIO

Pioneer V is made of aluminum. Its instruments include a 150-watt transmitter designed to permit communication with earth at distances up to 50 million miles. The transmitter is believed to be the most powerful ever flown into deep space—roughly 20 times more powerful than any U.S. experimental space transmitter to date.

Pioneer V's 150-watt transmitter contains solar cells that will recharge the payload's nickel-cadmium batteries every 4 hours and 55 minutes. It is hoped it will stay in touch with earth for 4 or 5 months, until it is out of range, and that it will resume contact in 1963, when it comes within range again.

Pioneer V is expected to describe a 506-million-mile path around the Sun in a year of 311 days. Its trajectory is expected to carry it to the earth's orbit at aphelion (greatest distance from the sun). At perihelion (closest distance to the sun) it should intersect Venus' orbit. The earth travels a 584-million-mile path around the sun in 365 days, while Venus covers a circuit of 422-million miles in a 225-day year.

The farthest Pioneer V could ever be from the earth, on its planned trajectory, would be some 186 million miles. The closest could be several hundred thousand miles, within the next decade.

TIME FOR SIGNAL

A radio signal transmitted over a 50-million-mile route would take approximately 4½ minutes to make the trip, at the speed of light (186,000 miles a second). At that distance, Pioneer V itself would have traveled about 5,300 miles during the radio's signal's transit time. Similarly, the earth would have covered about 4,900 miles.

In the early part of the flight, a 5-watt radio transmitter is being used to send out experiment data. After Pioneer V gets more than several million miles from the earth, the 5-watt unit will serve as a booster amplifier for the 150-watt transmitter which thereafter will be the sole radio contact.

One reason for the powerful radio transmitter is to demonstrate the feasibility of long-range space communication. Another reason involves a new method of measuring astronomical distances. To astronomers, the basic unit of measurement is the mean distance between earth and sun, about 93 million miles. Most scientists agree that this measurement is accurate to only plus or minus 50,000 miles.

NEW ACCURACY

While this tolerance may seem small when dealing with billions of miles, it is regarded as important to future space missions to have more precise measures. Successful long

range communication with Pioneer V, it was pointed out, "will surely aid in our spatial measurement knowledge, as the scientists should be able to triangulate between earth and several signal plots from the probe to give us new values."

Like Explorer VI, Pioneer V carries four paddlewheels, jutting out from the sphere's equator. They measure 14 by 18 inches, and carry 4,800 energy-converting silicon solar cells. The solar cells will get 30 to 40 percent more intense solar energy than those on Explorer VI, because Pioneer V will be flying closer to the sun.

Pioneer V is instrumented to get some basic measurements on radiation, magnetic fields in space, the action of gaseous "clouds" of plasma (electrified gases) floating through space, micrometeorite activity and solar flare effects.

One instrument is a 5-pound radiation device, developed by the University of Chicago, to measure high-energy radiation, such as the rays hurled into space by the sun. Since no previous probe has flown so close to the sun, the scientists do not know precisely what to expect. A similar instrument on Explorer VI tentatively located a band of hitherto undetected high-energy radiation near the inner edge of the earth's great radiation belt.

Dr. A. Hamilton Reid

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert a great article about a wonderful, fabulous man from Montgomery, Ala., where Jeff Davis was sworn in as President of the Confederacy. I am speaking of Dr. A. Hamilton Reid, of Montgomery, Ala., executive secretary of the Alabama Baptist Conference. I wish it were possible to put the wonderful picture that one of the oldest and best papers in the South, the Mobile Register, carried along with this article that I am inserting in the CONGRESSIONAL RECORD, that will go everywhere. This story and picture were in the Mobile Register Monday morning, March 7, 1960.

Dr. A. Hamilton Reid, along with another great and wonderful friend and hard-hitting preacher, Dr. A. E. Carpenter, had invited me to be with them on Sunday, as they dedicated this great church. How I wish I could have been with them, but you know, Mr. Speaker, you asked all of us to be here, and that is exactly what we did. But this was a great occasion. There were 1,050 people who attended this meeting, and I wish everybody could do that. It must have been just about the size of the meeting that we had when we honored you at the banquet I gave for you so long ago that brought us so close together.

I hope many people will read what this great and fabulous man who is working for God and man, Dr. A. Hamilton Reid, had to say in this article that I am inserting in the RECORD, that will go to every library in the Nation and

many libraries in other parts of the world.

It was a great day and it was a good day, and I wish all of you could not only know Dr. A. Hamilton Reid, but to also know the man that worked, pulled, and prayed and helped get up the money to build this wonderful Central Baptist Church on Fulton Road and Hurtel Street in Mobile, Ala.

The Alabama congressional delegation, Mr. Speaker, had a meeting yesterday to go over the plans for next week, and I had this Mobile Register with me with the picture and parts of the great sermon preached by Dr. A. Hamilton Reid, and how I wish every one of you could have heard what Senator Hill, Senator Sparkman, Congressman George Grant and every one of the men that attended the meeting had to say about this man who has worked so hard and done so much in the Lord's vineyard—Dr. A. Hamilton Reid.

ALBERT RAINS, the great orator and such another great man, said some very beautiful things. I cannot begin to tell you all the things they said, because every one of them had wonderful things to say about a great man that is doing a great work for God and man.

The article follows:

[From the Mobile (Ala.) Register, Mar. 7, 1960]

NEW BUILDING IS DEDICATED BY BAPTISTS (By John Will)

The new \$360,000 educational building of the Central Baptist Church at Fulton Road and Hurtel Street was dedicated yesterday at services which also commemorated the 14th anniversary of Dr. A. E. Carpenter's pastorate.

The educational building is the first unit in a long-range plan which calls for later construction of a large sanctuary and development of an extensive recreational area.

Meanwhile, a maximum congregation of 1,050 can be accommodated in a temporary auditorium in the educational structure which has a total of 90 rooms.

It was in the auditorium that dedicatory services were held yesterday. Dr. A. Hamilton Reid, of Montgomery, executive secretary of the Alabama Baptist Convention, preached in the morning and Dr. Leon Macon, editor of the Alabama Baptist at Birmingham, spoke at the night service. An afternoon service was followed by open house for public inspection of the building. Dr. Carpenter, the pastor, presided at the services.

Dr. Reid declared in his sermon that "we cannot think of any greater accomplishment than people building a House of the Lord" and he referred to the divine words concerning the Temple at Jerusalem: "For now have I chosen and sanctified this house, that My name may be there forever."

"First," Dr. Reid said, "this building is dedicated to the Lord as His house for His glory and for the advancement of His kingdom. It is dedicated with Christ at its very center. The sacredness of God is in its walls."

"More specifically," he continued, "it is dedicated to the cause of worship. The call to worship runs throughout the Bible. The hunger of the soul for fellowship with God can be satisfied only with worship. We will be stronger tomorrow as a result of waiting before God today in worship."

Next Dr. Reid spoke of the building as "dedicated to the preaching of the gospel."

"We must recognize the importance of preaching," he said, "Right at this hour, there are thousands of voices preaching in

the churches of all faiths in our great State of Alabama. And it is a different State because of these voices echoing across Alabama on this Lord's day.

"We should be thankful for freedom to preach the doctrine of our Lord Jesus Christ. Freedom of religion is fundamental in our country and it is one of the elements that has made America great."

Then the Baptist leader turned to the question of the church's teaching function and he asserted that "Jesus commissioned His church to be a teaching institution."

"The church," said Dr. Reid, "is responsible for religious instruction. And the home and family have an equal responsibility."

But Dr. Reid made it clear that Baptist thinking holds that the teaching function of the church relates only to spiritual development and not to secular instruction.

"We believe in our public schools," he told his listeners, "and we will stand by our public school system. May the time never come when we will find it necessary to convert our church schools to elementary training."

Finally, Dr. Reid proclaimed the need for dedicating the church to "our great world ministry."

"We should be ready," he stated, "to blend our efforts with those of other churches to advance the Kingdom of Christ in all the world. We should seek to build a Christian world, with peace, love, understanding and harmony among all the peoples of the world."

The Central Baptist Church moved to its present location on Fulton Road last September. It is maintaining mission work at its previous site at Church and Claiborne Streets.

Twenty Billion for Welfare—Story of a Growing Expense

EXTENSION OF REMARKS

OF

HON. HARRY FLOOD BYRD

OF VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article from the U.S. News & World Report, entitled "20 Billion for Welfare—Story of a Growing Expense."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TWENTY BILLION FOR WELFARE—STORY OF A GROWING EXPENSE

Welfare programs designed to give everyone security are rapidly catching up with national defense as the No. 1 program of Government spending.

The dramatic rise in the flow of dollars for welfare is hidden from the public by accounting for most of this type of expenditures—old-age pensions, widows' pensions, disability pensions—outside the Treasury's regular budget of income and spending.

Add the spending and taxing to support the growing welfare state, and the Government's finances are transformed.

What you find is this:

All spending for national security, including military aid abroad and atomic programs, has tended to stabilize at around \$46 billion a year. When President Eisenhower took office in 1953, that spending was around 50 billion, owing to the Korean war.

Welfare spending, however, has skyrocketed. In 1953, as shown by the accom-

panying charts, that spending was at the rate of less than 7 billions a year. In the year to start next July 1, welfare, as shown in the Government's financial statement, will pass \$20 billion a year. That cost has, thus, been growing by well over \$1 billion a year.

In Congress at this time are plans to speed that growth. One plan is to increase the size of many pensions. Another is to set up a system of hospital and surgical insurance for persons 65 and older. A third is to make more liberal the terms on which pensions are given to those who are permanently and totally disabled. Some of these proposals have administration, as well as congressional, support.

The whole welfare system is in the midst of a boom.

RISE IN TAXES, TOO

Along with the boom in spending comes an increase in payroll taxes to support large parts of the program. On January 1, 1960, the tax on payrolls for old-age and disability pensions went up to 6 percent of all pay of \$4,800 a year or less. That tax is shared by the worker and employer. For the self-employed, the tax is 4.5 percent.

A tax rise, step by step, to 9 percent of payrolls by 1969 is scheduled by law, and still higher rates seem certain if new programs are adopted.

The spending for welfare outlined above is not the whole story. If you add veterans' pensions as a "welfare" cost, the spending rises by another \$1.7 billion a year. That does not count compensation payments to veterans with service-connected disabilities. Spending by States to match Federal funds going to people on relief accounts for an additional \$2.1 billion.

All of this means that, in the relatively short period of 25 years, the United States has become—in dollar terms—one of the world's greatest welfare states. Outlays for this purpose still are not as liberal as in some other countries, in relation to national income, but the proportion spent in the United States is increasing rapidly.

You can see this when you compare welfare spending with what the Federal Government spends for all purposes. In 1953, welfare took about 9 cents out of every dollar spent. In the year ahead, it is scheduled to take about 21 cents. In the same period, the amount devoted to defense has dropped from 66 cents to about 48 cents of each dollar.

WHO GETS THE MONEY?

The scope of the welfare state is vast, both in terms of money and in terms of the numbers of people affected. In the coming fiscal year, it is estimated, more than 20 million people—about 1 out of every 9 in the United States—will receive help through a Federal welfare program.

As you glance down the following list of beneficiaries, note how near the Government approaches to providing security "from the cradle to the grave"—

Retired workers and dependents getting pensions, including railroad retirement: 15.3 million.

Elderly people on relief: 2.4 million.

Retired civil servants getting pensions: 583,000.

Disabled persons on relief, including the blind: 488,000.

Disabled workers receiving pensions: 592,000.

College students receiving federally supported loans: about 100,000.

Dependent children on relief: 3 million.

The number of people getting Federal help is greatly increased, if you count 1.9 million veterans and families of deceased veterans on pensions, 271,000 retired from the Armed Forces on pensions, and 13.5 million schoolchildren whose lunches—2.3

billion meals a year—are paid for in part through the Federal school-lunch program.

WHERE COSTS MOUNT UP

The chart on these pages shows what major types of welfare are to cost in the year ahead.

A large part of the increase in cost in the last 8 years has come in the old-age-insurance program. The \$11.2 billion to be paid out next year compare with \$2.7 billion in the 1953 fiscal year.

The number of people receiving old-age pensions has more than doubled, and the size of pensions has been increased.

When old-age insurance was established in 1935, it was expected eventually to eliminate the need for relief. But Congress and the States keep increasing the size of relief payments and the number of people eligible to receive them. There will be about 5,599,000 children and adults getting Federal relief money in the coming year, compared with 4,902,000 in 1953. The Federal share of relief checks will come to about \$2.1 billion, compared with \$1.3 billion 8 years ago.

For an example of the way in which new programs tend to mushroom, take a look at the disability pensions. These started going out to disabled workers 50 years of age or older just 2 years ago. Initial cost: 178 million a year. The cost in the coming year is forecast at 610 million. Plans now receiving serious consideration would give this program a big lift by easing rules and removing the age requirement.

HARD TO STOP

The Government's venture into aiding education shows it is much easier to start paying out money for welfare than it is to stop. The President this year, as in the past, is trying to cut down on grants to public schools and again is meeting powerful opposition in Congress. Meanwhile new proposals for educational aid are receiving serious consideration.

However, the new program that many in Congress think has the greatest potential for growth in future years is the plan to add hospital insurance to the old-age pension system. Initially, this legislation, introduced by Representative AIME J. FORAND, Democrat, of Rhode Island, would cover only some of the hospital and surgical bills of people retired on old-age pensions, but opponents of the plan see it as the beginning of a vast new system of national health insurance.

While opposing the Forand bill, administration officials have indicated they are likely to have a compromise plan of their own.

This much is sure: Steps to expand the welfare programs will be enacted into law in this election year. Hospital insurance may not make the grade, but there will be moves to increase the size of pensions, make it easier for millions to qualify, and broaden educational assistance.

Even without new legislation, the welfare program has built-in increases. More people retire each year on old-age pensions. More workers come under the unemployment insurance plan. Add plans afoot for new benefits, and you have a welfare program that can rival defense for the No. 1 spot in the cash budget before the 1960's end.

Who gets the \$20 billion in welfare money—
(Official estimates, year ending June 30, 1961)

	Million
Retired and disabled workers:	
Old-age-insurance pensions.....	\$11,248
Civil Service pensions.....	886
Railroad workers' pensions.....	979
Disability pensions.....	610
People on relief.....	2,087
Unemployed workers:	
Jobless benefits.....	1,973
State employment services.....	311

Who gets the \$20 billion in welfare money—
Continued

	Million
Students, colleges, school districts:	
Grants and loans.....	565
School lunches.....	150
Hospitals, health.....	904
Other welfare costs.....	468

NOTE.—Figures include relatively small amounts for administration.

California Home for Aged

EXTENSION OF REMARKS

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. McDONOUGH. Mr. Speaker, a recent editorial has been brought to my attention by constituents of mine regarding the outstanding accomplishment of one community project in the Los Angeles area to bring practical and effective aid to the aged.

The editorial by Mr. Al S. Waxman, editor-publisher, appeared in all six of Mr. Waxman's papers, the Los Angeles Reporter, the Wilshire Reporter, the Park LaBrea Reporter, the Pico Reporter, the Beverly Hills Reporter, and the California Jewish Press.

Under leave to extend my remarks, I insert the text of Mr. Waxman's editorial from the March 9 issue of the Los Angeles Reporter.

[From the Los Angeles (Calif.) Reporter, Mar. 9, 1960]

CALIFORNIA HOME FOR AGED

(By Al S. Waxman)

Mark Twain once said "people talk about the weather but do nothing about it," but in Los Angeles people began to talk about the need of the aged in a Jewish community and decided to do something about it.

Now as they embark on a \$1 million expansion program, it is time to mention the splendid work and to point out that the California Home for the Aged at Reseda is a glowing tribute to things which can be done when an entire community decides to "do something about it."

It hasn't been an easy thing to accomplish as the history of the institution reflects.

Necessity is the creator of many things and it was during one of America's most bitter and depressing eras that necessity fostered the Industrial Center for the Aged at Reseda, Calif.

During the depression days of the early 1930's a group vitally concerned with the trials and tribulations of their fellow man organized the center in order that elderly men and women who were outcasts from the business world, because of their age, would have a home to maintain themselves during their "sunset" years.

With the aid of their benefactors, residents at the center soon went into business. At the center they operated a thrift shop which became a thriving and profitable adventure. Old furniture and clothing were collected, restored to usefulness and sold in the thrift shop. This was a start.

Broken and weary refugees from Nazi-ridden lands came to this 8-acre site just prior to World War II and during the years of global conflict that followed many found the industrial home a haven where they could finish out the remaining years of their lives in simple dignity and serenity.

The medical sciences took great strides forward following the war and the population at the center budded and blossomed. As does rapid growth create problems everywhere so it did at the center. Thus, the need developed to increase facilities for care of those over 65.

It was in December of 1947 that a new organization, a new program, a new executive director and a new name for the center became children of necessity. And California Home for the Aged at Reseda started making history.

It is never entirely possible to acclaim any one individual or group in a project as vast as the California home. There is, however, one person to whom tribute must be paid.

Ben Garon, executive director of the home, since 1947, lived on the east side of Los Angeles and for years came into contact with the many problems of the aged and it was his driving force which took the germ of an idea and molded it into the lofty position the home enjoys today. Garon and his directorate have even greater plans for the California Home for the Aged at Reseda.

As problems go with progress the home in this respect was no different. But it grew until today the onetime rather barren spot is covered with a residency building, a dining and recreational hall, a hospital unit, a chapel, and meeting quarters.

The 75 elder residents of the home today live in peace and contentment in an atmosphere charged with a progressive pace of golden age hobby shops and occupational therapy programs which are the most modern attitudes and methods in the area of geriatrics.

Residents at the home have many advantages. Culture and religious observances, parties, and the production of a monthly newspaper are all a part of their lives. The best of medical care is ever in evidence. Over 30 of the city's finest physicians and surgeons voluntarily are the custodians of health at the home.

Unique in such programs is an allowance of \$2.50 each week to residents of the home. Married couples have double rooms, and all other residents have private rooms. Well-balanced meals, including kosher meats and poultry, are a part of the regular fare at the home.

And the home never forgets its neighbors on the outside. An intensive casework and counseling service to any aged person or family in the community is offered as a part of its program.

Thousands through the years—not eligible to enter the home—have been helped free of charge to find a way of life which creates a more happy existence for the individual and those with whom he or she is associated.

The California home organization consists of over 4,000 persons united into 16 affiliated auxiliaries and chapters for the purpose of maintaining and supporting the home's purpose and programs.

This organization is, in turn, assisted by nonmember individuals and groups which have contributed large sums of money over a period of years.

It is a tribute to Los Angeles that every service, each building, every bottle of milk is the result of some person or group's contribution.

The California home is not resting on its laurels. Recently it launched a \$1 million expansion program, made possible to a great degree by a Federal Housing Authority grant.

At the conclusion of this expansion project an additional 100 needy aged persons will find refuge at Reseda. And there they will find four resident buildings, a new dining hall, hospital unit, and many other necessary facilities.

These additional units are not yet a reality. There is much work to be done first, but already architects have spent 3 years in

planning and perfecting a design conducive to the special housing and living needs of elderly persons and the FHA took 2 years to investigate and approve the plans.

Officials of the home are optimistic. "We know we are making major strides in helping to dispel the fear of old age for many, and assuring many that they need not be afraid to grow old. That the best is yet to come," are their encouraging words.

The Cloak of Words

EXTENSION OF REMARKS

OF

HON. OLIN D. JOHNSTON

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. JOHNSTON of South Carolina. Mr. President, I ask unanimous consent that there be printed in the Appendix of the *Record* an article entitled "The Cloak of Words," published in the Wall Street Journal of today, March 14, 1960.

There being no objection, the article was ordered to be printed in the *Record*, as follows:

THE CLOAK OF WORDS

No one expected the Senate to get the two-thirds vote necessary to limit debate on the civil rights bill—a minority of southerners were supposed to block that.

But as matters turned out, the proponents of the legislation couldn't even muster a simple majority of the Senators willing to turn off the talk against the bill.

The result has been a bit of confusion as to what happens next. It has also, it seems to us, confused the arguments of those who pictured the filibuster as the wicked machination of a stubborn minority thwarting the set will of the majority of the Senate.

The Senate rules, as everyone knows by now, provide that no legislation shall be voted upon until every Senator has had his say, unless two-thirds of the Senators agree to halt debate. The Senate has invoked cloture upon occasion, but rarely.

The purpose of these rules is not to favor a minority southern bloc, although the casual follower of current events might suppose so. The purpose is first of all to make sure that any great issue is fully debated before irrevocable decisions are made; and, beyond that, to provide a deliberate brake against a simple majority running roughshod over a large minority on issues of very great moment.

Now it's quite true that these rules—like many other procedural safeguards in our constitutional system—are sometimes put to strange uses. The right of unlimited debate can be used not to debate but simply to delay. The words of a filibuster can be a cloak to cover many things, and it is this aspect of it that has many times brought the filibuster into public disfavor.

But the disfavor, be it noted, has a strange way of shifting. Last week, for example, Senator MORSE of Oregon voted to shut off debate because he did not agree with those talking. Yet upon another day and another issue it was Senator MORSE who invoked for himself the same right to talk; for a long time he held the Senate's filibuster record.

Moreover the power to talk has been vastly overrated as a power to halt the Senate from what it would do. A Senate of a hundred men which truly wanted to vote on an issue could, if it chose to do so, outlisten

any handful of Senators. Others besides Senator MORSE have shown remarkable endurance at steady talking, but human endurance still has an end.

The truth is that there are a good many Senators outside the Southern bloc who might have had some hard choices to make if forced to vote on this particular bill. The filibuster by the determined opponents delivers them from the necessity of voting on the bill itself and offers them at the same time a whipping boy to castigate.

Thus, while there were only 18 Senators who by their talking openly sought to put off a vote on this controversial legislation, there were 52 Senators who, on the test, were opposed to suspending the debate and thus hurrying the bill to a vote.

All this suggests, we think, a little perspective on last week's events and the controversy over the ancient safeguard of unlimited debate provided in the Senate's rules.

What ought not to be obscured in the cloak of words is that the will of the Senate was not thwarted by a handful of Senators. When the Senate gets a civil rights bill which the majority is truly determined to have, then the Senate will have it, filibuster or no.

Strange Voices and Senate Resolution 94

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. FLOOD. Mr. Speaker, in a number of previous statements to the House, I have quoted thoughtful editorials opposing rescission of the Connally reservation to the United Nations World Court resolution adopted by the U.S. Senate on August 2, 1946.

Among the strongest statements in opposition yet made is House Joint Resolution 41 of the Commonwealth of Virginia quoted by me in the *Record* of March 2, 1960, on page A1811.

The latest that I have read is an editorial in the March 5, 1960, issue of the *Tablet*, the influential weekly paper of Brooklyn, N.Y., which features the views of Dean Manion, the Nation's leading constitutional lawyer.

The editorial follows:

[From the *Tablet*, Mar. 5, 1960]

STRANGE VOICES AND SENATE RESOLUTION 94

Five years ago, Gen. Douglas MacArthur told the American people to "be not deceived by strange voices heard across the land decrying this old and proven concept of patriotism . . . seductive murmurs are arising that it is now outmoded by some more comprehensive and all-embracing philosophies . . . that there is a higher destiny for us under another and more general flag." These strange voices are currently pushing a thing which would repeal the so-called Connally amendment. It is Senate Resolution 94 and it would delete from our treaty accepting compulsory jurisdiction of the International Court of Justice a clause allowing the United States to determine if a case in question is domestic and hence not within the Court's province. It is waiting in the Senate wings until the proper time—when Senator J. WILLIAM FULBRIGHT, Foreign Re-

lations Committee chairman, feels it will get the necessary two-thirds vote of approval.

What do the voices say? We must abolish the Connally amendment to prove this country's good faith in the rule of law replacing the rule of force. Repeal is the action "most readily apparent with which to underscore American reverence for law and set it by contract against Communist materialism and expediency"; that admittedly the Connally amendment has done much to cripple the International Court," since other countries invoke their own Connally clauses to bar the Court from assuming jurisdiction. After all, didn't Russia claim its shooting down of American airmen in the Japan Sea was a domestic matter? The reasoning seems to be that if the United States would suspend this protection of our domestic affairs, the Reds will follow suit.

But what hath it profited this country to expend hundreds of thousands of lives and billions of dollars of wealth in the pursuit of law and order, if other nations still doubt our reverence for said law and order? It has not been shown where we have invoked the Connally reservation when the point at issue was not a domestic matter. As the *Tablet* has stated, if friendly or neutral governments resort to this subterfuge to avoid the Court's interference then of what worth is this righteous profession of belief in justice and rule of law?

In masterful testimony during hearings before the Foreign Relations Committee, former Notre Dame Law School Dean Clarence Manion stressed the United States "is not attempting to judge itself or decide its own cause when it withholds from the Court the right to be the final arbiter of its own jurisdiction. There is no court in our entire judicial system that has such a sweeping prerogative. An omniscient court with self-determined jurisdiction over all things and everybody under all circumstances would be the very definition of tyranny."

Systematically, Dean Manion asserted, the "melodic phrase 'world peace through world law' has been made to resound throughout the country as the bright alternative to our selfish addiction to the Connally reservation." Indeed one "voice" goes so far as to charge that "until the individual statesmen and citizens in this country know more about and have more confidence in the institutions and principles of our international society, the rule of law throughout the world will remain rather meaningless." Thus, the chief troublemaker in the world is not the Soviet conspiracy but Americans who would maintain a rampart against decisions by—according to the Court's statutes—merely two judges, and these could be from Communist countries.

On the international plane, since legal sanctions are impossible, said Dr. Manion, "moral sanctions are imperative. Such moral sanctions are the only hope for what we call international law because on the international level, law must depend solely upon international morality for its preservation and enforcement." But in the present deranged state of mankind where is morality and the natural, moral law recognized as the motivation of governmental action? Murdered Hungarian patriots are but one of many symbols which bear testimony to this myth.

Let's face it: Neither peace nor law is possible for a world that is locked in a death struggle between freedom and communism. We can think about "world peace through world law" after the diabolical menace of communism has been swept from the face of the earth. Until it is it would be the height of folly to weaken these United States, which represents truly the last, best hope for peace.

Marie C. McGuire: She's Helping Add Life to the Years for Senior Citizens: San Antonio Pioneers Better Housing for Aging

EXTENSION OF REMARKS
OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. YARBOROUGH. Mr. President, observing that medical science has substantially increased the life expectancy of man but that we have not found satisfactory solutions to cope with the problems of the aged and aging, a noted sociologist sized it up this way:

We've added years to life. Now we've got to figure how to better add life to the years.

Texans are indeed fortunate that one of the outstanding workers and authorities in this field in America is a San Antonio lady—Marie C. McGuire, executive director of the San Antonio Housing Authority. Under her dynamic leadership, San Antonio has built the Golden Age Center, a public-housing development for elderly citizens that is a model for such projects all over the Nation. The building, specially designed to meet the needs of the aged, will not be completed until this summer. But architects, planners, and city, State, and Federal officials already have visited San Antonio in droves to see this new dimension in housing for the aged.

Recently two excellent articles on the Golden Age Center have been written by Mrs. McGuire and published in Retirement Life magazine and the American City. I ask unanimous consent to have printed in the Appendix of the RECORD the following articles: From Retirement Life of January 1960 the story entitled "Toward Independence for Senior Citizens"; and from the American City of January 1960, the article "People Live Longer Today."

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From Retirement Life, January 1960]

TOWARD INDEPENDENCE FOR SENIOR CITIZENS
(By Marie C. McGuire)

The development of a housing policy and program of the U.S. Government has weathered a series of crises. Its present effort to establish a variety of methods to provide adequate housing for senior citizens presents a new challenge to the communities of America to meet a new crisis. The extent of the problem is grasped when we realize that in 1900 there were only 2 million citizens over 65 and by 1975 this age group will number 21 million. In the 1950 census, 65 percent of the 12 million persons over 65 years of age had incomes of \$2,000. Thirty percent of the dwellings owned by persons over 65 and 43 percent of those rented by them were substandard. This is the area of concern of the low-rent public housing program.

As local public housing officials entering this newest field, we are engaged in another fascinating and rewarding undertaking. There was joy in having been present when the first public housing project offered escape from the slums in 1938 for the family with

children; to see the unbelieving look in the eyes of people who could not understand that they and their families were important enough to be well housed; there was high excitement in planning and managing housing for the war worker and the military and the feeling of contribution to a Nation in conflict; there was a sense of fulfillment when the Congress in 1949 recognized that slums and their effect were a No. 1 domestic problem and provided tools to fight this disgrace on many fronts.

SPECIAL LEGISLATION ENACTED IN 1956

In 1956 we saw the Congress enacting special legislation to meet the increasing housing demand from the elderly at all income levels with recognition of the additional costs of special health and safety features in the home needed to meet the diminishing mental and physical prowess of the aging as well as related community facilities to create a proper living environment.

The last session of Congress, under the able leadership of Senator JOHN SPARKMAN and Representative ALBERT RAINS, provided other financial assistance programs attractive to private builders, religious and fraternal groups, profit and nonprofit organizations, as well as direct loans to the elderly at favorable interest rates. A variety of housing choices and designs should spring from the broad interest in the problem and the availability of Federal financial assistance. The Congress has indeed met the present-day challenge with commendable alacrity and vision.

Senior citizens in local communities now have an opportunity to take an active part in encouraging their local housing authorities to undertake programs essential for the low income elderly. Local authorities are political subdivisions of the State, the boards are local citizens appointed by the mayor or council of the city and they are amenable to the wishes of citizens interested in the low-rent program.

While many local authorities will quickly take advantage of the new provisions of the law, some may be slow to do so unless local citizen interest is expressed. This is due partly to the fact that the low-rent public housing program is still controversial in many places even though its detractors can offer no substitute plan for providing a decent standard of living within the paying ability of low-income families who live in the squalor of the slums of America.

Since 1949 the policy of our Government as stated in the Housing Act of that year is: "The realization as soon as feasible of the goal of a decent home and a suitable living environment for every American family."

INCREASING NUMBER OF ELDERLY HAS HAD IMPACT

From the beginning of the public housing program in 1937, local housing authorities have provided older people on limited incomes with standard housing within their ability to pay. The same formula for all families, approximately 20 percent of income for rent, is applied. Today, even though State pension programs have improved, despite assistance through social security and other more adequate pension plans, the increasing number of elderly in this country, due largely to the progress of medical science in the field of geriatrics, has had a dramatic impact on all areas of our society and at all levels of government. Housing authorities in the cities of this country on the last count provided small apartments for independent living for over 80,000 elderly persons of low income.

The San Antonio Housing Authority began its study of local need and how best to meet it in 1954. We are a city of 580,000. Best estimates are that a minimum of 50,000 are over the age of 65. On the State pension rolls alone in our city were 10,000 elderly with an average income of \$55 a month. In

the small units available in our low rent housing projects, there lived 610 low income elderly. Applications from the elderly came in a never-ending stream and the backlog grew steadily. Older residents do not move out unless they become too ill to live alone, or death takes them.

Specially designed housing to meet this crushing need was certainly indicated. Three years of research now set forth in a booklet entitled "Housing the Elderly" led to the present construction program that has become something of a model for private and public groups throughout the country.

Our basic concepts included recognition of the fact that older people, like all others, differ in their tastes and needs. Therefore, no one housing concept would suffice. There should be variations that permitted choices. Already having the row house design, we therefore undertook a one-story cottage-motel type and a close-to-the-city-center, nine-story apartment building. But, ask many, don't most older people want to return to a rural setting with a garden and a few chickens and welcome chores about the place? Extensive surveys proved that while a few wanted this, the large majority wanted the convenience, comfort and accessibility of a midtown area. Extensive surveys demonstrated that the same facts that prompt high-income elderly to live in residential hotels are valid for the less economically fortunate. A survey of 400 of our residents indicate that 37 percent of them would prefer an apartment building.

CLOSE BY BUT SEPARATED FROM GROWING CHILDREN

Our next question was whether older people should be housed separately from families of all ages. Again a survey. The overwhelming majority wanted to be close by, but physically separated from growing children. "We love them, but we like to live on our own schedule," summed up the replies. The older person wishing to retire at 9 o'clock is disturbed by the teenage party just getting underway. The younger children seemed to have no respect for the flowers tenderly planted and nurtured by the elderly, and a host of other complaints left no doubt of the older person's choice. Therefore, the apartment building for the elderly is across the street from 800 growing families and some 4,000 children of all ages. Children are accessible but they cannot set the living schedule of the seniors.

The cottage-motel development is on one square block at one end of a project of 450 family dwellings and a long block away from the playground. Everyone is happy with the arrangement.

Our next concern was with the health, safety, and comfort factors that differentiated housing design for the elderly from that of younger families. Bathing, cooking, reaching, stooping, in the physical sense; loneliness; emergencies; being bedridden; usefulness and pleasure were categories explored. Since many accidents occur in the bathroom, we came to these decisions: a shower with comfortable wooden seat, instead of a bathtub; tempered glass doors that won't break instead of dangerous shower curtains; no curb at shower so that a person in a wheel chair may roll to the shower seat and not need an attendant to bathe; emergency bell 2 feet off the floor and placed between commode and lavatory (it rings on the outside gallery so it may be heard by a neighbor); infrared lamp in ceiling for heat; no stove to fall against; continuous grab bars at varying angles in line with posture at time of use; nonslip floor, strong light.

In the kitchen, all cabinets and shelves within arm's reach; electric stove; refrigerator on a foot-high platform to prevent sometimes painful stooping; suspended light over the stove; dining space close by but in

front of a window so that the single person may associate himself with outdoor activity and therefore retain a more healthy pleasure in eating. Low bracket light over the table. All doors are wide enough for wheelchairs, no thresholds are used and levers instead of doorknobs will permit easy opening.

The living room and bedroom were studied jointly. At times a private bedroom is desirable, at other times it is better not to isolate the bedridden person from the view or activity of other parts of the home. Therefore, three portable closet sections that stop 2 feet below the ceiling are the divider. They may be unbolted and pushed against the wall if one big room is desired; or by the use of a door and panel with closet design, the bedroom may be completely quiet and separated. Space for nursing care on all sides of the bed; a double wall light for flooding the ceiling and direct light for reading, a continuous night light for safe access to the bath and low windows for enjoying the out of doors though bedridden are other features. Electric outlets are 3 feet from the floor to eliminate the need for stooping and bulbs in all light fixtures may be changed without standing on a chair or ladder.

After these and many other factors were decided on, we asked ourselves if housing did not encompass more than safety and convenience. What about loneliness, the absence of useful pursuits, opportunity for learning, for playing, for creative expression for productivity?—in a word, a way to assure a motive for living, to see to it that longer life meant fruitful and rewarding years.

WELL-ROUNDED NEIGHBORHOOD IMPORTANT

This concept led us to decide that housing for the elderly meant a whole living environment; a well-rounded neighborhood which is just as important to seniors as to juniors.

The Public Housing Administration imposes restrictions on community space and the limitations have not been lifted for the elderly. It was necessary for the commissioners of the local housing authority, nearer to the problems and acutely aware of need, to wage months of argument to achieve the many-faceted center needed for the 300 occupants in the apartment building, the 400 elderly across the street, and indeed any lonely elderly of all incomes in the city. The housing authority turned to the community welfare council for its support and assistance. Their response was immediate. A 40-man citizens' committee went to work.

The end result was that educational, counseling, recreation, library, and health programs were promised in writing by more than a dozen public and private city agencies. In addition, this committee agreed to see that funds were obtained to furnish and equip the center. Agency representatives worked with the housing authority architects on specific designs for their areas of concern. Armed with this kind of broad support, a 5,600 square-foot center on the first floor of the apartment building resulted—a veritable USO for the elderly of the city of San Antonio. Campaign for funds is well underway—citizens and clubs have been interested and generous. This again demonstrates that by pooling the efforts of public officials and private citizens, achievements beyond the potential of either working alone, are possible. The cottage-motel development now occupied received its community space furnishings through community welfare council efforts, and it was the occasion for joyful celebration and humorous vying for being the first to sit on the love seat.

The Hogg Foundation for Mental Health, of the University of Texas, will provide a center coordinator in the high-rise building for 3 years to assure program success.

Building completion is expected in February 1960.

SAN ANTONIO GROUPS EAGER TO PARTICIPATE

Eagerness to participate in helping adequately to provide for all the needs of the elderly has marked this undertaking. The latest are the art groups of San Antonio who now are at work on murals, sculpture, paintings, a fountain for the patio, and a series of other embellishments, some gay, some spiritual, all significant, in recognition of the spirit of man and his innate appreciation of beauty.

These generous and creative gifts of loveliness are another demonstration of the current deep concern that, as a society, we shall mold for our valuable senior citizens a rewarding and fulfilling environment with endless opportunities, opportunities for continuing contributions which enrich our society far beyond the capacity of the young alone. In a sense, it is also a fulfillment of Robert Browning's philosophy—

"Grow old along with me; the best is yet to be—

The last of life for which the first was made."

All of this and more is what we mean when we utter those prosaic words, "housing the elderly." Or, as a little ashtay I recently acquired says, "Go, girl, go—you're only old once. Make the most of old age; it is a privilege denied to many."

[From the American City, January 1960]
PEOPLE LIVE LONGER TODAY—SO SAN ANTONIO ADJUSTS ITS PUBLIC HOUSING PROGRAM TO THE INCREASED LIFE EXPECTANCY

(By Marie C. McGuire)

Our city, already experienced in blending the Latin and North American cultures, is taking definite steps to accommodate comfortably that growing segment of our population who now enjoy increased life expectancy. In 1900 there were only 3 million in our country over the age of 65—today there are 16 million; in 1970 there will be 20 million and in 2000 the average life span will be 82 years with a potential of 125 years.

The San Antonio Housing Authority 3 years ago recognized this trend. Our plans encompass more than just a place to live for these mature citizens blessed with an increasing life span. We aim at something that will permit them to be useful in a youth-centered society. This thinking has influenced the design of two new housing developments in San Antonio.

One is an apartment building of 185 units with zero, one, and two bedrooms. The first floor is a 5,600-square-foot center with auditorium, craft room, counseling offices, library, clinic, and demonstration areas. The Hogg Foundation for Mental Health of the University of Texas, sensing the research potentials, will provide a center coordinator and more than a dozen local agencies will staff and operate it. The center will serve the social, educational, and leisure-hour needs of the older people of the city, not only the building occupants. For this reason and because surveys indicated the elderly prefer the convenience, the sense of security and opportunity of being in an active area, the building is located close to the center of the city.

The building will house only older folk, but it is located immediately adjacent to an 800-unit, 2-story family housing project. Again surveys among older people showed that they preferred the privacy and quiet, the opportunity of being on their schedule and pattern of life, but also the opportunity of having younger companions when they wanted them.

The apartments are replete with safety factors, many of which probably will be adopted in all types of housing. Shelves and light fixtures are low, to rule out climb-

ing and reaching; refrigerators are on a 14-inch platform to eliminate stooping; doors will have levers instead of knobs and will be wide for wheelchairs; there will be no gas appliances; showers will have Alaskan cedar wooden seats and will be designed to permit regulation of water flow and temperatures before entering; they will have tempered glass shower doors rather than dangerous curtains and grab bars at different heights and angles throughout the bathroom; there will be an emergency bell between commode and lavatory that rings on the outer gallery and a protected record on the inner door of whom to call in case of emergency.

Of particular design interest is the space flexibility. The apartments can be turned into one big room or separated through use of portable closets into private areas. This permits different arrangements during illness and also permits a wider range of family size. Dining space is by a window so that the lone person's appetite may remain normal by associating himself with outside activity.

There is a small laundry on each floor rather than the less convenient and often drab basement treatment. The laundry area is roomy with opportunity for comfortable visiting and thus the backyard social aspect of this phase of living is recreated. Ironing as well as washing may be done.

Only the first floor of the center is air-conditioned but the thin building (38 feet wide) permits each apartment to have complete cross ventilation. The building itself is oriented to the prevailing southwest breeze on the 2½-acre site.

Outdoor living in San Antonio's warm climate is emphasized. An 8-foot wall makes the shady garden patio completely private from an adjacent busy street. It is reached by a large veranda closed on three sides and opening off the lobby. Even the lobby came in for psychological analysis. It is not just an entry but is the play area, complete with a billiard table, card tables, TV and just sitting and visiting space. Quietness was emphasized only for the library, clinic and counseling offices.

ART INTEREST

The pride of the city of San Antonio in this broad undertaking is no better demonstrated than by the keen interest of the art group of the city in embellishing the structure. Sculptors, potters, painters, glass workers—some 30 distinguished art workers—are donating their time, labor, and materials to translate in art the great social concept of the undertaking. Enthusiasm has even reached across the border and a distinguished Mexican sculptor will send a piece.

A second housing development for older citizens is already complete and occupied. It consists of 36 one-story, cottage-motel units situated on a square block within another family housing project. The unit designs are identical with those in the apartment building. A community center for the elderly also is a part of this development. The authority believes that there must be choices in ways of living if the diverse needs of the elderly are to be met. It also believes that health groups must speed their programs to be able to give proper medical care to this growing population group.

"Independent living at a cost that they can afford is what most elderly people want," the authority says, "and in addition, it is far less costly than public institutions for the well elderly."

Says San Antonio's Mayor Pro Tempore Mike Passur, "Our entire city is proud of the pioneer work of our housing authority in the field of housing for the elderly. Private builders, church, and fraternal groups in and out of the city have watched with interest and I'm sure have learned a great

deal from our effort. This undertaking is a new industry in human welfare and we hope that what San Antonio is doing will be emulated in cities across the country to relieve the impact created by the dramatic increase in the life span."

Playing Politics With Survival

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. PORTER. Mr. Speaker, the administration is playing politics with survival at Geneva. Apparently some powerful members of the administration, perhaps including the President, now want to resume testing. In the Nation for February 27, Edward Gamarekian, science reporter for the Washington Post and Times Herald, makes this serious charge:

During the past few months, some top U.S. officials have attempted to make the Russians appear more hostile in order to reduce the chances for a nuclear test ban agreement. Such manipulation of public opinion is a dangerous game when the stakes are this high.

Mr. Gamarekian knows that this charge is serious. In his article he sets forth the supporting facts.

Under unanimous consent I am including the entire text of Mr. Gamarekian's article, "Quarrels Over Underground Testing."

[From the Nation, Feb. 27, 1960]

WHY WE WALKED OUT AT GENEVA—QUARRELS OVER UNDERGROUND TESTING (By Edward Gamarekian)

An East-West agreement on a nuclear test ban has not been brought any closer by President Eisenhower's proposal of February 11.

Although the administration is proclaiming it a real step forward, the Soviet Union refuses to consider it. The plan would permit the testing of fairly large nuclear weapons underground and it has become apparent to everyone, including the Russians, that the U.S. Atomic Energy Commission and the Defense Department are eager to begin such tests as soon as possible. The underground tunnels are now being dug and the weapons readied.

The Russian argument is relatively simple—there is no logic in having a nuclear test ban that permits tests. The Russians insist that they will not agree to any proposal that permits tests of any size, anywhere.

Many Americans, on the other hand, fear that a total ban cannot be reliably policed at the present time because of the difficulty of distinguishing small explosions from earthquakes. What looks even more difficult is the detection of a weapon test that is intentionally concealed in a large underground hole. The Eisenhower proposal provides for a joint research program that should eventually make it possible to solve the underground detection problem.

In the meantime, however, the proposal would permit the United States to test new weapons. Those who want to resume testing say the Russians have a bad record on keeping agreements and would probably cheat if

they could. Therefore, they argue, the United States itself must test in order to maintain its lead.

Although the Eisenhower administration says it would agree to a total ban if there were a reliable way of detecting violations, the Atomic Energy Commission and the Defense Department seem more interested in showing that a test ban won't work than in trying to make one work. To illustrate, a group of scientists headed by the noted physicist Lloyd V. Berkner, after studying the problem of underground detection, came up with a set of recommendations last March which would have gone a long way toward solving this problem. However, nothing was done for 9 months. After Khrushchev's visit, the prospects of an agreement brightened suddenly and caught us unprepared. The Defense Department hurriedly set up Project Vela to implement the recommendations of the Berkner panel, but little has been accomplished so far.

During this same period, however, the Atomic Energy Commission has carried on an energetic program to show how an explosion may be concealed by setting it off in a sufficiently large underground hole. It has already made at least eight test shots in a Louisiana salt mine with small quantities of chemical (nonnuclear) explosives under extremely difficult conditions. The scientists have been held up by mud, but the sense of urgency has already produced preliminary results—which indicate that concealment is possible.

Most experts agree that the United States is well ahead of the Russians in nuclear-weapon development and would have less to lose from a nuclear test ban. But the Atomic Energy Commission, the Defense Department, and some key Members of Congress are solidly convinced that the Nation's security depends on the development of new weapons. The lack of a foolproof test ban is used to justify more tests.

Against this background, the problems of general disarmament appear staggering. If they have this much trouble over the possible concealment of underground tests, how are the nations ever to deal with the possible concealment of missile and nuclear weapon stockpiles?

Last November 17 President Eisenhower touched on this problem in a letter to Senate Disarmament Subcommittee Chairman HUBERT HUMPHREY, Democrat of Minnesota:

"The best and most carefully elaborated disarmament agreements are likely to carry with them some risks, at least theoretically, of evasion. But one must ponder, in reaching decisions on the very complex and difficult subject of arms control, the enormous risks entailed if reasonable steps are not taken to curb the international competition in armaments and be more effective in the direction of disarmament."

Very few would disagree with this statement, but some risks, enormous risks, and reasonable steps mean different things to different people. Also, they mean one thing when the Russians seem friendly and cooperative and something else when they seem hostile and belligerent.

During the past few months, some top U.S. officials have attempted to make the Russians appear more hostile in order to reduce the chances for a nuclear test ban agreement. Such manipulation of public opinion is a dangerous game when the stakes are this high.

The charge is serious; here are the facts to support it:

After Khrushchev's visit to the United States last September, the Soviet delegation at the Geneva test ban talks adopted a more cooperative position. Having dragged its feet for several months, the delegation suddenly agreed to a scientific conference on the detection and concealment of underground

explosions. The United States had been pressing for such a conference since the previous January.

Scientists from the United States, the Soviet Union, and Great Britain met in Geneva on November 25. No one had any idea how long the meeting would last, but one thing was apparent: If it went beyond December 19—the date on which the political conference was set to recess—the scientific conference would have to recess also and reconvene after the first of the year. President Eisenhower's moratorium on nuclear tests was set to expire on December 31. The scientific conference would have a critical effect on whether or not it was extended.

The scientists began their discussion with a reexamination of the conclusions and recommendations reached by the 1958 conference of scientific experts. The U.S. team then presented new data from the underground nuclear explosions that were held in the fall of 1958 during the Hardtack test series. These findings produced considerable discussion and debate, with the U.S. delegation contending that the detection network was not as good as it first appeared to be and the Soviet delegation replying that it was not as bad as the Americans said and could be made better. The English did not participate to any great extent.

It is not possible here to go into all the details of the arguments, but an indication of what they were beginning to show can be gotten from comments made by Sir William Penney, head of the British delegation, on December 3:

"Listening to the presentations so far, I had formed the opinion that the Hardtack data did show that the system we recommended was not as good as we thought. I have also formed the opinion that certain improvements in apparatus can regain some or perhaps most of the ground which had been lost."

Sir William criticized the Russians for trying to make the problem look too easy and later criticized the Americans for trying to make it look too difficult.

These three delegations maintaining consistent attitudes on all controversial issues. The United States was invariably pessimistic about the capabilities of the 180-station detection network proposed at the 1958 conference. The Russians were invariably optimistic. The British were in between, tending toward the American position on some questions and toward the Soviet position on others.

The going became particularly rough when the U.S. delegation brought up its big-hole theory. The American scientists said that it would be feasible to dig a hole large enough to conceal a 700,000-ton explosion (TNT equivalent; the Hiroshima and Nagasaki bombs were 20,000 tons each). It would have to be 800 feet in diameter (almost three football fields) and five-eighths of a mile underground. It might cost \$30 to \$40 million to flush a hole this size out of an underground salt dome and would probably take 3 to 4 years, they said, but it was possible. A much smaller hole would do the trick, they added, if special material were distributed through the cavity to absorb heat from the bomb and reduce the pressure.

The Soviets said they doubted that it would be possible to get the reduction calculated, took issue with the heat-absorber theory, and said the big-hole idea didn't look too practical.

The British agreed with the big-hole possibility, but supported the Soviets on the heat-absorber idea and the practicality of the overall scheme. They raised some serious questions about the assumptions on which the big-hole theory was based and wondered if they could be realized in practice. They also wondered about the likelihood that the hole would cave in.

On this issue, as on many of the others discussed, the differences were very great at the start but gradually diminished during the interchange that followed. On the big-hole theory, for example, the Soviets accepted the idea that a test could theoretically be concealed, although they continued to question its feasibility. The United States dropped the heat-absorber idea in the final report.

Another major argument arose over the problem of distinguishing the tremors produced by underground explosions from those produced by earthquakes. It was a key point because the number of annual onsite inspections depends on the difficulty of detecting this difference. The Russians, fearing that inspections might be used for snooping, were opposed to a great many (some say to more than 10 a year) and wanted a quota. The United States, fearing that a quota might make it easier to cheat, wanted no limit on the inspections.

According to the U.S. delegation, the Hardtack tests showed that it was much more difficult to distinguish an underground explosion from an earthquake than had previously been thought. At one point, U.S. delegate, Dr. Albert Latter, said an examination of the Hardtack data showed that it would be impossible to distinguish a 1,800,000-ton explosion with certainty. This annoyed the Russians since an explosion of such magnitude would be almost impossible to contain underground. E. K. Federov, the head of their delegation, declared that the Americans were "on the brink of absurdity." Much capital was to be made of this remark later by those who wanted to show how belligerent the Russians were.

Dr. Latter derived the very large figure from the Hardtack data by assuming that one detecting seismograph would be used. With 100 seismographs, Latter added, it would be possible to distinguish underground explosions of 50,000 to 100,000 tons. The Russians said the U.S. estimate was too pessimistic—that it would be possible to distinguish smaller explosions.

The British thought so too. The U.S. delegation apparently didn't take its own estimate of the lower limit too seriously because it was dropped from the final report. In the Eisenhower proposal, the lower limit has been dropped to 20,000 tons.

To top it off, Latter—the day before the holiday recess—came up with a new set of criteria which he said would improve the system by a factor of 30, thereby cutting the 50-100 thousand-ton limit to 1.7-3.3 thousand tons. This important development should have brightened the chances for agreement but it was quietly forgotten as the U.S. delegation curtly announced its plans to wind up the conference on December 19.

The test moratorium was due to end on December 31. The AEC, Defense Department, and some Members of Congress argued against an extension, charging that the moratorium was giving the Russians a test ban without inspection. A few also charged the Soviet Union was carrying out secret underground tests in the meantime, but admitted that they had no evidence.

At Geneva, where agreement was coming close on a number of important points, the British and Soviets protested the ending of the scientific conference by the U.S. delegation. Federov suggested that the decision be left to the political conference. Penney, speaking for the British, said:

"Of course, I agree with Dr. Federov that whether we reconvene or not is a matter for the political conference and our governments to decide. The technical matters which Dr. Federov himself listed show signs of coming together and I would be glad to join my colleagues in telling the political conference that although we do have these disagreements—some still serious and some not so

serious—we might well be able to make further progress if we did reconvene.

"As I said yesterday, the things we are doing here are of vital importance. They affect the world at large."

But the U.S. delegation held to its proposal to adjourn immediately. It added, significantly, that it planned to publish a report which would show the areas of disagreement. The fat was in the fire. Penney apparently saw at once what effect a report on disagreements would have and how it might be used. He objected, saying:

"If we follow your suggestion, the political conference (the echelon above) will have to consider what it says to the world. If it decides that we must come back it will also consider releasing none of this information to the world. If we are to come back it will certainly be unwise to reveal differences at this stage."

The British and Soviet delegations pleaded for a joint report, as is customary. The Americans refused. The head of the U.S. delegation, Dr. James B. Fisk, said a joint statement would give an unbalanced picture, but told the other delegations they could sign the U.S. statement if they wished. (Fisk is the president of Bell Telephone Laboratories and a member of President Eisenhower's Science Advisory Committee.)

Penney and Federov were furious. Penney said: "In some ways I am sorry, but if the U.S. delegation has their very firm view, if one delegation does that, the others must do it also."

Federov said: "I consider the action of the U.S. delegation as unprecedented, at least in the history of our technical talks, and extraordinary." On the matter of the balanced report, he said: "The U.S. delegation could always have informed its Ambassador at any time and in any form it chooses as to its own view. What is important is to have three delegations in a three-power conference come to an agreed scientific decision."

"I think such action is aimed at undermining our deliberations because, just as soon as some partial agreement came into sight, just as soon as we got to that agreement, immediately the U.S. delegation has taken steps to ruin it. Do as you will, Dr. Fisk. The Soviet delegation will report, then, on the whole of the agenda and will also report on our view of the action that you are taking."

Fisk's reply to all this was: "The U.S. delegation fully acknowledges the agreement which we have reached on this subject."

The U.S. group put out its report the next day and went home. The British and Soviet reports came out soon afterward. The three groups issued a joint statement on methods for improving the 180-station detection network. Although it was very encouraging, it had little effect on the generally pessimistic conclusions in the U.S. report.

The Soviet report was optimistic about the capabilities of the 180-station network. It criticized the U.S. delegation on a number of points—for modifying calculations that were based on the underground nuclear tests of 1957 and 1958, for misrepresenting the amount and type of instrumentation used during these tests, for using data in a way to make the 180-station network look ineffective, and for specifying detection criteria which made it seem impossible to detect underground explosions reliably in the order of hundreds of thousands or millions of tons. Their charges were strongly worded but were supported to a considerable extent by the record.

This report, plus Fisk's personal account of the conference to President Eisenhower on December 29 (he quoted out of context the Russian remark about "the brink of absurdity"), angered the President so deeply that he immediately made it known he would let the moratorium expire on the 31st.

He declared the United States free to resume testing.

A date was secretly set for the resumption of tests underground and Atomic Energy Commission officials began to make speeches to prepare the public. In an address prepared for delivery at the Business Outlook Conference in Los Angeles on January 13, AEC Chairman John A. McCone put the full blame for the outcome of the Geneva talks on the Russians. He said they refused to give serious consideration to the scientific data presented by the United States and submitted little or no data of their own. Their report was void of scientific evaluations, he added, and contained bitter denunciations and accusations.

The AEC Chairman went on to say that this behavior made it necessary for President Eisenhower to bring to the attention of the world this intemperance and the destructive tactics of the Soviets, and to declare an end of the 14-month moratorium on the testing of nuclear weapons. The United States, he concluded, cannot lower its guard until the Soviets modify their unyielding position. "Until then, we must face resolutely the hazards of the future. To me, the greatest danger would be to see our country weak and prostrate—an easy prey for a Communist dictator whose stated objective is to destroy all that we cherish." McCone gave similar but off-the-record speeches to a women's political forum and to a group of reporters in Washington.

On January 21, AEC Commissioner John F. Floborg was even more blunt at a luncheon of the American Ordnance Association in Washington. "The Soviet representatives, wearing the guise of scientists but obviously just going through the motions in the spirit of a formality which had to be endured, furnished not a scintilla of scientific information but instead satisfied themselves with a tirade against the men whom the United States had selected."

The verbatim record of the Geneva conference and testimony given by members of the U.S. delegation to the Senate Disarmament Subcommittee on February 4, contradict the McCone and Floborg statements.

At the subcommittee hearing Fisk said, "Up until the last day, the Russians were their usual selves. They discussed sensibly and made good contributions. They are a very able group of people." The comments they made on the analyses of the U.S. delegation were "very good" and "made us think hard and do work we had not done," Fisk said under questioning. It was only on the last day that they "improperly" questioned the intentions of the U.S. delegation.

The man of second rank in the delegation, Dr. Wolfgang K. M. Panofsky, of Stanford University, told the committee that the Russians made "elaborate theoretical contributions on the distortion of seismic waves," submitted data on large underground chemical explosions, and contributed seismic records taken in the Soviet Union which showed the earth tremors from the U.S. underground tests in Nevada.

Mr. Eisenhower does not appear to have been fully apprised of what happened during the scientific conference in Geneva. That seems the best explanation for the developments that followed:

1. The end of the test moratorium.
2. The setting of a date for the resumption of underground tests in Nevada (it has been put off for the time being).
3. The new test-ban proposal of February 11 which will make it legal to carry out underground tests on nuclear weapons that can be fairly large if they are exploded in a huge underground hole deep below the surface.

The Russian counterproposal would ban all tests and allow the West to examine a limited number of suspicious events any-

where in the Soviet Union. The Russians would have the same privilege in the western nations. This plan looks attractive because it would permit the use of intelligence information to uncover a violation. How far the plan gets depends on whether the Soviet Union will agree to the number of inspections the United States would consider adequate.

Defacement of Religious and Other Institutions

EXTENSION OF REMARKS

OF

HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. HART. Mr. President, the Nation was shocked recently by what hopefully we all believe was only a temporary and passing wave of vandalism and swastika painting.

The religious and community leaders in Detroit held a special meeting with Police Commissioner Hart. In addition, the executive board of the UAW issued a special statement condemning these activities. We must all be alert to potential dangers to our community and to our Nation in any outbreaks of this type. I ask unanimous consent that two statements be printed in the Appendix of the RECORD.

There being no objection, the statement and resolution were ordered to be printed in the RECORD, as follows:

JOINT STATEMENT OF RELIGIOUS AND COMMUNITY LEADERS IN DETROIT FOLLOWING A SPECIAL MEETING CALLED BY POLICE COMMISSIONER HERBERT W. HART TO DISCUSS THE PROBLEM OF RELIGIOUS AND OTHER INSTITUTIONS, JANUARY 15, 1960

We as religious and community leaders in the city of Detroit representing all faiths and races met at police headquarters today. We were concerned with a series of incidents involving the defacement of houses of worship and other buildings, and met at the request of Police Commissioner Herbert W. Hart to discuss and evaluate the problem and to suggest the best means to combat it.

Respect for human dignity and respect for differences, whether of race or religion, are foundation stones of our American way of life and basic in a democracy. No action is more revolting than the senseless and cowardly desecration of a house of worship. An act of violence against any houses of worship or public or community buildings is a threat to all faiths as well as to democracy itself.

In the past 2 weeks there have been several instances of such desecrations. We all deplore these incidents as evidence of the neurotic or psychotic personalities who we believe are responsible.

While we are of the opinion that there is no organized pattern, we do not minimize the seriousness of these outrages. These individual acts of vandalism emphasize for us the continued existence and danger of racial and religious prejudice. Such extreme acts grow out of racial and religious prejudices and discriminations all too widespread in our community and are fostered by improper attitudes or guidance in the home.

We affirm our conviction that brotherhood, mutual respect and cooperation predominate in our city. We are determined, however, to be a part of the building of a moral commu-

nity that takes every opportunity and effort to eradicate the virus of hate in our midst.

We express our confidence in the competence of the Detroit Police Department to cope with this situation and our assurance in its continuing vigilance in uncovering those who have perpetrated these outrages on our community. Similarly we recognize our responsibility in this community for the inculcation of democratic ideals as a vital part of the educational responsibility of the home, at all levels in our schools and just as vital a part of the teachings of our churches and synagogues, community groups, press, radio, and TV.

RESOLUTION ADOPTED BY THE UAW INTERNATIONAL EXECUTIVE BOARD JANUARY 20, 1960, DETROIT, MICH.

World War II—its concentration camps, its extermination ovens, its 6 million Jewish dead—are not so far in the past that we in America can look upon the revival of the swastika across the face of our synagogues as merely the twisted work of pranksters.

These are acts of bigotry as basic as those which swelled to carry a civilized nation down the road of savagery just three decades ago. These acts shame and humiliate all who believe in democracy and scorn those who have died for it.

Each day brings news of yet another community shamed by those who would resurrect that insignia of hate—the swastika. An ugly pattern of hate has formed, inspired in part by the fact that other acts of bigotry have failed to arouse the total Nation into realizing that bigotry is a terribly contagious disease.

The swastika-painters and the cross-burners look alike and are driven by the same distortions. They can't channel their hatred in one direction. No one religion, no one race, no one nationality is the sole target of their hate. Every person who believes in, fights for and lives democracy is their victim.

The swastika that now appears in the night indicates a quickening in the rhythm of hate. Anti-Semitic incidents have been erupting with such rapidity and on such a widespread scale that no one has a single explanation.

It is the belief of the UAW international executive board that much of the anti-Jewish vandalism expresses hatred and hostility only incidentally directed against Jews, that a frightening depth of racial, religious and institutional hatred exists and is promoted by professionals.

Racial and religious hatred can often go undiagnosed, its promoters operate unexposed. But in raising the swastika insignia, so soon after the most devastating war in history, the hatemongers have aroused men of good will everywhere.

The international UAW executive board joins religious leaders of all denominations who have denounced these outbursts of anti-Jewish feelings and have called on municipal, State, and Federal governments to take adequate and affirmative steps to expose and punish those who are guilty of peddling hatred and who, if permitted to go unchallenged, would desecrate and destroy our free institutions.

The Taxation of Cooperatives

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. MASON. Mr. Speaker, high taxes represent a common burden and source

of grievance to the American people—not to mention a drag on our economy—and most of us resent seeing someone take advantage of loopholes in the law to avoid bearing their fair share of the taxload.

Perhaps this resentment explains the outpouring of indignant editorials which greeted the disclosures of tax privileges now enjoyed by cooperative corporations competing with tax-paying enterprises.

Under a cloak of immunity of tailor-made for co-ops in the earliest days of the income tax, these commercial organizations have grown and prospered. Many own assets valued in tens of millions of dollars. They engage in many different commercial activities, wholesale and retail, manufacture and distribution.

Shielded from taxes, co-ops have built up their highly profitable empires at the expense of competitors, and often wind up absorbing their tax-burdened rivals into their sheltered domains.

At long last, however, the co-ops' free ride seems to be nearing an end, and much of the credit for arousing public opinion in support of tax equality must go to the alert and conscientious editors who in recent weeks have issued strong demands for legislative reform.

For my colleagues' benefit, editorial response to the facts developed at recent hearings before the House Committee on Ways and Means is sampled as follows:

The Wilkes-Barre Record, January 29, 1960:

"Taxation of earnings of cooperative associations which had not been distributed or allocated to patrons was imposed by Congress as part of the 1951 Revenue Act at the request of the Truman administration. But some co-ops have continued to avoid taxes on their earnings by issuing certificates from time to time stating the member's share of earnings. Courts held that these certificates were not taxable inasmuch as they had no determinable market value. The earnings certificates were taxable only when cashed in."

"Meanwhile, co-ops were free to invest their profits in other enterprises. Frequently these were in direct competition with businesses paying the corporate tax rate on profits ranging up to 52 percent."

The New Orleans States and Item, February 3, 1960:

"Businessmen who must pay all the regular taxes and still try to compete with co-ops have justice on their side. The tragedy is that in spite of justice on their side many of them have been driven out of business."

"Co-ops should pay their way taxwise and we hope Congress is fairminded enough to insist on the ending of an injustice against taxpaying private businesses."

The Dubuque (Iowa) Telegraph-Herald, February 1, 1960:

"The steady increase in business transacted by co-ops during World War II, contrasted with heavy wartime taxes on other businesses, created widespread agitation for equal tax treatment."

The Salem (Oreg.) Capital Journal, January 14, 1960:

"Key Democrats on the House Ways and Means Committee are reported to have decided to push legislation that would close one of the biggest loopholes for income tax evasion, by increasing Federal taxes on incomes of cooperatives, which because of their tax exemption have had a phenomenal growth."

The Roanoke Times, February 9, 1960:
"The tax 'gravy train' being ridden by co-operatives may be nearing the end of the line.

"For far too many years cooperatives have enjoyed an unfair advantage over taxpaying businesses."

The De Kalb (Ill.) Chronicle, February 5, 1960:

"Co-ops, as everyone knows, are big business. Nourished by their colossal tax advantage to continue to grow at an alarming rate * * *"

"Any effort to strengthen the unworkable 1951 law, a procedure which some members favor, would leave the co-ops as freewheeling as ever and simply shift the tax burden that is properly theirs to the backs of the farmer members."

The Amarillo (Tex.) Globe-Times, February 1, 1960:

"The broad investigation of Federal individual and corporate income tax structure sparked by the House Ways and Means Committee today is aimed at law changes in 1961 or 1962 rather than this election year, but Congress may make a small start in 1960 by closing a tax escape route to cooperatives."

The San Diego Evening Tribune, February 12, 1960:

"Cooperative commercial ventures in this country are now big business.

"They should be considered as such—particularly with regard to taxation.

"This is not the case at present. As a result, many of the Nation's taxpaying corporations face unfair competition from their free-riding, co-op rivals * * *"

"Equality in this matter is long overdue."

The Chicago Tribune, February 14, 1960:

"In its search for inequities in the income tax system, the House Ways and Means Committee ought to be particularly interested in the virtual immunity which is enjoyed by thousands of cooperative organizations. * * *"

"If corporate taxes were applied to cooperatives, the tax yield might be as much as \$200 million a year."

The Fort Lauderdale (Fla.) News, February 4, 1960:

"Co-ops drill oil wells, operate refineries and filling stations. They engage in mining, insurance, banking, publishing, paper-making, lumbering, and homebuilding. * * *"

"All of this is in direct competition with taxpaying private enterprise. Sort of a 'kingdom within a kingdom.'"

Americanism Award

EXTENSION OF REMARKS

OF

HON. HUGH SCOTT

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. SCOTT. Mr. President, a distinguished and greatly respected citizen of Scranton, Pa., Mr. William W. Scranton, has received the accolade of a number of his fellow citizens through the annual Americanism award of Amos Lodge 136, B'nai B'rith.

I ask unanimous consent that the report of this occasion in the Scranton Tribune of March 7, 1960, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICANISM AWARD GIVEN TO SCRANTON

Amos Lodge 136, B'nai B'rith, last night for the second time in the 8 years in which it has bestowed its annual Americanism award honored a member of the family for which the city is named.

More than 300 persons at the award dinner in the Jewish Community Center gave a rising ovation to William W. Scranton, son of the late Worthington W. Scranton, who was the first recipient of the award, as he received the plaque from Attorney David B. Miller, first vice president of the lodge.

In giving the award to Mr. Scranton, Attorney Miller stressed the unaffected, unassuming, modest simplicity of Mr. Scranton. He noted, "He knows our community and our people intimately, for he is a descendant of Scranton's founding family who has long been prominent in the civic and economic life of our community.

"Bill has been in the forefront of our charity and welfare campaigns for years, giving unstintingly of his time, talent, and money."

He cited Mr. Scranton's service during World War II in the Air Transport Command and his service last year in the Department of State as special assistant to the Secretary of State and the Secretary's glowing tribute in accepting his resignation, quoting Secretary Christian Herter as saying, "I have never seen anyone grasp with greater rapidity not only the factual details but the implications in the many knotty problems which came to this office."

Mr. Scranton in accepting the award noted that he had accepted the first Americanism Award given by the lodge on behalf of his father and that his father, though he hung none of the diplomas, certificates or other recognitions of honors given him in his home or office, did have the Americanism award from Amos Lodge displayed upon the wall of his home.

Mr. Scranton also spoke of the ideals of justice and service shared by members of the lodge and declared that in accepting the award he was very honored and most grateful.

Principal speaker was Maj. Gen. Julius Klein, retired, past commander of the Jewish War Veterans, author of the Klein report for the Senate Committee on Appropriations Armed Forces Subcommittee, commander of the 23d Quartermaster Truck Regiment in the South Pacific during World War II, and recipient of numerous military medals and governmental commendations.

General Klein termed the Senate filibuster "a tragic spectacle" and noted that while citizens of the United States are somewhat amused by hearing of it, the Soviet Union, the Soviet satellites and Africa are giving it and the human rights question behind it serious consideration.

He condemned as well the book, "The Ugly American," and said of State Department workers abroad, "If you could see those young people during their best, I say, they are combat soldiers and we can be very proud of our Foreign Service."

He also strongly supported President Eisenhower's views on national defense and spoke sharply of those who, for political or other motives, are now criticizing them.

General Klein also dwelt at some length on the U.S. need to prevent its concern over Soviet missiles from dulling awareness of Soviet gains in other fields, and he stressed that the United States must stand fast on the present policy toward Berlin.

"If Berlin is abandoned, we have lost World War II and surely the Korean war," he cautioned.

He referred to Israel as "the only little democracy in the Middle East the United States can depend on," and he said that in its dealings the United States has met the

Soviets "more than half way," adding that in the way of trade agreements, any course that would make American dollars available to promote the Soviets' aims would be "suicidal."

Attorney Jerome E. Parker, president of city council and a past president of Amos Lodge, was toastmaster. Paul Magida was general chairman.

Rabbi Milton Richman, spiritual leader of Madison Avenue Temple, offered invocation, and Rabbi Simon H. Shoop, spiritual leader of Temple Israel, benediction. George W. Unger, president of the lodge, spoke briefly and distributed awards to various members of the lodge. Mayor James T. Hanlon extended greetings.

Introduced were the members of this year's Americanism Award selection committee: John P. Barrett, president of the chamber of commerce; Gerard J. Ferrario, president of the junior chamber of commerce; Harold M. Brandamore, president of the Lions Club; Louis J. Nappi, president of the local unit of UNICO National; Attorney Joseph C. Kreader, president of Rotary Club, and George F. Peck, president of the Kiwanis Club, as well as Charles Luger and Max Spindel of Amos Lodge.

Previous recipients of the lodge's Americanism Award, in addition to Worthington W. Scranton, who was the initial recipient, are I. E. Oppenheim, 1954; A. B. Cohen, 1955; Roy Stauffer, 1956; Ted V. Rodgers, Sr., 1957; Morris Goodman, 1958, and President Judge T. Linus Hoban, 1959.

Mysterious Reasoning

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. GROSS. Mr. Speaker, the mayor of Charles City, Iowa, has attacked me for voting to sustain President Eisenhower's veto of the so-called water-pollution control bill, H.R. 3610. This, of course, is his privilege, just as it is the privilege of the Waterloo (Iowa) Courier to question his reasoning in demanding bigger and better handouts from Washington.

As part of my remarks, I desire to include the following editorial which appeared in the Courier on March 6:

Mayor Mike Micich, of Charles City, former Democratic candidate for Third District Congressman, recently attacked Representative H. R. Gross for supporting President Eisenhower's veto of a bill to increase from \$500 million to \$900 million the amount of aid to help local communities solve pollution problems.

Micich is concerned, because Charles City had hoped to obtain 30 percent of the cost of constructing a sewage disposal plant (\$200,000) from the Federal Government. He says Charles City shouldn't have to pay the entire cost of the project; and this is his reasoning:

"Charles City does not take its water supply out of the river but has deep wells. Many communities below Charles City do take their water out of the Cedar River for human consumption and that is one of the principal reasons we must see to it that we do not pollute the water here in Charles City, making it unusable to cities downstream. It is not solely a Charles City prob-

lem; therefore, it is unfair to expect the local taxpayer to pay 100 percent of the cost of pollution control."

This is a wonderful example of the type of reasoning which leads to demand for Federal aid. Charles City is polluting the Cedar River but because Cedar Rapids uses water from the river the Federal Government ought to help pay the cost of a Charles City sewage disposal plant. By this reasoning, a chemical plant belching poisonous gas into the air is entitled to Federal aid because everybody in the country might sometime breathe this same air.

It is a great mystery to us that anyone should see an advantage in Federal aid. If sewage disposal plants are to be financed from Federal taxes, the cost will be greater because of the inevitable Washington "service deduction" on tax dollars sent to the National Capital and returned to local communities.

The people of Charles City should be happy that the rash increase in Federal aid was defeated. In the long run the policy of imposing local responsibility for solving local problems will lead to greater economy because voters are able to exert strict supervision over the spending of local tax dollars.

Plucky Israel: Wonderland of the Unexpected

EXTENSION OF REMARKS OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 14, 1960

Mr. KEATING. Mr. President, bustling, up-to-the-minute Israel is speedily growing into one of the more important tourist centers of the world for visitors from every nation. Informality and ease of manners, customs, and hospitality are the keynotes, as I can attest from my journeys to this modern miracle land.

A graphic description of incredible Israel, as a place to which visitors are gravitating from everywhere, especially the United States, was recently carried in the *Diplomat* magazine. In an interesting article, contained in a special supplement devoted to Israel, many of the wonders which await visitors are outlined. I hope publicity such as this will encourage more people to visit this noble bastion of liberty in the Middle East, and I ask unanimous consent that it be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

INCREDIBLE ISRAEL: WONDERLAND OF THE UNEXPECTED

(By Jerald F. Ter Horst)

TEL AVIV.—"Shalom," the stranger said cheerily. "I believe we have an appointment?"

I rose from my chair, eyeing his tieless shirt, short sleeves and crepe soled shoes. It was 8 o'clock in the evening on the fashionable terrace of the Grand Accadia Hotel on Tel Aviv's magnificent seaside. And my appointment was with an influential Israeli banker-diplomat.

Cautiously, I introduced myself. The stranger grinned, extended a tanned hand. "Fine," he said in solid Middle West English. "Where do we start?"

Such was my introduction, not only to the executive of the largest private investment firm in Israel but to life in the young country itself. Lesson No. 1, I mentally jotted. Expect the unexpected. The man in the gray flannel suit will probably be, not an Israeli, but another tourist.

I felt better several days later when I learned that Abba Eban, former Israeli Ambassador to the United States and a favorite of the Washington diplomatic set, had to be taught the same lesson about Israeli informality.

Hang up that pin-striped suit, Prime Minister David Ben-Gurion advised his young protégé as Eban switched from the protocol circuit to the political campaign in his bid (successful) for a seat in the Knesset and Ben-Gurion's Cabinet.

So Eban jointed the ranks of the sport-shirted. It was the same Eban otherwise, entrancing audiences in fluent Hebrew, German, English, Arabic or Persian, as he hunted votes among the 70-plus nationality groups which make up this Middle East melting pot. But the sight of Eban's elbows would have startled anyone accustomed to Eban in the formal surroundings of the United Nations.

The classic case for informality involves Ben-Gurion himself. Rushing from a state ceremony to a meeting of leaders of the Histadrut, Israel's powerful labor body, the bushy-haired Prime Minister found no time to change his attire. Anticipating their reaction, Ben-Gurion rose to speak with this explanation:

"Excuse me. I come to you in my working clothes."

All this is related, not to glorify the merits of conducting business and affairs of state in short sleeves and open throats, but to illustrate the mood of a dynamic country and its energetic people. This is a land, not of milk and honey as the Bible bespoke, but of rock, sand, drought and old-fashioned hard work.

Except for the hard cadre of Sabras (native Palestinian Jews named after the sweet, prickly cactus fruit), most of the Israelis are refugees from oppression in Europe, Africa, and neighboring Arab lands. Israel's leaders, for the major part, are self-made men and women who came up from the ranks of peasants. Dressy attire has a place in Israel—at the theater, the opera, and some stuffy bars. But a visitor or an Israeli can go just about anywhere in sports garb. And he does.

Thus geared to expect the unexpected, it was comprehensible to come upon an encampment of nomadic Bedouins just a 90-minute bus ride out of Tel Aviv's westernized metropolis. Hard by Beersheba (Well of Sheba) on the edge of the Negev Desert lives Sheikh Suleiman and his 2,500 tribesmen, their goatshair tents, and flocks of sheep, goats, and camels.

The bearded old sheik is still carrying a torch for Mrs. Eleanor Roosevelt—to whom he proposed several years ago. Her picture adorns the walls of the stucco quarters the sheik himself calls home. He never misses an opportunity to call upon her when Mrs. Roosevelt visits Israel. Suleiman's ambition is to add a 40th wife to his collection, but the monogamic law of Israel and Cupid has thwarted his desire. The last to turn him down was an 18-year-old blonde German fraulein who had answered an advertisement in the European press.

Israel has ambitious plans for the Negev, a wilderness of dry, rocky hills and indescribably beautiful gorges and cliffs that stretches its lonely, virtually uninhabited length from Beersheba to Eilat on the Red Sea's Gulf of Aqaba. A costly project is now underway to channel water from Lake Tiberias (the ancient Sea of Galilee) in the north down to the Negev. Ben-Gurion hopes to turn the Negev into a fertile garden spot, perhaps as it once was in the days of the Nabataeans who inhabited the area

2,000 years ago. "And they shall build the old wastes," said the prophet Isaiah, "they shall raise up the former desolations, and they shall repair the waste cities, the desolations of many generations."

At Eilat itself, it is possible to glimpse camels near the ancient Well of Abraham or journey a few miles to the Mines of Solomon where slaves mined the copper which Solomon traded to merchants of the Far East for gold, silver, silk, and fabulous treasures.

More importantly to modern Israel, however, Eilat some day will be its seaport on the Indian Ocean. Under Israel's planned economy, 6,000 people live there now in quarters erected by the government. In time, a city of 60,000 will be built, serving as a rail, oil, and export center. The traveler today can still go skin diving in the crystal, mildly brackish waters of the gulf or glimpse the aquatic wonderland via the comforts of a glass-bottomed boat.

My first sight of a pretty young thing named Elana on the edge of the U.N.-patrolled Gaza Strip made it hard to believe that she was a symbol of a waning era in Israel. Elana, as beauteous as the Biblical Ruth, is one of the leaders of about a hundred young Israelis who live, work, and operate a large kibbutz (collective farm) in the shadow of no man's land between Israel and Egypt.

All of these youngsters are between 19 and 21, many just out of their compulsory service in the Israeli Army. Elana—she said her last name was unimportant—is one of these. Garbed in a sweater-blouse, blue shorts and barefooted—the workaday uniform—she guided us around the quarters of Kibbutz Nahal Oz, through the communal dining room and out to the nursery-schoolroom—home of the young children of the five or six married couples in the group. The youngsters see their parents from 4 p.m. until bedtime. Married couples are entitled to a pair of neat, small rooms. Elana, being single, shares a room with two other girls.

With flashing dark eyes, she described the way the men and women of the kibbutz are turning the dry brown soil into green, productive fields through irrigation and perspiration.

"No," she said thoughtfully to the obvious question, "I don't miss the city lights. Here I have a chance to contribute, to share in the future of Israel. It is much more important than just living in the city."

Kibbutzniks own and operate their own lands, borrowing money from the Jewish Agency, much of it contributed by American Jews, on long-term loans. Nahal Oz is but 3 years old, but some kibbutzim have swimming pools, "espresso" bars and their residents live as comfortably as any wealthy Iowa corngrower. The exception is that they cannot take their wealth with them if they should leave the kibbutz.

Yet the kibbutzim, backbone of the Zionist movement for more than a quarter century, are fading away. In the days before statehood, the kibbutz was like a pioneer settlement in America's wild West. Its people had to work and share together to ward off drought, marauding Arabs and the impossible loneliness of isolation in a desert. Today the trend in Israel is toward the moshavim—cooperative farms where the people pool their tools and product-marketing but still own and farm individual hectares of land. Kibbutzim like Nahal Oz exist only along Israel's tense borders where the kibbutzniks must serve as border troops as well as farmers in event of hostilities.

Another unexpected facet of Israel is its diminutive size. In a land not much bigger than New Jersey, it is possible to headquarter at an American-style seaside hotel such as the Grand Accadia at Tel Aviv and make daily forays by bus or rented auto to every point of the country. One gets in more roadwork this way, and from early spring

until late October, can relax at the end of a day with a brisk swim in the azure Mediterranean.

However, even in a minimum 2-week stay in Israel, it is much the best to plan an overnight stop or two in Jerusalem's commodious King David Hotel or the peaceful, smart Galei Kineret Hotel on the western shore of Lake Tiberias when visiting Nazareth.

At the latter, it is possible to escape the omnipresent dust and souvenir hawkers and meditate on what this land must have been like in the days of Christ and St. Peter. The lake, fresh and invigorating in daytime, wears a brooding air of mystery at twilight as the sun sets on the Syrian hills.

It is impossible in any brief odyssey to capture all the moods and impressions of Jerusalem, a holy city of Jews, Christians, and Moslems. Unfortunately for the visitor in Israel, the ancient landmarks of Old Jerusalem are in the zone occupied by Jordan and travel between the two parts is not permitted except on rare occasions of pilgrimage, which must be arranged well in advance.

But unless one is a pilgrim, with a pilgrim's insistence on personally touching the holy or ancient spots, the modern Israel should more than suffice the brief traveler. Language is no barrier, since English is the second tongue of most Israelis; a visitor is likely to encounter in the cities, shops, hotels, government offices.

Eating can be a minor irritant since Israel, although established as a haven for the oppressed, so far has applied the rabbinical bans on pork and the mixing of meat and dairy products in the same meal for all who must dine in public places. But though one must inevitably choose between "meat or dairy" meals, the latter can open up new vistas of fruit and vegetable concoctions to ease a jaded appetite.

Israel is a land where one learns early to expect the unexpected. But the rewards are likely to be beyond your expectations.

James Wesley Rearden—Lesson in Loyalty

EXTENSION OF REMARKS OF

HON. JOHN J. RILEY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. RILEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include excerpts from the report of the President of the Graniteville Co., Graniteville, S.C., which pay tribute to one of the most remarkable men who ever lived, James Wesley Rearden. This man served one company for nearly 87 years. This is believed to be a record unequalled in the history of mankind. Mr. Rearden's service is truly a lesson in loyalty, but it is more than that. It is also a tribute to his employers and is indicative of the fine relations generally prevailing between management and labor in South Carolina. I know personally and number among my good friends most of the officers and many of the employees of this fine company. While I did not know Mr. Rearden well, I was familiar with the high regard and esteem in which he was held by his fellow man. I respectfully present these excerpts from the report of the president, Samuel H.

Swint, and commend them to my colleagues for reading.

The excerpts follow:

EXCERPTS FROM THE REPORT OF THE PRESIDENT, GRANITEVILLE, CO., GRANITEVILLE, S.C., FOR THE YEAR 1959, PRESENTED AT THE ANNUAL MEETING OF THE STOCKHOLDERS, FEBRUARY 23, 1960

HISTORICAL EXHIBIT: JAMES WESLEY REARDEN

When Graniteville's "Grand Old Man," James Wesley Rearden, passed away at his home in Graniteville, S.C., on March 25, 1959, the last chapter was written and the book was closed on a very interesting and unusual life. His time spanned all but 16 of Graniteville Co.'s 114 years of existence. And during 87 of those years he was an employee of Graniteville Co.—a record of continuous service with one business firm which, to the best of our knowledge, has never been equaled by anyone else anywhere.

A book could be written—and it should be—about Mr. Rearden's unique and dedicated life of service to his family, his church, his community and the company for which he worked so faithfully from May 10, 1872 until his death on March 25, 1959. Unfortunately, space does not permit us to do him justice here, but the pictures and the notes which appear on pages 28 through 31 will serve to give our stockholders a glimpse of this remarkable man and, at the same time, will preserve something of him and his distinctive contributions in the Graniteville Co. archives (p. 7).

NOTES MADE ON A VISIT WITH MR. JAMES WESLEY REARDEN ON THE MORNING OF MAY 10, 1957, THE 85TH ANNIVERSARY OF HIS CONTINUOUS EMPLOYMENT WITH GRANITEVILLE CO.

This morning we three (Samuel H. Swint, president; F. A. Townsend, vice president; and William C. Lott, assistance vice president) went up to Mr. Rearden's home at 78 Canal Street in Graniteville to see him. We found him in very good spirits, and in better condition than we had thought he might be. He was pleased to see us, and we sat and talked with him for about an hour. We encouraged him to do most of the talking, and he did this with some effort but with evident enjoyment. He asked who had sent him flowers and was very much interested in things at the office. Mr. Swint "kidded" him about not coming to the office to see us, telling him that he had too good a record to go and spoil it by "loafing around." Mr. Rearden did not really understand this, but when Mr. Swint began to ask him questions about his early days with Graniteville, he brightened visibly and told us quite a lot that was interesting and informative.

Mr. Swint asked Mr. Rearden exactly what had happened on May 10, 1872, 85 years ago. Mr. Rearden said that he had been fishing on the banks of the creek (Horse Creek) very near where a portion of the fence surrounding the mill (original Graniteville mill) was placed. He stated that his own home, which he described as a "half log house," was close by the same spot. He described how a tree grew just on the banks of the creek and how the water seemed to form a rather deep pool as it passed beneath the roots of this tree. He said he had learned this was a good place to fish and that it was not long before he caught the biggest red-breast perch he had ever caught "before or since." Mr. Rearden went into some detail in describing the size and the coloring of this fish. He said that when he caught the fish he became quite excited and jerked his fishing pole entirely over his head, which threw the fish over the fence against the gutter of the mill. He wasted no time climbing the 7-foot fence to retrieve the fish. When he got inside the fence he saw watching him Mr. Tillman Faulkner, who was overseer of

the cloth room. Mr. Rearden had spent quite a bit of time looking in the door of the cloth room and watching the people at work there, and he already knew how to do some of the jobs there even though he never actually run any of them. He said that Mr. Faulkner complimented him on the size of his fish and then asked him, "Would you like a job?"

Mr. Rearden answered very promptly, "Yes; what do you want me to do?"

"I want you to tack," Mr. Faulkner said.

"What time do you want me here?"

"Tomorrow morning." And Mr. Rearden said he was there at 5:30 the next morning.

Mr. Swint asked Mr. Rearden how many hours a day they worked in those days. Mr. Rearden replied that they worked 12 hours a day 6 days a week, except that Saturday was a short day. He went on to explain that they usually worked a little extra time every weekday so as to be able to have some time off on Saturday—if they picked up 5 or 6 hours extra work during the weekdays then they would have to work only 6 or 7 hours on Saturday. For this he received the sum of \$1.80 per week, paid every 4 weeks. He said that the excuse or reason given for paying off at such lengthy intervals was that to pay off more often would give the office man too much work to do.

Mr. Swint asked Mr. Rearden where he went to school. He replied he had gone to school at the "Academy" for about a year. "I wasn't a bad boy," he said, "but my daddy decided to send me to somebody who could handle me." He stated that a man by the name of John Snead had started a school, and his daddy sent him there. He said that Mr. Snead could handle him all right. "He would switch us at the drop of a hat." He mentioned that Mr. Snead had only one leg, saying, "He brought it back from the war." Mr. Swint asked Mr. Rearden if he remembered William Gregg. Mr. Rearden replied that he remembered him well. He mentioned that Gregg used to live in the house where he (Mr. Rearden) was now living, spending part of his time there and part of his time at his home on Kalmia Hill. He told about seeing Gregg on a good many occasions come to the "Academy," as he called it, with his buggy loaded with peaches. He said that Gregg had a sizable peach orchard, and he shipped peaches to New York; he would load up his buggy with ripe peaches and drive in the yard of the "Academy." Mr. Rearden said that as soon as Gregg would arrive he usually "hollered out," and that signaled the dismissal of all classes. The children would crowd around his buggy and he would hand the peaches out, taking particular care to see that all the girls got one. Mr. Rearden asserted that the boys, "including me," did manage to reach in and get at least one, and sometimes were able to get two or three and stick them inside their jackets.

Mr. Rearden told the story of how a boy named Bill Gullede was standing on the streets one day when Gregg passed by in his buggy. He said that Gregg stopped the buggy and asked Gullede what he was doing on the streets instead of being at school. He did not know what excuse Gullede gave, but, in the meantime, Mr. Gregg had sent someone to get his father (Gullede's) out of the mill and come and see him. When the father came out, Gregg asked him why it was his son was not in school, being of school age. Mr. Gullede said that he (the boy) did not have enough clothes to wear to school. Mr. Gregg then told Mr. Gullede and his son to follow him to the store run by a Mr. Berry. When they got in the store Mr. Gregg instructed the storekeeper to see to it that young Gullede was fitted with everything he needed in the way of clothing. Mr. Rearden said most of the clothing was secured in the form of cloth; Mr. Gregg then told Mr. Gullede to take all of this ma-

terial home and tell his wife to make the boy some clothes and see to it that he attended school. Of course, Mr. Gregg paid the bill at the store.

Another interesting incident concerning William Gregg was also told by Mr. Rearden. He said that he could call the name of the individual concerned but that he would rather not, since he had descendants still living around here. Mr. Gregg was on his way from his home on Kalmia Hill to Graniteville one day when he passed this man at the top of Cemetery Hill. He was carrying a gallon jug, and Mr. Gregg stopped and called him over. "What have you got in that jug?" he asked. The man did not answer and Gregg said, "Hand it here." He handed it up to Gregg in the buggy—Gregg removed the cork and sniffed it—it was corn liquor. He raised the jug and brought it down sharply on his buggy wheel, breaking it in many pieces. Then he asked the man, "How much did you pay for this whisky?" The answer was \$1.25. Gregg reached in his pocket and handed \$1.25 to the man, and said, "Take this \$1.25 home to your wife and tell her to buy some clothes for the children." Whether or not he did this nobody seemed to know.

Mr. Rearden talked with great clarity and perception; he was particularly attentive to small details of events that happened 85 years ago. He exhibited a keen sense of humor, as illustrated by the fact that he mentioned some lady in one of his stories and stated, "I do not know how old she is, but there's one thing I have learned, and that is not to ask any lady her age." Another illustration of his sense of humor came when he was talking about John Snead, the schoolmaster—he said that Snead's wife actually bossed the school, " * * * bossed him too, I think."

We thoroughly enjoyed our visit and our talk with Mr. Rearden this morning. He is truly an amazing man with a remarkable record of 85 years of continuous service with one company—a record which, undoubtedly, cannot be equaled by anyone else in industry anywhere (pp. 29-31).

SAMUEL H. SWINT.
FRANCIS A. TOWNSEND.
WILLIAM C. LOTT.

GRANITEVILLE, S.C., May 10, 1957.

NOTE.—Mr. Rearden died on March 25, 1959, just 1½ months before he would have completed (on May 10, 1959) 87 years of continuous service with Graniteville Co.

To the beautiful little church (St. John Methodist) just around the corner from his home in Graniteville and one of the two built by William Gregg when he was building the community, Wesley Rearden paid constant devotion. He joined it in 1884, was married there to Allie Quimby 3 years later, taught the Young Men's Bible Class every Sunday for 31 years, was a member for 68 years, and was a lifetime member of its board of stewards.

When the Thomas De La Rue Co., Ltd., of London, England, had an employee, Harry Adkins, to complete 75 years of service in 1950, the company asked the National Association of Manufacturers to search for that person in the United States who could most nearly equal Mr. Adkins' record. Of course, when Mr. Rearden was located, the De La Rue Co. was surprised to learn that he had already exceeded Adkins' record by 3 years. Mr. Rearden was invited to come to London and bring someone with him as a guest of the De La Rue Co.; his health would not permit him to take the trip. However, on the day on which Mr. Adkins completed his 75 years of service with De La Rue, there was an exchange of telegrams between the two "oldtimers," and Mr. Rearden was presented a silver salver or tray by the De La Rue Co., identical to the one presented to

Mr. Adkins. On the tray the names of both men were engraved, the names of the two companies they had served, and the words "Loyalty is the true insignia of manhood" (p. 28).

"The Air Force Reserve Manual"

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters to an editor:

COUNCIL AND PROTESTANTS

In a recent editorial, the Easton Express bemoaned the state of public apathy. The situation was accurately appraised, but it is possible from the pages of the same paper to trace the factors in one issue which contribute to public apathy. It is the age-old maneuver of clouding an issue instead of squarely answering the charges involved.

The issue involved is whether or not the National Council of Churches in particular, and Protestant clergymen in general, have been infiltrated by the Communists. The evidence in support of the charge is voluminous. To date, however, no honest effort has been made to prove or disprove the charges.

Instead, an Express editorial labeled the charges "unsupported." George Cornell, AP religion writer, said in effect that such a charge is not new. Then he went on to speak in less than complimentary terms of those who would dare to question the National Council of Churches or the Protestant clergy, singling out Dr. Carl McIntire of the International Council of Churches. In its Roundtable, the Express quotes an article by Murry Kempton in the New York Post which criticizes Representative FRANCIS E. WALTER and his House Un-American Activities Committee. This is the group which has amassed the evidence which directly supports the charges.

If the charges are not new, as Mr. Cornell states—and no wonder, since the infiltration is not new—the tactics in defense are less so—if you cannot answer the charges, smear, and deprecate those who make them. Cloud the issue, keep the public uninformed about the truth of the charges. Does this or does it not contribute to public apathy? After all, the millions of Protestants for whom the National Council of Churches purports to speak have a right to know.

As the Federal Council of Churches, as it used to be called, the National Council of Churches came under fire on the charges of communistic infiltration and began to feel the displeasure of its membership in an economic way. However, with the royalties from its best seller, the Revised Standard Version of the Bible, it has molded itself into an organization which is virtually independent of its membership. Impervious to criticism, it has developed into a powerful force exerting its influence in the affairs of government, in the press, on the radio, and on television. Though it purports to speak for Protestantism, its policies do not always represent the will of its membership. The recommendation for the recognition of Red China is a classic example. We are presently witnessing its influence upon Government and the press to keep the public in a state of uninformed apathy.

The Reverend HORACE H. HOEY,
FIRST BAPTIST CHURCH, PHILLIPSBURG.

THE MANUAL

The Washington (D.C.) Post and Times Herald recently broke the story of the National Council of Christian Churches of the United States demanding the immediate suppression of the Air Force Reserve manual containing a section entitled "Communism in Religion."

Thomas S. Gates, Jr., Secretary of Defense, ordered the manual withdrawn. Secretary of the Air Force Dudley C. Sharp apologized to the officials of the National Council of Churches.

Congressman FRANCIS E. WALTER, chairman of the House Un-American Activities Committee, accused the Secretary of Defense of issuing a groveling apology, when the Air Force manual's statements are true. He said the reference to communism in religion was based on facts and that Gates should have investigated the facts before issuing this groveling apology to the National Council of Churches. He declared: "The leadership of the National Council of Churches, which claims to speak for 38 million American Protestants, has in the aggregate a record of hundreds of affiliations with Communist fronts and causes."

Dr. Clyde J. Kennedy, president of the American Council of Churches, Dr. Carl McIntire, president of the International Council of Christian Churches, Dr. Ralph I. Yarnell, secretary of the American Council, Dr. Harlan J. O'Dell, vice president of the American Council, and many other church leaders and Protestant Christians, objected to the suppression of the manual.

Maj. Edgar C. Bundy, director of the Church League of America, said: "The National Council officials merit the disdain of liberty-loving Christians in America."

The spectacle, however, of the Department of Defense surrendering is even more tragic when one realizes that the president of the National Council, Dr. Edwin T. Dahlberg, has been an insistent enemy of the Defense Department.

It will always be noble for us to fight for the freedom of our country, no matter what the cost may be, regardless of the odds or fierceness of the battle.

For the Secretary of Defense to capitulate to a church organization with a president who denounces the myth of national defense and ridicules the nobility of the spirit of a Patrick Henry is the height of insult to our integrity as a Nation.

The Reverend D. A. KING.

BETHLEHEM, PA.

New England Fuel Dictatorship

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an interesting editorial which appeared in the Boston Herald on March 12, 1960:

NEW ENGLAND FUEL DICTATORSHIP

Congress is solemnly considering the establishment of a dictatorship over New England fuels. It is looking to a scheme by which some well-meaning bureaucracy in Washington will deny us the right to decide which energy source is most economical for us—oil, coal, or natural gas.

This is the plan for a "national fuels policy" proposed in a couple of concurrent resolutions. Already 42 Senators have co-

sponsored the Senate bill Senate Concurrent Resolution 73.

New England has already taken a beating from the oil import quotas, which deny us our full reliance on residual oil and so enable coal prices to be raised. The national fuels policy plan would carry this elimination of competitive price curbs to the ultimate conclusion.

New England is nearer to coal sources than to oil or gas. So it is quite likely that a fuels policy would dictate the use of coal by New England industry. This would be great for coal, as it would relieve it from meeting the price competition of residual oil. But for New England it would mean a possibly disastrous increase in fuel costs.

Oddly enough, the independent Texas oil men are in on this deal, too. The politically powerful Independent Producers and Royalty Owners Association has discovered that coal and oil are not mortal enemies. The reason is that one of coal's major competitors in industry is imported crude and residual oil, and the independent oil men would like to see these imports cut off.

The excuse offered for a fuels allocation is the "uneconomic exploitation of and wasteful competition between limited energy resources."

But proved reserves of crude oil and natural gas are at an alltime high. Enormous quantities of shale oil can be tapped. Coal is in vast supply. Solar energy, the fuel cell, and atomic developments promise unlimited resources in the future.

And competition, instead of bringing waste, has brought producers to the point where even byproducts are closely controlled. This fuels policy plan is yet another of the various schemes to replace competition with a comfortable cartelism.

New England, at the end of the line and with small energy resources of its own, stands to lose heavily by this sort of business.

Adenauer Calls MRA World's Hope

EXTENSION OF REMARKS

OF

HON. BEN F. JENSEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. JENSEN. Mr. Speaker, under leave to extend my own remarks, I am pleased to include an article from the New York Journal American of Sunday, January 31, 1960.

During these days we are honored and happy to welcome to this country the distinguished Chancellor of West Germany.

In the years since World War II he has stood out as a dauntless fighter for freedom and an architect of the unity of the West. Better than most he understands the nature of the ideological struggle we are in right now. For he and his country are on the very front line of that struggle.

He and his family were among a group of 150 picked leaders of Western Germany who, at the end of the war, came to the Moral Re-Armament Assembly at Caux, Switzerland. There began the close friendship of the Chancellor with Dr. Frank Buchman, the initiator of Moral Re-Armament, an association which has grown and deepened over the years, and which has had a profound effect on the history of Western Europe.

The Chancellor's convictions about the world work of Moral Re-Armament are well expressed in an article which he himself wrote for the New York Journal American on January 31 of this year, and in the handbook to which I am about to refer.

The article follows:

ADENAUER CALLS MRA WORLD'S HOPE

(The ideology of moral rearmament is seen by West German Chancellor Konrad Adenauer as vitally important at this stage of world affairs. His Government has awarded the Grand Cross of the Order of Merit to Dr. Frank Buchman, founder of Moral Re-Armament. In the following article written exclusively for the New York Journal-American, Chancellor Adenauer discusses this ideology.)

(By Konrad Adenauer, Chancellor of West Germany)

At this time of confusion in Europe we need, and especially in divided Germany, an ideology that brings clarity and moral power into shaping international relations. A nation with an ideology is always on the offensive. A nation without an ideology is self-satisfied and dead.

Communism has gone through many phases—Marxism, Leninism, Stalinism, now Khrushchev. But one thing has remained unaltered—its aim of world domination. We must be prepared to continue the ideological struggle for several decades yet, but I am convinced Khrushchev's grandchildren will not be Communists.

Dr. Frank Buchman, founder of Moral Re-Armament, is making a great contribution to international unity and to the establishment of social justice. A lasting memorial to his work is established in the hearts of mankind of this age. The way he has labored to establish relationships between men and nations on firm foundations of moral values will never be forgotten.

Now is the time to work more strongly than ever for European unity through MRA. A Europe in which freedom and brotherhood should reign can only be created when nations are mutually conscious of their moral responsibility. MRA has given most valuable stimulation to the great work of uniting Europe. Unless this work is carried forward, peace in the world cannot be maintained.

If all nations are to continue to live together, one of the most pressing tasks of our age is to overcome prejudices that exist between people, races and nations. In this field MRA has made an important contribution.

May it above all pass on the truth that the one real hope of nations living together in peace can only be found through a change in the human heart.

We can be grateful to the men and women of Moral Re-Armament that in this world of destruction they have had the courage to raise the banner of moral values. MRA has become a household word in postwar Germany.

The German people gratefully recognize the help which has come so readily to them through MRA. Very soon after the end of the war this ideology reached out a hand to the German people and helped them make contact again with other nations. In Western Germany MRA has worked very forcefully in the creation of good relations between management and labor.

Men and nations cannot outwardly enjoy stable relations until they have been inwardly prepared for them. In this respect MRA has rendered great lasting services.

We have seen the conclusion after some difficult negotiations of important international agreement. MRA has played an invisible but effective part in bridging differences of opinion between negotiating

parties. It has kept before them the objective of peaceful agreement in search for common good which is the true purpose of human life.

Begin with yourself—that, in my opinion, is the basic challenge of MRA. May this challenge ring out far and wide across the whole world and into all nations.

Mr. Speaker, it is by a most happy combination of events that at this time a new weapon in this ideological struggle is being put into our hands. It is this handbook, "Ideology and Co-Existence," prepared by Moral Re-Armament. It has been published as a weapon to put America and the free world on the offensive in this war of ideologies. It sets forth in pungent sentences the true nature of communism and presents the one effective universal answer.

The strength of the statements in this handbook and the ideology which it represents is proved by the violence of the attacks which Tass—the Soviet News Agency—Pravda, Izvestia, Trud, Life, and Literature, and the Moscow, Tashkent, and Peiping radios have launched against it, noting that this handbook "is putting an end to the ideological softening up of the free world."

To my knowledge this handbook is receiving one of the most massive simultaneous distributions in the history of the world. A copy has gone to every home in the Scandinavian countries, including Greenland and Iceland, to every home in Holland, and in Switzerland where it was given a foreword by General Guisan, the famous commander in chief of the Swiss armies in World War II. Last week it went to every one of the 4½ million homes in Canada. At this very moment it is being distributed to every family in Britain, France, Germany, Italy, and Australia, and before the end of this month it will reach every home in this Nation's Capital.

It is fitting that at the time of Chancellor Adenauer's stay in this country means such as this are available to strengthen the fundamental beliefs and qualities of the American people and restore to new life and power the precious heritage of our forefathers and the great destiny of our land.

The Foremen's Story

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. DULSKI. Mr. Speaker, I have previously outlined in the RECORD the plight of the foremen in American industry, who are in the no man's land between management and labor, without collective bargaining rights or the protection of laws of the land concerning labor-management relations.

The following address, by Joseph Murphy, temporary president of the Foremen's Federation of America, elo-

quently and adequately amplify what I term the "Foremen's Story":

ADDRESS MADE BY JOSEPH F. MURPHY, OF BUFFALO, N.Y., TO THE STRIKING STEELWORKERS OF THE BUFFALO STEEL CO., AND THE FOREMEN AT THE SAME MEETING

Mr. Chairman, brother steelworkers, and foremen of the Buffalo Steel Co., it is an honor accorded to me to appear here this afternoon and address you men who are waging a battle for the principles that we all treasure highly. You men of the rank and file have the support of your very noble organization back of you. Through the efforts of the many men who in the past have fought for the right to association, you men have today the weight of the U.S. Government supporting your just cause. But you foremen are in a very precarious position. The words of the Labor-Management Act state that you are not to be deemed as employees within the words of the act. To me, my friends, this is a mockery. I can recall the days when, as a youth, I attended the schools of our land. I was proud of the fact that I had been blessed by being born in America. For, as I read the words of the immortal Declaration of Independence and the amendments of the U.S. Constitution, sponsored by the outstanding American, Thomas Jefferson, I felt I was very fortunate indeed to be an American citizen. I can recall the lessons by the good Sisters in my early schooldays when they taught me of the many rights that the just and merciful God has bestowed on me. Rights, my friends, that no government could deny.

But, as I grew to manhood and took my place in the industrial world to gain for self and my family, I found that when I endeavored to exercise these rights, I was halted by the masters of industry. Many a time have I since the days of 1909 suffered the results of the blacklist for my membership in the trade-union movement. I have seen my fellowmen shot in cold blood by the thugs employed by the masters of steel in their endeavor to stop the organization of men into the unions for their economic welfare. I have traveled many a time away from my family to parts far away in order to secure employment, and many a time under a false name.

Many a time when alone I have pondered over the conditions that made me an exile as it were from my family, owing to my demanding the protection of my rights as given me by my Creator. I have at times wondered if this was America—the land of the free and the home of the brave. But the lessons taught me by my dead father always remained with me and I had the faith that some day the laws would be enacted that would protect me in my rights. When in 1943, gentlemen, I became a member of the Foremen's Union, and I read the words in that document I assumed that owing to the fact that the foremen in the years gone by also were guaranteed the protection of the law, the same as the boys who worked under me.

But when the Taft-Hartley Act came into being I was confronted with the fact that I, a foreman, was not entitled to the same privilege that my fellow foremen in the maritime, railroad, and the building trades, enjoyed. I was a potential economic slave to the whims and the policies of the steel barons. They, through the law, stated that I was part of management. I had no voice as to the hours I worked, the pay I received, and that at any time the management decided to eliminate me from the payroll, I took it with no help from my Government or any of my fellow foremen.

During the war we have been on the firing line, as it were, producing the necessary weapons to win the war for democracy, and the freedom of the many in Europe from the rule of Hitler and his cohorts only to find out that when peace came we were worse off

than the ones we had fought to liberate. What a shock this was to us born in America. I consulted with many of the clergy and tried to find out whether I was wrong in my belief as to my rights, only to be told that I was correct. That Almighty God had made no distinction between men and foremen, and that I, too, had my station in society to protect, and that the welfare of my wife and kids were entitled to the same protection of their bread earner as the men that I supervised.

You men of supervision are faced with the command that you, too, must insist that this Government of ours must also protect us; that we will fight for the recognition of our rights; that we, too, are entitled to all the privileges as the men we supervise; that simply being a foreman does not mean that we are a simple mechanical robot in the great industrial machine to be discarded whenever the boss wants to remove us from the scene.

It is up to you men to assert your manhood and citizenship. During this month we celebrate the birthdays of two great men, Washington—the father of our Nation—and Lincoln, the savior of the Union. Write your Congressman and request him to support the amendment to the Labor Management Act to protect the foremen. Then go to your church, no matter what faith and ask the Divine Giver of all the good things in life to send to the lawmakers of our Nation the wisdom of granting first class citizenship to we foremen.

I do hope that very soon we can tell the management of steel that this is America, and not Russia; that the words of the Declaration—"That all men are created equal and endowed by their Creator with certain inalienable rights and that among those rights is the right to life, liberty, and the pursuit of happiness."

Again, I thank you for the honor given me and all I can say, in my humble and sincere manner, may God bless you.

Cuba: Hands-Off Attitude

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. BERRY. Mr. Speaker, under unanimous consent I insert in the RECORD a letter received from a resident of the Second Congressional District of South Dakota, which letter makes a lot of sense so far as our relations with Cuba are concerned.

This letter from David R. Richards, of Spearfish, S. Dak., is as follows:

I have been reading with some interest the State Department's hands off attitude as concerns Cuba. In turn I have kept silent, thinking that things will work out.

However, the time has come to have Congress now advise the State Department to put their foot down and in the same token demand that Cuba reduce the price of sugar to that price which the U.S.S.R. is paying.

Power hungry people can only be dealt with through the stomachs of their people and certainly no one in the West or East can ball the Cuban people out of their bondage and servility to Castro, without first making things worse before they get better.

The United States of America for years has always turned the other cheek and then walked the "second mile" with other countries just to have peace. There can be no peace at any time with bullies, robbers, murderers, and dictators, and it is time

that we stood up and punched back such as Herter did recently in Cuban affairs.

Dignity of people and nations cannot be achieved by letting a bunch of hooligans run over them and by polite words between their State Departments. This type of respect can be obtained only by firm, fair, sincerity of action against those that cause the trouble, not by running scared or offering bribes just to keep the peace.

Red Growth Rate Found Lagging

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mrs. ST. GEORGE. Mr. Speaker, we in this country have contracted a new and virulent disease. It should be called Soviet, or Russian, neuroses.

Those in the throes of the disease believe firmly that everything from the ballet to the ballistic missile bigger and better in Russia than anything of its kind in the rest of the world. This is especially true of our productivity rate compared to that of the Soviet Union.

Now comes an English economist who knocks the theory of Russian productivity into a cocked hat. Like most people near the U.S.S.R., Mr. Colin Clark is not particularly terrified of the Russians. He leaves that fear to his American cousins who are over 3,000 miles away.

The following article by Frank C. Porter appeared in the Washington Post of March 12 and gives a brief synopsis of Mr. Colin Clark's findings:

RED GROWTH RATE FOUND LAGGING—ECONOMIST FINDS SOVIET PERFORMANCE MEDIOCRE

(By Frank C. Porter)

The specter of burgeoning Russian productivity has caused considerable consternation in the United States.

Politicians, businessmen, economists, and scientists have pointed to figures showing an annual Russian growth rate of 6 percent or more against our 3.5-percent average.

Some have called for extraordinary measures to close the gap, to protect the United States' productive superiority, to give the lie to Khrushchev's boast that the Soviet's real national product will match or top ours in a decade or so—a boast which many Americans seem to fear may prove only too true.

Almost alone is a British economist who, in effect, calls the whole thesis tripe.

"Like so many other things which 'everybody knows,' this supposed growth trend of the Soviet economy is an illusion," writes Colin Clark, Oxford University economist and research director of the Econometrica Institute. Fortune magazine has printed the main conclusions of Clark's forthcoming book, "The Real Productivity of Soviet Russia," in its current issue.

The illusion arose, Clark says, through expectations that a spurt in Russian productivity, reflected in data for the period 1949-53, will continue indefinitely. He chides fellow economists for overlooking a commonplace: After a war or other disaster which has drastically reduced its productivity, a nation will go through a period of rapid growth followed by gradual deceleration of this rate "as productivity approaches that position on its normal trend line which it might have been expected to reach had the war not occurred."

"The information for the years after 1953 shows in actuality the rate of (Russian) growth slowing down," he points out.

Clark likens neurosis over Russian growth to the prognosis of a physician who, finding that a child recovering from a serious illness shows a rapid gain in weight for two successive weeks, plots the figures on a logarithmic diagram and tells the parents that in a year the child will weigh more than the father.

As for Clark's own figures, he finds the annual rate of Soviet growth per man-hour to be only 1.2 per cent over the period 1913-56. Reckoned from 1928 the average is 1.7; from 1939, only 1.6 percent.

Against this, the average rate of growth per man hour in the United States has been 2.3 percent a year from the 1890's, Clark says.

Since population increase is also a factor in growth of the total national product, Clark takes some pains to show that the Soviet Union falls far behind the United States in this category as well.

Russia's rate of population growth has been 1.5 percent and "possibly" is now decreasing while the U.S. rate stands at 1.8 percent and is increasing, Clark claims.

The British economist comes to a political and moral conclusion: "Governed by fanatical materialists, the Russian people have been called upon to sacrifice their personal liberties, their national traditions, and their religion for the sake of material progress; and all that they have received in return is a rate of material progress far below that of most other countries It should be made clear how very mediocre the economic results of communism have, in fact, been."

The Super-Bomarc Missile in Perspective

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PELLY. Mr. Speaker, last year when the armed services appropriation bill was being considered by the House, there was opposition during debate on the floor to the inclusion of funds for the super-Bomarc missile. At that time, I did not argue merits or military facts; nor did I shed crocodile tears for the Bomarc B just because it happens to be a product of the Boeing Airplane Co. of Seattle which I represent. I did state that laymen should leave technical decisions to the military engineers who can evaluate scientific capabilities and defense needs. All the while, of course, I recognized in the debate the earmarks of typical interservice competition between the Bomarc as against advocates of the Nike missile, or you might say it indicated Army versus Air Force rivalry.

Mr. Speaker, there are rumblings that this same rivalry may break out again. Indeed, publicized troubles of Bomarc firings are good material for use in attempts to withhold funds for its continued development.

Again, I must make my position clear. I will not subordinate in this the national interest to the special interest of my own district or support military waste or unnecessary duplication. The troubles encountered in super-Bomarc

firings should be fully aired in the House Defense Subcommittee. But I do hope members will not prejudice the facts. Necessarily, missile development involves trial and error. After all, the Atlas had successive problems before its long series of satisfactory firings.

My point is that it would be unfair to make an important military decision based on news articles—especially headlines. The testimony of the Defense Department, not news reports, should decide the issue.

Notwithstanding, I offer as a matter of information a newspaper article which I think covers the situation fairly. Here is the most objective news coverage on the Bomarc troubles I have read. I commend to all Members of Congress the following article which appeared in the Seattle Times of March 8, 1960:

SUCCESS SEEN FOR SUPER-BOMARC—GIVEN ADEQUATE TEST TIME

(By Robert L. Twiss)

It is time to put the trouble-plagued super-Bomarc flight-test program in perspective.

A super-Bomarc—the Boeing Airplane Co.'s solid-fuel-boost defensive missile—was destroyed by fire Saturday on the launch pad at Cape Canaveral, Fla., 30 minutes before the countdown reached zero.

Boeing was readying the missile for a seventh super-Bomarc flight attempt when a failure in instrumentation, not the weapon itself, led to destruction of the missile.

None of the six previous flights was completely successful. The shoots were not complete failures, either, for important lessons were learned. On several of the tests, the ramjet engines, which provide cruise power for the interceptor, failed to ignite.

BIGGEST HURDLE TAKEN

On the sixth test, the solid-boost rocket hurled the missile skyward and the ramjets ignited. But a malfunction in the flight-control system—which had worked perfectly in previous flights of the Bomarc Model A—caused the missile to plunge into the sea short of its planned flight.

However, the Air Force said then the missile in that flight passed the major hurdle of the flight-test program.

Missile failures and partly successful flights are not new to the military services and aerospace industry. Cape Canaveral is a testing ground to perfect weapon systems; problems are part of the development cycle of all missiles.

The Bomarc troubles are occurring at an unfortunate time, however. Both the Air Force Bomarc and the Army's Nike-Hercules defensive missiles have been targets of congressional criticism for years.

The fiscal 1961 military budget, now being discussed by Congress, contains \$420 million recommended by the administration for the Bomarc system.

AMMUNITION FOR CRITICS

The Superbomarc test troubles undoubtedly will be used by congressional critics as evidence that the program should be reduced or canceled.

Given reasonable development time, however, there is no reason why the advanced Bomarc will not be an effective weapon against manned aircraft and air-breathing (nonballistic) missiles.

Its predecessor, the liquid-fueled Bomarc, has compiled an enviable test record against both drone aircraft and supersonic missiles. The Superbomarc is a longer ranged weapon than its model A predecessor.

The Superbomarc should be able to prove its worth in a few more test flights, for the

earlier shoots clearly indicated the problem areas that needed correction.

FEUD BLAMED

Unfortunately, both programs have been the targets of irresponsible criticism, much of which has arisen from the Army-Air Force feud over defensive missile assignments.

In the case of the Superbomarc fire Saturday, the Associated Press' reporting of the incident will add to the controversy.

The article stated that a congressional committee has been critical of Bomarc and might drop it in favor of Nike-Hercules. The article failed to mention that Nike-Hercules has received equally strong congressional criticism.

The Senate Armed Services Committee last year voted to withhold most Nike-Hercules base funding, for example, because of its doubts of the merit of the weapon system. A compromise resulted in continuing both the Bomarc and Nike-Hercules programs.

At stake in the Superbomarc program for the Seattle area are many of the 15,000 jobs in the Boeing project.

Billions for Research

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I wish to present a most timely and well-written editorial, entitled "Billions for Research," which appeared in a recent issue of the Shreveport Journal, Shreveport, La.:

BILLIONS FOR RESEARCH

As the 1950's were a decade of startling scientific fireworks, many of which promise to project a concept of civilization and human endeavor not yet fully realized, the 1960's are already being heralded as a period of great research and study.

Many new horizons were glimpsed through partly opened doors during the latter half of the last decade. So enticing were the rewards promised by this brief look, many individuals in many walks of life are laying the foundation for further pursuit.

This foundation is research. The fulfillment of one of man's most fervent desires—to travel beyond the confinements of his planet—is now within reach. There is no longer doubt that universal travel is possible. Only the completion of present scientific experiments is necessary.

The centuries-old search for an economical means of converting sea brine into potable water is about to come to an end. Only a little more experimentation and a little more research are needed. Even the elimination of man's most common diseases has been brought closer by discoveries in recent years. Who can predict what a little more laboratory study will produce?

Thousands of minor puzzles have been brought closer to solution by greatly expanded facilities for research. There are now 7,500 research bodies in the world—more than 5,000 of them in the United States—employing 800,000 persons. In 1920, the United States had only 290 research groups. It is a rare industrial concern which does not devote large amounts of capital to the research and development necessary for the introduction of tomorrow's products and services. Universities, govern-

ment, and private foundations all contribute handsomely to the investigation of the unknown, as well as the improvement of the present.

Crawford H. Greenwalt, president of E. I. du Pont de Nemours & Co., has characterized research as a "savings account from which we make withdrawals as we convert that knowledge through applied research to new products and processes. As with all savings accounts, bankruptcy lies ahead when withdrawals exceed deposits. To keep our scientific balance in healthy condition, we must insure always that our deposits derived from basic research are never less than our technological withdrawals."

Anticipating the great use to be made of present knowledge and that which will be forthcoming at more frequent intervals, industry is determined not to go bankrupt in its potential progress derived from research. Segments of industrial society which wish to expand and perhaps increase their influence in the future now realize a laboratory filled with research personnel is a guarantee of display cases filled with new merchandise.

The Late Senator Richard L. Neuberger

SPEECH
OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. REUSS. Mr. Speaker, I join with my colleagues across the Nation in expressing my deep sorrow at the death of Senator RICHARD L. NEUBERGER, and my sympathy to Maurine Neuberger. The thoughts of Mrs. Reuss and I are truly with her.

DICK NEUBERGER was a remarkable man—a great Senator and statesman, a prolific writer, a man of deep human insight and compassion, a close friend and legislative partner.

It was my privilege to work often with Senator NEUBERGER. No one was more dedicated to the conservation of all our Nation's resources than he, and I was proud to be associated with him in this great cause. He fought wholeheartedly for the interests of the Klamath Indians of Oregon—and when we had some difficulty guarding the interests of the Menominee Indians of Wisconsin, he helped us out, too. In fighting for adequate health and medical research programs, in enacting billboard regulation, in many other endeavors, it was a pleasure to be allied with DICK NEUBERGER.

Most recently, Senator NEUBERGER joined me in introducing a bill looking toward the establishment of a Point 4 Youth Corps, to enable young Americans to serve our country and help the peoples of other nations in technical assistance missions in far-off lands. DICK NEUBERGER's sponsorship of this legislation was typical of his deep interest both in young people and in America, showing to the world our sincere dedication to peace and friendship.

We in the Congress have lost an inspiring friend, and the Nation has lost a brilliant son.

National Council of Churches of Christ in U.S.A. Urge Medical Care for Elderly

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the March 5, 1960, issue of the AFL-CIO News:

FOR AND PRINCIPLE BUTTRESSED—COUNCIL OF CHURCHES URGES MEDICAL CARE FOR ELDERLY

OKLAHOMA CITY, OKLA.—The general board of the National Council of Churches of Christ in the U.S.A. has conditionally endorsed the principle of the Forand bill to provide medical care for the aged, declaring the Government must act if voluntary insurance plans fail to offer needed protection.

At a 2-day meeting here, the board adopted a statement expressing deep concern over the availability and financing of medical care of high quality, and called on the medical profession and the public to maintain flexibility in considering new approaches aimed at meeting the problem.

The board, governing body of the 40-million-member religious federation, said the "continued growth of prepayment methods shows promise of insuring high quality of medical service."

"The churches should encourage the inclusion of mental, dental, nursing, and other health services in programs of prepaid care, and the extension of the amount and kind of care available to retired and other aged persons and to persons living in rural areas," it added.

"If voluntary prepayment plans cannot accomplish the desired ends, Government should protect the health of the people by making possible the prepayment of health services."

A floor move aimed at striking from the resolution the reference to the Government's role was defeated after the Rev. Charles C. Webber, director of religious relations for the AFL-CIO and a member of the National Council's executive board, spoke in favor of retaining the original language.

In other actions, the religious federation's governing body—

Opposed extension, in its present form, of the Mexican farm labor program due to expire June 30, 1961, declaring the importation of foreign workers "tends to produce a labor surplus, thereby depressing wages and labor standards for domestic agricultural workers."

Urged amendment of the Fair Labor Standards Act to prohibit the agricultural employment of children under 14, except those working on farms owned by their parents. "Health and safety records," the council noted, "now place farm operations among the most hazardous occupations."

Called on candidates in the forthcoming presidential campaign to adopt high ethical standards, disclaim all forms of demagoguery, and insure that there is "no resort to intimidation or bribery, direct or indirect."

HEALTH A KEY RESOURCE

The Council of Churches statement of concern for the Nation's health services declared that "it is now widely recognized that the health of people is an important national resource, and therefore Government has increased its responsibility for the maintenance of optimum health." It continued:

"With the rising cost of medical care, serious or extended illness has imposed eco-

nomic burdens which are beyond the capacity of many individuals and families to meet from current income. There is need for churches and church members to study the economic aspects of health services.

"Experimental patterns of health service, such as group health programs under the auspices of labor, management, or other responsible voluntary associations of people, deserve encouragement."

Railroads to the Rescue?

EXTENSION OF REMARKS
OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ROBISON. Mr. Speaker, the special subcommittee on the Federal-aid highway program recently completed hearings dealing with the difficulties the Defense Department has experienced in moving the largest items in our missile arsenal through bridges and underpasses on the Interstate System. We have yet to meet to attempt to come to an agreement as to the import of the facts brought out during such hearings, and to approve the recent decision of the Bureau of Public Roads ordering a minimum 16-foot vertical clearance standard on such system in lieu of the original 14-foot standard.

We did discover, I think, that there are many more facets to this problem than originally met the eye. It is to be greatly hoped, therefore, that the subcommittee will not approach its decision-making responsibilities in a hasty or partisan manner, but in an objective and properly deliberative manner.

It is my understanding, though I as a minority member of the subcommittee have yet to see it, that the Association of American Railroads has submitted a written statement for inclusion in the record of the hearings to the effect that raising the vertical clearance standard will not enable the highways to accommodate any important military shipments which cannot now be handled by the railroads which, goodness knows, need the business. Certainly, in view of the added financial burden any such change will bring to an already overloaded highway trust fund, this is one facet of the overall problem to which the subcommittee should give serious consideration.

As further evidence of that I herewith include, under leave to extend my remarks, the following editorial from the Sarasota News of March 4, 1960:

BACKWARD PROGRAM

Now it turns out that our missile gaps aren't big enough. Since 1956, 2,259 bridges, overpasses and underpasses have been built or authorized on the Federal Highway System—with too little clearance for modern missiles to be trucked through.

The House Public Works Committee investigating, estimates that changing these and the others to come would add about a billion dollars to the cost of the highway program.

It seems that up to 1957, the Defense Department thought 14-foot clearances would be enough to clear the heaviest missiles the United States might build. In that year, they changed their minds and decided they'd need 17 feet. Now there's talk of compromising on 16 feet, which, we presume, would confine the United States to building smaller missiles. Or to building bigger missiles but not sending them anywhere.

Perhaps, before the bridges are adjusted on all 41,000 miles of new Federal highways, the Defense Department might be asked just where it wants to send its missiles. The big ones aren't now sent everywhere from coast to coast and border to border, anyway. It's doubtful they'll ever need to be, seeing as how their range is in thousands of miles and that they cover space more rapidly on their own than on trailers in traffic jams.

Further, we've been reading that the defense experts are talking in terms of putting our missiles on railroad cars so they can be launched from anywhere. Launching sites would be moved frequently to keep any enemies from zeroing in on them. If they're to be on rails, why doctor the bridges to accommodate them?

We hope some serious study will be given to these questions—more serious study than evidently went into the original planning.

Let's be sure how much clearance is needed just where, before getting out the jacks and putting up the jack.

Proposal for an Impartial Study of New York City Government

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. ANFUSO. Mr. Speaker, as our civilization grows more and more urban with each passing year, new problems arise on the need of more adequate housing, eradication of slums, decaying neighborhoods, transportation facilities, more and better schools for our children, more parks and playgrounds, water pollution, industrial and economic growth, and numerous other problems facing the modern city.

All of this requires not only a greater outlay of funds, but also an adjustment and modernization in municipal government and a more efficient city governmental structure. Perhaps even more important is the need for establishing better cooperation between States and municipalities. It is not necessary to wait until there is a breakdown in municipal government operations before studying the situation and seeking ways to improve it.

This is true today of nearly all of our major cities in the country. I am, of course, particularly interested in the problems we are encountering in New York City, where improvements are sorely needed. While this matter has received some attention, nothing of a concrete nature has been done thus far.

Recently, a proposal has been advanced by Mr. Frank D. Schroth, former owner of the defunct Brooklyn Eagle, for one or more of our public-minded private foundations to undertake jointly

an impartial and nonpolitical study of the New York City government with the idea of subsequently recommending constructive plans how to improve the municipal government and bring it more in accord with the times.

This proposal deserves very serious consideration and early action. Once the study is decided upon, it should be pursued in a nonpartisan manner with only the welfare of the people of the city of New York in mind, irrespective of party affiliations. It is estimated that such a study would cost approximately \$2 million. This is not too huge a sum for one of our larger foundations.

Perhaps a joint study sponsored by several foundations could be undertaken, and if necessary some of our universities which are doing admirable research work in political science could be interested to participate in the project. This kind of a study would be of great value not only to New York City, but could serve as guidance in the planning and improvement of other urban communities in the country.

I am today writing to several foundations regarding the proposal, among them the Ford Foundation, the Fund for the Republic, the Rockefeller Bros. Fund, the Twentieth Century Fund, and others.

Also in connection with this matter, I am inserting into the RECORD an editorial from the New York Daily News of March 14, 1960, in order to give this proposal wider attention. The editorial reads as follows:

PAGING SOME FOUNDATION(S)

The so-called little Hoover commission, appointed by the legislature to dig into New York's governmental setup and recommend improvements, has stubbed its toe several times and isn't looking nearly as healthy as it once did. This despite a surprise shot in the arm from Controller Lawrence E. Gerosa.

Its main trouble seems to be that it is overloaded with Republicans who can't resist the temptation to try to undermine the democratic city government, rather than work out constructive suggestions for strengthening that government no matter which party controls it.

This weakness seems almost sure to afflict any such committee having a political background. Meanwhile, the city goes on needing an impartial, overall analysis of the way its government operates, plus disinterested plans for bettering the operation.

Comes now Frank D. Schroth, onetime owner of the strike-killed Brooklyn Eagle, and suggests a plan which seems eminently practical and promising to us.

Why, says Mr. Schroth, doesn't city hall ask one of the wealthier foundations to put on a detailed, impartial, nonpolitical study of the city's government, department by department and bureau by bureau?

Such a project might cost \$2 million or even more. But that is peanuts to such outfits as the Ford Foundation, the Rockefeller Brothers Fund, the Fund for the Republic, and the like.

If one of these institutions didn't want to take on the whole financing job, several of them could chip in to build up an adequate kitty.

Thus these foundations, says Schroth, "not only would be fulfilling a great public need but would also be improving the investment climate for their tremendous resources"; and "this would be an opportunity to repay the people of New York in some slight way." They would also kill off some

of their reputation for spending money foolishly.

What with recent scandals in various areas of city government, the mounting complaints against high taxes, the spread of slums, and so on and so forth, a study like the one Mr. Schroth suggests is obviously needed. Just as obviously, politicians can't fill this particular bill.

We pass the Schroth idea along with the recommendation that it receive earnest consideration from the mayor, the board of estimate, and the city council.

Missing War Prisoners

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a very interesting and enlightening editorial that appeared in the Chelsea Record, Chelsea, Mass., on March 11, 1960, which warrants the attention of each and every Member of the Congress:

MISSING WAR PRISONERS

Khrushchev's resumption of the Berlin cold war and the determination of free-world nations not to be driven from the defense of a besieged ally could lead to renewed demands by the West for some news of the hundreds of thousands of German soldiers captured by the Russians during World War II and never seen again.

German Red Cross offices list more than 2 million soldiers who disappeared during the bitter fighting, never to be heard from again. Thousands of inquiries continue to flow in each year from relatives seeking some clue to the fate of their missing kin. Most officials, and surviving relatives, have given up hope of seeing any of them alive, but they would like the consolation of knowing how they died.

A great majority of the missing Germans were last reported fighting on the Russian front. It is known that in the battle of Stalingrad alone more than 200,000 were killed and 500,000 captured from the German 6th Army. Most of these were never reported by the Russians. The dead were interred in mass graves and the captured shipped to Soviet labor camps and oblivion. How many of the latter managed to survive Russian brutality is not known, but it is doubtful there are many still living in Russia.

As is the case of the missing Americans in Korea—Communist prisons are believed to hold more than 500 American servicemen captured during this conflict—the Russians have denied any knowledge of the missing Germans. This was one of many acts of savagery perpetrated during the regime of Josef Stalin which have not been repudiated by succeeding rulers in the Kremlin.

If the Russians show a determination to follow through with their threat to turn the keys to East Germany over to the puppet government and attempt to swallow West Berlin, the spirit of Camp David will automatically dissipate. If the cold war is to be resumed, let the Russians be presented with the long list of atrocities, reneged promises and broken treaties they have accumulated over the years.

Breaking the peace for moments of propaganda advantage has been one of the prime tactics of the Soviet Union. If the Kremlin should undertake to destroy the momentary

peace so painstakingly conceived, the West should not hesitate longer in an all-out assault on the most heinous record ever gathered by a world power.

A Warm Ambassadorial Embrace for a Dictator?

EXTENSION OF REMARKS
OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. PORTER. Mr. Speaker, ever since the President endorsed Milton Eisenhower's recommendations in January 1959 the hemisphere has been waiting to see what implementation the administration would give the fully endorsed and loudly trumpeted doctrine of "a formal handshake for dictators and warm embraces for democratic leaders."

Our Ambassador to Nicaragua, Thomas E. Whelan, has been there for 9 years. The U.S. Embassy in Managua is so located as to appear to be an outbuilding of the Somoza estate, or vice versa.

This situation, which should be embarrassing to the administration, but which is apparently entirely acceptable, is described in the February 27, 1960, issue of the Nation by James L. Busey, in his article entitled "Mission to Somoza-land." Mr. Busey teaches political science at the University of Colorado and visited Nicaragua on a faculty fellowship award for research in Central America. His findings are summed up in this paragraph:

No rational person expects an ambassador to be openly hostile to the regime to which he is accredited. But in Nicaragua we have a clear-cut case of the United States obdurately retaining one whom Central Americans widely believe is playing footsy with a hated dictatorship. In the face of the Smith-Batista revelations, and the widespread Latin American impression that this is precisely the way the United States conducts itself with dictators, the State Department should either explain or correct the Nicaraguan diplomatic situation.

The entire text of the article, under a previous consent, follows:

MISSION TO SOMOZALAND

(By James L. Busey)

One would suppose the Department of State must have learned something from the fairly recent entanglements of Ambassador Smith with the Batista regime. It would be reasonable to expect that Latin America's frequent protests against alleged U.S. affection for dictators would have had some impact by now on our diplomatic practices in this hemisphere.

Apparently not, at least in Nicaragua.

Next to the bizarre Trujillo tyranny (since 1930) in the so-called Dominican Republic, the Somoza family dictatorship over Nicaragua, established in 1937, is the oldest in the New World. The two rulers of the country are Luis Anastasio Somoza and his brother, Anastasio Somoza, Jr., who have shared power since the assassination of their father in September, 1956. Luis, a civilian, is the President; Anastasio, a military man, is head of the national guard, or army.

The opposition circulates typical anti-dictator reports about the brutality and corruption of the Somozas. Dr. Guillermo Urbina Vázquez, a leftist, asserts that the personal fortune of Luis is no less than \$300 million. Nicaraguans who have been close to the Somoza family have given me even higher figures. Academicians confirm that the Somoza wealth is very great. Charles W. Anderson of the University of Wisconsin, who wrote an excellent, objective summary of the background of the Somoza dictatorship (Canadian Forum, August, 1959), gave \$150 million as a conservative estimate of the family's fortune. He quite accurately reported that most foreign transport by air and sea, and about 10 percent of the country's arable land, belong to the Somoza clan.

Pedro Joaquín Chamorro, of the conservative opposition to the dictatorship, writes in his *Estirpe Sangrienta: Los Somoza* (Mexico, 1957) on the torment undergone by political prisoners (he had been one himself). He tells of elegant zoological gardens adjacent to the presidential palace, where some cages contained African lions—and adjacent cages housed political prisoners, several of whom he names.

There are signs that Luis Somoza, if not his brother, would like to liberalize his rule; but it seems quite likely that the Somoza dynasty—which ex-President José Figueres of Costa Rica would call a "hereditary satrapy"—will eventually disappear. When the debacle comes, will Latin American public opinion again deem the United States to have been clearly on the side of a discredited dictatorship? Present evidence indicates that this will be the case. What is worse, the United States is doing nothing to correct the impression.

Critics of the Somozas differ politically among themselves. Dr. Guillermo Urbina Vázquez, president of the Junta Revolucionaria, obviously taking his cue from Castro, promises to shoot all Nicaraguans who have contributed in "greater or lesser degree" to support of the Somoza regime, and to include Communists in a seven-member coalition cabinet. Dr. Enrique Lacayo Farfán, Jefe of the Unión Nacional Opositora (UNO), is determined as anyone to be rid of the Somoza rule, but is more conservative. Whatever their political differences, however, all anti-Somoza leaders, and all Central Americans I have interviewed on the subject, charge that U.S. Ambassador Thomas E. Whelan is inextricably involved with the dynasty.

In Chamorro's book, it is alleged that Ambassador Whelan has participated in social functions in a salon looking out upon the cages which confined some of Somoza's political opponents. Emilio Borge Gándales, exiled professor of law of the University of León, wrote in a scholarly Costa Rican quarterly that Mr. Whelan "acts as a propaganda agent for the Somoza brothers." Time, in its issue of October 1, 1956, described the Ambassador as "a poker-playing personal friend of Somoza" (the reference was to the assassinated dictator).

There are two curious facts about our diplomatic representation in Nicaragua. The first has to do with the physical location of our Embassy there. The second is related to Ambassador Whelan's long tenure of office.

One cannot say much about the Somoza dictatorship without talking about La Loma de Tiscapa (or La Loma, as it is popularly called), a great hill that looms above the streets of Managua. Official government offices, including the Palacio Nacional, which houses the Nicaraguan Congress, are located in various parts of the capital. But the actual command post of the dynasty is at La Loma. On its topmost ridge are the huge, ostentatious homes of the Somoza brothers, commanding a view that extends

over substantially all parts of the city. The mansion to the west belongs to Luis, the President; the other—literally a castle complete with towers and turrets—is the home of Anastasio of the National Guard.

To the south—behind the palaces—La Loma drops off precipitously into La Laguna de Tiscapa, a deep crater lake. In front of the mansions, to the north, the descent to the streets of Managua is less steep. Sentry boxes guard the approaches, and soldiers are everywhere. Halfway down the slope is a long, east-west wall with gun emplacements, to keep back the rabble. There is an elegant Casino Militar, or Officers' Club; a large field, and an ornamental Tribuna Monumental, or parade reviewing stand. All the buildings and grounds are protected by security regulations; once within the borders of a boulevard that encircles the area, one must have official permission to take photographs.

The widow of assassinated Anastasio Somoza, Sr., lives in a relatively modest home—modest, that is, by Somoza standards—within the edges of La Loma, below and to the east of the Somoza brothers' palaces.

Outside the charmed circle, but bordering on the boulevard, are homes of National Guard officers. Nearby, also immediately outside the area of La Loma, are the huge walls and grounds of the Academia Militar, as well as the offices of the police.

A few foreign embassies, notably the French and Dominican, are within a short distance of the security area of La Loma, but most are in other areas of the city. Not so the Embassy of the United States, which occupies a large building within the restricted circle of La Loma, not over 20 feet from the home of Señora Somoza. With the reservation that Eisenhower is no Somoza, it is as though the Nicaraguan Embassy in the United States were situated on the President's Gettysburg farm. To all appearances, the U.S. Embassy in Managua is either an outbuilding of the Somoza estate, or vice versa.

The reports current in Latin America of our intimate relationship with the Somoza regime may or may not be true; the point is that most Central Americans believe them. And it would appear that in its choice of an embassy location, the United States is doing what it can to confirm the belief.

If the location of our Embassy seems odd, the tenure of our Ambassador is even odder. Thomas E. Whelan has served in Managua longer than any other U.S. diplomatic chief-of-mission has served at his present post anywhere on earth. My compilation of data from the Foreign Service List of October 1959, indicates that 68 of our 83 chiefs of mission have held their present posts only since 1957; 10 of the remainder were appointed in 1956, 3 in 1955, 1 in 1954, none in 1953 or 1952. Only one—Thomas E. Whelan in Managua—has been serving since 1951.

Mr. Whelan, a Republican from North Dakota, was appointed to Managua by a Democratic President, Mr. Truman. The unusual appointment needed some explanation, and Time (August 6, 1951) offered one: Mr. Truman wanted to reward Republican William Langer of North Dakota for having furnished crucial support.

In response to my request for an explanation of this long tenure, Wallace W. Stuart, Deputy Director of Personnel, Department of State, wrote me on December 16. His explanation was that "all ambassadors are appointed by the President, by and with the consent of the Senate, and are commissioned by him to 'serve during the pleasure of the President of the United States'; that Mr. Whelan was appointed by President Truman on July 28, 1951, and reappointed by President Eisenhower on February 26, 1953; and that Mr. Whelan 'continues to serve as Ambassador to Nicaragua at the pleasure of

the President of the United States." Mr. Stuart added that "Ambassador Whelan's tenure in Nicaragua sets no precedent," and cited the cases of Claude G. Bowers, Ambassador to Chile from June 1939, to August 1953, and of Harold Tittmann who, while not at one post as long as Mr. Whelan, "was Ambassador to Peru for nearly 7 years from June 1948, until March 1955." Mr. Stuart commented that "from 4 to 6 years' service as ambassador to one country is not uncommon for U.S. Ambassadors throughout the world." Mr. Whelan is now well into his 9th year in Managua.

Mr. Stuart concluded by writing that "I hope that this information will be helpful in explaining the length of Ambassador Whelan's service in Nicaragua." Most Latin Americanists would say that the explanation was not particularly helpful.

There may be some personal reason why Mr. Whelan must remain in Nicaragua; if so, it would seem that the U.S. Government could find some other useful employment for him in Managua. Or it may be relevant that Dr. Guillermo Sevilla Sacasa, Nicaraguan Ambassador to the United States, is the dean of the Washington diplomatic corps. Still, there is no protocol requiring the reciprocal retention of Mr. Whelan in Managua; and in any case, if this were indeed a factor, there is nothing to prevent personnel officers from saying so.

Managua is hot, muggy, and infested with mosquitoes as well as Somozas, and few would relish the post; but considering some other spots to which Foreign Service personnel are assigned, this is of course, no bar to finding a replacement for Mr. Whelan.

It may be that the Ambassador is quite popular with the Somoza family, and that the Nicaraguan Government wants him to stay.

No rational person expects an ambassador to be openly hostile to the regime to which he is accredited. But in Nicaragua we have a clearcut case of the United States obdurately retaining one whom Central Americans widely believe is playing footy with a hated dictatorship. In the face of the Smith-Batista revelations, and the widespread Latin American impression that this is precisely the way the United States conducts itself with dictators, the State Department should either explain or correct the Nicaraguan diplomatic situation.

Or if that is impossible, we might at least move our embassy to some other part of Managua.

Local and Federal Funds

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Los Angeles (Calif.) Herald Express, March 1, 1960]

LOCAL AND FEDERAL FUNDS

It is encouraging to note that while Governor Brown recommends asking for Federal funds to help State and county governments, California's State director of finance, John E. Carr, is of a different mind entirely.

Here is what Mr. Carr had to say after declaring the State should pay its own way in education and other matters:

"When we get Federal money, it always costs us more than if we used our own money without detouring it through Washington."

As for the State's public schools, he told the California Taxpayers' Association here that the schools are what he termed "de luxe" and do not need Federal help.

Well, he was asked, how about the proposed new \$450 million bond issue for schools in California?

Although his reply was cautious, it was obviously not designed to give comfort to the big spenders of public money.

Whatever is done, he said, the State should proceed carefully. And then he added these words of warning:

"Sooner or later the cost of government has to be faced by the people of California."

"We are going to have to accept a period of austerity sooner or later."

"Government costs increase normally about 5 percent a year and efforts should be made to absorb this by more modern technical methods."

The main, central, strong theme of Mr. Carr's message was to save, not spend.

This the people of California should demand of their Governor and their administrators of various State systems, as well as of their legislators.

Hold the line on spending and resultant higher taxes, Carr recommended, by such things as:

1. More efficient business management of State departments, including reduction of overlapping and parallel functions, to save large amounts of money in proposed costly office buildings.

2. Restriction of borrowing and issuing of bonds to those which are absolutely necessary, thus keeping the State from being financially overburdened and running up the cost of State financing.

3. He said the Governor's budget should go through without any additions by the lawmakers, but added that there is even now talk that the legislators are going to ask for money to provide new State services which would cost between \$35 million and \$40 million more.

The State director of finance is in a position where he can clearly see the dangers. His warnings should be heeded before California reaches the point of financial chaos or insolvency.

There is a ray of hope for the taxpayers of California (and that includes almost everybody and not just the property owners, but the payers of income, sales, gasoline, and many other forms of State taxes) when some of those prominent in government are brave enough to buck the easy come, easy go spenders.

Loyalty Oath in the National Defense Education Act

EXTENSION OF REMARKS

OF

HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. BERRY. Mr. Speaker, under unanimous consent, I insert in the RECORD the first of what I anticipate will be a series of resolutions passed by American Legion posts in South Dakota and across the Nation demanding that Congress retain the loyalty oath in the National Defense Education Act.

The resolution is based on the fact that the American Legion realizes the subversive nature of many of the foreign ideologies and urges Congress to not only retain but strengthen the loyalty requirements of educational loans made

by the Federal Government under the National Defense Education Act of 1958.

The resolution is as follows:

Realizing the subversive nature of many of the foreign ideologies, especially those of Red Russia and Red China, we, the members of Dwight Wood Post of the American Legion, of Springfield, S. Dak., in session this February 22, 1960, request and urge our National American Legion organization and our congressional delegation to press for such legislation as will retain and strengthen the loyalty oath requirement in the making of college educational loans by the Federal Government under the National Defense Act of 1958.

Mock War in Panama

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. FLOOD. Mr. Speaker, an informative analysis of the first major field maneuvers of the U.S. Armed Forces with those of the Latin-American countries participating, March 4-18, 1960, by Hanson W. Baldwin, distinguished military and naval analyst of the New York Times, was published in the March 6, 1960, issue of that paper.

The analysis follows:

[From the New York Times, Mar. 6, 1960]
MOCK WAR IN PANAMA—FIVE LATIN COUNTRIES JOIN THE UNITED STATES IN TESTING "REMOTE" CANAL DEFENSE

(By Hanson Baldwin)

Five thousand men and 150 aircraft from the United States and five Latin-American countries will participate this week in a mock war in Panama and the Canal Zone.

A parachute infantry company from Brazil, an airlanded infantry company from Colombia, a company of the Panamanian National Guard, and Lockheed F-80 fighter-bombers from Chile and Peru will join U.S. forces in simulated defense of the Panama Canal.

This will be the first time Latin-America will have joined with the United States in a major field maneuver. Therefore, the exercise, called Banyan Tree II, have more political than military importance.

All of the participating Latin American countries except Panama have bilateral military assistance agreements with the United States. These agreements provide for the development of specific military units to carry out hemispheric defense missions.

UNITED STATES PROVIDES TRAINING

For the last 7 years, the United States has been providing military training and military aid to these countries. Brazil, an ally in World War II, provided a division that fought in Italy. A Colombian battalion participated in the Korean war.

The active phase of Banyan Tree II will take place in the Canal Zone and in a treaty provided training area near the town of Rio Hato on the Pacific side of the Republic of Panama.

The first phase of the exercise, which will last until March 18, started Friday as United States and Latin American units were marshaled at their home stations and prepared for air movement to the Panama area. The highlight of the second phase is the airborne operation, scheduled for Tuesday at Rio Hato.

The Brazilian parachute company is scheduled to lead the assault from the air, followed by elements of an airborne battle group of the 82d Airborne Division from Fort Bragg, N.C., which will be transported in Lockheed C-130 Hercules aircraft.

The Panamanian National Guard unit will simultaneously make an amphibious landing on the Rio Hato Beach, using medium landing craft and the minesweeper *Falcon* under the general direction of Rear Adm. Lewis S. Parks, commandant of the 15th Naval District.

The Colombian infantrymen and other U.S. troops will land in the assault area in Fairchild C-123 assault transport aircraft. The fighter-bombers of Peru and Chile will fly close tactical-support missions from Howard Air Force Base in the Canal Zone for the ground troops.

LONG-RANGE AIR SUPPORT

During the third phase of the exercises, U.S. North American F-100 super-Sabres will provide long-range support, with the aid of air refueling, from Homestead Air Force Base, Fla., 1,160 miles from Panama. Later phases will involve jungle and tactical training, and the redeployment to home bases.

Lt. Gen. Riddley Galtner, commander in chief in the Caribbean, will control all forces while they are in the area. Maj. Gen. Charles L. Dasher, commander of the U.S. Army in the Caribbean, is maneuver director, and Maj. Gen. Leland S. Stranathan, chief of the Caribbean Air Command, will direct tactical air operations against the "aggressor" forces.

The role of "enemy" will be played by the 1st Battle Group of the 20th Infantry, the principal tactical unit and the only infantry component in the permanent garrison of the Canal Zone.

The maneuver is to test the post-World War II concept of the "remote" defense of Panama by aircraft and troops normally based in the United States or Latin American countries but ready at short notice for air movement there. Maj. Gen. Henry Viccellio, head of the Tactical Air Command's 19th Air Force, will command the combined air strike forces.

Red Poland Is Still Blazingly Polish

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. James Morris, which appeared in Sunday's Washington Post.

The article vividly describes the situation in Poland today and demonstrates again that despite that Nation's present Communist rulers, the Polish people continue to manifest their sincere dedication to the principles of freedom and democracy.

Mr. Speaker, the article follows:

[From the Washington Post, Mar. 13, 1960]

RED POLAND IS STILL BLAZINGLY POLISH

(By James Morris)

On the stroke of every hour throughout the day, a small shutter opens in the belfry of St. Mary the Virgin, in Cracow, the oldest and most beautiful of Polish cities, and a trumpeter, the bell of his instrument shin-

ing dimly in the shadows, blows an ancient call to arms.

Bold, clear and beautiful, it sounds across the market square where the women squat beside their flower stalls and the taxis squelch among the slush, and it rings away among the tumbled houses of the place to the broad, frozen Vistula and the high ramparts of the castle, where the old kings of Poland lived in a splendor of gold bowls and tapestry.

But suddenly in midphrase the trumpeter stops, and his music ends abruptly with a kind of dying jerk. Four times he tries, turning north, south, east, and west, but four times his fanfare is interrupted, and he never completes it.

A TART SPIRIT

The trumpeter blows this way because many tangled centuries ago, in the dim recesses of Polish history, a predecessor rousing Cracow against a Tartar invasion was shot in the back by a barbaric arrow halfway through his summons. The fact that to this day he never finishes his call, and that his heartrending failure is broadcast each day at noon by the Polish state radio, is a gage of the depth and resilience of Polish tradition.

In considering the People's Republic of Poland, as a political phenomenon, as a Communist experiment, as a dependency of the Soviet Union, it is wise to bear in mind the trumpeter of Cracow and all he so picturesquely represents. Poland is still blazingly Polish, and she breathes a tart spirit peculiar to herself.

Poland lies in the bowels of Europe, her western frontiers well to the east of Rome, her eastern on about the same longitude as Mersa Matruh. Yet she feels unmistakably a country of the West, a Christian country, a country of individualists, with humor and skepticism and argument like a tang upon the air.

Poland has been under unwanted Communist rule for 15 years, and since 1939 her story has been one of unrelenting foreign domination, actual or implied. But pay a visit to a students' theater in Warsaw, with its tinkling piano and its pretty feathery girls, its faint but pleasant baritones, its light-hearted attempts at a soft-shoe shuffle, and were it not for an excess of aspirants and a shortage of vowels in the lyrics, you might be at a little London revue.

GUSTO IF NOT LOGIC

The Poles are by nature a people of ease, fun and elegance, a people always con brio. Their manners are impeccable, their tastes ornate, and even the insistent objections of the hygiene specialists have not broken the feudal elaboration with which they kiss a lady's hand.

The Poles pursue their professions, their hobbies and their prejudices with equal gusto, not always indeed with great logic or overwhelming efficiency, but with a panache, nicely tinged with irony, that often reminds me of the Irish.

This punch and pungency of character has sometimes brought the Poles great suffering, but has at least enabled them to survive both as a nation and as a culture; and in our times it has prevented their land sinking once and for all into the alien uniformity of the Communist block.

In 1956 the ebullience of the Poles coupled with their well-known penchant for romantic if hopeless causes led to a relaxation of the Communist grip so generous that for a moment Poland seemed the progenitor of a new political compromise—a Communist state, but one so liberal that it might form a bridge of reconciliation between East and West. Today Poland is not quite so exhilarating as she was 3 years ago; but, thanks entirely to her own prickly pride, she re-

mains much the most relaxed and open-minded of the Communist powers.

THEY AREN'T SCARED

We may safely assume that three-quarters of the Polish people loathe the form of government that rules them, but nevertheless this is not now one of your grisly whole-hog police states. There is a censorship of newspapers; passports are not always easy to come by; Western diplomats and local die-hards will make your flesh creep with tales of hidden microphones, informers and tape recorders. But though the apparatus of complete despotism undoubtedly exists, since 1956 it has not been exercised.

There are, I am assured, no political prisoners in Poland today. People talk to you with abandoned liberty and outspokenness. Nobody, in my experience anyway, is scared to be seen with a foreigner. The bookstalls are heavy with the world's pinker press, but anybody who likes can read the organs of Western reaction in the bars of the big hotels.

Poland does not feel a happy country, but she does not feel a frightened one.

Intellectually she is in a turmoil of activity, her coffee shops buzzing with the exchange of ideas and the clash of opinion. Western culture of all kinds ferments and flourishes. Plays English, American, French, German are translated by the dozen and performed in a myriad of theaters. Western books are on sale everywhere, side by side with mountains of Russian technical works.

Many abstract artists are at work, many 12-tone composers, poster painters of involved technique, angry young men and existentialists. Architects are just beginning to squirm themselves out of the awful stultification of Stalinist taste.

Above all, Poland remains an intensely religious country. The intelligentsia, like its brethren everywhere, is mostly agnostic, but the people at large are said to be more staunchly Catholic than any other nation within the wide fold of Christendom.

The Church, which is engaged in a perpetual running battle with the regime, is the only organized opposition in Poland; but so powerful is it, so patently does it represent the feelings of its faithful millions, so stubborn is its hierarchy, that it remains inviolate the most powerful body of dissent within the Communist bloc.

How you respond to the fervors of the Polish church depends upon your own predilections, but for myself there is nothing more moving in Europe than the spectacle of a Polish church at evening mass, when the crowds of the poor and ever-faithful stream from the snowy streets into the dim cold church, to a glitter of vestments and candles and ornaments.

The vast congregation stands there in a condition halfway between slump and ecstasy, and the intensity of belief is so profound that it feels almost tangible, hanging and drifting about your head like a cloud of incense.

I am moved not simply by this unyielding faith but because you can see in the eyes of these people something of the tragic quandary of Poland, something of the terrible pathos that lies behind its gaiety. All that the Poles have snatched out of communism, they have won by their own strength of character; but for such a people it is not much.

Much has indisputably been achieved in Poland under Communist rule: the reconstruction of Warsaw from a wilderness of bloodstained rubble, great new housing schemes, new industrial projects. Nobody, so far as I know, is starving in Poland. People are reasonably well dressed, shops are moderately well stocked.

The present Communist leaders of Warsaw, notably Gomulka himself, are not power-drunk egotists; on the contrary, they

seem to live lives of ascetic restraint. There are few flashy cars for the wide boys of the party, such as you see brazenly skidding around the streets of Prague.

When Gomulka was sent a new kind of television set, as a gift from the state factory, he asked if he might pay for it on the installment system; he is a plain, humorless, dedicated workman, and he lives in genuine simplicity in a two-room apartment.

Nor can one be blind, in theory anyway, to the practical advantages of the system. Poland is a poor and in some respects backward country, and though her prewar government worked energetically enough to raise her from the slough, still there remains a heavy legacy of old unhappy times.

The country is congenitally against the government. It is riddled with corruption, evasions, black markets. The Poles have inherited from all their past tyrannies and occupations a natural tendency toward the crooked way, the slipped note from hand to hand, the little backstairs speculations.

They are flaming patriots, but they have been dominated by alien or unpopular authorities for so long that they often find it difficult to equate love of country with social conscience; and on paper anyway, communism can provide the element of discipline and communal effort that everybody (not least themselves) agrees they need.

Nevertheless, Communist government in Poland is a tragedy, if only because it really represents the domination of a foreign power. Few would deny, not even the staunchest party workhorses, that were it not for the ever-present threat of Russian power, communism would be swept out of Poland in a few crowded, glorious hours.

Only the wildest conservatives wish to return to the prewar past, to restore the great industries to private hands, and summon back the exiled aristocrats. But nearly all Poles would probably vote, if they had the chance, for some kind of democratic socialism that was truly independent.

They care less about economics, if I judge them right, than about freedom, national and personal. They are sick to death of norms, congresses, delegations, medallions of Lenin, party bonhomie, state enterprises, and all the tedious paraphernalia of the creed.

More than anything, they are sick of Russians. The Russian troops stationed in Poland are kept strictly within their allotted limits, for fear of incidents; and if ever the people of Warsaw could knock down the "palace of culture," Stalin's enormity of a gift to the nation, it would be a Mafeking, a Mardi Gras, a blockbuster of a fireworks night.

But there is nothing they can do. This is their age without a name and Gomulka represents the most they can hope of contemporary history.

In 1956 their spirit, fortunately met by Khrushchev's brand of gambler's liberalism, enabled them to achieve the degree of independence they enjoy now. But time has passed, the world has shifted, and today the events of 1956 have to them miraculous air, as if some divine thunderbolt had intervened on their behalf.

I am told that if the present ration of political tolerance were withdrawn from Warsaw, a revolution would occur, and optimists say that Khrushchev, his fingers still smarting from Hungary, would hesitate to stifle it by force. But for myself I have my doubts.

So, I suspect, do most Poles, and in a way this makes the vivacity of their intellectual life all the more poignant since in political terms it is achieving nothing. I do not know if they have really settled into a mold of political impotence—they certainly do not give that impression in the sparkle, skepticism, and irreverence of their conversation. But I think they realize that in the

unhappy poker school of our times, they have no more cards to play.

They turn from politics, most of them to other and more hopeful pursuits: to their profession, to illicit commercialism, to drink, to religion. Their dinner tables ring with infectious bravado, but after a few days in Poland you will begin to perceive the core of hopeless cynicism that lies behind the fun, and to grasp the tearing pathos of their realism.

For realism is what they like to call it. By instinct, they are anything but realists. They are an imaginative, high-flown artistic people, and nothing illustrates their character better than the mad but marvelous rising against the Nazis in 1944, when Warsaw, so many miles from friends, rose to arms in desperate inspiration, as on the wings of a Chopin polonaise.

In 1956, they were prepared to do the same again but in 1960—"Well, times have changed a bit. We must count our blessings and be realists."

In 1956, when Poland's grim period of Stalinism ended, Gomulka and Khrushchev, separately appraising a ticklish situation, presumably reached this common conclusion: that the Poles being the people they were, their political system had better be relaxed. If rule by secret police was going to incite them to violence, very well then, call off the cops.

Today in Warsaw, you hear constant ominous hints that the regime's methods of control are getting tighter, harsher, cruder again. If this is true, it is because liberalization has not worked from a technical point of view.

Everybody admits that the Poles are bad workers, and that the economy of the country is slipshod and ill-organized. This is only partly due to communism, and is chiefly the legacy of a raveled past.

Life among the Poles can be delightful, but could hardly be called efficient, or even indeed predictable. The queerest anomalies of economics and logistics give a truly Irish piquancy to financial affairs, and half Warsaw seems to conduct its commercial affairs with a wink and a rubbed thumb.

The big state-run stores are slovenly and illogical; the city streets are thick with sludge; petty embezzlements complicate half the official accounts. Poland feels disheveled, incompetent, and—compared with either Moscow or New York—unkempt.

All this shambles the Communist regime still hopes to reduce to order, and even the most blatant of their opponents admit that "some discipline" is necessary.

How to achieve it? We would say by increasing incentives, whose paucity keeps the Polish worker in a condition of disgruntled apathy; by widening the private sector of industry and commerce, now the subject of steady, rather than vicious, discrimination; by making more allowance for the Polish sense of nationality and individualism.

But the Communists might answer that they have tried a dose of liberalism, and it has failed. If nonconformism does not bring Poland to her senses, then perhaps uniformity will. There are indeed signs—straws in the wind, no more—that the regime may be tightening its dogmas.

I find it difficult to believe that with Khrushchev's ideas paramount among the Eastern countries, the full terror treatment is to be revived in Poland. The springs of the system, though, undoubtedly exist, like a mastiff leashed or muzzled.

It is all there, lying dormant: the secret courts, the camps, the whole hideous apparatus of despotism. The Poles know well enough that this instrument of repression still hangs over them, to be dropped at a word of harsh command, and the realists among them, at least, will think twice before uncoiling enough rope to hang themselves.

Thus Poland seems fated to compromise or uncertainty. Today the Poles do not know whether they can haul a new national identity out of the tragedy of their situation, whether they must remain a precarious half-way house or whether in the long run they will be absorbed once and for all in an inexorably expanding Mother Russia.

A melange of figures crosses my mind when I survey my stay among this striking people: the elert young students of the hitchhikers club in their vaulted basement in Warsaw; the preoccupied multitudes in the Cathedral of St. John, huddled in scarves and old coats; the gay and talented young people who produce Polish television; the friendly souls at the Hotel Bristol reception desk, inviting me to correct the grammar of their English brochure; the waiters clicking their heels like Uhlans in the steamy restaurant car; the wanderer who used to keep a hotel in Teheran; the cocky black marketeer; the faded patricians wandering like wraiths through the cracked bric-a-brac of the antique shop.

Young or old, successful or awash, in all their eyes there lurked, I thought, that most affecting of the qualities, pathos. The Poles are pathos personified, souls of brave pathos, through whose affairs there runs, like some distant plucking melody, an unbroken threat of sadness.

American Lithuanians Speak Out

EXTENSION OF REMARKS

OF

HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. RABAUT. Mr. Speaker, the annals of recent history record the tragic story of the vicious and tyrannical occupation of the Republic of Lithuania by Russian troops and her subsequent annexation by the Soviet Union. Thus the Lithuanian people have experienced the terror of communistic imperialism at first hand. They have seen their very freedom as a people and as a nation snatched away from them by forcible means. These people have not been forgotten or forsaken by the free world. The Republic of Lithuania retains its sovereign identity in the minds and hearts of freedom-loving peoples throughout the world.

As freedom-loving people, all Americans are ideologically opposed to communism. As citizens of a nation eternally dedicated to the principle of self-determination for all nations, all Americans detest and abhor Communist imperialism and its enslavement of free nations. As a nation which is truly "e pluribus unum," the United States of America is privileged and strengthened by having citizens from every ethnic and national origin in the world. One such origin is represented by those American citizens who are of Lithuanian descent. These Americans, particularly, have not forgotten what Communist imperialism has done to Lithuanian freedom. Recently the Americans of Lithuanian descent in the Detroit area held a mass meeting at which they drafted a resolution proclaiming their continuing love of freedom and their hatred of commu-

nism and its concomitant—imperialism. I ask that this resolution be inserted in the RECORD as an inspiration and a lesson to freedom-loving people everywhere.

Resolution unanimously adopted at a mass meeting of Americans of Lithuanian descent of Detroit and vicinity, sponsored by Detroit Lithuanian Organizations Center, held February 14, 1960, at Western High School, 1500 Scott Avenue, Detroit, Mich., to commemorate the 42d anniversary of the declaration of independence of Lithuania:

"Whereas Lithuania formally declared herself a free and independent nation on February 16, 1918; and

"Whereas in violation of international law, and unlawful, forcible occupation of the Republic of Lithuania, against the will of the Lithuanian people, the Kremlin rulers annexed her to the Soviet Union; and

"Whereas the people of Lithuania were and still are suppressed by tyrannical Communist dictatorship, her culture distorted, and thousands of her people deported yearly into prison camps; and

"Whereas our Government has never recognized the fraudulent and violent annexation of Lithuania by the Soviet Union: Therefore be it

"Resolved, That this gathering of loyal Americans of Lithuanian descent of Detroit and vicinity, calls upon the Government of the United States to stand firm against the expansion of Communist imperialism in the free world; be it further

"Resolved, That this meeting asks the Government of the United States not to trust the Soviet "peaceful coexistence"; and finally be it

"Resolved, That this meeting asks the Government of the United States to refrain from signing any new treaties with the Soviet Union until the latter agrees to restore freedom, sovereign rights and independence, to Lithuanian and other enslaved Eastern European nations."

Nineteen Hundred and Sixty Congressional Tour of New York City Scheduled for May 13, 14, and 15.

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. VAN ZANDT. Mr. Speaker, this week all Members of Congress will receive a notice from me advising that the annual tour of New York City for Members of Congress and their families is being arranged for May 13, 14, and 15. The trip is planned with the cooperation of the Honorable Richard C. Patterson, Jr., Commissioner of the Department of Commerce and Public Events, and Mr. Carmine A. Liguori is the program coordinator.

As Chairman of the Committee on Arrangements, an effort is being made to set up a most interesting and enjoyable program which will include visits to New York's Chinatown, the Empire State Building, a trip around the New York harbor, and many other interesting entertainment features.

As in the past, the visit to New York City will begin Friday morning, May 13,

when a special Pennsylvania Railroad train will depart from Washington Union Station at 9:45 a.m., DST. The group will return via the Pennsylvania Railroad, arriving at Union Station about 10:30 p.m., DST, on May 15. The all-expense tour will cost \$39.50 for adults and \$34.50 for children from 5 to 12 years of age.

All Members interested in the all-expense tour of New York City should mark these dates on your calendar immediately and await further information from me regarding the complete tour schedule and list of features. Miss Patricia Bryan of my office staff is in charges of reservations and can be reached on extension 4576.

Tax Problems in Connection With Payment of Dues of Chamber of Commerce Members

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. MASON. Mr. Speaker, the U.S. Treasury Department is now proposing to tax business and professional men's contributions or membership dues to chambers of commerce if and when those dues are used to present to the public the pros and cons of pending Federal legislation. The excuse used for this new ruling is that presenting the pros and cons of pending legislation to the public is lobbying.

Mr. Speaker, on December 29, 1959, the U.S. Treasury Department published a final regulation, to be effective immediately, covering the administrative policy on the tax status of expenditures for lobbying purposes and payments to labor unions or trade associations. Prior to this publication in the Federal Register, the Internal Revenue Service had held a public hearing on November 12 and 13, 1959, at which time more than 40 witnesses testified in opposition to the regulation. Approximately 200 written comments were received by the Internal Revenue Service also protesting the issuance of these regulations. Despite the opposition from interested and affected taxpayers and organizations, these regulations were published unchanged. The regulations purport to explain the administrative enforcement policy as to items which will be deductible for Federal income tax purposes as "ordinary and necessary" business expenses. In the area of legislative activities or lobbying the regulations limit the tax status as follows:

Expenditures for lobbying purposes, for the promotion or defeat of legislation, for political campaign purposes (including the support of or opposition to any candidate for public office), or for carrying on propaganda (including advertising) related to any of the foregoing purposes are not deductible from gross income.

As to the tax status of payments made by a taxpayer to an organization which he may financially support, the regulations provide that:

Dues and other payments to an organization, such as a labor union or a trade association, which otherwise qualify as business expenses, are deductible in full unless a substantial part of the organization's activities consists of those activities listed above.

These regulatory limitations have the effect of questioning the taxpayers' tax deductibility of legislative activities or so-called propaganda activities which a taxpayer may use on his own behalf or through a trade association which he may support financially and which he may consider an appropriate ordinary and necessary business expense.

Mr. Speaker, the broad scope and ambiguities of the terms used in this administrative policy will no doubt pose difficult problems for taxpayers in seeking to determine in advance what tax consequences may result from their having made expenditures or payments of this type. There has been widespread concern that because of these ambiguities and lack of definitive criteria that this administrative enforcement policy will result in a form of governmental censorship or limit the presentation of views on matters of government—at all levels of government.

Congress has never limited the tax status of ordinary and necessary business expenses in the manner or form covered by the regulations. The terms "lobbying purposes," "propaganda" are not defined nor is there any definition as to what type or degree of activities will constitute a "substantial part" of an organization's activities.

Congress has never expressed a legislative intent to use the tax laws as a means of curtailing the expression of views by taxpayers, or their organizations, on matters which relate to their business or their right to stay in business. Congressional clarification through legislation appears to be the only effective means whereby this problem can be resolved.

Mr. Speaker, several bills have been introduced in the Congress which provide relief and clarification in this area. These bills are H.R. 7123, H.R. 10272, and H.R. 10502. These bills have been introduced by Congressmen HALE BOGGS, Democrat of Louisiana, WILLIAM E. MILLER, Republican of New York, and JOHN A. LAFORE, Republican of Pennsylvania, respectively. These bills would amend Revenue Code section 162 by adding a new paragraph authorizing the tax deductibility of the following:

(4) expenses lawfully incurred in supporting or opposing or otherwise influencing legislation in the Congress or in a State legislature or in the legislative body of a county or other local governmental agency or in any submission of proposed legislation to the voters.

In order for taxpayers to utilize this tax deduction, if it is enacted, it would be necessary that the payments meet two basic and restrictive criteria: (a) the expenses would have to be ordinary and necessary to the business of the taxpayer or be related to the production of in-

come; and (b) the expenses would have to be lawfully incurred and thus the payments or expenses would not qualify if they violated any laws, such as the bribery and graft provisions of the Criminal Code or the Corrupt Practices Act.

Also within the provision of these bills would be the type of expenses which meet the foregoing limitations but relate to the submission of proposed legislation to the voters as in a State initiative or referendum.

Why Americans Should Not Buy Renault and Dauphine Automobiles

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 16, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following release by the conference of presidents of major American Jewish organizations, issued on January 7, 1960, together with a résumé of the Arab League boycott and the Renault Co.

The release follows:

The presidents of 17 major American Jewish organizations today, January 7, 1960, released the following statement regarding the Arab League boycott and the Renault Co.:

"Recently, the Renault Co., manufacturer of automobiles, doing business in the United States, announced the termination of its business relations with the Kaiser-Fraser assembly plant in Israel. The Renault Co. admitted that it had withdrawn from Israel because of pressure from the Arab League boycott office. Subsequently, at the request of the Renault Co., the boycott office removed its name from the Arab League blacklist.

"We believe capitulation to Arab pressure by business firms is harmful to American and U.N. efforts toward stability in the Middle East and world peace. It is gratifying to note the large number of enterprises throughout the world that have refused to surrender to the boycott. It is unfortunate, however, that some, like Renault, have seen fit to yield to the Arab League boycott.

"The Arab League boycott also makes it impossible to achieve progress toward peace in the Middle East. U.N. Secretary Dag Hammarskjöld has characterized the boycott as a dead weight upon our efforts. It is a form of political and economic aggression that creates and maintains tension in the Middle East. By keeping the Middle East in a state of near war, the boycott is a continuing threat to world peace. So long as the boycott lasts, interests vital to America are jeopardized.

"The boycott has brought about violations of the rights of American citizenship and interference with the freedoms to trade, invest and travel. Because the boycott imposes unnecessary expenditures and economic losses upon all the countries of the Middle East, it subverts the purposes of U.S. economic assistance and makes the Middle East more dependent upon such American aid. Arab League economic warfare therefore places unnecessary and additional burdens upon the American taxpayer.

"We shall continue to expose these evils in the conviction that on political and economic, as well as moral grounds, the Arab League boycott must be resisted by the U.S.

Government, by American business, and by the American public."

The statement was signed by: Mr. Bernard Abrams, Jewish War Veterans of the United States; Rabbi Philip S. Bernstein, American Israel Public Affairs Committee; Dr. Maurice N. Eisendrath, Union of American Hebrew Congregations; Mr. Moe Falikman, American Trade Union Council for Labor Israel; Mr. Moses I. Feuerstein, Union of Orthodox Jewish Congregations of America; Dr. Miriam Freund, Hadassah, the Women's Zionist Organization of America; Mrs. Rose L. Halprin, Jewish Agency for Israel; Mr. Adolph Held, Jewish Labor Committee; Mrs. Charles Hymes, National Council of Jewish Women; Mr. Bernath L. Jacobs, United Synagogue of America; Mr. Label Katz, B'nai B'rith; Mrs. Clara Leff, Labor Zionist Assembly; Rabbi Irving Miller, American Zionist Council; Rabbi Joachim Prinz, American Jewish Congress; Mr. Abraham Redelheim, Zionist Organization of America; Rabbi Isaac Stollman, Mizrahi-Hapoel Hamizrachi and Mr. David Ullman, Nation Community Relations Advisory Council.

RENAULT

In 1955, Renault of France entered into a contract with Kaiser-Fraser of Israel. Under its terms, Renault cars were to be delivered "knocked-down" for assembly in Israel. Accordingly, in 1955, Renault furnished Kaiser-Fraser in Haifa with unassembled parts for approximately 200 cars; in 1956 with approximately 500; in 1957, for almost 800 and in 1958 for more than 2,000 cars.

Although the original contract called for annual renewal, in September 1958, a 3-year extension was proposed. Negotiations continued until February 1959 when Renault agreed with Kaiser-Fraser to deliver from that date to December 30, 1960, unassembled parts for 2,400 cars. This commitment came in the form of a letter from Mr. M. Pierre Dreyfus, president-director of Renault.

However, in August 1959, when the agreement had 18 months still to run, and when "knocked-down" parts for only 800 cars had then been delivered by Renault to Haifa, Renault unilaterally canceled its commitment. It waited until October to make a public announcement of the cancellations, but its statement included a concealed significant admission: that it withdrew from Israel because it was unable to persuade Arab authorities to permit it to do business in their countries so long as it continued its commercial involvement in Israel. The complete statement, in the form of a release dated October 22, 1959, was issued from the home office of Renault in France, a translation of which follows:

"The following statement has been issued by the information service of Regie Nationale des Usines Renault:

"The backwash raised by publication of news concerning commercial activities conducted in Israel by Regie Renault requires the following correction:

"1. It is true that after many years, contrary to the rules of law and practice, certain states prohibited the admission of merchandise to proceed from firms executing industrial contracts with enterprises situated in the State of Israel.

"2. Regie Renault, being unable, despite repeated effects, to bring an end to this situation of fact, found, as have numerous French and foreign businesses before her, it had to make an unwilling choice. For an enterprise exclusively industrial and commercial, this choice is obviously not motivated by political considerations. The sole criterion is the number of vehicles sold, on which depends, in the final analysis, the number of jobs assured to French workers.

"3. Regie Renault, after having weighed all the consequences, signed in 1955 a 3-year

assembly contract with an Israeli firm. In 1958, Regie Renault offered to renew the contract with that firm if it could make assurances of a reasonable minimum number of vehicles per year, and was turned down, although the attention of competent Israeli authorities had been drawn to the possible consequences of a negative response.

"Although the assembly contract could not be renewed under these circumstances, Regie Renault continued to supply the Haifa factory for several months, preventing an abrupt halt of manufacturing there.

"Be assured, of course, that Renault will undertake, to the degree to which the Israeli public powers will permit, to send assembled cars to Israel, and will provide replacement parts no matter what happens."

Despite the Renault assertion that the Kaiser-Fraser failure to guarantee annual sales of a reasonable minimum number of vehicles was an important factor behind its cancellation decision, it seems obvious from all surrounding information that Renault's essential reason was its wish to be removed from the Arab blacklist. It is also clear from an intimate knowledge of Arab Boycott Office operations that Renault's immediate offer to sell assembled cars to Israel would not jeopardize its new relations with Arab countries. The Boycott Office is adamant about working interests in Israel; it is less severe about ordinary sales to Israel.

Subsequent public statements by Arab authorities revealed that there had been prior consultation and agreement between Renault and themselves before the cancellation announcement was made. On November 9, the Egyptian newspaper, El-Ahram, disclosed that the Arab League Boycott Office had required Renault to furnish authenticated documentation establishing conclusively that it had actually discontinued its business connections in Israel in accordance with the Boycott Office's regulations. Among the documents required was a certified copy of an appropriate cancellation notice. When the Arab League Boycott Office announced that it had received the required proof from Renault, it added that it had received at the same time a request from Renault that the company's name be removed from the blacklist.

On November 30, the Lebanese Embassy in Paris disclosed that Renault had submitted to the Arab League its proposed letter of cancellation before sending the final document to Kaiser-Fraser in Israel. It seems reasonable from the foregoing that the price of removal from the Arab blacklist was an official and public acknowledgment by Renault of its reason (the Arab boycott) for terminating its Israeli contract. Having complied, Renault was granted permission by the Arab League Boycott Office to open markets in Arab countries.

Several days later, the Egyptian newspaper, El-Akhbar, reported that Renault had begun negotiations to establish an auto assembly plant in Egypt. And, on December 7, the Cairo Radio reported that Renault had committed itself to a \$22,400,000 investment for the construction of the new plant.

RENAULT IN THE UNITED STATES

In February 1957, a certificate of incorporation for Renault, Inc., was filed in the State of New York and, among other things, the corporate purposes were described as follows:

"(1) To purchase or otherwise acquire, by importation or in any other manner, automobiles and other vehicles and all accessories and other things appertaining thereto, including engines, bodies, chassis and spare parts generally and to sell the same in the United States, Canada or elsewhere; and in connection therewith to operate display rooms, sales agencies and such agencies as may be required to provide maintenance and repair service for vehicles sold by the corporation.

"(2) To import, export, manufacture, purchase or otherwise acquire and to hold, own, sell, mortgage, pledge, assign, transfer and otherwise dispose of, and generally to invest, trade and deal in goods, wares and merchandise of every class and description."

The office of the corporation is located at 750 Third Avenue, New York City.

A highly placed official of Renault, Inc. has indicated that it is a wholly owned subsidiary of Regie Nationale des Usines Renault. Wards Automotive Reports (the industry's authoritative research organization) describes Renault, Inc. as a factory-owned import agency.

A leading credit agency lists the following Renault, Inc. officers: Pierre Molhan, president, Robert Volode, vice president and general manager, both of whom reside in France; Kenneth C. Howard, assistant general manager and assistant treasurer; James E. Hughes, treasurer, and Hugh Fitzgerald, secretary, all of whom reside in the United States. Molhan and Guy De Berc, Ernest Dale, Volode and Hughes are the directors. According to this same source, De Berc is the general manager of the French Line in the United States and Dale is a professor of economics at a French university. Hughes and Fitzgerald are attorneys associated with the New York law firm of Couderd Brothers.

The sale of Renault (and Dauphine) automobiles in the United States is achieved through 17 regional distributors and approximately 800 local dealers. The regional distributors sell Renaults and Dauphines exclusively, but the 800 retail dealers are outlets which sell Renault cars in addition to other foreign cars or standard American automobiles.

R. L. Polk, a business research agency, reports 765 local Renault dealers, broken down as follows: New England, 68; Middle Atlantic, 152; South, 155; East-Southwest Central, 96; Northwest Pacific, 50; Southwest Pacific, 85; Mountain, 34; West-North Central, 64; West-South Central, 61.

It is generally conceded in the automobile industry that Renault in the past few years, has made rapid inroads in the U.S. market. According to Fortune magazine, October 1957, Renault in 1955 sold 800 cars in the United States, in 1956, 2,900. Wards Automotive Reports reports the following sales figures: 1957, 22,587; 1958, 48,054; for the first 10 months of 1959, 76,750. According to Renault, its sales for the first 11 months of 1959 totaled 85,131. Ward quotes the company as stating that it expects to sell 100,000 vehicles in the United States in 1959.

RENAULT IN FRANCE

Renault in France, known as Regie Nationale des Usines Renault, was founded in 1896 by Louis Renault and his brother, the company turning out cars well before Ford came on the automobile scene.

In World War II, Louis Renault collaborated with the Nazis and his factories were largely destroyed by Allied bombing. According to Time magazine of January 6, 1958, the Renault Co. during the World War II occupation rolled out 34,232 tanks, trucks and other vehicles for the Germans. Workers who protested working conditions were shot on the spot by the Nazis.

After the liberation, the then-ailing Louis Renault was accused by the French Government of collaborating with the Nazis; 4 weeks later he died in a private clinic. The French Government, according to Time magazine, confiscated his 95-percent interest in the company and seized the remaining 5 percent held by private investors who were later paid off.

Fortune magazine of October 1957 reports that the company is 100-percent owned by the French Government. It is generally conceded, however, that Renault is "a far cry

from the classic nationalized company." According to Time magazine, January 6, 1958, it has never had a government loan. The Government keeps hands off, aside from examining Renault's books once a year and tapping civil servants for appointment as its top managers.

M. Pierre Dreyfus, the president-director general of Regie Nationale des Usines Renault, is described by Time magazine as being a scholarly doctor of law, lifelong civil servant and 10-year Renault veteran. In describing the company, Dreyfus is quoted as follows: "We operate like an absolute monarchy. I make all of the decisions. We have one stockholder—the French state. The state merely judges the financial results at the end of the year. If the results are bad, the state can fire me."

In addition to the manufacture of automobiles, Renault sells machine tools to such leading manufacturers as Opel in Germany, Fiat in Italy, and is believed, in 1956, to have entered into a license agreement with Rolls Royce. Currently the company has 10 plants in France and 7 in other countries. The company also is reported to produce petrol and diesel tractors, industrial engines and railway rolling stock. The company has its own steel foundry and is reported to produce half of its own steel needs.

Junkets

EXTENSION OF REMARKS

OF

HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. GROSS. Mr. Speaker, another newspaper has expressed editorial support for enactment of legislation to require full disclosure of spending by Members of Congress on trips overseas at Government expense. The Asheville (N.C.) Citizen, properly points out that since public money is involved, there is good reason for disclosure.

As part of my remarks, I include the following editorial which appeared in the Citizen on March 4:

As long as there are Congressmen, there'll be junkets.

At least 190 Members traveled, mostly at Government expense, to all parts of the world in 1959.

It was a banner year for congressional tourism.

Trips were made by 51 Senators—just enough for a quorum—and 139 Representatives.

The leading attractions were found in Western Europe, with 102 legislators visiting there during the 12-month period. Half as many journeyed to the Far East. Thirty-one Members of Congress traveled behind the Iron Curtain as compared to only six in 1958.

The amount of public money spent by junketing lawmakers on these trips—and no doubt many of them are worth while both to the Congressmen and to the Nation—is a secret tightly guarded by Congress.

There are many persons outside Congress, as well as a few inside, who think each lawmaker should be required to make all of his junket spending public.

One foe of junketing, Representative H. R. Gross, (Republican, Iowa,) introduced a bill last year to accomplish this, but its prospects appear dim. It has been referred to as "the bill least likely to succeed."

Since public money is involved, there is good reason for disclosure. For one thing, it would stop any wasteful junketing. For another, the voters back home would not be irritated if it is shown the traveling solon was performing a useful mission properly and adding to his knowledge of global problems.

An Able Soldier and Engineer Reports on the Arkansas Basin

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks, I am pleased to place in the RECORD the address delivered at the annual meeting of the Arkansas Basin Development Association on March 11 by Brig. Gen. William Whipple, division engineer for the southwestern division of the U.S. Army Corps of Engineers.

General Whipple has not only won a host of friends in the Southwest during his distinguished tour of duty in that area, but has also made an outstanding record as an imaginative, industrious, and farsighted planner of the future of the Arkansas Basin.

His report to the basin association is sure to be of interest to many in this body, and throughout the Nation, who are interested in the future of this great river program.

General Whipple's speech follows:

REMARKS OF BRIG. GEN. WILLIAM WHIPPLE, DIVISION ENGINEER, U.S. ARMY ENGINEER DIVISION, SOUTHWESTERN DALLAS, TEX., TO THE ANNUAL MEETING OF THE ARKANSAS BASIN DEVELOPMENT ASSOCIATION, INC., TULSA, OKLA.

It is a real pleasure to meet again with the Arkansas Basin Development Association, its distinguished guests, and its members and associates from Oklahoma, Arkansas, and Kansas. It is not surprising that there is progress in the Arkansas River Basin when there are such enterprising people behind the work.

Governor Edmondson has already made a name for himself in the capable and aggressive way he has met the problems of Oklahoma since taking over the reins of State government. We are most aware of his substantial accomplishments in connection with the development of the State's water resources. From the moment he took office he faced up squarely to the difficult problems of planning the extensive highway relocations so as to provide adequately for the future traffic of this State. We of the Corps of Engineers could not have asked for better cooperation.

Congressman Edmondson has one of the clearest grasps of the problems of water resource development of any Congressman I have ever known. He is the perfect catalyst between the technical problems with which we are concerned in our work and the broad policy problems of those who direct us in our efforts.

Congressman CARL ALBERT and I were Rhodes scholars together at Oxford a good many years ago and I have a respect for him of long standing. But as great as it was, this respect has continued to grow as I have ob-

served him in this important work and his heavy nationwide responsibilities as majority whip of the House.

Senator MONROE is an able and respected Senator who is active and effective in many fields. His influence is widely felt.

No one needs to say anything to this group about the high stature of the senior Senator from Oklahoma in national water resource development circles. He is not only a man of ideas and of vision, but a man who has the know-how and the force to put them into effect. Senator KEARNEY can live up to any superlative that you or I can apply to him.

I am also particularly happy to recognize here tonight that far-sighted and brilliant leader, Clarence Byrns. Although he has been far from well, he has again recently demonstrated anew his courage, his sound judgment and his devotion to the good of the entire basin.

The stature of these leaders and the cooperative effort of the many others here tonight add up to an impressive force. As one who has served in water resource development over the years from coast to coast, I know by experience the hampering effect of divisive quarrels and futile bickering between factions. I know there are differences of opinion, but you seem somehow to hammer out a beneficial solution and then get together to put it across. Let me wholeheartedly congratulate those responsible, and this association in particular.

My appearance before you at this meeting comes at a good time. Not only can I report on a year of progress but also something of my testimony for next year's funds before the House and Senate Appropriations Committees. Of course, as most of you know, the Corps of Engineers is required strictly to support the President's budget. However, when required by the Appropriations Committee, we can give our engineering advice as to capabilities for using additional funds, irrespective of the budgetary aspect. I mention this so that as I mention such capabilities later on, I will not be misunderstood.

The first item I would like to mention to you, very briefly, is the progress in building up our engineering in the Tulsa district of the Corps. This district had simply become unable to keep up with its tremendous and ever-increasing workload. Last summer, to meet this situation, we took four steps. First, in picking the new district engineer, the Chief of Engineers picked one of the very finest officers in the Corps, Col. Howard Penney. Next, to cope with the immediate situation, we assigned to another district elsewhere the preparation of the plans and specifications of two of the smaller flood-control dams. Third, we beefed up the planning and reports branch. Fourth, we created an entirely new design branch, doubling the normal organization, and brought in some good engineers from other parts of the country to help. Progress under this new organization is such that I now consider the Tulsa district, which was formerly a weak spot, one of the strongest in the United States.

During the year we have made a lot of progress on certain surveys and studies of considerable long-range importance. Funds are available to continue and complete a number of studies. I would particularly like to mention the central Oklahoma project. After completion of a long period of preliminary studies, we will initiate a survey during the current year.

We have also started work this year on a study which is absolutely unique and unparalleled anywhere in the United States and which may be of great significance to Oklahoma and to adjacent areas in Texas. I refer to the pollution control study from the Arkansas and Red Rivers. The U.S. Public Health Service is charged with the general responsibility of locating the sources of natural brines and salt which are largely respon-

sible for the poor quality of water such as that of the Arkansas River, here at Tulsa; and the Corps of Engineers is working on the structural means of blocking off the salt springs, bypassing the salt flats, or disposing of the highly concentrated brines in isolated valleys or pumping them back down into abandoned oil wells. Curiously enough, by far the greater part of this pollution comes from a small number of highly concentrated springs and salt beds extending right across Oklahoma and north Texas. If we can work out means to control this pollution, at reasonable cost, an immense improvement in water quality may be within our grasp. Since this is a pioneering effort, an intensive investigation will be required, using the best scientific brains available, and the full talents of both the Public Health Service and the Corps. I cannot forecast the complete answer. Nevertheless, although I was originally skeptical, I am now quite optimistic that this study will result in a feasible program for improving usability of your existing streamflows.

We were given funds in the amount of \$73,000 for the current year for our part of this antipollution study. A resolution of the Senate Public Works Committee on December 16, 1959, cleared up any question about legislative authority and also established a channel through which a report on a construction program can be submitted. Our budget for next year does not include any funds for continuing such work; but in response to committee questions, I replied that we have the capability. I certainly did not conceal my opinion that this is one of the most interesting and potentially valuable studies on which we have ever been engaged. The committee appeared sympathetic.

Since your last meeting two major projects in Kansas have been completed and dedicated. The Toronto Reservoir and the Wichita and Valley Center Floodway have begun long and useful lives in the service of the people of that part of the basin. Work under the first major contract on the \$32,800,000 John Redmond Reservoir was started, and the budget includes \$3,800,000 for its continuation next fiscal year. The first contract on the Council Grove Reservoir, for project buildings, is scheduled for award before the first of July. The budget for next year contains \$2 million for the continuation of this \$13,700,000 project. However, the Appropriations Committee was extremely critical of the fact that we had not yet been able to complete arrangements for water supply storage. This matter will have to be cleared up before we can start construction.

In Oklahoma the local protection project at Enid is 20 percent complete and contracts for the relocation of railroads and erosion control are to be awarded before the end of the fiscal year. We expect to complete the project with the funds presently available.

Although this is in the Red River Basin, I will mention that there was considerable interest during the Senate hearings on appropriations for starting construction on the Broken Bow Reservoir. Our planning has reached a point where I was able to testify to a construction capability for the next fiscal year. I also testified that from the engineering point of view this appears to be a fine project, which will meet urgent needs, in what has been a serious problem area for the last 15 years.

I am happy to say that the budget recommendations will provide all the funds that we can economically use on the reservoir projects now under construction as a part of the main control plan for the Arkansas River.

For the Oologah Reservoir the amount is \$3,700,000. This \$35,100,000 project is about 65 percent complete with most of the work under contract. Last month a contract approaching a half a million dollars was

awarded for the relocation of county roads, as well as an \$87,000 contract for public use facilities. Scheduled for award before the end of the fiscal year are contracts for the relocation of electrical and telephone lines and plugging oil and gas wells in the reservoir area.

The budget allowance for the Keystone Reservoir is \$17,400,000. This project is now well underway. A contract for the spillway and main part of the dam was awarded in November for the exceptionally good price of \$16 million. This was one of the reasons we were able to reduce the project estimate from \$137 to \$111 million during the year. Award was made in January on about \$2 million worth of State highway and bridge relocation work, and other contracts will soon be awarded for relocation of telephone, power, and pipe lines. The heavy schedule of relocation contracts awards will continue into the next fiscal year.

The budget allowance on the Eufaula Reservoir is \$20,700,000. The big contract on the spillway, power intake and powerhouse substructure went for \$14.7 million, another excellent award. Bids on the first two sections of the joint relocation of U.S. Highway 69 and M-K-T Railroad have been opened but a material error in the low bid was alleged and we have not been able to make award yet. We have made a reduction in the estimate of project cost from \$157 million to \$141 million, and will probably be able to reduce it even further next year.

For the Dardanelle Dam the budget recommendation is for \$6,100,000. The first major contract on this \$94.6 million project is now about half completed. This was a \$3 million job for the first part of the navigation lock and the embankment of the north side. It is certainly welcome news to know that the first navigation lock on the Arkansas is now solidly underway. Just this week we advertised for bids on the overflow section of the dam. The bids on this work, to be opened May 5, are expected to run somewhere on the general order of \$10 million.

Progress and the outlook on appropriations permit us to hold to our scheduled completion dates on these large dam projects. More critical points now concern bank stabilization and planning, which I will mention later.

Last month the Tulsa district awarded bank stabilization work approaching \$1 million, and another award to run around a third as much is to be made before the end of the fiscal year.

The Little Rock district has had active work at 15 locations in the last year. About \$1 million worth of awards has been made since last July. About one-half million dollars more in awards is scheduled for the remainder of this fiscal year.

In the Vicksburg district new work exceeding \$1 million was awarded early this fiscal year for work at six locations, in addition to recent awards on repairs for nine locations at about \$600,000 and regular maintenance for \$100,000 at three locations.

The budget recommendation was for \$5 million to continue bank stabilization, under the emergency program. It was apparent during the hearings that not everyone considered the restrictions surrounding this emergency designation as appropriate and, in the face of engineering facts, I could not take issue with this view. I have again testified of the savings in cost and engineering advantages of getting on with the very large permanent program with completion of as much as possible prior to 1964. At the present rate of progress we would still be less than half done when we close the reservoirs in 1964. I testified that we have capability of \$9 million for bank stabilization.

Taking a long-range look at where we stand on all of the units of the main control plan for the Arkansas River, there has been allotted \$122 million through fiscal year 1960.

For fiscal year 1960, \$39.6 million was received and the budget allowance for the next fiscal year is \$53.3 million. The reason a larger sum is not required for optimum progress is that bids have been running so much lower than original estimates.

Progress on the ground is very gratifying. It is beginning to be worth your time to visit these projects, and we hope all of you come and see them in the near future.

However, perhaps the signal accomplishments of the year are in planning, rather than construction.

One of the major accomplishments has been the resolution of the controversial question as to the route to be followed below Pine Bluff. Instead of the proposed North Bank Canal, which was bitterly opposed by the residents of the lower valley, we will follow the river route all the way to Arkansas Post, leaving the Arkansas River only for the last few miles of swamp. The difference in cost turned out to be much less than had been thought; particularly after we had found that we could leave out one dam on the river route. The economic values of future valley development made up the difference. All factors of comprehensive development considered, this was clearly the best alternative, although it did cut into savings made elsewhere.

During the last year and a half we have devoted a tremendous engineering effort to solving the problem as to how best to create navigation by locks and dams on a river that carries a great natural silt load. We knew this could be done; but it had never been before; and we did not know the best way to do it. We have made a system analysis of the Arkansas River and come up with a perfected plan based on a concept new to engineering science.

In essence this concept is simply the spacing of dams farther apart, with variable-width regulated channels between the dams, to provide equal sediment-carrying capacity throughout the entire length of the navigation pools. Although the mathematics behind it is highly technical and involved, this new concept will produce quite simple practical results. We have been able to eliminate three previously planned locks and dams between Dardanelle and Arkansas Post. Pool levels will not have to be raised; in fact, 5,000 acres less land will be required than would have been taken by the previous system. The navigation conditions will be improved by elimination of three lockages on every tow, and there will be a net construction savings on this account of \$37 million. We had to work night and day to get all the new plans and estimates approved by the Chief of Engineers so that I could testify at the hearings on the basis of a complete plan.

Now that these questions have been settled, we know exactly how many structures we will need between the head of navigation at Catoosa and the mouth, namely 20, rather than 24 or some other larger numbers that had previously been considered. We know what type each will be, and approximately where it will be located. We can announce locations soon, so that plans of local interests can be adjusted accordingly. Locations and pool elevations will still be subject to some change as a result of detailed planning of individual structures. From your point of view, the big point is we are now ready to proceed with detailed planning as soon as appropriations are made.

We did not reduce the over-all cost estimate of \$1,201 million as a result of the project cost reductions I have been telling you about. We still have a long way to go, and the Engineering News Record of construction costs has been climbing 3 or 4 percent every year. There may be other contingencies which will come up—for example estimates on bank production costs on the

river below Pine Bluff have had to be increased as a result of recent experience. While indicating assured reductions on individual projects underway we have had to escalate other unstarted projects upward conservatively. However, the net indicated savings appear sufficient that we can set aside now \$45 million in general contingency reserve, over and above the cost we could surely complete the program for if we could be assured a continuation of present price levels. This represents a sounder basis and more conservative estimate than we had last year.

The goal of completion of the entire program previously given as 1972, has slipped forward to 1973, as the optimum completion date based upon the situation as a whole, including the budget. During the recent hearings I was questioned on this point by the Senate Committee. I testified that we could hold the line on further slippage subject always, of course, to the rate of appropriations. I also said that from the engineering point of view we could move back to the 1973 completion schedule if planning were commenced during the coming fiscal year on one navigation dam below Pine Bluff, on one between there and Dardanelle, and on the Short Mountain Dam as previously scheduled. We have such a capability.

During the early days of my time as Division Engineer I sometimes encountered the view that the Corps need not be too hasty about the Arkansas; the appropriations to complete it on the early schedule would never be forthcoming. That I refused to accept. Our job, I said, is to get ahead, so that the engineering is ready for the maximum program. Any decision to reduce the optimum rate of progress should be a policy matter, to be decided between the people of the area, the administration, and the Congress, but in any event not to be due to the failure of the Corps of Engineers to keep up. It has been a source of great pleasure and pride to me to have had the opportunity to guide the engineering of this great program through a critical period. I look forward to the day when it will be complete, with navigation bringing ever increasing industry and commerce to the great Arkansas basin.

Cranberries

EXTENSION OF REMARKS OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. ADDONIZIO. Mr. Speaker, among the resolutions adopted by the 45th annual convention of the New Jersey State Board of Agriculture on January 26, 1960, in Trenton, was one concerning cranberries. Inasmuch as this concerns an agriculture problem that is national in scope, I commend Resolution No. 10 to the careful study of the Congress. It follows:

RESOLUTION 10—CRANBERRIES

Whereas the production of cranberries is an important segment of New Jersey's agricultural economy; and

Whereas the industry has been done irreparable harm by the untimely and indiscriminate announcement by an agency of the U.S. Government concerning alleged contamination of cranberries and cranberry products; and

Whereas New Jersey cranberries were not contaminated, as alleged; and

Whereas it was impossible to market them due to this action: Therefore be it

Resolved, That this agricultural convention strongly urge the Department of Agriculture and the Congress of the United States to indemnify the industry for its actual monetary losses; and be it further

Resolved, That a copy of this resolution be sent to the President of the United States, the Vice President, the Secretary of Agriculture, the Secretary of Health, Education, and Welfare, and each Senator and Representative.

Washington Report

EXTENSION OF REMARKS OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include my newsletter of March 12, 1960:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas, March 12, 1960)

H.R. 5, a bill to encourage private investment abroad and thereby promote American industry and reduce Government expenditures for foreign economic assistance, surprisingly never came to a vote after debate. The laudable enacting clause in the view of many was not matched by the contents of the bill. Most approved the original intent of deferring U.S. income tax until earnings were brought into the United States. Many felt misgivings over the foreign competition in low wage-cost areas hurting U.S. industry.

Other arguments against the bill included: (1) A complicated bill under closed rule (no amendments permitted) should be carefully explained in debate and understood. Few, including Ways and Means Committee members, understand this technical bill, so different from the original bill on which hearings were held; (2) two other bills, comprising the sections stricken from the original bill have yet to be considered and are related to H.R. 5. Perhaps the uncertainty surrounding the bill was best described by the minority views . . . "further work should be done in committee to find answers to the many problems that either are unanswered in this bill or are created by the bill."

The authorization of appropriations for the National Aeronautics and Space Administration (NASA) of \$915 million provided for: salaries and expenses, \$171 million; research and development, \$621 million; and for construction and equipment, \$122.7 million. This was \$113 million more than originally budgeted but was requested by the administration. The manned satellite, missile systems, propulsion engines, new space vehicles, and tracking systems were all included under research and development. Although appropriation of the money comes later (after this authorization) there is little disagreement or doubt that Congress will approve the expenditure. So far as we know this is all the money that can be used. The bill passed handily.

The military construction authorization bill passed with little difficulty. This bill, similar to the NASA bill, is so comprehensive that Members accept generally the committee members' views. The absence of controversy usually suggests a sound bill. Of the \$1,104 million, less than \$150 million was allocated for expenditure outside continental United States. Texas' total was \$23.6 mil-

lion, with Dallas receiving \$2.6 million for the naval air station and Army Reserve center (No. 3). Four hundred and seventy-seven total installations are covered in the Army, Navy, Air Force, Department of Defense, and Reserve components.

The civil rights debate in the House contrasted sharply with the unlimited debate of the Senate (see Newsletter, March 5). A tight time allocation limited all House Members, with members of the Judiciary Committee, responsible for the bill's explanations, getting preference. The 15-hour rule was cut short by House leadership agreement, further limiting the time allocation, a strange and dangerous move, it seems to me. Controversial issues need to be thoroughly thrashed out.

Actually, all House Members start with the same belief, enunciated by the President, namely: (1) the rule of law is supreme; (2) every individual is entitled to equal protection of the laws. Proponents of civil rights legislation are sure that southern Negroes are denied these basic principles. Opponents of this civil rights bill generally are sure that Negroes are not mistreated; nor do northerners do not understand; this bill is the wrong approach; and even greater discrimination against the Negro exists outside the South, to which many close their eyes.

Many Congressmen doubt that in the heat of an election year, this highly emotional issue will or can be properly solved. Though politics is ever present, the sincerity of many on both sides is quite evident. Surprisingly good humor is the rule, not the exception. Questions I have raised in debate include: (1) Does this bill permit several prosecutions for the same act? (2) Will the Judiciary Committee approve the additional Federal judgeships needed, particularly in view of the added work entailed by this bill? (3) Why pass more civil rights legislation without reports from the Civil Rights Commission? (4) Why get into other fields than voting rights? (Fugitive from justice in property destruction; education; court obstruction, etc.). (5) Why should Federal Government interfere in local and State elections? (6) How can another Federal law solve an evolutionary process in human relations? Behind this facade of gentlemanly debate lurks the political expediency of an election year. Unfortunately, the rights of the majority, rather, of all citizens may be jeopardized or violated by well-intentioned, zealous citizens trying to protect what they are sure are violations of a minority groups' rights. Not forgotten by some is the threat of race riots which are potentially far more dangerous in the northern cities (Washington, Philadelphia, New York, Cleveland, Detroit) than in the South. Next week amendments may improve or water down the bill, depending on your viewpoint. Either way, a rough road lies ahead.

Adam Powell Fearless Champion

EXTENSION OF REMARKS OF

HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial: [From the Omaha (Nebr.) Star, Feb. 26, 1960]

ADAM POWELL FEARLESS CHAMPION

ADAM CLAYTON POWELL, New York Congressman, representing a district heavily populated with Negro and Puerto Rican vot-

ers, is scheduled to succeed a North Carolina Congressman next year as head of the House Labor and Education Committee. This possibility has stirred up quite a number of unkind comments against Congressman POWELL. Unfortunately, most of the hand wringing is coming from people who are usually thought of as friends of the Negro such as Mrs. Roosevelt, and George Meany, the head of the AFL-CIO. We feel that since no one has complained about Congressman BARDEN's chairmanship of the committee, nor of Senator EASTLAND's antics as chairman of the Senate Judiciary Committee where he held up an Eisenhower appointment to a Federal court for almost a year merely because the appointee did his job well in breaking up some attempts to flout the Supreme Court desegregation decision, we wonder why there is so much worry about Congressman POWELL's right to head a Senate committee. We feel that Congressman POWELL has been a fearless champion of Negro citizens and often a voice in the wilderness when all others wanted to compromise and postpone giving the Negro what was rightfully his. Probably the main reason Congressman POWELL is so disliked is because he never fails to add a clause to bills supposed to aid education making it mandatory that no money be given out where Negro children are segregated or not treated equally. In doing so he is merely enforcing the Supreme Court decision. Too often our friends feel that if white children are going to be hurt by this kind of tactic also then it should not be used. They say that Federal aid is good for everybody and we can wait a little longer to enforce the Supreme Court decision. Despite the widely publicized attempts to discredit Congressman POWELL, we feel that he has done a great job and has refused to back down on issues involving Negro rights. Therefore, we are with him. We wonder where George Meany gets off attacking Congressman POWELL as "stirring up race trouble" when it practically takes an act of Congress to get a Negro into Meany's own plumbers union and into a lot of other building trades organizations such as Meany heads. We expect Meany will be a lot madder when Congressman POWELL gets through having a hand at correcting some of this foolishness.

Uncontrollable "Control"

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article appearing in Nature magazine of January 1959:

UNCONTROLLABLE "CONTROL"—WILDLIFE THE VICTIM OF DEADLY, CHAIN-ACTION POISONS

(By Marguerite Angelo Smelser)

Such is the current passion for poison that yearly, upon millions of American acres, Federal and State agencies are spreading tons of grain and meat impregnated with the most spectacularly deadly poison known to man: Sodium fluoroacetate.

Commonly called Compound 1080, this all-killing poison was developed by chemists during the Second World War when red squill was hard to get. So extremely toxic is 1080 that minute amounts kill, and it possesses an annihilative chain action destructive to all wildlife. "Unfortunately that

1080 was ever discovered," writes a noted research biologist.

Man also is highly susceptible to this tasteless, odorless white poison; it has caused human deaths. Taste it, breathe it, and although it may work slowly and you get the best medical aid, you are doomed. There is no known antidote.

In the wake of Compound 1080's dramatic discovery have followed widespread tragedy to wildlife, and almost unbelievable official incompetency, complacency, and concealment.

Although Compound 1080 is used ostensibly for so-called predator control—in itself more often than not questionable—and for rodent control, this dastardly poison plays no favorites. Its chain action kills much of the wildlife in large areas. Many scientists realize the danger, but are unable to change official policies. Poisoning is big business.

This indiscriminate killer is in common use today widely over the United States.

Some idea of the extremely deadly nature of Compound 1080 can be gained from records of the American Medical Association. Babies ranging from 6 months to 2 years have died from merely chewing on cups that had contained 1080 bait. In a masterly understatement, the U.S. Fish and Wildlife Service warns: "A single teaspoonful of the poisoned water solution as used for rats (one-half ounce to the gallon) may be sufficient to produce the death of a child, and three times that amount could kill an adult person. In addition, 1080 possesses a high degree of secondary hazard. A single mouse killed with the water solution may contain enough poison to kill a full grown dog."

Warnings by the U.S. Department of Health against the use of 1080 in solid baits have been disregarded. Some wild animals die slowly and wander far before they fall; they and their vomitus to become in turn lethal bait to other animals, including birds.

Two eminent biologists, Robert L. Rudd and Richard E. Genelly, Department of Zoology, University of California, state that, among other alarming aspects of 1080, "There is little doubt that rodents killed by 1080 and later eaten by carnivores are responsible for the loss of many furbearers. . . . As long as mammal control depends on poisoned baits, hazard to other animals will be high. . . . It merits a full and impartial review."

No such full and impartial review is forthcoming. Whenever an investigation is made, it becomes a farce conducted "by the very men who put out the poisons and by their supervisors," writes Arnold Rieder, a Senator in the Montana State Legislature. "It's like sending a bank robber to investigate his own robbery."

Control programs are completely out of hand, but the directors of the programs either will not admit it, or do not think it worth doing anything about. These directors are the men who hold our wildlife welfare in the palms of their powerful hands.

One official device used repeatedly to sidetrack investigation is the soothing assurance that compound 1080 no longer is being manufactured; hence objections are out of date. This misinformation has been spread so widely that the author time and again has met chemists and biologists repeating it and apparently believing it themselves. These are men whose very vocation should lead them to know better, and should move them to concern regarding the actual situation.

So hush-hush has been the use of 1080, with its dangers, that the general public has had little knowledge of what is going on. But with the scandalous poisoning of thousands of geese, pheasants, and other animals in Washington, Oregon, and northern California during an attempt to control a serious mouse infestation in 1957 and

1958, the facts are beginning to come to light.

A one-man information bureau in exposing the danger to wildlife, domestic animals and humans implicit in the use of 1080, the cyanide gun and certain other poisons widely used in control is Lester Reed, for 17 years an official trapper. He was also a poisoner for the U.S. Fish and Wildlife Service—until his conscience overcame his desire for a regular paycheck. Mr. Reed resigned his official job in October 1957, and now devotes his life to informing people that: Most wildlife will be destroyed if they do not demand a stop to the 1080-poison programs.

Already, in areas where a few years ago wildlife was fairly plentiful, this skillful outdoors man and his equally skillful companions find little sign of even coyotes in thousands of miles of travel and search. This bears out Dr. Durward Allen's prophecy in his book, "Our Wildlife Legacy," written when he was a biologist with the U.S. Fish and Wildlife Service: "Widely spaced 1080-injected carcasses are deadly baits to the far-ranging brush wolf, and its extirpation in large regions is now but a matter of time."

Let it be stated now that officials in Government agencies employing this deadly poison claim that those now sounding the alarm are "misinformed," or "fanatics." Or a "few faddists," as the National Agricultural Chemical Association recently dubbed the hundreds of thousands of people aroused over the widespread use of certain dangerous insecticides manufactured by association members.

The Government officials also deny there is widespread and indiscriminate slaughter by 1080, claiming that "extreme caution" by "experts" is exercised in the placement of 1080-baits, and that it is "selective"—killing only coyotes and rodents. These statements are serious falsehoods, and can be proved to be such.

It is worse than unfortunate that the writer must accord the anonymity of the confessional to some biologists, and others in important places, who acknowledge the 1080 poison programs are dead wrong and destructive. They are happy that someone is willing to arouse the public, but dare not do it themselves.

Neither Lester Reed nor anyone else will deny that the farmer needs control of rodents, and, at times, the elimination of individual carnivores. But for rodents, there are safer poisons with which to achieve results; for carnivores, there is the more biologically sound trapper-instructor-farmer system used successfully in Missouri.

Rodents and rabbits are the main diet of bobcats, coyotes, foxes, and badgers. The trapping and poisoning of these so-called predators for monetary gain, whether bounties to individuals or appropriations for officials, has been a racket for many years. With carnivores killed off, rodent populations multiply and flourish, ruining untold acres of grasslands. This results in larger rodent and grasshopper poisoning programs, and appropriation of more millions of taxpayers' money to control these real pests. This is a tragic rat race, as Colorado cattlemen found to their great financial loss. Now, to protect the few remaining predators, the embattled ranchers guard their lands with a vengeance against Federal, State, and county trappers and poisoners.

In California during 1957 alone, the U.S. Fish and Wildlife Service spread 8,892 pounds of meat, each 100 pounds poisoned with 1.6 grams of 1080 (about one-twentieth of an ounce). It spread 15,175 pounds of grain, each 100 pounds poisoned with 2 ounces of 1080. The cooperating agency, the California Department of Agriculture, spread 327,257 pounds of grain, similarly poisoned. This does not take into account the unavailable figures for 1080 used in this State by

military installations and commercial pest eradicators.

Once 1080-bait is out of the poisoners' hands, there are no safeguards humanly possible. "Pieces of solid bait may be carried by rats or mice into stored food or other places where they remain dangerous for an indefinite period," warns U.S. health authorities. In the field, birds and other animals carry baits long distances.

The manufacturer admits in Tull Bulletin No. 1, "Carefully collecting and burning all surface kill that can be located, still has not prevented accidental poisoning. * * * Residues or uneaten baits constitute a hazard to beneficial wildlife in the same habitat."

The 1080-grain poisoning of deer in California in 1955, and the scandalous 1080 and zinc phosphide poisoning of thousands of geese, pheasants, and countless other animals in Washington, Oregon, and northern California in 1957 and 1958—as a result of widespread rodent "control"—show safeguards to be as absent as the proverbial hens' teeth.

After the 1957-58 fiasco was over, a biologist with the U.S. Fish and Wildlife Service wrote to a medical doctor, who was shocked by the tragedy: "Our Service has had no legal responsibility in the mixing, placing, or use of these poisons or baits provided the farmers by the counties. We have furnished technical guidance when possible."

Another statement is that compound 1080 is "remarkably selective," killing only coyotes; that, in fact, it is a "great benefactor" of other furbearing animals, since they have "almost doubled in numbers, or (and here enthusiasm for 1080 runs hog wild) become even more plentiful." Many wildlife men brand this "a damned lie."

"Why is it," this author asked ex-poisoner Lester Reed, "that government officials and others hot in pursuit of poison panaceas, will allege—and their reports show—that animals other than coyotes and rodents are not killed by 1080-poisoned baits?"

Replied ex-poisoner Reed, "I can tell you from my own experience, and I have personal knowledge that other trappers and poisoners would tell you the same thing if they were not afraid of losing their jobs. When I first began to trap and poison, I listed all the animals I killed—and got called on the carpet. My supervisor admonished me, 'Report only the number of coyotes and bobcats killed; do not report other animals—it might bring public censure.'"

"Furthermore, my supervisor ordered me to hide the bodies of these other animals and birds, including farmers' dogs, so that the harm I was doing would not come to the attention of the public." A Federal trapper, quoted by Wallace Taber in "Poisoners at Work" (Nature magazine, June-July 1949), stated that mink, marten, fox, and badger were being exterminated by the 1080 coyote bait. The trapper gave figures to prove his point, figures he did not turn in to the Washington office for fear of losing his job.

Another assurance—intended to lull but actually alarming—of Government officials using compound 1080 in both grain and meat baits, is this one by the Assistant Director, Bureau of Sport Fisheries and Wildlife: "The use of 1080 by the Bureau is confined to cooperative pest control projects in the more sparsely populated portions of the Western States" (although in the following paragraph he writes: "It is probable that some 1080 is used in every State by some State agency or commercial concern"). The agricultural commissioner for the author's home county wrote in a letter that the 1,698 pounds of 1080-injected bait he used last year was mostly in remote areas.

Remote areas, sparsely populated portions. There, of course, is where our remaining wild animals live. When this fact was called to the attention of a public official, he replied: "Well, the supervisor of our

poison program took a botany course in college."

A staggering lack of knowledge of the relationship between plants, wildlife, and humans is exhibited by the great majority of Government officials—with a few notable exceptions—from county politicians to directors of agriculture and directors of wildlife agencies. Nor do these officials with power over this Nation's wildlife resources seem susceptible to learning from experience.

Late in 1957, more than 3,000 dead geese, ducks, pheasants, and other birds were counted in a 1080 mouse-control project in Oregon, according to Senator Richard L. Neuberger in the CONGRESSIONAL RECORD, June 16, 1958. And in the State of Washington, a like tragedy.

Yet 3 months later, the men playing God in California who, like their northern counterparts, had spent years poisoning, trapping, and shooting foxes, coyotes, bobcats, badgers, skunks, hawks, owls, and other rodent eaters, now got busy with their poison pots to meet their explosive mouse population.

The California Agricultural Department, the U.S. Fish and Wildlife Service and the farmers killed, by actual count, more than 2,500 geese—among the dead, 40 of the rare Ross geese—according to the California Tulelake Reporter, of March 6, 1958, a newspaper located in the midst of the murder. "At least 3,000 geese, and probably three or four times that, reportedly have been killed by poison bait in the Klamath Basin," is the estimate by Western Outdoor News, a leading hunters' publication. None alludes to the countless other dead animals not valued by hunters, but which are a necessary part of balanced wildlife.

These very officials who should be educating the public as to the value of wildlife are, instead, spending our own money to perpetuate indiscriminate poison and "predator" trapping programs to the tune of millions of dollars without heeding the scientific findings of biologists and naturalists, some of whom are in their own agencies.

A news item headed "Many an Argument," in the Arizona Farmer, June 10, 1950, quotes the complaints of Everett Mercer of the U.S. Fish and Wildlife Service, who "pays his respects to those who circulate 'wild stories' about the danger of 1080 to game, especially quail, turkeys, and javelinas," says the Arizona Farmer. Too much of the "education" end of the job, Mr. Mercer complains, has been left to the personnel of the Fish and Wildlife Service and the State Game Department. "He and his men had to put in too much time explaining and defending the program. The program had to be explained to literally hundreds of people to get permission to put 1080 on their property."

This author has many eye-and-ear witnesses' accounts of this official type of "explaining." A medical man who went along with a Government poisoner on one such trip reported that the poisoner did not merely explain, he "argued and persuaded" until the ranchers gave in and signed the waiver, thereby permitting 1080 poisoning on their property and absolving the Government agency of responsibility "against any and all claims arising out of accidental poisoning."

Lester Reed states that all indications from his extensive contacts with stockmen lead him to believe that the idea of coyote and other carnivore damage has had to be promoted in order to put over poison programs.

Dr. Allen, in his book mentioned earlier, wrote: "It is well known that popular reports in support of Government predator control programs are not distinguished for being critically impartial."

In writing of this tendency to exaggerate and misrepresent the activities of carnivores, Ian I. McMillan, an influential central Cali-

fornia rancher and author, writes in *California Farmer*, November 1951:

"In my experience of some 30 years in raising cattle where coyotes and eagles were at times abundant, I have never suffered any such loss nor have I found any conclusive proof of such loss from predation as reported by others. Both these species will feed upon carrion, and when found feeding on the carcasses of calves that have died from other causes, the loss is commonly attributed to whatever animal is found at the carcass."

The official departments, depending on repeated rodent-poisoning operations for continued Government monetary appropriations, rejoice openly because 1080 used to poison rodents will, by its chain action, also exterminate coyotes—Nature's rodent control, and therefore the departments' competitors.

The Honorable Arnold Rieder, Montana state Senator, a man of long experience with cattle and a vehement opponent of the 1080 poisoning programs, has written an excellent report, "The Coyote's Fading Howl." In Montana there have been placed some 2,000 of the 1080-bait stations annually for 10 years. The coyote is virtually eliminated, yet more poison than ever is being spread. "A wanton waste of money and natural resources," Mr. Rieder writes.

He places the blame on government poisoners—and "armchair" biologists—with the woolgrowers as their political affiliates, as against independent biologists, "the naturalists, sportsmen, cattle-growers, and for the most part the general public."

Mr. Rieder writes that the 1080 poisoning "has been beneficial to the sheep people to a degree, but everybody else loses. . . . I spent an entire winter where 10,000 sheep wintered in eastern Oregon. Without poison being used, not one sheep was lost to predatory animals, and there were plenty of coyotes."

He writes: "The Fish and Wildlife Service tell the cattlemen that the coyote is a great killer of calves. This really disturbs me, for I have followed cows and calves for many years and have talked with many old-time cattlemen about it . . . and anyone who knows the cattle business from a working cattleman's standpoint will not hesitate to tell you that the loss of calves to coyotes is so rare that it is not worth talking about."

The Montana legislator points out that the stomach analysis of 8,263 coyotes showed that 80 percent of the animal items on the coyotes' menu are detrimental to man; thus the brush wolf is an ally. The small percentage of domestic stock he attributes—as do other authorities—mostly to animals dead of natural causes, which are simply there for the coyotes and birds to clean up.

Further, writes Mr. Rieder, "Whenever the balance-of-nature topic is brought up at a discussion of coyote control, the Fish and Wildlife Service is quick to hand out a printed report called 'The Predation Question—Facts Versus Fancies,' which tries to impress that there is no such thing as balance of nature, and cites a few cases where there were lots of coyotes and rodents at the same time. It does a good job of confusing the novice, or one who has not lived with the facts . . ."

In attendance at a secret "appraisal" meeting was Mr. H. Nelson Elliott, District Agent, U.S. Fish and Wildlife Service. He is among the officials who promote and foster the continued destruction of carnivores and insectivores. In the California Department of Agriculture's Annual Report for 1957, he attempts to justify the slaughter by the 87 official trappers and poisoners in California of 21,462 "predators" (not including the rare golden eagles and the endangered kit foxes). In one area, he claims "an estimated 60 lambs were killed by golden eagles . . . and instances of lamb killing by eagles also occurred in five other counties."

No evidence presented. No substantiation. A mere allegation intended to convince you by the official position, not the competence, of the man with a monetary interest in convincing you. This is an example of flagrant official disregard for even rare or doomed species of wildlife. Naturalists and other authorities dispute the claim that golden eagles are a menace to livestock. Being carrion-eaters—as well as rodent and rabbit catchers—the few surviving eagles are being killed by 1,080-poisoned animals, they are shot from airplanes, shot by the high-powered guns of the professional trappers, and have long been targets for unscrupulous gunners, who kill them just for the "sport" of it.

Mr. Elliott claims that his joint predatory control program now receives Army funds, and "valuable help" is given by the California Woolgrowers Association, the co-operating officials of the U.S. Forest Service, Bureau of Land Management, National Park Service, military installations, and the California Farm Bureau Federation, along with many others.

One out-of-State trapper, typical of others, writes: "I am with a fish and game agency using Federal aid in predator control. Though this department does not use poison and knows the harm it does, I have been seriously cautioned against saying anything against 1080. Our department must maintain friendly relations with the Fish and Wildlife Service."

In the Arizona Sportsman, May 1958, Potter writes: "With the Fish and Wildlife Service's expensive laboratory equipment and biologists counting the pinfeathers on doves, checking the reproductive organs of deer, here eight javelinas [peccaries], our leading game animal, turn up their heels and die near a 1080-bait station and nothing more was done than a hasty check by a decidedly biased official of the Service. . . . This is only one of many cases where the poison program has backfired and the officials have suppressed the facts to shield the poison programs from public criticism at any and all costs."

The poisoning still continues. How much? When you write these various Federal and State officials for figures you get ambiguous, ever-varying, and indeed conflicting information. The first 6 months of 1958 in California, using the smallest non-conflicting figure of just one department alone, saw at least 95,840 pounds of 1080-poisoned bait visited on us—and so on you. Similarly, the poisons destroying wildlife in your State, in official quietude, are visited on us.

Every American has a stake in the Nation's remaining wildlife—whether it is in California, or Michigan, or Maine—and a responsibility to see that it is saved for future generations without further inroads by the serene bunglers.

Suckers for a Slogan

EXTENSION OF REMARKS OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial:

[From the Honolulu Star-Bulletin, Feb. 29, 1960]

SUCKERS FOR A SLOGAN

Some people are suckers for a slogan. "Federal aid to education" is a rolling phrase and there are persuasive spokesmen

who speak of it as a way to bring quick improvement to the Nation's school buildings, and quick advances in teachers' salaries.

We hear few voices asking if there isn't a better way to accomplish these desired results. But these few voices are critical and pointed.

One sharp critic is Representative DONALD L. JACKSON, Republican, of Santa Monica, Calif.

He makes some trenchant points:

Not only is the \$1.8 billion aid to education bill inflationary, but, by including money for teachers' salaries "makes inescapably clear the fact that passage of the bill must bring Federal direction of American education. The political implications of federally paid teachers is so clear as to require no elaboration."

From the very beginning of public education in this country, it has been recognized by educators and politicians alike that the real foundation of democracy is locally controlled schools. Federal school systems are for dictatorships.

Representative JOHN W. BYRNES of Wisconsin comments:

"The plain facts are that in the last 10 years, this Nation has undergone the greatest expansion of public education in the history of any nation in the world and without general Federal aid."

"Since 1950, public school expenditures have risen from \$5.8 billion to \$14.4 billion and teachers' salaries, on the average, have gone up from \$3,010 a year to \$5,160, or 71 percent. Classrooms have increased 30 percent since 1954, and the number of pupils per classroom is down from 30.6 to 28.1."

"During the present administration, an average of 62,725 classrooms per year have been built, three times as many as during Truman's administration and almost 6 times as many as during F.D.R.'s. The spenders know that time is running out on them, insofar as making a case for Federal aid to education."

"Thus, in one fell swoop, the Senate decided to wipe out at least one-quarter of a surplus badly needed to fight inflation and restore fiscal stability."

Representative JACKSON, who visited Hawaii as a fighting marine during World War II, and was here briefly last year on Marine Reserve duty, makes another point that Hawaii's delegation in Congress would do well to consider.

"We do not intend to vote to seat Uncle Samuel as an ex-officio member of the school boards of Los Angeles, Santa Monica, and Beverly Hills. These communities have built fine schools by the hundreds, and are meeting the problems of exploding population in a businesslike way."

"Passage of the instant bill would mean that California and the taxpayers of that State not only would pay for hundreds of schools that must be built in the next few years, but would also be required to finance, in part, the construction of schools elsewhere throughout the land."

And so would Hawaii. The more prosperous States, which include Hawaii, would, through Federal aid, have to contribute to the less prosperous ones—Mississippi, Alabama, Georgia, Arkansas.

Furthermore it costs money to collect taxes in Hawaii, take the money to Washington, shuffle it around among hundreds of bureaucrats—all of whom have to be paid—and then return it to Hawaii.

The sooner we get over the notion that Federal aid is "free money" the better. The sooner we realize that for Hawaii, at least, some Federal aid can be a losing proposition, the more we will come to realize that local solutions of our educational problems will give us more money to do the job in the long run—at less cost to Hawaii's taxpayers.

The Policy of International Giveaway of Historic Rights Strikes at Every American Citizen

EXTENSION OF REMARKS

OF

HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. PELLY. Mr. Speaker, I hope my colleagues of the House, especially those whose congressional districts include coastal areas and fisheries, are not failing to see the implication of a death sentence to certain segments of the U.S. fishing industry through Canada's proposal on the law of the sea.

Where a nation historically has fished outside the traditional 3-mile limit, both a moral and legal right has been established which must be recognized under international convention.

However, Canada sees in the Geneva Conference on the Law of the Sea, starting Thursday, March 17, 1960, an opportunity to gain for herself an exclusive fishing zone on the Pacific coast where our American fishermen have pioneered and long established an international right to take fish within the 12-mile limit.

Will the Representatives in Congress of the American people see in this threat to my State of Washington and Pacific coast fishermen a potentially immoral and dangerous policy of international giveaway that strikes at every U.S. citizen's rights regardless of geographical residence. I hope so, and that my warning protest will not go unheeded and unsupported.

The following Seattle Times editorial points up that traditional fishing rights must be guaranteed:

FISHING RIGHTS MUST BE SAVED

The agenda for the Second United Nations Law of the Sea Conference, convening March 17 in Geneva, will be limited specifically to two subjects: Territorial sea limits and exclusive fishing zones. Upon the outcome of this convention, much of the future of the fishing industry in the State of Washington may depend.

Two main proposals before the conference probably will dominate its deliberations. The Canadian Government will propose that the territorial limits of any coastal nation extend 6 miles offshore. In addition to this 6-mile territorial sea, Canada also will propose an additional 6-mile exclusive fishing zone. In effect, the Canadian plan creates a 12-mile exclusive fishing zone.

The American plan differs from the Canadian proposal only in that the United States takes cognizance of historic fishing rights. Under the American plan, fishermen who had traditionally depended upon fisheries falling under these new territorial limits would be allowed to continue their operations. Basically, while agreeing with the need for a wider territorial sea buffer zone and broader protection of fishing rights, the United States seeks to preserve the status quo.

The Canadian plan is aimed, frankly, at banning American fishermen from offshore areas in which they have fished for many years and which hitherto have been regarded as international waters.

Canadian External Affairs Minister Howard Green, in a speech to the Dominion House of Commons, made his country's point crystal clear. He emphasized that the Canadian plan would "wipe out" historic fishing rights now enjoyed by the United States.

U.S. convention delegates must make it equally clear to the conference that this country's economic dependence upon the fishing industry is too great to write off in a grand gesture of international good will. Traditional fishing rights should be guaranteed by any plan to which this country is a party.

Illinois Medical Society Makes Effort To Solve a Very Difficult Problem

EXTENSION OF REMARKS

OF

HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. MACK of Illinois. Mr. Speaker, the Illinois State Medical Society is to be commended for making an effort to provide for the health needs of older citizens who are not in a financial position to pay the full price for expensive surgical operations and certain other medical care.

The society has announced a voluntary insurance program for persons over 65 to be administered by Blue Shield and to cost subscribers \$1.65 per person. This is not a complete solution of the problem but it is a step in the right direction. The society expects that most doctors will accept the scheduled allowances as full payment for surgical and medical care in hospitals for persons with limited assets and small incomes. The society also anticipates that Blue Cross soon will match this program with one providing low-cost hospital insurance for the same group.

Under leave to extend my remarks I include here a letter from Dr. Joseph T. O'Neill, president of the Illinois State Medical Society, and a fact sheet on the program:

ILLINOIS STATE MEDICAL SOCIETY,
Chicago, Ill., March 11, 1960.

Re Forand bill.

HON. PETER F. MACK, JR.,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN MACK: As you are aware, we have been very much concerned with the difficulties of our older citizens to provide for their health needs at a time of life when their income is decreasing and their medical needs are increasing. The medical profession has been studying this problem and working on solutions offering a cheap and realistic answer.

We are happy to inform you that on February 25, 1960, the Illinois State Medical Society announced a low-cost voluntary insurance program for persons over 65, to be administered by Blue Shield. This program will cost about \$1.65 a month per person. Its benefits include allowances for surgical and in-hospital medical care, and certain diagnostic procedures. Preexisting conditions are covered after 180 days of membership and no physical examination is required.

The officers of the society anticipate that the majority of doctors will accept the scheduled allowances as payment in full for those with limited assets and with incomes of less

than \$2,000 per person or \$3,000 per couple.

This is just one program of the Illinois State Medical Society which is evolving under our free enterprise system to meet the needs of our people as they arise. No controls are imposed on anyone and no tax moneys are required.

An accompanying low-cost hospitalization program for those over 65 is expected to be made available by Blue Cross within the very near future. We hope that you will bear these developments in mind when evaluating legislative proposals which purport to deal with this particular problem.

Very truly yours,

JOSEPH T. O'NEILL, MD.,
President.

ILLINOIS STATE MEDICAL SOCIETY'S MEDICAL CARE INSURANCE PLAN FOR PEOPLE OVER 65

THE BACKGROUND

Following recommendations of the American Medical Association and a directive from the house of delegates of the Illinois Medical Society this new program has been developed by the society.

THE PURPOSE

This program is designed to make it possible for the person over 65 who has to go to the hospital for an operation or in-hospital medical care to have a practical plan to help him pay the physician's bill.

Growing life expectancy has resulted in over 900,000 people in Illinois now being in the over-65 age group. In George Washington's time, the life span was a mere 35 years. In Lincoln's day, it was 38 years, and today it is 70.2 years and still rising rapidly.

THE NEED

Many of these people over 65 are living on social security or on small pensions. A large number of them have no medical plan and find it difficult to finance surgical and in-hospital medical care. To help them finance such care, the voluntary way, this program has been developed.

THE SCOPE

This program will provide benefits for the over-65 subscriber who has to go to the hospital for an operation. A schedule of maximum allowances has been developed which provides allowances according to the type of operation. And the subscriber may receive benefits up to a maximum of \$200 in a 90-day period for surgery performed in a hospital.

The plan also will provide 30 days of in-hospital medical care benefits for those who do not require an operation but do need medical care in a hospital.

SPECIAL FEATURES

Preexisting conditions are covered after 180 days of membership. People can get benefits over and over again for the same condition. For example, a subscriber may receive benefits for a number of cancer operations or he may receive 30 days of in-hospital medical care benefits over and over again for a heart ailment, any time he has been out of the hospital for 90 days.

BENEFITS THIS PROGRAM WILL OFFER

Surgical benefits vary from \$5 for lancing a small abscess to \$200 for a gastrectomy (removal of stomach.)

Allowances are provided for surgical services for correction of fractures or complete dislocations.

A maximum of \$200 in surgical allowances may be provided in a 90-day period.

General medical care in a hospital

In-hospital medical care will be covered to the extent that when a patient is hospitalized for three or more consecutive days of bed care, the plan will pay the physician \$5 for each of the first five daily visits and \$3 for each of the next 25 daily visits * * * for a maximum of 30 daily visits.

If subscriber is discharged from the hospital and 90 days separate date of discharge and readmission, he may receive allowances for another 30 daily visits of his physician.

Other professional services

Schedule of Allowances

Diagnostic X-ray service: A maximum of \$50 per illness or accident.

Radiation therapy: A maximum per calendar year of \$150 for treatments of malignant conditions with X-ray, radium, radon and radioactive isotopes and \$50 for superficial malignancy.

Clinical and surgical pathology: A maximum of \$50 per accident or illness.

Anesthesia: A maximum of from \$10 to \$35 per procedure to the anesthesiologist.

Shock therapy: A \$10 allowance per electric shock treatment, \$3 per insulin shock treatment, with a maximum of \$50 per calendar year for a series of each type of treatment.

Robert A. Bicks, Chief of Antitrust Division

EXTENSION OF REMARKS OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to call attention to the editorial from the New York Times of Saturday, March 12, 1960, in which the question is raised as to why Robert A. Bicks, who has been Acting Assistant Attorney General in Charge of the Antitrust Division of the Justice Department, has not had his nomination sent over to the Senate.

I think everything that is said in the editorial about Mr. Bicks, worth is eminently true. One of the foundation stones of the private enterprise system is adequate and equitable enforcement of antitrust legislation. It is very difficult for those of us who believe in the marketplace as an efficient and effective method of making economic decisions rather than a political bureaucracy or oligopoly to maintain this position if the marketplace is not kept truly free. Antitrust legislation adequately enforced is one of the essential features in keeping it free.

The editorial follows:

ANTITRUST LAWYER

One of the great strengths in the performance of William P. Rogers as Attorney General has been his record of antitrust enforcement. The Justice Department has been more active in this field than it has been for many years, bringing more cases and more significant cases. It has been firm in moving against anticompetitive practices. At the same time it has shown welcome imagination in trying to make out the vague contours of the antitrust statutes and especially in developing coherent theories for controlling the merger trend.

Those familiar with the antitrust field are in agreement that the person chiefly responsible for this excellent record is Robert A. Bicks. For some years the No. 2 man in the

antitrust division, Mr. Bicks became its acting head last April. He has won the respect of Congress, of the antitrust bar and, perhaps most significantly, of the lawyers who have dealt with him as an opponent in the big cases.

Why, then, has Mr. Bicks not been nominated as chief of the antitrust division? The explanation most often heard is that certain business interests oppose him as too zealous an advocate of the antitrust laws. But that answer cannot appropriately come from either Mr. Rogers or President Eisenhower. The administration has properly taken credit for adopting the strong antitrust policy urged by Mr. Bicks. Since it obviously believes in that policy, it should have the courage to say so by nominating Mr. Bicks, and promptly.

Slovak Independence Day

EXTENSION OF REMARKS OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. DERWINSKI. Mr. Speaker, I shall take but a brief moment to remind the Members of this body that this is the 21st anniversary of Slovak Independence Day. To most people in America, this day has no significance. Furthermore, high-ranking officials in our Government especially in the pre-World War II period, and during the diplomatic negotiations with the Soviets in the latter days of the war failed to understand the aspirations of the Slovak people for independence.

At the present time, the brave Slovak people share a common misery with other groups behind the Iron Curtain; that common misery is the dread oppression of communism. It is my hope and prayer that the spirit and love of freedom on the part of the Slovak people and all other captive peoples, will continue to grow and someday manifest itself in the reality of national independence. Surely justice will someday free the courageous Slovak people from Communist persecution and provide for the goals that they so fervently desire.

May I further call to your minds the fact that the Slovaks are a Christian nation—a great majority being Roman Catholic—and, therefore, this religious heritage provides them with the inner strength necessary to resist Communist philosophy.

As I have indicated on many previous occasions, history will someday reveal the tragedy that followed the unfortunate wartime Yalta Agreement, when the occupant of the White House at that time delivered, in addition to the Slovaks, millions of people into the hands of Communist tyranny.

In conclusion, Mr. Speaker, may I commend the Slovak League of America for its effective work in maintaining among the 2 million Americans of Slovak origin the faith and confidence in eventual liberation of the Slovak people.

Law Our Only Hope for Lasting Peace

EXTENSION OF REMARKS OF

HON. HOMER THORNBERRY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, February 17, 1960

Mr. THORNBERRY. Mr. Speaker, Law Day U.S.A. will be observed throughout America, on Sunday, May 1, 1960. It has been so proclaimed by the President of the United States, and is being given official designation in our State by the Governor of Texas and scores of Texas mayors.

Directed at the national level by the American Bar Association, the Law Day observance in Texas is being coordinated by the State bar and 180 local bar associations.

The distinguished president of the State Bar of Texas, the Honorable A. J. Folley, of Amarillo, is the author of an article on Law Day U.S.A. for the March periodical of the Texas Law Enforcement Foundation, an organization dedicated to teaching public respect for law and its enforcement.

It is fitting that Judge Folley is author of this article, for he has served with distinction at virtually every level in our system of the administration of justice: practicing lawyer, prosecutor, trial judge, associate justice of an intermediate appellate court, and as an associate justice of the supreme court, Texas' highest tribunal in civil matters.

In view of the significance of law to our country's greatness and its unchallenged position of leadership among nations of the free world, I include Judge Folley's article in the Appendix of the RECORD:

LAW DAY U.S.A.

I appreciate the opportunity to write this article on "Law Day U.S.A.," fully realizing the important role that the Texas Law Enforcement Foundation maintains in teaching respect for the law and its enforcement, and in encouraging its support from the people of Texas.

In the course of 2 or 3 years, Law Day U.S.A. has become somewhat of an institution in the United States, and in Texas, particularly. By Presidential proclamation, and by proclamation of the Governors of our several States and of the mayors of our cities, May 1 of each year is proclaimed Law Day. These proclamations urge our people everywhere to join in a nationwide observance of Law Day, either the week before or the week after May 1, with patriotic programs in churches, schools, courts, service clubs, fraternal organizations, and private organizations of all kinds.

The purpose, of course, is to cause the people to foster an abiding respect for the law, enabling the Nation to grow in moral strength as it grows in population, resources, and world leadership; and to provide an occasion for the American people to rededicate themselves to freedom for the individual under just laws administered by independent courts, and in so doing to emphasize before the world the contrast between the rule of law in the United States and the rule of force and fear under communism.

The purposes of Law Day are educational and patriotic. Though the lawyers of the

country assume the principal burden of sponsoring the event, Law Day is not a "lawyer's day," as the name might imply. It is a day for honoring the place of law in American life and the contribution which it has made and must continue to make in the Nation's growth and development, as well as its great potential as an instrument of world peace.

The full purposes and aims of Law Day U.S.A. are too numerous to discuss here in detail. Suffice it to say that the lawyers of the United States and other public-minded groups like the Texas Law Enforcement Foundation, are attempting to impress upon the minds of the people everywhere the importance of law as an intangible force that makes freedom and progress possible.

It is the law that brings order into the affairs of men, enables them to survive, accumulate possessions, develop the arts and sciences, pursue knowledge, and enjoy the freedom of life. Law gives the individual security that he can obtain in no other way. It protects his home, his family, his property and his ideals for the advancement of common interests. It permits the growth of great cities and the development of vast enterprises. In other words, it is the cement that holds our free society together.

Law Day U.S.A. is dedicated to an understanding of this powerful force and to more extensive use of it for the benefit of mankind. Men attain the high state of social, political and economic development we call civilization by thinking and working together for the good of all. The full flower of human endeavor is possible only when the individual is free to think for himself, to follow his own bent, and to enjoy the fruits of his own efforts. He can do this only if he lives in a society of freemen in which his rights are protected and his basic obligations are fixed by law. It is therefore literally true that law is the alternative to chaos on the one hand and terror on the other.

The law is the servant and not the master of freemen. It is our only hope of lasting peace. It is not good to lie down at night in solemn sleep realizing that no gestapo is about to break in and that the silent protection of the strong arm of the law is ever present as a shepherd watching over his flock? Americans are truly fortunate to live in such a good, free world. I urge all groups everywhere to join in this nationwide observance of Law Day U.S.A. and hold high the banner of the law and spread its good tidings around the world so that peace and security shall not perish from the earth.

Postal Rates

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. CANFIELD. Mr. Speaker, I like the editorial appearing in the Washington Daily News of this date on postal rates. It puts the truth right on the line. I am glad to say that our House subcommittee in charge of appropriations for the Treasury and Post Office Departments concurs in this expression. The editorial follows:

POSTAL RATES

In principle, Congress favors pay-as-you-go for the Post Office. A law passed in 1958 specifies that postage rates be adjusted periodically to pay the cost of service. But,

in practice, Congress is extremely reluctant to fix stamp prices high enough to do this.

Last week, President Eisenhower reminded Congress both of its own law and of the postal deficit, now running \$2 million a day. He asked for increases in rates to raise \$550 million in fiscal 1961.

As the President point out, big postal deficits date from the inflationary period following World War II. They have amounted to \$6.8 billion in the last 13 years and are costing the taxpayers an extra \$200 million a year in interest charges alone.

Insistence on a break-even operation for the Post Office is an important phase of the general effort to balance the budget and pay something on the national debt. This new revenue is a part of the estimated budget surplus for next year.

Congress is squeamish about raising anybody's rates in an election year and the prospects for this one admittedly are not good. We hope this attitude will change. The vast majority, in our opinion, will not begrudge the extra stamp pennies necessary to insure a sound, businesslike operation for this great public utility.

A Prayer for the Creed of Humanity

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. EDMONDSON. Mr. Speaker, under leave to extend my remarks, I welcome the opportunity to place in the RECORD an eloquent and moving prayer in which hundreds joined 2 weeks ago, on the occasion of a dinner given by the Young Democratic Clubs of the District of Columbia honoring Mrs. Eleanor Roosevelt.

Father Harry J. Magoulias of Dumbarton Oaks, Washington, D.C., delivered the memorable benediction, which follows:

O Lord, our God, as we depart this evening from this table and communion of love, we pause to recollect Thy sustaining words, "Man liveth not by bread alone." Do Thou, then, we beseech Thee, ever sustain us in Thy love for Thou art the bread of life and the living water of faith.

O Lord, who in Thy mercy and loving kindness dost regard the prayers of all who call upon Thee with their whole heart, incline Thine ear and hear our prayer, now humbly offered unto Thee.

Bless, we beseech Thee, Thy gracious servant whom we have honored this evening; grant unto her many more years of fruitful labor in Thy vineyard.

Be mindful, O Father, of this God-loving Nation. Confirm and strengthen it, keep and preserve it in peace, the peace which cometh from above, the peace of Thy life-giving spirit.

Be mindful, O Savior, of our Nation's leaders, of our Armed Forces, of our country's citizens, and of this Capital City in which we dwell.

In the face of a suffering world let this be the creed of our country, this wondrous land of promise whence flow milk and honey—the creed of humanity enunciated by Thine own living word: "For I was an hungered, and ye gave me meat; I was thirsty, and ye gave me drink; I was a stranger, and ye took me in; naked and ye clothed me; I was sick, and ye visited me;

I was in prison, and ye came unto me: Inasmuch as ye have done it unto one of the least of these my brethren, ye have done it unto me." May Thy symbol of faith, O Lord, our God, forever be the soul and heart and life force of these United States. In the name of the Father, and of the Son, and of the Holy Spirit. Amen.

The Real Castro—VII

EXTENSION OF REMARKS

OF

HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the last of a series of articles on the Cuban dictator, Fidel Castro, published in the New York Daily News. The last installment appeared in the issue of March 12, 1960:

MERE MINUTES SEPARATE HIM AND THOSE HE FEARS

(Last article of a series)

Behind Fidel Castro's almost hysterical attempts to sell himself and his regime to the Cuban people—attempts that have taken the form of circus trials, rob-the-rich-and-help-the-poor land grabs and TV and radio attacks on the United States—lies a growing fear of his enemies.

He's not as cocksure as he was a year or so ago. He knows that his foes are busily organizing in areas within a short bomber hop of Cuba.

He's worried and he has reason to be.

One of those reasons is a hard-bitten, lean, gimlet-eyed man whose son was killed by Castro's soldiers—Gen. Jose E. Pedraza. As of this moment, he represents the greatest single threat to Castro and his regime.

Pedraza is a man of mystery who lives quietly in Ciudad Trujillo, Dominican Republic. He shuns all reporters and publicity. He's passionately anti-Communist, anti-Batista and anti-Castro.

The general has highly skilled followers in the Dominican Republic and many more in Cuba—some of these last within Castro's armed forces. Born 56 years ago in Espezanza, in the Province of Santa Clara, he joined the Cuban Army in 1919 as a private and rose to the rank of general.

GETS S O S FROM A WORRIED BATISTA

From 1933 to 1939 he was the head of the Havana police. In 1939 he became chief of the Cuban armed forces, serving until 1941, when enemies informed Batista that Pedraza was disloyal. As a result, he was placed on the inactive list and exiled to the United States.

About 18 months later, cleared of the charges, he returned to Cuba and became a cattle rancher, fading into obscurity until Christmas Day, 1958, when a desperate Batista recalled him just before Castro began his march on Havana. The assignment lasted exactly 1 week and he was forced to flee Cuba.

Pedraza is dedicated to the destruction of the Castro government. Whether this determination is based upon his hatred for Communists or because his only son, Rodolfo Pedraza Patino, 29, was ambushed and murdered by Castro soldiers near Manacas, in Santa Clara, cannot be verified. Confidants of the general claim his mission is not inspired by vengeance.

HIS REPUTATION: TOUGH, BUT JUST

He is a religious man—meticulous, efficient, grimly silent, and conservative. The few men who make up his intimate circle of friends describe him as physically powerful, with the large, rough hands of a farmer. His black hair is graying at the temples and he seldom smiles. He is an ardent friend of the United States.

As a police chief, he had a reputation as a tough, but just, disciplinarian. He maintained perfect peace and order in a hard-to-manage city without creating enemies and had the habit of roaming the streets after dark without the protection of the bodyguard which usually accompanies such officials in turbulent Latin American countries. He is absolutely fearless.

During the Batista regime, Pedraza was given the task of putting an end to Communist demonstrations in Cuba. He did the job in his usual efficient manner.

There is no other man capable of taking on the task of wresting Cuba away from Castro.

Rolando Masferrer is another man whom Castro fears—and hates. But Masferrer, a former senator, attorney, newspaper publisher, and the head of a gang of terrorists that did a lot of Batista's dirty work, has the support only of Batista followers.

In Miami, Masferrer heads a group that is well-heeled and knows all the tricks needed to start—and possibly complete—a revolution. But there is a hitch. The Cubans are unwilling to accept him because of his past.

Yet, so greatly does Castro personally fear this powerfully built, ruggedly handsome man that recently he sent men to kidnap him from his Miami home. The plot was thwarted by an FBI agent, who posed as a venal deputy sheriff and "accepted" \$25,000 to lure Masferrer to a waiting ship.

GAVE CASTRO THE HEAVE-HO

"You might say that I was Fidel's tutor," he told the News. "In 1947 I organized an expedition against Trujillo and the Dominican Republic. Castro was one of the men I helped train. Even then he had a bad temper, was insolent, arrogant, and intolerant. He was so bad for morale I had to remove him from command of a platoon. That was at Key Confites, on the north coast of Camaguey. We had 1,500 men, PT boats, and about 15 planes—with members of the famed Flying Tigers flying them.

"But the thing was called off. He has tried to kill me before this. He wants me badly. He has given me a death sentence in absentia. He's scared because he knows I know means of fighting him."

Masferrer is said to have left Cuba with \$17 million. He grinned, and said, "All I can tell you is that I don't own a car, that my wife does the cooking and household chores, and that I don't have a big bank account."

SOURCE OF DOUGH? HE'S NOT TALKING

The money to fight Castro must be coming from some place but Masferrer won't talk about it. He has his own counterintelligence service and gave the News a list of the more active Castro agents in Miami and New York.

"There are 2,000 exiles ready to fight," he said, "and many thousands waiting for the call in Cuba. Our main trouble is that the anti-Castro groups are not under one leadership."

Masferrer is confident, however. "I've made Fidel Castro run before," he said, "and I'll do it again."

Also gunning for Castro is the FAYCA—Fuerzas Armadas y Civiles Anti-Comunistas, the armed and civilian forces against communism.

FAYCA was created in early 1959 and boasts a membership of more than 4,000 in Cuba. Former navy officers, former army officers, mechanics, pilots, radio operators, and armament experts are included in its ranks.

The brains of the underground organization are in Miami, Central America, and New York. From Central American points, they have been sabotaging Cuba's sugarcane fields almost nightly with incendiary bombs.

The FAYCA invited the News team to fly on one of its missions out of a Central American base, but the offer was rejected. Castro has used less than this for anti-American propaganda.

Destruction of the cane, ironically the principal Castro weapon when he was fighting Batista, has been principally in Oriente and Camaguey, the two largest sugar-producing provinces. Millions of pounds of cane have been destroyed.

On January 20, in Batabano, Havana Province, the headquarters of the 26th of July movement were burned to the ground. Eight days later, Havana was without electricity for more than 4 hours as the result of anti-Castro sabotage of a powerplant.

None of these incidents has been reported in the government-controlled press.

Castro has troubles elsewhere, too. In New York, the White Rose movement is gaining impetus. It is headed by Fidel's ex-brother-in-law, Rafael Diaz-Balart, and it must gall Fidel to realize that his only son goes by the name of Fidel Rafael Castro Diaz-Balart.

Diaz-Balart, who was Castro's best friend during their student days at Havana University, said: "Castro, since the beginning of his public life, has shown he is a completely unscrupulous man. His only values in life are the acquisition of power—by any means."

SAYS MARX, ENGELS ARE CASTRO'S GODS

"His bible is the Communist Manifesto of Marx and Engels. I separated from him because he was a murderer and a Communist. He has no respect for either God or human life.

"He is not, nor has he ever been, an idealist. He is a pure and simple farsante—a liar, a pretender. It is a tragedy that he has been able to fool so many people of good faith, but now the Cuban people—as well as the other people of the free world—are getting to know the real Castro."

Castro, his beard, his gestures, his fatigue cap and his personal magnetism made a big hit when he came to New York last year. Cubans here, as well as native New Yorkers, greeted him like a conquering hero—which he was at that time.

Now, they are among the disenchanted.

Gen. C. P. Cabell, deputy director of the U.S. Central Intelligence Agency, testifying last November before a House subcommittee investigating administration of the Internal Security Act, said Castro had delegated authority in key areas to Reds.

RED PROPAGANDA A HIT WITH FIDEL

"In turn," he said, "he appears to be increasingly susceptible to Communist propaganda, which is designed to exploit 'evidence' that the United States is an enemy, to discredit charges of Communist influence in Cuba and witch hunting—or, as they call it, maccartismo—and to glorify the Cuban revolution, and particularly the agrarian reform, as a pattern for the liberation of the masses in other Latin American countries.

He added: "At present, therefore, their (Communist) primary interest is to influence Castro in favor of an aggressive anti-imperialist nationalism supported by non-Communists, but which will defend the rights of Communists to express their views openly and engage in legal activity."

This is a cautious estimate of the situation.

Castro, despite his enormous ego, is beginning to feel the pangs of uncertainty.

He also recognizes the danger of the underground groups—for it was he who coordinated similar groups to stage the revolt that sent Batista into exile and resulted in

the entrenchment of the Reds who now run Cuba.

COLLECTOR'S ITEMS: ARMS AND FUNDS

He is desperately collecting arms and funds, with agents dealing in every market of the world—Belgium, Paris, Miami, New York, and the other key spots where guns, ammunition, bombs, planes, tanks, and flamethrowers can be had for a price.

His TV and radio appearances are calculated efforts to keep the Cubans at a high emotional pitch. He is so afraid of being assassinated that he moves from house to house, hardly ever spending two successive nights in the same one.

Beyond that, he is courting Russian intervention and aid to his country and he dreams of the day when Cuba will be the hub of Latin America. This from the man who prattles against imperialism.

A great many dictators and revolutionary leaders—most of them more powerful than Fidel—have fallen victims to their own consuming ambitions during the past 60 years of Latin American history.

The United States is facing up to the fact that Castro is not the Messiah.

Maybe the Cubans will be next.

Bond Rate Ceiling

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. CURTIS of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial which appeared in the Christian Science Monitor on Saturday, February 27, 1960:

BOND RATE CEILING: NO DEAL

For a time it appeared that Treasury demands for a lifting of the bond rate ceiling and congressional committee criticisms of debt management policy might end in a compromise. But if so, the agreement has been deferred.

The Joint Economic Committee demanded at least three changes in Treasury methods before it would assent to removing the 4½ percent limit on long-term Government bond interest. On each point the committee had a persuasive argument but Secretary Robert B. Anderson also had a specific rebuttal.

The first was that long-term bonds should be sold by the auction method. Theoretically this should have an advantage, but Mr. Anderson said experiencing in auctioning 1-year bills indicates it may increase the cost to the Government.

The second was that long-term bonds, especially those issued in times of the high interest rates, should be made callable after a certain period. This is a common practice by corporate borrowers and seems desirable notwithstanding the objection that a temporarily even higher rate may be necessary to make them attractive to investors.

Third, the committee urged that long-term borrowing be concentrated in periods of low interest rates rather than high. This would seem obvious except that, as Mr. Anderson pointed out, the periods of low interest rates are those of recession when capital ought to be encouraged to go into home and factory construction instead of being sopped up by the Government.

All in all, the hearing on these points suggests that the Treasury should have as much latitude as possible and at the same time should maintain flexibility. Meanwhile, the case for removing the artificial interest ceiling

ing, so that the Government may pay a going rate for money and spread its borrowings beyond a 5-year term, remains a valid one.

Slovak Independence Day

EXTENSION OF REMARKS

OF

HON. MICHAEL A. FEIGHAN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 9, 1960

Mr. FEIGHAN. Mr. Speaker, under leave obtained, I insert in the RECORD an address I delivered in Cleveland on March 13 under the auspices of the Slovak League of America, at ceremonies commemorating the 21st anniversary of the proclamation of Slovak independence—Slovak Independence Day:

SLOVAK INDEPENDENCE DAY

I am honored by your invitation to speak on this eve of the anniversary day of Slovak Independence. I deem it a privilege to associate myself with the ages-long inspiration and struggle of the Slovak people for their national independence. Long years of study of the Slovak nation and the aspirations of her people have convinced me that the cause of human freedom has a staunch and proven ally in the Slovak nation.

The cause of the Slovak nation has been much maligned in recent years, particularly since World War II. A concerted effort has been made to brand the leaders of the Slovak independence movement as Nazis or Nazi collaborators. This attack stems from several quarters and is by no means restricted to the propaganda organs of the Russian imperialists. Those who seek to degrade the cause of the Slovak nation play upon the general public's ignorance concerning the historic aspirations of that ancient and honored nation. The opponents of the national independence movement, whatever hue and color they may be, have made the Slovak nation the symbol of their determined effort to preserve organized tyranny, colonialism, and imperialism.

Because of recent attacks made against the just aspirations of the Slovak people, I would like to set the public record straight on several important points.

The first is that the Slovaks are a nation who trace their history back for more than 1,000 years. This history is replete with examples of the struggles of the Slovak people to throw off a wide variety of alien occupations and dominations. During and following World War I this popular movement toward self-government and complete national independence was led by Monsignor Hlinka, who founded the first truly democratic party in that country. Monsignor Hlinka had been imprisoned for his views on Slovak independence. He was released from prison and immediately went to Paris to plead the cause of the Slovak independence before the leaders of the great powers then meeting to work out a peace settlement. Following this appeal for the Slovak nation, Monsignor Hlinka returned to his homeland where shortly thereafter he was again jailed for insisting on the right of the Slovak people to absolute and complete national independence. These are some of the reasons why Monsignor Hlinka stands today as one of the bright symbols of his countrymen in their continuing struggle for national independence.

It is a fact of history that the Slovak nation became a part of the Czechoslovak federation against the will of most of her national leaders. It is also a fact of history

that the Slovak people were treated as second class citizens by the Benes regime which ruled the Czechoslovak federation following the death of Thomas Masaryk. It is little wonder then that the Slovak people felt no sense of loyalty for the Benes regime and others associated with him in discriminating against the natural rights of the Slovak people. It is understandable that the Benes regime was thus unable to stand up against the dictator Hitler and as a consequence, both the Czech and Slovak people were viewed as easy game for the tyrant on the march. With the fall of Czechoslovakia, it was to be expected that the Slovak people, true to their traditions, would make a renewed effort for their national independence. History records that the Slovak people declared their national independence and being caught between the totalitarianism pincers of nazism and Russian communism, fought a valiant battle to preserve their identity as a nation. Hitler attempted to make Slovakia a vassal state, completely subservient to the will of nazism, and in this effort he failed completely. Thus the Slovak people and their leaders were faced with the task of preventing both the Nazis and Russian Communists from gaining a foothold in their country.

During the days of World War II the Slovak leaders had the single purpose of preserving the national integrity of their country. This was a tremendous challenge because agents of the twin tyrannies of nazism and Russian communism were attempting to destroy the newly independent state. In these circumstances the Communists charged the Slovak independence leaders with being Nazi collaborators, and at the same time, Nazi agents were seeking to take over the country under the guise of protecting it against Communist infiltration. These are the facts in the case. These are the facts I have found after many years of careful and intensive study of the role of Slovakia during World War II.

The price Benes paid to the Russians for the reconstruction of the Czechoslovak federation was complete subservience to the masters in the Kremlin. The treaty which Edward Benes signed with the Russians at a Kremlin meeting during the closing days of World War II led to the Communist enslavement of both the Czech and Slovak nations. This was a terrible price to pay but Edward Benes, whatever his motives may have been, was prepared to pay this price.

It is important to know that in contrast to the charges being made against the Slovak nation by Communist agents in the free world, the leaders of the Russian Kremlin are attempting to win the loyalty of the Slovak people by recognizing the popular aspirations for complete national independence. It is a well known fact that the Russians have attempted to secure support and approval from the leaders of the Catholic Church in Slovakia in exchange for granting their country complete national independence. It is to the everlasting credit of the leaders in Slovakia that they have refused to engage in any deals or bargains with the Russians even when it involves a promise of national independence. The Slovak people and their leaders know that the only way they will be victorious in their fight for national independence is to remain firmly attached to the spirit of individual liberty and freedom. They also know that any deals with the Russian imperialists would be selling their rich heritage for a mess of pottage.

I am convinced beyond any doubt that the most powerful force at work in the world today is the national independence movement. We have seen the inspiring victories of this movement in farflung parts of the world, from south and southeast Asia to the Middle East and Africa. No less than 20 nations have won their national independence since the end of World War II. The day is not far distance when every colonial and dependent

territory in the free world will have its national independence and complete self-government. This powerful human force is the moving spirit among the masses behind the Russian Iron Curtain. The captive nations behind that Iron Curtain are struggling to throw off the chains of the new Russian imperialism, the new Russian colonialism. In this struggle the Slovak nation takes second place to none, because the people of Slovakia are in the vanguard of this national independence movement. I am equally convinced that the Russians are finding it impossible to hold their empire together and that they desperately seek the cooperation of the United States in maintaining their slave empire. This is the real meaning of status quo. This explains the frantic efforts of the Russians to force the United States, France, and Great Britain into a second summit conference. Therefore the second summit conference to be held in Paris May 16 presents a great opportunity for President Eisenhower—an opportunity which he must seize if our country is to maintain its leadership as champion of a peace with justice for all nations and people. President Eisenhower can strike a powerful blow for the cause of peace with justice by going to Paris with a dynamic political action program. Here is what I mean by a dynamic political action program.

The 86th Congress enacted the Captive Nations Week Resolution which is now known as Public Law 86-90. Public Law 86-90 is a public declaration of American foreign policy and intention toward all the nations and people held in Communist bondage. This declaration of intention states simply and clearly that the United States recognizes the right of all these submerged nations to their national independence. It is imperative that President Eisenhower make certain that the Russians understand that we mean business by the terms of this resolution. He can do this best by challenging the Russians to permit free and unfettered elections in all the captive nations, such elections to be under United Nations supervision.

Such action on the part of President Eisenhower will put into sharp focus the basic and fundamental cause of world tensions. The President can, with confidence, assure Khrushchev and the other Russian leaders that if they accept his proposal there will be no further need for talks on disarmament, talks on banning nuclear bombs, talks about the control of outer space, and such other matters as are basic to the question of peace or war. It is a certainty that free and unfettered elections held in all the captive countries will resolve each and every one of these problems because such elections will result in the complete dismemberment of the modern day Russian Empire, which alone stands as a threat to the peace.

While the Captive Nations Week Resolution does not distinguish the Slovak Nation as a separate and distinct nation, a development which was beyond the control of those of us who brought about its passage, such action by the President would have equal force and effect for the Slovak Nation. I say this because free and unfettered elections under United Nations supervision would present all the people concerned with a series of options. These options would, in all justice, require the following:

- (1) The right to remain under the domination of Russian imperial communism.
- (2) The right to accept or reject previous or existing federative arrangements.
- (3) The right to establish independent governments, irrespective of previous geographical and political settlements.
- (4) The right to determine the form of government which the people concerned determine most likely to guarantee them life, liberty, and the pursuit of happiness.

Those who know the true story of the Slovak nation in history would have no fear whatsoever of accepting such a formula because it would give to the people of Slovakia the rights which have been denied them for all too long. Such a formula would settle, once and for all times, all outstanding questions involving the Slovak nation.

If President Eisenhower fails to confront the Russian dictators with the full meaning and serious purpose of Public Law 86-90 it will be fair and proper for the American people to say that the second summit conference was nothing more than a part of the "mirage of peace" and a further step along the road to appeasement. It is now widely held in the United States that the Khrushchev tour of our country, accompanied as it was by complete access by him to all our mass media of communications, particularly television, was an important part of this "mirage of peace" concocted by the Madison Avenue soap salesmen. This was intended to be a 1960 political special in which the "mirage of peace" would be used to justify the Republican campaign slogans of peace, prosperity, and progress. Fortunately for the cause of peace with justice, the "mirage of peace" has now been exposed as a fraud and a massive deception of the American people.

For those who innocently believe that by allowing Khrushchev to see firsthand the great industrial power of the United States, he would be dissuaded from his evil ways and would, practically overnight, give up the communist objective of world conquest, the evidence is overriding to the contrary. Khrushchev has interpreted his visit to the United States as a sure sign of the triumph of communism in the world, as an indication of weakness on the part of the United States, as reason to believe that the policy of appeasement guides our foreign policy. Our allies in NATO and SEATO have begun to wonder whether the United States has wearied in its task of leading the cause of human freedom. The uncommitted peoples of the world are showing dangerous signs of looking towards Moscow and its claims to represent the wave of the future. The people of the captive nations behind the iron curtain are surely wondering whether the United States is being led down the road to associating the destiny of our Nation with the Russian despots in a common effort to hold the slave empire of communism together. This, my friends, is the Pandora's box in the field of world affairs which President Eisenhower's invitation to Khrushchev has opened up.

But there is a brighter side to life than that which results from the Khrushchev visit to the United States. There are ever growing signs that the people of the United States are becoming restless and dissatisfied with the many failures of leadership by the Eisenhower administration. The American people will not long suffer at being second best, too little—too late, and a national posture of passivity in circumstances of opportunity calling for dynamic action.

Foreign policy will be a major issue in the fall campaign because the failure of the Eisenhower administration to develop a realistic policy to advance the cause of freedom and national independence for all nations has made it an issue. The Eisenhower administration has turned its back on the fight for national independence now raging behind the Russian Iron Curtain. The overriding problem facing the American people today is to put a new President in the White House who publicly rejects the road to appeasement and who sets a steady course of meaningful political actions along the road to peace with justice for all nations and all people. The history of our country teaches us that in periods of crisis great and enlightened leaders rise up to lead us out of confusion, uncertainty, and fear. Our people

recognize the perilous situation into which our country has fallen and their demands for such leadership cannot be denied. I am confident that we are at the doorstep of a new and dynamic era in which the United States will return to a position of world political leadership.

In conclusion, I give you my assurance that I shall continue my efforts to make the great moral and political principles of our country the cornerstone of all our actions and programs in the field of world affairs. With our country returned to the firm leadership of men who will permit no compromise of these sacred principles, you and I can be confident that Slovakia will soon be free and independent.

Problem of Mass Transportation in Metropolitan Areas

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter, digest, and memorandum in regards to the problem of mass transportation in metropolitan areas:

BOSTON & MAINE RAILROAD,
Boston, Mass., March 8, 1960.

The Honorable THOMAS J. LANE,
House of Representatives,
Washington, D.C.

DEAR MR. LANE: The problem of mass transportation in the metropolitan areas has become a Federal Government problem for these reasons:

1. Over 65 percent of our total population lives and works in metropolitan areas.
2. The Federal highway program of 1956 has caused the building of great arterial highways in the metropolitan areas which, unfortunately, are no longer functional in the peak commuting hours.
3. The municipally owned transit systems of the United States and the great majority of the commuting railroad lines are not in a financial position to develop by themselves a sound mass transportation system.

The solution of the problem requires the cooperation of the Federal, State, and local governments, in order that short-range and long-range planning be introduced to develop a sound plan of mass transportation in these metropolitan areas.

Because the Federal Government controls the highway program, no plan can be evolved without its cooperation.

Legislation is needed to establish within the Department of Commerce a plan to extend financial assistance to State or local governments or public authorities. The Department would be charged with the responsibility of financing for these metropolitan areas a system of mass transportation during the peak commuting hours at the lowest possible cost, whether it be by highway, municipal transit, or commuting railroad.

Mr. Patrick H. McLaughlin of the American Municipal Association is coordinating the sponsorship of legislation to accomplish this purpose and will call upon you to discuss this matter shortly. Attached to this letter is a short digest of the proposed bill; also a copy of my idea of the position of the commuting railroad.

We hope that you will give serious consideration to our suggested solution and

assist in developing an overall plan which will benefit the great majority of our people.

Your sponsorship of the legislation would be greatly appreciated.

Sincerely,

PATRICK B. MCGINNIS,
President.

DIGEST

The legislation contemplated sets up a Mass Transit Financing Corp. in the Department of Commerce, with an authorized capitalization of \$500 million, to be used as a revolving fund for advancing long-term, low interest loans to State or local governments or public authorities operating or providing transit and commuter service.

These loans shall be used to acquire equipment, land, stations, right-of-way, tracks and track materials, electrification facilities, or other real or personal property necessary for the operation of transit or commuter service.

The loans are made to duly constituted public bodies and not to private operators. The States, municipalities, or public authorities will in turn contract with the private operators for certain mass transportation services to serve the people in their area, and on the basis of such contracts lease the equipment to the private operators.

The loans are to be used, not only for rail commuter service, but for all forms of mass transportation, including bus, subway, rapid rail and other forms of mass transportation.

WHY ARE FEDERAL LOANS REQUIRED?

In the case of rail commuter service, no railroad can presently borrow money for equipment because the railroads are losing millions of dollars on commuter service, and no banker would lend them money to finance a deficit operation.

No private enterprise can be expected to continually sustain losses and stay in business. The only alternatives for the railroads are to raise their rates to the point where they will drive customers in private automobiles, to cut down service with the same result, or to abandon service entirely.

Similarly if other forms of mass transportation aren't improved and extended to rapidly growing suburban areas, the people from these areas will be forced to move in and out of the metropolitan area solely by private automobile. When you reach the outer stretches of these areas it is not profitable for private operators to operate presently, nor can they borrow money from private sources for such unprofitable service.

The alternative is to move all of the people in and out of metropolitan areas by private automobiles. The costs of moving the same number of people by highways and providing parking space, police and traffic controls, etc., is so fantastically high as to be almost beyond human comprehension. In just the five cities of New York, Philadelphia, Chicago, Boston, and Cleveland, the cost of providing highway facilities to move the same number of people who move by mass transportation presently would be over \$30 billion.

WHY CAN'T THE PROBLEM BE HANDLED LOCALLY

What creates the problem of mass transportation is the fact that people are moving over a vast metropolitan area, which extends across city, county and State lines. There is no jurisdiction with authority to tackle the problem in its entirety, even if it had the tax resources to do it. The core city does not have the authority to tax its residents to provide facilities outside of its boundaries to serve people who live outside of its jurisdiction. Cities must help in the solution to this problem, and will to the limits of their resources, as will States, but a combined local-State-Federal approach is required to solve the problem.

WHAT IS THE FEDERAL STAKE IN THE PROBLEM

At the present time, 65 percent of the Nation's population live in the 170 metropolitan areas affected by this problem. In the next decade 80 percent of our population will live in these city-suburban complexes.

Not only our national defense but our national economy depends on the industrial, financial, research, university, medical, and other facilities located in these areas. If people cannot move in and out of these centers the repercussions on our national economy will be staggering.

The Federal Government is committed to a highway program, to which in some categories it contributes 90 percent of the revenues. If mass transportation services collapse the Federal funds required to move people by highways will soar beyond the capacity of the Nation to finance it. The Federal Government is also pouring millions of dollars into urban renewal programs which will be entirely wasted if mass transportation does not keep pace with urban renewal.

Even the farmer living in the most remote section of the country is affected directly, because if railroads lose millions of dollars in metropolitan commuter operations they can only recover such losses by increasing freight revenues, which affects the price paid on every commodity and manufactured article used in our national economy.

THE POSITION OF THE COMMUTING RAILROADS
(Memorandum by Patrick B. McGinnis)

Subsidies to our competitors have existed for a long time and continue to expand. Railroads operating on strict private enterprise principles may not be able to exist indefinitely in competition with other modes being assisted generously by Government.

The suburban services which a number of railroads perform at substantial losses are basically required to be performed not for the benefit of the railroads but as an essential public necessity in the interests of a balanced and economical system of transportation in the large metropolitan areas. Participation by Government at any or all levels in providing this essential public service is no more a subsidy or a form of public hand-out than is the maintenance of police protection, fire protection, and other community services. No one can logically suggest that it is unsound for Government to undertake any activity which is primarily a public function and thus not basically a task of private citizens. For example, there is no business market for long-range missiles and other forms of armament and it is only natural and proper that Government finances this entire effort. And, what is more significant for our purpose, it is impossible to suggest that the private companies receiving Government contracts for producing these commodities are being subsidized or aided by Government.

We feel strongly that there has been a failure to place the commuter problem in its proper setting, and a tendency to assume that any Government participation in any phase of railroading is a subsidy and will be the entering wedge for ultimate public ownership. We are dealing with a situation which has no relationship at all to farm supports and housing subsidies. No law compels farmers to operate farms or people to buy houses. The law does, in effect, require railroads to perform suburban services; and this only serves to emphasize that those operations are essential in the broad public interest and lend themselves to treatment as a type of essential Government function.

It is simply not true that government participation in any activity leads inevitably to government ownership or complete control of that activity. Our competitors in the transportation business are perhaps the very best example of the fallacy of this idea.

They have been assisted by public expenditures in numerous ways over a period of many years and we find today that they are actually under far less government control or regulation than are the railroads, who have always posed as champions of private enterprise. Actually, when it comes to problems such as suburban services, we are firmly convinced that the very best assurance we can have of avoiding an ultimate financial crisis and government ownership will be to have government assume some responsibility for providing these essential public services which cannot be performed profitably by private enterprise alone.

What we have said so far explains our views on the validity and even the necessity of Government participation in providing suburban rail services in metropolitan areas. With regard to the part the Federal Government should play, we must remember that it is already deeply involved in providing transportation facilities in all areas of the country, including the heavily populated metropolitan areas. This is a vast and costly program from the standpoint of highway facilities alone. Thorough studies by impartial authorities into the overall problems of transportation in metropolitan areas have demonstrated that the improvement and extension of rail suburban services, and other mass transportation facilities, will be less costly to Government than an attempt to duplicate those facilities with urban highways. For this reason Federal expenditures in connection with participation in the commuter problem will actually save the Federal Government money.

To our minds, the suburban service problem is one which should be dealt with honestly and forthrightly.

Hungarian Freedom Day

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. DINGELL. Mr. Speaker, Hungarians are one of the sturdiest workers and courageous warriors in Europe. They have worked hard in making their naturally picturesque land one of the most beautiful countries in Europe, and they have fought valiantly for their freedom and independence. But they have not always enjoyed their freedom in the past, and particularly during the first half of the 19th century when they were held down by the oppressive regime of the Austrian empire. Under its iron-fisted and arch-conservative leader Metternich, that government did everything in its power to hold down all subject nationalities and stifle their national aspirations. But this was not an easy thing to do in the case of the Hungarians. They were restive, clamored for reforms, demanded freedom and independence. They had their chance in the revolution of 1848.

In that year Hungarians were prepared to stage a revolution of their own for the attainment of their goal. But as the forces of freedom and liberty were gathering momentum, and those of despotism were weakening, revolution proved to be unnecessary in Hungary.

As the startling news from Paris and Vienna reached Hungary, a band of youthful idealists in Budapest held a bloodless demonstration on March 15. They presented their grievances and demanded freedom and participation in the government. Fortunately for the government and for all concerned, these demands were met: Freedom was granted, and a new day dawned for the Hungarians on that March 15, 112 years ago. Today on the observance of the anniversary of that day, unhappy Hungarians still yearn for their freedom from Communist tyranny.

President's Economic Report

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. CURTIS of Missouri. Mr. Speaker, in his column printed in the New York Times of March 7, 1960, Mr. Edward H. Collins presents a thoughtful analysis of the annual report of the Joint Economic Committee dealing with the President's Economic Report. I have requested permission to have Mr. Collins' column included in my remarks and it follows:

[From the New York Times, Mar. 7, 1960]
CONGRESSIONAL STUDY—AN ANALYSIS OF
UNIT'S ECONOMIC REPORT FINDS IT BASED
UPON A FALSE PREMISE

(By Edward H. Collins)

For the second time in a little more than a month the Joint Economic Committee of Congress has published a report in which the Democratic majority and the Republican minority are so far apart that they have filed separate reports. The newest of these documents, which was released last Monday, is the regular annual report dealing with the President's Economic Report.

In the preceding report, that on "Employment, Growth, and Price Levels," published on January 26, the distinguishing characteristic was that the cleavage between the majority and minority rested on grounds more serious than mere disagreement on policy.

The most important single issue raised by the minority on that occasion concerned the quality of the majority report, and hence its usefulness. To the minority it was "partisan, cavalier about simple rules of logic and evidence, and disrespectful of legitimate differences of values, opinions, and judgments."

POSTULATE CRITICIZED

There can hardly be any doubt that the majority courted just such criticism, which is perhaps the most serious criticism that can be brought against the authors of what is purportedly an objective study of an issue of major importance.

That was the postulate that there had been a letdown in the rate of economic growth since 1952, when the previous administration went out of office. It was this basic assumption that was supposed to have justified the year-long \$200,000 inquiry of which the January 26 report was the capstone, despite the fact that the assumption rested on a statistical foundation that can only be described as completely spurious.

It is possible to show, of course, by taking the right number and combination of years (such as 1947-52) that over that period the rate of economic growth was not far below 4 percent. But how meaningful is such a figure when subjected to even the most superficial examination? It does not tell one, for example, that Mr. Truman's administration consisted of 4 years of peace and 3 years of war, or rearmament on a wartime scale; that if one takes all 7 postwar years the annual rate of growth drops from 3.9 percent to, roughly, 1.5 percent; or that when one separates the 4 peacetime years from the 3 nonpeacetime years one is confronted with the startling discovery that not only do the former reveal no net growth, but an average annual decline in the rate of growth of 2.2 percent.

This is the historical foundation on which the meretricious "4-percent average" was contrived, a figure that has been sedulously employed to convey the notion that there must have been a magic in the economic policies of the Truman administration that we have not been able to recapture over the last 7 years.

Plainly, if the majority members of the Joint Economic Committee regarded it as their appointed task to validate this preposterous thesis it would have been unrealistic to have expected from them a set of findings that aspired to either objectivity or consistency.

REPORT IS SCORNE

Nor is it surprising to find that the most recent report, which emerged last week, should have produced even more strident criticism of the kind associated with its immediate predecessor. Indeed, the "Additional Views" inserted in the report by one of the most highly respected members of the minority—Senator PRESCOTT S. BUSH, Republican, of Connecticut—deals exclusively with the quality of the majority findings. The Senator declares:

"At one time reports of this committee were entitled to serious consideration by the legislative committees of Congress, by the Executive and by professional economists. That time has passed. Their specific recommendations in this report will most likely be ignored by the legislative committees which their own party controls in this Congress—and has controlled since 1954. Instead of a useful guide to public policies they have written a campaign document for the 1960 elections.

"Were it not for the fact that valuable additions to economic knowledge are often made in papers prepared by contributing economists I would recommend that the committee be abolished. It fails to discharge its responsibilities under the Employment Act of 1946."

The majority's findings with respect to the President's Economic Report are, as a matter of fact, little more than a warmed over version of those contained in the report on "Employment, Growth and Price Levels," and, if anything, even more slipshod.

ADMINISTRATION ASSAILED

Reverting to the latter's thesis of the administration's "failure" in the area of economic growth, it hazards, for example, the suggestion that the administration has failed to act "quickly and promptly" in dealing with cyclical downturns in the economy. Perhaps this is carping criticism, but somehow that explanation sounds strangely unrealistic when one recalls that the contraction of 1957-58 is reflected in only two quarterly figures on the gross national product—those of the fourth quarter of 1957 and the first quarter of 1958.

By contrast, for example, the 1948-49 recession started from the fourth, and peak month

of 1948, and its performance as late as the fourth quarter of 1949 was one that might be better described as one of "flattening out" than turning up.

It would be difficult to convey the full flavor of the majority's findings in the limited space available here, but one finds it difficult in reading it to get far away from the conviction that it is essentially an effort to justify the preconceived views of the authors, or the things the authors would like to think were true.

Nowhere is this more clearly apparent than in its observation at one point that "the administration's fight on inflation resumed in November of 1958 after a year of stable prices. The result is [was?] an unemployment rate higher than it need have been or should have been."

Now, let us pass over, in the interest of timesaving, the fact that the record would seem to show that the change of direction in money policy had been initiated at least as early as August. And let us ignore, also, the fact that unemployment, as measured by adjusted percentage of those out of work, reached its high point in August, declining steadily from the 7.6 percent shown in that month to a double bottom of 4.9 percent in May and June 1959 (the 2 months, it so happens, that immediately preceded the month of the steel walkout).

The important point here is that having become accustomed to repeating it on every possible occasion, these more or less full-time critics of the Federal Reserve have obviously convinced themselves that that body is actually dedicated to but one task, namely, the task of halting inflation, actual, potential, and even imaginary. Fortunately for all of us, the Federal Reserve has not itself been similarly convinced.

One would suppose that it would have been obvious to even the most hardened enemy of flexible monetary policy that Reserve policy in mid-1958 was not concerned with price inflation, but with the staggering outflow of the Nation's gold, then proceeding at a rate of close to \$250 million a month. And we can thank the Reserve for the fact that though some find the present level of gold stocks disturbing, they could have easily been \$2,500 million lower had the money policies of early 1958 been retained.

Resolution Memorializing the Congress To Enact Legislation Amending the Social Security Law

EXTENSION OF REMARKS OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include resolutions adopted by the General Court of Massachusetts:

"RESOLUTION MEMORIALIZING THE CONGRESS OF THE UNITED STATES TO ENACT LEGISLATION AMENDING THE SOCIAL SECURITY LAW

"Whereas it is advisable to raise the maximum which an individual can earn while obtaining full social security benefits from the present \$1,200 a year to \$2,500 a year, and to permit wives to earn more than the present maximum of \$1,200 a year: Therefore be it

"Resolved, That the General Court of Massachusetts respectfully urges the Congress of the United States to give early and favorable consideration to the enactment of legislation to amend the social security laws to raise the maximums which may be earned under the social security laws; and be it further

"Resolved, That copies of these resolutions be sent forthwith by the secretary of the Commonwealth to the Senators and Representatives in Congress from this Commonwealth."

House of representatives, adopted, February 29, 1960.

LAWRENCE R. GROVE,

Clerk.

Senate, adopted, in concurrence, March 2, 1960.

IRVING N. HAYDEN,

Clerk.

Attest:

JOSEPH D. WARD,

Secretary of the Commonwealth.

Tax Relief for the Disabled

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. CANFIELD. Mr. Speaker, there is a growing sentiment in our country to provide tax relief for disabled persons. I was glad to see in today's New York Times an editorial endorsing a bill introduced by my good friend and colleague, the gentleman from New York [Mr. KEOGH].

The Keogh bill would permit disabled taxpayers to deduct the cost of transportation to and from work. I might add that I have introduced similar bills in the last two sessions of Congress.

The editorial is as follows:

TAX RELIEF FOR THE DISABLED

For the past two sessions Congress has had before it a proposal for tax relief for the disabled. Introduced by Representative EUGENE J. KEOGH, Democrat, of Brooklyn, the measure would permit disabled taxpayers to deduct the cost of transportation to and from work and would provide an additional exemption for a taxpayer (or wife) who is physically or mentally incapable of caring for himself.

There are compelling arguments in favor of these proposals. Persons with disabilities nearly always have extraordinary expenses in the production of income. Their inability to deduct such expenses means that they get very little or no net return for their work. Many end up with less actual cash than if they accepted public assistance. This is not good medicine for them, nor good economics for the Nation.

Persons who are disabled to the point that they cannot care for themselves also incur expenses far beyond those that can be deducted under the medical-care provisions of our income tax laws. Mr. KEOGH's proposals would give them the same additional exemption which is now available to those who are blind or over 65.

This proposal, if enacted, would mean only a small loss of income to the Federal Government—a loss far outweighed by the moral and practical issues involved.

Congressman Gilbert's Annual Report

EXTENSION OF REMARKS

OF

HON. JACOB H. GILBERT

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. GILBERT. Mr. Speaker, at the close of the 2d session of the 86th Congress, I shall prepare and include in the CONGRESSIONAL RECORD, my annual report to my constituents. The report will cover legislative work done by the Congress, and my efforts in behalf of the people I represent.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p.m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p.m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than

six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. _____ addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Medical Care for the Aged—Government Cure Is Socialism

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ALGER. Mr. Speaker, as the labor-boss-led battle to foist socialized medical care on the American people reaches its height in political pressure, the editorial pages of America's great newspapers are patriotically pointing out the pitfalls inherent in such a step.

To anyone who is knowledgeable about the typical labor boss tactics the endeavors on behalf of the Forand-Kennedy socialized medicine proposal can be likened to the labor-boss-inspired objections to the Landrum-Griffin bill of last year. Last year the labor boss was against ridding the labor movement from corruption; this year the labor boss wants to corrupt the quality of medical and hospital care through socialization.

Examples of editorial comments on this unwise and ill-considered endeavor were recently contained in the Chicago Sun-Times, the New Orleans Times-Picayune, and the Chicago Daily News. As a part of my remarks I will include these editorials at this point in the Record.

[From the Chicago Sun-Times, Feb. 25, 1960]

RIGHT CAUSE—WRONG CURE

To insure that all persons over 65 who need medical care shall have it—and particularly to insure these senior citizens against financial ruin by "catastrophic" illnesses—is an obligation that this country must face.

But to assume—as do the sponsors of the Forand bill—that the way to bring this about is by bringing old age health insurance into the social security program is unsound to the point of recklessness.

The Forand bill—rejected last year but now before Congress once more—would increase the social security tax (already scheduled to reach 9 percent) and with the proceeds make available to some 16 million eligibles a maximum of 120 days' free combined hospitalization and nursing home care per year. Surgical care would also be provided. Most of the eligibles are over 65.

Our first objection is that this measure would convert social security into something it was never intended to be. Up to now it has provided benefits in money, alone. The Forand bill would turn it into a compulsory health insurance program, and in effect, reduce the money benefits in proportion to the individual's and employer's investment. In terms of individual desires and needs social security and health insurance are entirely separate matters; they should not be lumped together.

But the Forand bill would also put politics irrevocably into the health insurance business on a massive scale. No private insur-

ance company could compete against the Government. And all that is good about the private, personal relationship between physician and patient would, we believe, ultimately be lost as the Government forced the medical profession (and the patients) into an impersonal, socialized system. Individual choice of physician would be increasingly difficult. Patient and doctor alike would be forced into a rigid schedule of fees. Administrative waste and bungling would inevitably increase. Malingering would almost as inevitably increase, crowding the hospitals with freeloaders, running up costs of services and new facilities.

In the course of time the present anticipated ceiling of 9 percent on social security taxes could be pushed upward to 15 or 20 percent. This is the kind of confiscation that leads to socialism, across the board. In this case, moreover, it would immediately place the whole burden of financing medical care for the over-65 people upon the younger people still actively contributing to social security. Meanwhile, it would do nothing whatever for those millions of older persons who are not now covered by social security.

We do not take the medical profession completely off the hook in point of responsibility for conditions as they are. We believe doctors have generally been unduly slow in working out schedules of fees which older people of limited means could pay without undue burden. There are unquestionably many older persons whose life savings have been totally and swiftly consumed by the high costs of prolonged treatment and hospitalization. And private insurance companies, although making progress, have not yet been able to make moderate-cost catastrophe covering available to all the millions who need it.

The Health Insurance Association of America estimates that about 43 percent of our over-65 people are now covered by health insurance. They estimate that the proportion of coverage for those who want and need it will reach 75 percent by 1965, and 90 percent by 1970.

Short of the socialized medicine route, what can be done to speed the spread of this vital coverage?

We suggest that the medical profession move promptly to survey its own fee structures for the over-65 group, and as rapidly as possible bring them into line with what the patients can afford.

We suggest that the insurance companies make special efforts to provide essential coverage to this group for the lowest costs consistent with sound operations.

Finally, we urge the Federal Government to take a bold look at the possibility of subsidies to make up the difference, in cases of authentic need, between the actual cost of providing the insurance and the amount the patient can afford to pay. One such method would be to make additional Federal assistance funds available to the States, which in turn could funnel the money through the regular facilities of private insurance companies to older people of demonstrated need.

We don't like subsidies, but we also believe the health and dignity of the Nation's older people is a high-priority obligation that the Nation must accept. A program such as outlined above would, at least, be preferable to turning the whole program over to the Government and imposing socialized medicine

upon a whole broad segment of our population.

[From the New Orleans Times-Picayune, Feb. 27, 1960]

SOCIAL SECURITY AND MORE TAXES

Taxes are a primary function of the House Ways and Means Committee, and that is the reason most of the social security bills are before that committee. They are primarily tax bills. If enacted some of them would mean TAXES—in capital letters.

A measure like the Forand bill, for instance, would probably hit taxpayers—by way of pay envelope deductions—for about \$2 billion the first year, followed by a big increase year after year. This is the one so drawn as to get the socialization of medicine under way. It would grant to all social security old-age pensioners and dependents (also those eligible for the pension) 120 days a year in hospitals and nursing homes and pay the physicians. The service would have to be obtained from hospitals and doctors listed by the Welfare and Health Department. The Government would pay the money, not to the pensioners, but to the hospitals, nursing homes, and doctors.

This venture into socialism would cost real money, of course. Its sponsors say that it would increase the social security pay envelope deductions only one-fourth to one-half of 1 percent—at first, anyway. But the fact is that the payroll cut is already up to 6 percent and in another 9 years will be at least 9 percent without any further liberalizations and without the Forand bill. The way things are going the deduction soon could be 12 or 15 percent (half from employee and half from employer). Add that to the Federal income tax deduction of 20 percent or more plus still more deductions to come, and it can be seen that the take-home could be pretty badly shrunk. Some States are working on the envelope deduction for State income taxes (which are tending to rise) and there is a bill in Congress now to authorize the Government to deduct city transaction or income taxes from the salaries of Government employees for the account of the city governments.

As an election year gesture, Congressmen feel bound to do something in line of social security—at the public expense, naturally. Maybe they are not quite ready to take the leap into Forand socialism but there are plenty of other envelope-deduction plans they can choose from. Senator JOHN KENNEDY has one in to allow people 65 or over, 90 days of hospitalization and 120 days of nursing. That would be very costly also.

The administration, acting through the Welfare and Health Department, is expected to come up with a counterproposal to grant any person 65 or over a hospital policy (not surgery or medical) that would pay the hospitalization after the beneficiary paid the first \$200 or \$250.

In connection with these bills, the public, it seems to us, needs to consider two things: How much payroll deduction it can stand for these social security liberalizations and how far it wants the Government to go with its medical socialization.

Within a few years, we surmise, practically everybody will be covered with private pre-paid medical and hospital policies, if the present trend is not interrupted with Federal socialization. The real problem here is to provide policies that will reasonably

meet the soaring cost of medicine and nursing. Some hospitalization policies are now fairly adequate but generally insurance policies for medicine and surgery for people over 65 are either too costly or are inadequate.

[From the Chicago Daily News, Mar. 1, 1960]
VOLUNTARY MEDICAL CARE BETTER THAN U.S.
HANDOUT—HELP FOR THOSE PAST 65

A few generations ago, health care of the aged posed no particular financial problem. The family gave grandpa such nursing as they could, with the counsel of the family doctor. If there was no family, the elderly fended for themselves as long as they could, often with the aid of neighbors, and quietly died, believing it to be so ordained.

Today there is a vast machinery of medical science and hospital care to lessen pain, to heal and to prolong life. Since it exists, the prevalent view is that a reasonable amount of it, at least, should be available to everybody regardless of personal means.

The reason medical care costs so much today is because it is so extensive and because we use so much of it. The problem then arises of how to finance care for the aged who can't afford it.

The Illinois State Medical Society is sponsoring a low-cost insurance plan to meet surgical and in-hospital medical expenses for persons 65 and older. Planned through Blue Shield, it will cost about \$1.65 a month. The society is exploring a Blue Cross plan that will apply to hospital costs.

The alternative approach to this and other private insurance is the proposal that the social security system be expanded to include medical care to retired persons. The Forand bill now in Congress is designed to accomplish this.

The proponents of this are usually those who urge Federal subsidies for schools, for public power systems, for depressed areas, and in other fields. Consciously or otherwise, they favor a socialized state in which the distribution of benefits is unrelated to individual contribution—and, more importantly, where there is an intense concentration of political power.

A scant generation ago, the Forand bill would not have received serious consideration. The thought of taxing someone else for one's personal benefit was foreign to our tradition. We would have rebelled at the suggestion of a giant bureaucracy selecting a physician or a hospital for us, and clipping our paychecks to pay for it.

It goes almost without saying that the Forand bill would open the door for a full program of Government-run medical care, with age limits removed and membership compulsory. This would spell the doom of the many voluntary plans such as that of the Illinois medical society.

Nobody can guess the future cost to the taxpayers, but \$2 billion a year is estimated for a starter. Sooner or later the dubious "trust funds" from special taxes for these Federal programs would be found useless. Then we would become frankly the wards of the Government, with general taxes distributed as our wardens saw fit.

One man's guess is as good as another's as to the extent to which malingering, overutilization of hospitals, and the nature of the system itself would impair the quality of medical service.

Such issues as this one have probably become so imbedded in emotions, depending upon how much one thinks he is going to get "for nothing," that discussion will not prove fruitful. For ourselves, we consider that the voluntary plan would not only best preserve individual independence but give the country better medical care.

West Virginia Undergoing Period of Economic Transition Which, When Fulfilled, Will Provide a Broader and More Secure Foundation for Prosperity

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. RANDOLPH. Mr. President, there appeared in the Charleston (W. Va.) Gazette's issue of March 12, 1960, an article the editor of that newspaper invited me to prepare on future prospects in West Virginia and to discuss some of our State's needs in the field of Federal legislation and administrative actions.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST VIRGINIA UNDERGOING PERIOD OF ECONOMIC TRANSITION WHICH, WHEN FULFILLED, WILL PROVIDE A BROADER AND MORE SECURE FOUNDATION FOR PROSPERITY

(By JENNINGS RANDOLPH, U.S. Senator from West Virginia)

We have been seeking to diagnose the major economic ailments which beset the State of West Virginia, to evaluate the human and material resources we can bring to bear in providing a cure, and to indicate briefly some of the lines of future development.

There is no element of belief on my part that our economic problems are those of a dying State. The pangs we presently experience are growing pains, not those associated with senility and decay.

There is abundant evidence that West Virginia is undergoing a period of economic transition—though a painful one in some sections—which, when fulfilled, will provide a broader and more secure foundation for the future prosperity of our State.

Our present problems, as well as our future promise, are but different aspects of the transition which emerge from the technological revolution at work in West Virginia and throughout the country. And, in the long run, there cannot be valid objection to the use of machines where men once served in mining and manufacturing—provided that we find economic use and devise adequate living standards for the humans thus displaced. This is one of the fundamental elements of the challenge to which we must address ourselves, and it is to this goal that the creative efforts of both private enterprise and government must be devoted.

TWO FUNDAMENTAL OBJECTIVES

The objectives toward which we should work seem to fit into a fundamental two-fold pattern: first, to relieve the immediate effects of the poverty and distress brought to many of our citizens by continued and long-standing unemployment; second, to lay the foundations for long-term development of a balanced economy and the wise conservation and utilization of our national resources.

As a Senator from West Virginia, a major portion of my endeavor during the past 16 months has been devoted to efforts to help seek the fulfillment of these two goals.

Criticism has been directed at me for some of the actions taken on behalf of West Virginia, some claims having been made that I have painted too bleak a picture of the circumstances prevailing in our State. As asserted heretofore, I recognize that public officials are subject to condemnation as well as commendation. It is my hope always to be able to accept both with equal good humor and awareness of the circumstances from whence they arise. But I must emphasize that we do not solve problems in this life by looking the other way or by lulling ourselves into a false sense of security in the belief that they do not exist.

Earlier in this discussion the opinion was expressed that the best efforts of both private enterprise and Government must be devoted to the building of a better State. It has been pointed out, too, that all elements for success are present. If the constructive potentials of private enterprise, government action, and individual initiative are fully developed and made to complement each other—rather than clash—real progress for West Virginia will be assured.

INDIVIDUAL CITIZEN PROVIDES IMPETUS

But in this field, as in others, the initial impetus must come from the enterprise and imagination of the individual citizen. Such a person is Hayes Scott, of Mill Creek, in my home county, who has built a thriving business through his own vision and drive and the natural resources immediately at hand. He started by buying dead chestnut trees, which he hauled home in short sections in the back of his old model Ford. He then trimmed and fashioned chestnut rails and posts for the rustic fence industry. As the market widened for his product, Hayes Scott employed his neighbors, so that he now has an average wintertime work force of 40 men and a summertime peak of approximately 80 men. He has, in addition, expanded his operations to include hardwoods for the furniture industry.

This is but one of many instances of the individual initiative of West Virginians. To preserve and foster its development, and to prevent the demoralization of our people and the destruction of their health, we dare not permit chronic unemployment and lingering distress to continue. In attempting to serve the most immediate needs of eliminating such distress, the State's delegation in Congress has been in the forefront of the constant efforts to increase the quantity and variety of food supplied under the surplus commodity distribution program. We have sought, and will continue to press for the augmentation of the inadequate diet afforded by the few items of food available under this program. Though our efforts thus far have been frustrated by the failure of the national administration to use the means at its disposal, we shall continue to strive to communicate a sense of urgency to members of the executive branch.

A PROGRAM FOR ACHIEVEMENT

Over and over again the testimony recorded during official hearings by Senate committees in West Virginia, and substantiated by constituent correspondence, bluntly and forthrightly states: "West Virginians don't want handouts—they want work." The desire and the will to work is another of our assets which we must preserve through area redevelopment aid in conjunction with industrial development and diversification; by research to find new products and markets for our coal industry and agriculture; by furthering useful public works; by stepping up water antipollution programs in spite of executive decrees to the contrary; through expediting needed military construction and utilizing Government-owned former defense production plants, such as those at Mor-

gantown, South Charleston, and Huntington, for private peacetime production; by qualifying for and utilizing Federal aid for airport improvement and modernization; and by conserving our natural beauty and natural resources and expanding the State and National forests and parks, including the Monongahela National Forest, the Harpers Ferry National Monument, and a proposed Washington's Western Lands Monument area.

All of these would increase tourism, enrich the economy, provide needed employment for thousands of West Virginians, preserve much of our heritage, and help restore dignity, health and self-respect to many of our citizens presently in distressed circumstances.

As one of the Senators from West Virginia, I am dedicated to every activity and desirable result so stated. In most efforts I have been joined by my colleague, Senator ROBERT C. BYRD, and our State's delegation in the House in the advocacy of appropriate action or indicated legislation—some of it pending in the Congress, some enacted by the Congress and in effect, and some of it passed by the Congress and disapproved by the President.

NATIONAL FUELS POLICY IMPORTANT

To further help in stabilizing and, hopefully, to improve the vitality of our basic coal industry, I strongly advocate legislation to bring into existence a sound and necessary national fuels policy, and I am the chief sponsor of a measure in the Senate to bring this into being. The West Virginia delegation in Congress has achieved an active role in successfully advocating mandatory controls on residual fuel oil imports—and we must be vigilant and aggressive in working for the maintenance of this procedure for protecting coal's domestic fuel markets against unfair competition from abroad. There must be equal effort expended on behalf of other of our important industries, especially glass and pottery.

Better opportunities for small enterprises to survive and thrive must continue to be explored. In this respect, there have been some helpful developments in recent weeks for small businesses and small industries in both the northern and southern parts of West Virginia through loans made by the Small Business Administration under liberalized legislation which I supported. We must also work to procure more technical assistance from the SBA facilities.

There is an increasing awareness of the worth of the programs administered by the Federal Housing and Home Finance Agency. There must be additional participation by West Virginia in the programs administered by this agency, especially to increase home building starts, urban development and renewal, and to provide more college dormitory facilities.

BETTER ROADS AND ENRICHED EDUCATION

Certainly collateral with any substantial improvement of the economic and social aspects of our State should come better roads and expanded and modernized education facilities with an enriched curriculum. It is an unfortunate truth that the high cost of living for the individual, and the increasing cost of operations in commerce and industry, also are experienced by the public roads and educational systems. Although there seems to be general countrywide acceptance of and reliance on Federal aid for highways, it is paradoxical that the same is not true with respect to advocated Federal aid for public education.

Yet, as we have reiterated in this series of articles, the people are West Virginia's most important assets, and nothing will contribute more to the development of our human resources than the improvement of our public educational system.

The importance of the individual was again brought to my attention with considerable impact during a recent conversation with a young woman from West Virginia. While preparing this article, I received a visit from Janet Lea Cavender, a charming senior at Morris Harvey College.

Miss Cavender was in Washington as one of six 4-H Club members representing a total nationwide membership of two and a quarter million youth. She is the first person from West Virginia to have achieved this annual distinction in the 4-H movement. During our conversation the Charleston girl referred to her interest in international relations and her desire to help alleviate tension between the people of the world. "But," she remarked, "Senator RANDOLPH, I am just as interested in helping to solve the problems of West Virginia."

With the devoted interest and assistance of young people like Miss Cavender, who see their own community in relation to the world, we possess the certain proof that our West Virginia of the future will usher in a challenging era of notable achievements.

Suffering in the Wake of the Movement of Industry

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DENT. Mr. Speaker, over the years there has been a great campaign organized and put into effect by the various State and subdivisions of government.

This campaign has been designed to attract industry into a given State or community.

Too few of us have taken time to study this campaign and the net results of its operation.

In many communities the movement of an important production facility has meant personal and business hardship beyond the ability of the community and its people to sustain.

Every now and then industries are moved for one reason or another.

The plight of those severed from their jobs had been given very slight notice or attention by either the newspapers or the general public.

In this regard it seems that the adage of "It depends upon whose ox is being gored," best describes the attitude of those who think they are benefiting from the movement and displacement of industry.

The seriousness of this situation is best described in the letter which follows these remarks.

The case described shows vividly what happens when a production facility is uprooted and the workers are severed from their jobs after years of service and faithful work.

No matter what the reason, the results are the same.

The failure of Congress to recognize this type of unemployment, coupled with spending of millions of Federal dollars to create the very conditions pertinent to

the Nuttall case, may cause very serious disruptions in our economic future.

This case is shocking in its apparent disregard for the families deprived of their means of making a livelihood.

With the approval of organized labor leaders, chambers of commerce, and the Manufacturers Association, this Nation has been building production facilities abroad which have cut into the American market and has without a doubt caused a great deal of permanent employment.

If we continue on this disastrous route and if Congress passes H.R. 5 (Boggs, Louisiana), entitled "To Aid Foreign Investment" by American individual and corporation investors you can look for many more "Nuttalls" all over the United States of America.

I want to say that Congress should immediately start to inquire into the entire picture of the movement of, closing of, and curtailing of industrial enterprise.

In order to give all of you a firsthand view of the situation insofar as one community and its workers are concerned I submit a letter from the President of the United Electrical, Radio & Machine Workers of America, Albert J. Fitzgerald:

UNITED ELECTRICAL, RADIO & MACHINE WORKERS OF AMERICA,
New York, N.Y., March 11, 1960.

Congressman JOHN H. DENT,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DENT: Approximately a year ago I sent two letters to the Members of Congress dealing with the effect of corporation policies upon the lives and welfare of American workers. The first letter, dated January 31, 1959, dealt as you may recall, with the calamitous effect upon employment of the runaway plant and runaway job policies of the two largest corporations in our industry, the General Electric and Westinghouse companies. The second letter, dated March 23, 1959, dealt with the destruction of jobs by the collusive, profiteering pricing policies of these same corporations, as exemplified by the loss of an important TVA turbogenerator contract to an English firm.

I am writing you now to call to your attention a particularly shocking example of corporation irresponsibility and callousness toward employees of many years' service.

The Westinghouse Electric Co. is abandoning one of its oldest plants, the Nuttall Gear Works. It is terminating the employment of some 400 employees. The average length of service of the approximately 270 production employees represented by this union is more than 25 years and runs as high as 42 years.

These are people of the highest skills. The Nuttall Gear Works has been famous for 2 generations, and the Westinghouse Co. has drawn profit and prestige from the work of these employees for many decades. The company still requires the products that the Nuttall workers make, but intends to manufacture them elsewhere because to do so will increase the profits of the corporation.

The Westinghouse Co. employs approximately 40,000 people in the area surrounding the Nuttall plant. Nevertheless, it refuses to continue the Westinghouse employment of the Nuttall people in its other operations in the area. This deprives workers of many years' service of valuable pension and other rights of seniority, as well as throwing them into the street without means of making a living. Naturally in

a plant where the average length of service is as great as at Nuttall, the workers discarded by the company are seriously handicapped because of age in obtaining other employment.

Westinghouse takes the position that for its own pecuniary advantage, it may, without responsibility or liability, inflict crushing financial loss upon its own employees.

While going through the motions, the company has thus far refused to bargain collectively in good faith on the future employment status of the Nuttall employees. It has, on the other hand, persistently attempted to circumvent its collective bargaining obligations by a barrage of threats against individual workers. It tells them that unless they accept a meager and discriminatory severance and insurance proposal made by the company when the plant closing was announced, that the company will dump them without paying anything at all.

This union, the UE, is asking that the company provide employment for these 270 workers among the 40,000 other workers it employs in the area. Failing that, we ask that pension, insurance, and severance arrangements be made that come somewhere within rifle shot of the needs of the workers and the responsibilities of the corporation.

We ask your support in achieving these very modest objectives. It must be remembered that no Nuttall worker stands to gain a single thing by what we ask—that he will only escape some, not all, of the crushing burden the company proposes to lay upon him. Further, the company can still give fair recompense to its workers and increase its profits by the move.

Westinghouse is a rich company. Last year it increased its net profits by 15 percent, on an increase of less than 1 percent in sales. It did so with an average employment 2,000 less than in depression 1953, and 16,000 fewer employees than in 1957.

Westinghouse is a callous and irresponsible company in its relationship to its employees, as evidenced in the Nuttall and other similar situations.

I ask you on behalf of the Nuttall workers to communicate with President Mark Cresap of Westinghouse expressing your human concern at the plight of these workers, your interest as a consumer, and your concern as a Member of Congress charged with watching over the rights and equitable interests of the people.

The situation at Nuttall is symptomatic of a much larger problem that requires congressional attention.

Against the concentrated economic power of the big corporations, the ordinary American city is powerless. There is now no law that interferes with the ability of a corporation if it chooses for the sake of greater profit, or other private advantage, to pass economic sentence of death upon a community and its citizens, and to carry it out totally free from any legal responsibility or liability for the consequences of its act. A corporation is at present legally free to condemn any number of thousands of its employees, no matter what their length of service, to all the privations of long-term or perpetual unemployment, and the community in which they live to economic stagnation and bankruptcy.

In the view of this union, the exercise of such economic power without clearly defined legal responsibility is intolerable and urgently requires the serious attention of Congress.

Yours sincerely,

ALBERT J. FITZGERALD,
General President.

Federal Aid to Education

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an outstanding editorial which appeared in the February 8, 1960, issue of the Sumter Daily Item. It is entitled "We Must Fight Desperately To Salvage Our Government," and contains some very strong points against the various proposals for general Federal aid to education. The Item is ably edited and published by Mr. Hubert D. Osteen, and has on its staff a very talented and highly respected editorial writer, Mr. Harold Booker.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WE MUST FIGHT DESPERATELY TO SALVAGE OUR GOVERNMENT

(By Harold Booker)

The U.S. Senate voted last Thursday to give the States \$917 million a year for 2 years in Federal money for school construction and teacher salaries.

A dispatch from Washington says that a Presidential veto seems likely if the bill ever gets to the White House carrying its present total of \$1,834 million.

This total is small compared to that proposed by Senator CLARK, a Democratic spender from Pennsylvania, whose plan to provide \$1,100 million a year indefinitely in Federal grants to aid construction and teacher salaries was defeated Wednesday night. The vote on this plan, shocking as it may seem, resulted in a tie and Vice President Nixon wisely cast the deciding vote against it.

Anyone who followed closely the debate on this measure in the Senate could see that the supporters of the measure are believers in a big government, a government that will be the master of the people instead of its servant.

The story is told that as Benjamin Franklin came out of the final session of the Constitutional Convention, a woman approached him with the eager question, "Well, Doctor, what have we got—a Republic or monarchy?" Franklin replied, "A Republic if you can keep it."

It has been within the last 30 years that any serious threat to our form of government developed. Until the hectic days of the New Deal the people of this old Republic withstood their misfortunes and setbacks as our forefathers intended they should. But in the days of the New Deal we began to weaken and to become more and more dependent upon the Government.

Those early Americans who wrote our Constitution and founded the United States were deeply aware of the dangers growing out of big Government. They knew that government in itself had a capacity to accomplish a mushroom growth and a basic tendency to usurp the freedom of the governed. The Founding Fathers therefore recognized as their foremost task that of defending future American generations against a government that would become dominant over the individual.

It was the view of our Founding Fathers that the government must be held to the role of servant—not master—of the people. Its creators foresaw the dangers that would beset it. They knew that a force greater than the weakness of human nature would be necessary to preserve it. Being unwilling to trust men they ordained a government of laws. They feared—and rightly so—that George Washington called "that love of power and proneness to abuse it, which predominates in the human heart."

The fear was expressed in even stronger terms by Thomas Jefferson when he said: "It would be a dangerous delusion were a confidence in the men of our choice to silence our fears for the safety of our rights. * * * In questions of power, then, let no more be heard of confidence in man, but bind him down from mischief by the chains of a Constitution."

Obviously these early architects of our Government knew what they were about. It is unmistakably clear that the revered liberty would be destroyed by the weakness and whims of men—and could be maintained only by the strength and constancy of the law.

Particularly within the last 30 years the greatest task of governing our country has been the struggle to keep government down to size—to administer according to law rather than according to man—to hold steadfastly to that fine line of distinction between the rights of the individual as against the protection of all. In recent years, sad to relate, people have generally been losing and big government has been winning.

We are even losing our freedom to refuse the monetary assistance of the Federal Government. As an example we cite the case of a county in eastern Ohio which carried on a 4-year fight against accepting Federal aid for their totally and permanently disabled citizens. The county commissioners said they were able and willing to do the job themselves. But the Ohio State Supreme Court handed down a decision that the county commissioners had to accept Federal aid whether they wanted it or not—because their refusal would endanger the handouts for the 87 other counties in Ohio.

It is inevitable that with every acceptance of Federal aid we yield a bit more of our local independence. We shrink the measure of self-reliance given us in the original distribution of human virtues. Actually, we lose a portion of our total character. Increasing control of the individual by government that grows bigger and bigger is truly immoral because it results in a steady deterioration of the individual's character.

Cooperative Extension Work in Agriculture and Home Economics in the State of Indiana

EXTENSION OF REMARKS

OF

HON. FRED WAMPLER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. WAMPLER. Mr. Speaker, as a salute to cooperative extension work in agriculture and home economics in the State of Indiana, performed under the auspices of the Purdue University Agricultural Extension Service, in cooperation with the U.S. Department of Agriculture, I should like to call to the at-

tention of my colleagues the noteworthy increase in the service's activities during 1959.

Mr. L. E. Hoffman, director of the program, has informed me that a steadily increasing number of urban families are benefiting from the services of Purdue's agricultural extension staff. This past year, 129,511 urban Indiana families were provided with assistance.

Of pride to all Hoosiers, I am sure, is the fact that Indiana had 86,766 boys and girls enrolled in 4-H Club work last year,

which represents an average of 954 members per county. As Mr. Hoffman points out, I think it is quite interesting to know that 51 percent of these boys and girls came from nonfarm homes.

Mr. Speaker, the extension service's activity in the Sixth Indiana Congressional District, which I have the honor to represent, has been, and I am quite certain will continue to be, highly laudable. A summary of extension services for 1959 in Indiana's Sixth District reveals a remarkable degree of program bene-

fits extended. Families assisted by the program in making changes in agriculture or homemaking total 22,254, of which 10,265 were farm families, 5,187 rural nonfarm families, and 6,802 urban families.

The following summary tabulation indicates by activity breakdown and county the signal agricultural and homemaking contributions rendered by Purdue's Agricultural Extension Service to the people of the Sixth Indiana Congressional District:

Summary of extension activities, 1959, 6th Congressional District

Barry Scobee: Historian of Trans-Pecos, Tex., and Leader of Fort Davis National Historic Site Movement

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. YARBOROUGH. Mr. President, able and energetic Congressman J. T. RUTHERFORD of the far west Texas district is the leader of the congressional effort to have old Fort Davis in Jeff Davis County, Tex., declared what it in fact is, a national historic site.

To aid in this, I have introduced a Fort Davis bill in the Senate as S. 3078.

But the man who has worked for 35 years on this task of preserving this important historic site for the American people is Judge Barry Scobee of Fort Davis, a Missouri-born Texas historian and newspaperman. His life is worth noting here.

It has been briefly sketched in a Sunday feature article by Ray Camp in the Fort Worth Star-Telegram for Sunday, February 28, 1960, under the title: "West Texans Awaiting Action on Fort Davis."

I ask unanimous consent to have printed in the Appendix of the RECORD the February 28, 1960, article from the Fort Worth Star-Telegram entitled "West Texans Awaiting Action on Fort Davis."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WEST TEXANS AWAITING ACTION ON FORT DAVIS

(By Ray Camp)

FORT DAVIS, February 27.—Citizens of this beautiful little top-o'-Texas town are delighted over recent dispatches from Washington that Congressman J. T. RUTHERFORD, first, and now Senator RALPH YARBOROUGH have introduced bills to designate old Fort Davis as a national historic site.

All west Texans, in fact, will share satisfaction with the mountain folks if the proposed congressional action is adopted.

To Barry Scobee, of Fort Davis, the measures offer fulfillment of the hope long cherished. For 35 years he has urged that the old fort, one of the most important and picturesque frontier outposts, be restored and preserved for enjoyment and inspiration of the Nation.

Well it might, for it is located in surroundings of surpassing natural beauty, and midway between two great national attractions, the Big Bend National Park, a few miles to the south, and the Carlsbad Caverns, a short distance north, the three linked by splendid highways.

LOCKE OBSERVATORY

Also near Fort Davis, and all served by the 74-mile Scenic Loop that traverses the mountains, are the internationally famous McDonald Observatory atop Mount Locke, the Harvard-U.S. Air Force Radio Astronomy center, and the delightful pueblo-type Texas State Park Indian Lodge.

Scobee has been an able and consistent chronicler of the folks and facts, the lure and lore of this fascinating region. Many of his articles and scores of fiction stories based on the area have appeared in national periodicals. Two of his booklets, "The Story of Fort Davis," and "The Steer Branded Murder," and a book, "Old Fort Davis," have had wide circulation.

Leading newspapers of the Nation, including the Star-Telegram, for years have carried his news and feature stories.

Scobee was born in Pollock, Mo., learned the printing trade at Unionville, and as printer and cub reporter earned his way through State Teachers' College, Kirksville, Mo. He then hit the road to see the world as printer and/or reporter in the Midwest, ending up by enlisting in 1907 in the U.S. 9th Infantry. Last year of his hitch was in the Philippines. He returned to Missouri immediately to marry Miss Katherine Ford at Kansas City in 1911.

MARKET FOR STORIES

They headed southwesterly, working for various newspapers, and reached San Antonio in 1914, where he was a reporter 3 years, with the Express first, then the Light. By then he had developed a steady market for his fiction, and when a historian offered him a chance to do some research in the Davis Mountains area, Scobee accepted, and he and his wife arrived in Fort Davis March 31, 1917.

A few months later he entered officer training camp, but almost immediately the war ended. He went to Fort Davis again to edit the Fort Davis Post, but left soon for Bellingham, Wash., where he was courts reporter and feature writer on the Morning Herald 3 years.

Fiction sales continued to increase, much of it west Texas in flavor, so he hied himself back to Fort Davis in October 1925, for keeps. The Scobees took naturally to the life of ranch folks, and for years he traveled the region, with ear to ground for fact and fiction material. He became a welcome hand at roundups, and expert with branding irons. Once at the J. W. Merrill 7 U Bar Ranch he branded 120 calves in 120 minutes, as ropers brought the bawling animals to the branding fire.

TOP O' MILE HIGH

Scobee helped in 1939 to organize the Mile High Club and three times was president of the group, which functions somewhat as chamber of commerce for the area. He likewise helped form in 1953 the Fort Davis Historical Society, a group devoted to research.

On the death of Nick Mersfelder, noted border lawman, in 1939, Scobee was appointed justice of the peace for Fort Davis, a post to which he has been regularly reelected. His office is in the Jeff Davis County Courthouse, on the lawn of which he has developed a beautiful arboretum, including about 40 types of trees native to west Texas.

Letters to the mayor of Fort Davis, to the fire chief, to the chamber of commerce, find their way to his pleasant little office. There began correspondence that led to establishment of the McDonald Observatory, the Harvard-U.S. Air Force radio astronomy installation, and other advances for the region.

The Scobees have done a lot of happy living in this mile high town, rich in friendships, legends, and lore.

The Massacre of Budapest

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. WALTER. Mr. Speaker, the uprising of the Hungarian people against the Russian regime on March 15, 1948, has been a monument to the Magyar Nation which has, throughout history, remained faithful to the Western ideals of freedom.

In the Hungarian uprising of 1956, this historical tradition has again revealed itself to the world and proved that the imposition of the Communist ideology on the people of Hungary has failed and that their spirit could not be broken. Thus, the Hungarian people have in a manner triumphed over their Soviet hangmen.

However, and this is a matter of conscience to all of the Western world, these undaunted people are today enslaved by the sheer might of the Soviet army.

No amount of words can ever justify the massacre of Budapest, nor can diplomatic casuistry ever justify any further concessions to or coexistence with the Bolsheviks while present conditions in Hungary exist.

The Soviet rulers may talk about coexistence and they may haggle for peace in the world on their terms, of course. They may raise the issue of Berlin and peddle disarmament proposals. But, it is folly to ignore the fact that they have under their thumb millions of captive human beings, while operating today with the same unvarying purpose of ultimate world conquest that existed in their minds in 1917.

We must remain aware of this and we must avoid any consideration or agreement on issues which would black-out the actual situation existing in Hungary and the other enslaved nations of the Soviet colonial empire.

The issue of Soviet conquests must be brought to the fore and kept alive at the forthcoming summit meeting. We must stand firm if we agree to bargain with the butchers of Budapest, and we must force them to consider the plight of the captive nations before we consider their cover-up issues.

Nixon Has Made the Vice Presidency an Important Office

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. WILEY. Mr. President, as citizens of a Republic created to provide government "of, by, and for the people" we recognize that local, State, and national elections—even though these may interfere with the day-to-day regularity of carrying on the business of the people—are significant—in fact, fundamental—to our free way of life.

Since our Declaration of Independence in 1776, the Nation, as we all appreciate, has experienced tremendous growth and progress. As a result, there has arisen a need for new, more effective ways to carry on the business of the people.

In recent years the spotlight has focused especially on the office of the Presidency and the tremendous magnitude of its responsibility.

As Senators, we are well acquainted with the broad scope, complex challenge of representing millions of citizens in our respective States. The Office of the Presidency, of course, involves the responsibility of attending to the business of all the people which we here represent collectively—as well as involving other myriad broad-scope national and international problems and challenges.

In the light of the ever-growing burden on the President, there has been increased concern as to just what should be done to keep the functions and responsibilities of the Presidency within realistic boundaries.

Under the Constitution, we elect a President and a Vice President. Throughout history, men of great ability and integrity—both Republican and Democrat—have occupied both offices.

Unfortunately, however, there has been a reluctance, historically, to utilize the Office of the Vice President as an effective, functional office, bearing a proportionate share of the executive responsibility.

Currently, there has been a creative, commendable effort during the present administration to change the trend. Wisely, the President has made provisions for greater participation by the Vice President in the affairs of the Nation.

The policy of President Eisenhower—carried out, for the most part, to a larger degree than previously in history—provides, I believe, a key to resolving the problem of lessening the tremendous burdens on the President of the highest office in the land.

As the second highest office in the country, the Vice Presidency can and should serve a functional role, bearing a proportionate share of the load; and in any regrettable instances of temporary, or permanent incapacity of a President, it should be so integrated in the wheels of operation that there would be mini-

mum interruption in the work of the executive branch.

Naturally, the involvement of more responsibility upon the Vice President presumes, of course, an incumbent capable—and willing and able—to shoulder a larger share of the Executive burden.

In such a role, Vice President Nixon has done a remarkable job.

In view of what I strongly feel is a need for assumption of even greater responsibilities by the Vice Presidents of the future, however, I believe the American people will want to take an especially close look at the qualifications and capabilities of the candidates for this high office in the 1960 elections.

For upon this office, of necessity, I believe will—and should—evolve more and more responsibility of the executive branch of the Government—leaving the President greater opportunity to deal more exclusively with the really top level problems, decisions, and challenges.

Overall, the Eisenhower-Nixon teamwork, I believe, has established a real foundation upon which to build further for the future.

Recently, the Green Bay Gazette published a constructive editorial relating to this Presidential-Vice-Presidential co-operation. Reflecting upon the situation that is of real concern to all American citizens, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

NIXON HAS MADE THE VICE PRESIDENCY AN IMPORTANT OFFICE

During Vice President Nixon's visit to Milwaukee recently he told newspaper reporters that the old methods used to select vice presidential candidates are now obsolete.

The old method of course was to select a candidate whom the party leaders believed could carry along with him the strong support of the section of the country in which he lived.

There was no thought or very little thought of his other qualifications for the office for indeed little was required of him except to preside over the Senate. All of this changed because of the relationship between President Eisenhower and Vice President Nixon. In the past the candidate for President has been consulted on the selection of a Vice President, but the main reason for the selection was often the belief that the candidate might add some strength to the ticket. Vice President NIXON, it is generally conceded, will be the Republican candidate for President. As such he will undoubtedly have a great deal to say about the choice of Vice President. He laid down his version of the new rules for such a choice which very briefly are that the candidate for Vice President should have views similar to those of the President, be able to handle the expanding duties of Vice President, and be able to serve as President.

Always in the past when a vice presidential candidate was chosen it was well known that he might step into the office of President upon the death of his superior but little thought was given to that possibility for no party nominates a man for President with any thought that he will die in office.

Because President Eisenhower suffered severe illnesses during his term of office public attention was centered upon the office of Vice President not only because of the possibility that the Vice President might succeed to the Presidency but also because

there was the possibility that he might succeed to the office of Acting President in the event of the incapacity of the President due to illness.

It must be pretty obvious that in such a situation if the Vice President did not have views similar to those of the President the situation would be awkward to say the least. In fact it might be said that the Vice President should be a man in whom the President has absolute confidence. That is necessary if there is to be any thought of turning over the office to him during a period of a President's inability to perform the duties of his office. Thus it would appear that if anything approaching the relationship between Vice President Nixon and President Eisenhower be continued, it would seem that the presidential candidate must have the final say in who is to be his running mate.

People have watched with great interest the obvious interest President Eisenhower took in training Mr. Nixon for the Presidency. It is doubtful if any person in America ever had such training directly for this position. We think the policy of the President and the enthusiastic work of the Vice President have had the approval of the American people. It appears that they have succeeded in converting the office of Vice President into something great and useful. It is to be hoped that both parties will find a way to continue this policy.

The 1960 Program of Veterans of World War I of the U.S.A., Inc.

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. TEAGUE of Texas. Mr. Speaker, the Committee on Veterans' Affairs had the pleasure this morning of hearing the statement of Mr. Charles A. McCarthy, national commander of the Veterans of World War I, U.S.A., Inc., which was very interesting.

Under unanimous consent, I include the statement as follows:

STATEMENT BY CHARLES A. MCCARTHY, NATIONAL COMMANDER, VETERANS OF WORLD WAR I OF THE U.S.A., INC., BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, MARCH 15, 1960, ANNOUNCING THE PROGRAM OF THE ORGANIZATION FOR 1960

Mr. Chairman and members of the committee, I am Charles A. McCarthy, national commander of the Veterans of World War I of the U.S.A., Inc., and I wish to express the appreciation of the national officers and the entire membership of our organization for the courtesy and opportunity afforded by this august body that allows my appearance here today.

In reminding you that on July 18, 1958, H.R. 11077 became Public Law 85-530, I am only building up to the statement that, having been granted a congressional charter, we accepted also the duty and obligation to carry out the objectives and purposes of the corporation as specified in this charter. That does not, however, bar additional activities and endeavors in behalf of and for the veterans of the United States of America in general, and the veterans of World War I in particular.

Let us review, for the sake of handy reference, the objectives and purposes:

(1) To provide for the veterans of World War I an organization for their mutual benefit, pleasure, and amusement, which will afford them the opportunities and means for personal contact with each other in order to keep alive friendships and memories of World War I and to venerate the memory of their honored dead;

(2) To cooperate to the fullest extent and in a harmonious manner with all veterans' organizations to the end that the best interests of all veterans of all wars in which the United States of America has participated, and the widows and orphans of deceased veterans of such wars, may be best served;

(3) To stimulate communities and political subdivisions into taking more interest in veterans of World War I, the widows and orphans of such deceased veterans, and the problems of such veterans and their widows and orphans;

(4) To collate, preserve, and encourage the study of historical episodes, chronicles, mementos, and events pertaining to World War I;

(5) To fight vigorously to uphold the Constitution and laws of the United States, as well as the individual States of the Union and to foster the spirit and practice of true Americanism;

(6) To fight unceasingly for our national security in order to protect Americans from enemies within our borders, as well as those from without, to the end that our American way of life be preserved;

(7) To fight to the utmost all those alien forces, particularly forces such as communism, whose objectives are to deny our very existence as a free people; and

(8) To do any and all acts and things necessary and proper to carry out the objects and purposes of the corporation.

It is quite true that the word "pension" does not appear in any place or at any time in section 3 quoted above in its entirety. However, it is pertinent and necessary to ask your attention to (3) of section 3 as quoted above, "To stimulate communities and political subdivisions into taking more interest in veterans of World War I, the widows and orphans of such deceased veterans, and the problems of such veterans and their widows and orphans."

Let us briefly review one of the greatest and most serious problems that is posed to the aging veteran of that first great world conflict that occurred to us in 1917-18. The man-child born into this world in the closing decade of the 19th century, the boy who came to the defense of his country in the First World War, is of that generation that bridges the gap from the first century of our national existence to the great second century of automation and higher education. He is, for the greater part, one of that generation of boys who had to go to work as soon as he was able to reach up to the handle of a plow, or fit into the position of roustabout in a shoe factory. He is of the generation who was told that "a big boy like you should have a job," and he left that job only when he went to war.

Did he have that job when he returned? Did he have 52 weeks in which to find a job and draw a cushion of \$20 each and every week until the time he might land a job? He did not. What were the opportunities offered for furthering his education, suddenly become so necessary in a world upside-down to prewar concepts and requirements? None. What were the inducements and incentives for starting a small business, securing a small farm or purchasing a modest home? None—none at all. But he did survive those heartache days and months, until he found some sort of a job in a land of silent factories and smokeless smokestacks, found the girl of his choice, raised that curlyhead in the highchair up to manhood

only to see him swept into a later war. The now fast-aging veteran of the First World War gladly paid the soaring taxes made necessary by war, in addition to striving for those benefits in favor of the boy who was to return, if he did return, in order that the son would not have the worry, the disillusionment of walking the streets, the highways and byways, looking for work, while he bitterly asked himself that age-old question, "What Price Glory?"

Once the torn telephone books and ticker-tape turned the old home port into a blizzard but in the months and years that followed things quickly changed. Attacks and vituperations have dogged the veteran of 1917-18. A long and searching study of the Nation's press covering the decades of time since "Johnny Came Marching Home," exposes the astounding fact that almost without exception the veteran of the First World War was the whipping-boy for the editor, the columnist, the commentator, and the cartoonist who required a suitable aiming-point in order to hit that target which is the subconscious mind of the American citizen, taxpayer, and voter.

Only threatening war clouds on the distant horizon eased the attitude of these leaders. In retrospect one is reminded of poor "Tommy Atkins" of Kipling:

"It's Tommy this, an' Tommy that,
An' 'Get behind, you brute,'
But it's Tommy come a-runnin',
When the guns begin to shoot."

A lot of things have happened since little Bill Huska of the Bonus Marchers was shot down in cold blood not too many yards from where I stand. They tried to make out that Bill was no veteran, that he was a radical, but those medals his family hurled away in disgust as his poor, emaciated remains were brought home were not given to him for killing potato bugs. Several of those kids who were driven into the night at that time later coughed out their lives in the Second World War, thus wringing afresh a veteran-father's heart.

It has been said that the Veterans of World War I of the U.S.A., Inc. are just a bunch of disgruntled old men. The question is asked, "Why another veterans' organization?"

While it is true that there are others—and who should know it better than the now old men who founded them and built them—their membership is now predominantly of men of another generation. The natural differences between ages separated by the gulf of a quarter of a century, is accentuated by the type and nature of their service, further deepened by the new viewpoint in national objectives, and colored by the strange but subtle influence of a world transformed by the advent of instant communication and faster-than-sound transportation.

Intelligent and serious-minded citizens realize that the Second World War, triggered by the Pearl Harbor attack, and engulfing our beloved country in years of conflict, also drew a curtain on the bloody adventure of 1917-1918 to the extent that the First World War is relatively forgotten.

That is most clearly demonstrated by the examination of an alleged history, a high school textbook, revealing the astounding fact that the entire story of the First World War is told in exactly 1 paragraph of 26½ lines.

Once, in addressing a class of students and for the sake of proving something to myself, I asked if anyone knew and would tell me when the First World War started. "Pearl Harbor," a big boy answered, "but I don't know the date." "No, no," I cautioned him, "the First World War." "That was when they blew up a ship in Cuba," another one

contributed, "and it was just before Christmas."

At long, long last, the veterans of 1917-18 awoke to the fact that unless something was done, and done quickly, nothing would remain to tell future generations of Americans that once there was a war "To Make the World Safe for Democracy and to End All Wars."

It is true that our organization is for an outright pension. As I travel this great land of ours from coast to coast, I see and hear so much that it convinces me of how badly a general pension is needed by so many of the veterans nearing the seventies in age, and in the twilight of their lives.

But a pension is not all we are striving for. Because we realize the crying need for an increase in payments to the widows of World War I veterans. We know only too well the need to increase the compensation to service-connected disability patients in order that they can meet the tremendous rise in the cost of living. We have witnessed so many dire cases that we strive for the hospitalization of World War I veterans without the "pauper's oath." We feel that there should be no pauper's oath necessary in order for World War I veterans to secure treatment for non-service-connected disabilities. We feel that the problems posed by the veterans' needs for remedial legislation, now and for many years to come, should encourage us to press for a Veterans' Committee in the U.S. Senate, as embodied in S. 19.

Nor is that all. We are striving to build an organization which will be a monument to the veterans of that first great national adventure that sent American boys into European battlefields. Their footsteps followed the legions of Cato, Alexander, Caesar. They trod the terrain of Jean d'Arc and Wellington. They mingled their fresh American blood in the sands that have soaked up the blood of youths for untold centuries.

The Congress of the United States officially recognized this when it specifically stated that we were, "to collate, preserve, and encourage the study of historical episodes, chronicles, mementos and events pertaining to World War I."

And we are reminded subtly but forcefully, that we are Americans, with just as great a responsibility, just as great a call for service now, as nearly a half century ago, in this challenge to the American heritage posed by the enemies from within as well as those from without. So, we are directed by that congressional charter "to fight unceasingly for our national security in order to protect . . ." Again we are pledged "to fight vigorously to uphold the Constitution and the laws of the United States, as well as the individual States of the Union."

We are directed by that congressional charter "to stimulate communities and political subdivisions into taking more interest in veterans of World War I. . . ."

I repeat, it is true that our organization is for an outright pension. But we are not unmindful of the need for study, examination, and decision, as veterans, on questions of the day, problems of the times. The national commander of the Veterans of World War I of the U.S.A., Inc. has developed a national commission within the organization which is making a quiet but comprehensive study of many things affecting the welfare of the Nation—that Nation for which our members once offered their lives.

Yes, we are trying for a pension now because, while it seems only yesterday since Pearl Harbor, by the time that period is repeated there will be left a very few tired old men in their eighties who can say they fought a war which was "to make the world safe for democracy and to end all wars."

Proposed Increase in Interest Rate Upon REA Loans

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an article entitled "The Rural Electric Stake in This Issue." It appeared in the March 11 issue of the Rural Electric Minuteman. It deals with the proposal to increase the present interest rate upon REA loans.

For over a year now, we have been besieged with the threat of high interest, tight money, and increased taxes upon REA cooperatives. I cannot agree with these proposals. They appear to be based upon the premise that the battle for REA has been won and it is time to liquidate. It is true that most farmers now have electric lights. It is a fact that REA cooperatives and power districts are established and accepted enterprises. But it is not true that the fight for rural electrification is over.

We need to complete the task of electrifying our farms. And it is in those uneconomical areas where private companies will not go that the need is greatest. We must expand the use of loans to install telephones in rural communities. We must increase the generating and transmitting facilities.

The article clearly shows how dangerous an interest rate increase would be to the REA program and to the Nation.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE RURAL ELECTRIC STAKE IN THIS ISSUE

Rural electric members probably have a bigger stake in the battle to retain the 4½ percent ceiling than any other segment of the economy.

In the first place, high interest hurts them as consumers, just as it does everyone else. They pay more for houses, clothes, cars, farm machinery and just about everything else they buy.

They have an even more direct interest by virtue of being owners and consumers of rural electric systems.

The advocates of the high-interest policy are waging an all-out campaign to more than double the rate on REA loans. They have succeeded in convincing many people that REA borrowers are parasites because they pay only 2 percent.

Why this concerted attack on the REA rate? Senator OLIN JOHNSTON of South Carolina put it this way at the recent NRECA annual meeting in St. Louis:

"Because the co-op loan program was written into law and cannot be changed by administrative action, it has become a symbol of resistance against high interest rates in the money world. The REA loan program is a thorn in the side of those who have promoted tight money and high interest rates. It is a source of antagonism to Agriculture Department officials who have hiked hardship interest rates on farmers; it is a point of departure from the smooth operating high interest rates imposed on

housing loans by the Administration. It represents contrariness by a certain group of people to the money lenders who have succeeded in raising their rate of income from every other group of Americans. The co-op program in truth has become the last remaining symbol of reasonable rates of interest on loans of any sort in this Nation."

Advocates of high interest for REA loans are not concerned with the effect it would have on the rural electrification program. Yet it is a fact that area coverage depends upon low-interest, long-term loans.

There was little criticism of the 2-percent rate during the years that it was higher than the cost of money to the Government. The 2-percent rate looks bad to outsiders only when compared to the inflated level of other interest rates.

If the 4½-percent limit on long-term bond interest is lifted, it will undoubtedly set off another round of increases in all interest rate. This will bring even more pressure on the REA rate.

But rural electric members have an even more direct stake in the fight over the long-term bond ceiling.

Three bills have already been introduced in Congress to carry out the administration's new REA interest increase formula. This formula would tie the REA rate directly to the rate the Government pays on long-term bonds. If the 4½-percent ceiling is lifted or bypassed, and the long-term rate goes up to 5 percent or higher, that is the rate rural electric would have to pay under the administration proposal. And to this would be added one-fifth of 1 percent for administrative costs.

It's dangerous to assume that such a bill has no chance of passing Congress. It could, if not this year, then next, or the year after that.

REA's friends in Congress cannot hold the 2-percent rate indefinitely in the face of ever-rising interest costs for everyone else. The pressure to pass the administration bill is tremendous right now, even in this election year.

The only ultimate solution to the problem is to take action now that will help check and reverse the upward spiral of all interest rates.

The alternative is to jeopardize the entire rural electrification program. Many systems could not survive an increase in the rate on ordinary loans. Their service areas are too sparsely settled or marginal in income.

But this is only part of the danger. A sharp increase in the REA rate would virtually wipe out the generation and transmission program. Foley Treadway, consulting engineer for many rural electric, pointed out this danger in a panel discussion at the NRECA meeting. He said the rate proposed by the administration would add 1.67 mills per kilowatt-hour to the cost of power generated under a typical REA G&T loan. This would destroy the feasibility of most of the loan applications.

"In such an event," Treadway said, "the G&T potential will have been dealt a death blow."

With G&T loans no longer feasible, he added, the power companies would be expected to raise wholesale rates. In 1958, he said, a 1 mill per kilowatt-hour increase in wholesale power purchased from power companies would have meant a \$12 million increase for rural electric systems.

This would have reduced the total net margins of REA borrowers in 1958 by about 17 percent.

Nor can systems purchasing power from Government projects expect to escape the effects of the high-interest policies. Interest is charged on the cost of the power facilities at such projects, usually 2½ percent.

A higher rate would sharply increase the cost of power from new projects, even if it were not raised for the old ones. A 1 percent increase at Montana's Hungry Horse Dam, for example, would increase the cost of the power by 24 percent.

The Ford Farm Efficiency Awards Program

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. SMITH of Mississippi. Mr. Speaker, one of the most commendable public service projects being carried on by American business firms is the Ford farm efficiency awards program. These awards are given to farmers selected from throughout the United States for their record of efficiency in their farm operations. The competition and the examples set will be of vast benefit to all the American farmers.

The winner of this first award for cotton production was Mr. Hugh Nichols, Jr., of Tchula, Miss., in my congressional district. At the award dinner, Mr. Henry Ford II, suggested that these representatives of the U.S. farm community could help to advance our country's efforts to achieve world peace and cooperation by personally visiting key agricultural countries outside the United States on a "farmer-to-farmer" basis. Mr. Nichols is going with a group to the Far East on a 4-week trip, which will be a further public service contribution of the Ford Motor Co.

Under unanimous consent I am including the address made by Mr. Henry Ford II at the Ford farm efficiency award banquet on February 15:

I should like to add my own word of welcome to all of you who honor us by being our guests this evening. We are delighted that you are sharing this occasion with us. In particular, I want both to welcome and to congratulate the winners of the Ford farm efficiency awards and their wives.

In our daily concentration on new and improved products and better engineering and manufacturing methods, we in industry are all too likely to forget that the technical gains scored by industry are matched or surpassed by tremendous advances in agriculture. The efficiency and productivity of American farmers have won the respectful attention of all the world.

In these days, much is being said about the worldwide population explosion and the economic battle between communism and the West. The productivity of the American farmer will bear importantly on the outcome of both these problems. Because of him, the United States was able to ship abroad in 1959 the output of 41 million acres of cropland. It is difficult to measure or even to guess the social and political impact of this achievement on other countries, but I think we may safely say that it has been great indeed.

Ford Motor Co. has been very close to the farm community for more than 50 years. We have been concerned with farm problems and have worked with farmers to provide the kind of equipment they need to get their job done efficiently and at lower

cost. Consequently, we share a great pride in their accomplishments.

You who have earned tonight's farm efficiency awards are among the best and most experienced of America's farmers. For that reason, I believe that you, as individuals, can do a great deal to help advance our country's efforts to achieve world peace and cooperation. And so, before I present your awards, I should like to issue you an invitation. On behalf of Ford Motor Co., I invite each of you to take an expense-paid trip, as our guests, either to Latin America or to major agricultural areas in the Far East, especially India. As representatives of American agriculture and of the American way of life, you will be able to discuss farming on a person-to-person basis with people who have problems and goals similar to your own. The U.S. Foreign Agricultural Service and the International Cooperation Administration know of this offer and have agreed enthusiastically to put their official stamp of approval on these visits. We know that absence from your farms will involve some sacrifice on your part. But I am so convinced that you have something of value to offer the people of other nations that I sincerely hope you will see your way clear to undertake this important mission.

I should now like to award plaques to the gentlemen here tonight who have demonstrated their knowledge, skill and efficiency in the various areas of agriculture.

Hospitalization Insurance for People on Social Security

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. MORSE. Mr. President, I have received a great many moving letters from people in my State and in other States urging the Congress to take action on a medical pension plan which at least will carry out the principles of the Forand bill in the House and the Morse bill in the Senate. I have received a particularly touching letter from an Oregon constituent, Mr. Bertram Jenkins, who asks me in another letter to send copies of his letter to me to other Members of Congress.

I have replied to Mr. Jenkins that I think it would be preferable for me to put his letter in the Appendix of the RECORD, so that the Members of Congress will have access to it.

Mr. Jenkins says in his letter,

Let us live and let live. It is hoped insurance companies will not be able to block hospitalization insurance for people on social security.

Then Mr. Jenkins proceeds to cite his own case. He is 73 years old and his wife is 71. He makes what is to me a very moving and I think unanswerable plea for hospitalization and medical insurance.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PORTLAND, OREG., January 14, 1960.

Senator WAYNE L. MORSE,
Washington, D.C.

OUR DEAR SENATOR: "Let us live and let live."

It is hoped insurance companies will not be able to block hospitalization insurance for people on social security. Let me cite my own case: American Can Co., Portland, Oreg., closed plant complete. Left me with no insurance or pension. In fact I lost both by 5 months.

I am 73 past, my wife 71.

It is positively inhuman for anyone to oppose passage of this bill to help us old people, just when we could use it most.

Yours very truly,

BERTRAM JENKINS.

Statement of A. E. Cross

EXTENSION OF REMARKS

OF

HON. JAMES W. TRIMBLE

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. TRIMBLE. Mr. Speaker, it is with pleasure that I insert in the Appendix of the RECORD as a part of my remarks a copy of the testimony of A. E. Cross, of Arkansas, national hospital chairman of the Veterans of World War I of the U.S.A., Inc., before the Committee on Veterans' Affairs today, regarding the hospitalization and medical program of the Veterans of World War I of the U.S.A., Inc.

The statement follows:

Mr. Chairman and members of the House Veterans' Affairs Committee, I appreciate this honor of having the privilege to appear before this great committee in regard to all veterans of the United States of America.

I want to explain what the Veterans of World War I are attempting to do. We are undertaking a survey of all hospitals, including VA, State, city, county, all denominational hospitals, as well as rest homes to determine how many veterans of all wars are in such hospitals throughout this great Nation of ours, and to show how many veterans are on the waiting lists. We are doing this to try to show our Government the necessity of having a larger number of hospitals and the need for more beds. From the reports that we have been able to attain, the shortage of beds is distressing. By making this survey, it will give us the actual number of veterans that are in our hospitals. We will secure a completed questionnaire signed by the Administrator, or the person in charge of each hospital, giving the names and addresses of the hospital in question. In this way, we will have a true picture. We are indeed anxious to see that an adequate number of beds are available to disabled veterans.

At the present time, the veterans' hospital system operates under a ceiling of 125,000 beds. This, of course, is inadequate to meet present needs. Today, the average age of World War I veterans is 65 years, and the average age of World War II veterans is 40 years. As the veterans' population ages and their medical needs grow, there will be an increasing demand for hospital beds in Veterans' Administration units. A particular problem in accommodating the aged veteran is the growing need for facilities to provide immediate and future or long-time care.

Before continuing on with the facts of this survey, I should like to relate some ex-

periences I have had, to try to point out to you the need for this survey and for more VA hospitals in some sections of the country.

I visited one particular VA hospital, located in one of our larger southern cities with a population of over 1 million people a few weeks ago. This hospital is literally "falling apart at the seams." The administrative wing of the hospital was completed in the year 1891, and the newer wing was built in 1930. Time has taken its inevitable toll as evidenced by the conditions I saw while I was there. The ceilings have collapsed; plumbing and wiring are wearing out, and are inadequate for present-day needs; and this hospital does not have a single room with private bath nor does it have a signal system whereby a patient in need of attention can summon help.

At the time of my inspection trip, I observed three women patients confined in this hospital with no facilities for their special care. I also observed that it was necessary for these three patients to share one of the men's toilets which was located at the end of a long corridor, and had been blocked off for their use. I further noticed that after these sick women had strolled the length of this long hall, it was necessary for another patient (man or woman) to guard the outside of the toilet while it was in use. This was the limit of special facilities for these ladies. Photographs of conditions are submitted for your examination.

We are reliably informed there are several other veterans' hospitals which are deteriorating rapidly due to lack of proper repairs and maintenance.

This, of course, is only an example for you to compare with the abundant and modern facilities of other hospitals today with private rooms, private baths and showers, telephones, elaborate X-ray rooms, the best in modern equipment and instrument, whereas this hospital is ill equipped with old instruments and is inadequate in every way.

There was one other thing which drew my particular attention, and that was what I saw in connection with the care of the veterans' service records. The record room, storage room, or whatever you want to call it (anyway, it was where the records were kept) was in a horrible condition. There were no file cabinets at all, and the files were placed on board shelving reaching across a long room. It would have been utterly impossible to check an individual record. This, in my opinion, is one reason why so many veterans are unable to get the care to which they are so rightfully entitled. It is urgently important that the records of veterans be kept in a well preserved and orderly condition for future reference. As of today, there are many, many veterans throughout this Nation who should be in our hospitals but, due to the fact that their records have been misplaced, they are unable to get their service-connected disability which they definitely deserve. With the large increase of veterans which we have who are seeking hospital care, files certainly should be cared for with precaution. It would be impossible for me to give you a detailed description of the deterioration of the aforementioned hospital, but I do want to emphasize to this committee the fact that this 300-bed facility was erected for the care of the Spanish-American War and World War I veterans.

It is true that in some sections of the United States we do have some of the finest VA hospitals in existence. At the same time, however, I should like to emphasize the dire need for more hospitals in other sections of the country where conditions exist such as I have just described.

There is one other desperate need for more hospitals throughout our Nation, and that is for the care of the ever-increasing number of psychiatric patients. It is a well-known fact that many of our city jails are overflowing with psychiatric patients who have been

placed there through no fault of their own, but for safekeeping of themselves and the protection of the public. Many of these individuals are veterans who suffered strenuous hardships protecting our country, and who could become self-supporting and respected citizens if given the proper care. The waiting list for these patients is entirely too long.

The majority of veterans cannot afford the high cost of new drugs and the psychiatric care required for treatment of these afflictions, and at the same time it has been confirmed by many doctors that a large percentage of patients if treated in time, could be cured. This fact supports the need for additional trained personnel, equipment and the use of new drugs and methods of rehabilitation.

To help provide for additional relief for disabled veterans, the Veterans of World War I, Inc., think that the passage of legislation similar to that which has been outlined in H.R. 10594, recently introduced, would be of great help to our program.

Now, getting back to the survey which I mentioned in the beginning, there are no statistics available by any veterans' organizations that actually show the number of veterans who are in the hospital as of today, other than those by the Veterans Administration. At the present time, I shall give you a partial report as to what we have accomplished with our survey to date. We have received partial reports from 10 States, including the District of Columbia, and 140 VA hospitals.

The figures for the VA hospitals are as follows:

Spanish American War veterans.....	1,278
World War I veterans.....	35,390
World War II veterans.....	44,885
Korean conflict.....	9,477
Female veterans (WAVE's, WAC's, Nurses).....	1,569
Veterans of other wars, and peacetime.....	2,434
Number on waiting list.....	20,274

The figures of the partial reports for the 10 States to date for State, city, county, and denominational hospitals, as well as rest homes are as follows:

Spanish American War veterans.....	212
World War I veterans.....	2,472
World War II veterans.....	4,893
Korean conflict.....	909
Female veterans (WAVE's, WAC's, Nurses).....	488
Veterans of other wars, and peacetime.....	1,480
Number on waiting list.....	808

When we, the Veterans of World War I of the U.S.A., Inc., complete our survey we will be able to furnish to this committee the exact number of veterans in all VA, State, city, county, and denominational hospitals, as well as rest homes in the United States.

In closing, I want to thank each and every member of this committee—and the last words I want to leave with you are these: "Hospitalization delayed is hospitalization denied."

I thank you.

Encouragement of Foreign Private Investment

EXTENSION OF REMARKS

OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. JAVITS. Mr. President, the importance of applying international law

and morality to foreign investment is highlighted by recent events in Cuba and other countries where American industry has invested millions of dollars plus its know-how and technological experience. If the world's economically advanced countries are to increase the level of assistance to the emerging nations of Asia, Africa, and South America, through and with the aid of their own private citizens capable of doing so, some form of international action will have to be taken to make fair and just the consistency of national sovereignty and the attractiveness of private investment in the less developed areas. The subject of encouragement of international capital investment is discussed and analyzed in a recent article by Pierre Rosenstock, vice president of the Banque Commercial de Paris, appearing in *American Banker*, issue of February 19, 1960. I ask unanimous consent that the article be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

INTERNATIONAL CAPITAL PROTECTION CHARTER
URGED BY FRENCH BANKER—ABS PROPOSAL
FOR RESPECT FOR COMMITMENTS ENDORSED
(By Pierre Rosenstock, vice president, Banque
Commercial de Paris, France)

An analysis of the relations between primitive and advanced peoples shows the existence of an initial period during which the newcomers from abroad limit their contacts with the natives to the exchange of manufactured articles for raw materials. The colonial period, which follows this initial stage, sees the settlement of the more advanced newcomers in the younger countries and the organization of the means of production to the advantage of the settlers.

The settlers, by introducing schools, hospitals, and churches, believed that they had given these primitive peoples the means of growth and development, in the course of time. This is no longer true.

We now witness in many places the outright confiscation of the natives' goods, carried out in the name of national liberty. The obsession with the idea of liberty, which is kept alive among these primitive peoples, makes it difficult to organize exchanges which would be beneficial to both natives and settlers, and produces for the time being a marked economic recession.

COLONIAL ECONOMIC EVOLUTION

The first brutal contacts of the settlers, who gained the upper hand by force, with the primitive peoples gives way to the phase during which the local chieftain supports the colonists and governs jointly with them. Now the leading elements among these peoples intend to free themselves from their chieftain.

This stage of development is not yet completed; the subjects seek to free themselves from their ruler—whether it be a prince, a dictator, or a dominant party—in order that the mass of the population may benefit from the fruits of their joint labors.

It is only if they are conscious of this evolution that these large numbers of potential consumers can come to represent a field of expansion for the economy of the civilized world.

It is only if the standard of living of these underdeveloped populations is raised that civilized industries will find the consumers for the goods which they produce, while absorbing the raw materials which these less advanced countries should be able to supply.

If each man in India were to buy one shirt a year, the textile industry of the entire world would not be sufficient to satisfy the demand.

This illustration throws more light on the problem than any long explanations.

DEVELOPMENT BENEFITS

The potential markets which would be created in the world by spending the development of the underprivileged would be so important that each one of us would benefit indirectly as a result.

It is possible for the rest of the world to set aside from its output a sufficient quantity of goods to enable the less advanced peoples to survive. The public conscience has already brought this about; however, this effort of subsidizing should be only a transitional stage.

A delicate and costly work of preparation is necessary, both physically and morally, before a community can become productive and represent a potential market. It is not until he has come to accept a civilized standard of values that the member of a less advanced society can assimilate the idea of sustained effort with a view to acquiring a little more than the bare necessities of life.

INVESTMENT PLUS KNOW-HOW

However, it is not possible to give people who possess no equipment whatsoever the means to work and produce without raising the problem of investment in these underdeveloped countries.

We can no longer go to these young countries demanding concessions: we must go taking with us technical aid and equipment, repayable from the proceeds of the future production to be organized. We must accept the risk of the possible failure of our venture, but we must eliminate all risk of dishonesty.

We must invent a means of guaranteeing that these pioneers of industry will be repaid for what they have created or carried out, and that neither the local rulers nor the dishonesty of the participants will have the power to wreck the project.

Industrial settlements abroad must be legally protected from what amounts to theft by expropriation until their cost has been met by those who benefit from them.

MUST HONOR PROMISES

The obligation to keep one's promises should be among the first ideas to be instilled in the underdeveloped countries. It is no longer possible to send, as in times past, a gunboat to ensure a hearing for our opinions and obedience to our orders, the political competition is too keen between the two ideologies which direct the world.

It would be preferable for an international charter to exclude defaulting countries from the world market. The necessity to find outlets would rapidly oblige the rulers of these countries to honor their engagements.

Dr. Hermann Abs, president of the Deutsche Bank, is at the origin of this idea of an international charter the terms of which all the civilized countries of the world would undertake to respect and protect all legitimately acquired property abroad; any breach of this charter would be submitted to international arbitration. The same ideas are to be found in the report of the Committee on Foreign Economic Policy set up by President Eisenhower whose findings were published in 1954 under the title "Randall Report."

UNITED FRONT NEEDED

It is imperative that the countries capable of introducing technical progress to the underdeveloped regions should form a united front.

While it is to be feared that international competition would create difficulties in the way of the application of a treaty of this kind, it is quite certain that any political system—be it collectivist or capitalist—it will not be possible for any length of time to ask the more advanced peoples to work free of charge for any group which was manifestly dishonest.

The United States has sufficient wealth to enable her to be generous for a certain length

of time. Russia has the means at her disposal to enable her to be generous toward those whom she wishes to convert to her doctrines. Generosity, however, can only provide a temporary, and limited solution.

In America and Germany study circles such as the Cologne Society are actively engaged in drafting suitable texts in respect of investments abroad. In France there would appear as yet to be no interest in this major problem; yet France, more than any other country is fitted to exploit to the full the natural resources of regions whose activities should complete our own.

Adequate Force

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a most interesting editorial on our foreign policy, which appeared in the *Lawrence (Mass.) Sunday Sun*, on March 13, 1960.

The editorial follows:

ADEQUATE FORCE

"No foreign policy can have validity," Sir Winston Churchill has written, "if there is no adequate force behind it." That is quoted by the distinguished military correspondent and historian, George Fielding Elliot, in the lead article of the February issue of *United States Naval Institute Proceedings*. Mr. Elliot stresses the word "adequate"—and it is his obvious belief that we may fail to achieve this because of a static strategy in which the emphasis is on defense.

As he puts it: "The spectacle of the United States busily engaged in entombing its freedom of action in a complex of concrete missile bases planted in its own bosom can hardly be encouraging to peoples in whose memories the tragic history of the past 25 years still lingers." He then cites a series of examples—such as that of France in the last war—where events proved that the available military force, and the military thinking that directed it, were sorely inadequate in the light of foreign policy, and disaster resulted. France, for instance, placed virtually her whole faith in a vast defensive work, the Maginot line, and, says Mr. Elliot: "Obsessed with this preconception, France forfeited all freedom of action to meet any other form of enemy attack against herself or her allies."

As for ourselves, Mr. Elliot is gravely disturbed because, in his view, we are "moving step by annual step toward immobilizing our strategy in a form which will be able to react effectively only to a single contingency—to deter or avenge a Soviet nuclear assault on the United States." This, he is convinced, defeats the needs that the free-world collective-security system imposes on us. Missiles are taking an ever larger part of the resources available to our military system. And he believes also that the changes and the huge problems that the nuclear age as brought about may be blinding us to lessons from the past.

Mr. Elliot's primary point is that a sound strategy must be based upon deterrence—and that "deterrence of the Communist enemy from resorting to violence must be applied over the whole scale of violence." The Communists, obviously, would prefer to win the world without going to war, and over the years they have demonstrated beyond any doubt their desire and their ability

to make huge gains on the step-by-step principle. Mr. Elliot states, "It will do us little good to deter nuclear assault only to have the free world taken over by a process of piecemeal aggression." And the type of force needed to deal with local and limited aggressions is a very different thing from the type of force demanded by all-out nuclear war.

Mobility is the key to the kind of force Mr. Elliot is convinced we must have. In his words, we need "to provide ourselves with a nuclear deterrent force which is relatively immune to destruction by the enemy's weapons, in which case the Soviets cannot under any conditions initiate nuclear action themselves without assuring their own destruction." So, he then reasons, "... the only choice for a global coalition requiring a nuclear deterrent force is to establish it in mobile bases at sea." Such sea-based power, he is convinced, would prove the solution to dealing with local Communist aggressions, because of its virtues of great flexibility and its relative invulnerability to surprise.

Mr. Elliot's article is long and detailed, and a brief summary does it less than justice. He is arguing against putting all, or too many, of our military eggs in one basket—and most particularly into an immobile, essentially defensive basket useful only in the event of unlimited United States-Soviet war. Not everyone, of course, will agree with him. But he has made an important and thought-provoking contribution to the great and crucial debate over the possible strengths and weaknesses inherent in the military policy that is the keystone of our foreign policy.

George Stadelman's Report on Bali and Indonesia

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. MORSE. Mr. President, there is a very outstanding leader among Oregon businessmen, Mr. George Stadelman, who is president of Stadelman Fruit, Inc., of Oregon. Mr. Stadelman is a former student of mine. Although we have very definite differences of opinion in regard to matters of political philosophy, Mr. President, he is a very able Republican in my State. He has had his secretary send to me a release which he wrote in connection with a trip he is now taking in Asia, and this release has been made available to the Oregon press.

I ask unanimous consent that the letter I receive from Mr. Stadelman's secretary and a copy of the release on the situation as he has seen it and interpreted it in Asia be printed in the Appendix of the RECORD.

There being no objection, the letter and release were ordered to be printed in the RECORD, as follows:

The Dalles, Ore., March 7, 1960.

HON. WAYNE MORSE,
Senator from Oregon,
U.S. Senate,
Washington, D.C.

DEAR MR. MORSE: At the request of Mr. George Stadelman, I am enclosing a copy of the account which is being published in our local and adjoining county newspapers of his difficulties encountered in Bali and

Indonesia. As you know, Mr. and Mrs. Stadelman and Mr. and Mrs. Ralph Stearns of Shell Oil Co. are on an extended trip around the world and this phase of the trip has been less than pleasant.

It would seem that their experiences with our State Department representatives would bear out the accusations of the recent censorious book published about the ineptness of this group.

Yours very truly,

LORES SAWYER,
Secretary to Mr. Stadelman.

We have been looking forward to our visit to beautiful Bali and a good part of our trip was necessarily planned around this visit because there is air service only once a week to Den Pasar, the capitol. We arrived in Djakarta where we were to spend the night before going to Bali and the roof fell in. We were advised that Mr. Khrushchev had decided to go to Bali and that all tourists were being removed and no others were allowed to go in.

After this blow, we were to find out how much of a police state Indonesia really is. At customs one must declare all currency, travelers' checks, cameras, etc. The currency must be exchanged for rupials (the Indonesian currency), and it may not be changed back when one departs. The rate of exchange is 45 rupials to 1 U.S. dollar, but one gets only 36 to \$1 as there is a 20 percent transaction tax. The black market rate is from 450 to 500 rupials to \$1, or 14 times as much. One is then faced with the decision of obeying the law and paying outrageous prices for everything, or going on the black market. A number of Americans have been caught and fined up to \$1,000, or up to the amount of money they declared they had when they entered the country. There are rumors of Americans being framed with counterfeit money, then fined the amount of their funds by the police but this did not happen to us. Since prices necessarily are based on the black market rates, a very poor lunch for four persons costs us \$40, and the food wasn't fit to eat. The Des Indies Hotel, once one of the best in East Asia, is going to ruin. There is no running water in the rooms, the plumbing doesn't work, the food is terrible and the dining room is so dirty one just couldn't eat. The tablecloth is left on for days at a time, the dishes only half washed, and flies cover everything. The dining room seats about 400 persons and when it was operated by the Dutch, it was full. There were not more than 20 persons in it while we were there. Although it did not happen to us, it is common for the hotel to assign extra guests to your room if space is short. They simply put in another bed and you have a stranger for a roommate.

Indonesia is a police and army state now. When the army wants space on the airline, they simply move tourists or civilians off. Recently the Committee for Improvement of Tourist Travel decided to meet in Bali, so they kicked all of the tourists out of their rooms making them leave Bali, although they had confirmed and prepaid space in the hotel. Sometimes one is taken from the plane at Surabaya and turned loose without a hotel room or other place to stay. At the airport women and men are frequently stripped and searched. A special room for the process is provided and everyone must go there and go through it before boarding the plane. The custom guards are demanding, unreasonable, arrogant, and generally as hasty as they can be.

The police and army are involved in graft up to their elbows; 14 percent of the rice imported last year disappeared off the docks. Foreign companies are employed by the navy to certify that they purchased certain materials so that the army does not steal them.

The streets of Djakarta were decorated with thousands of Russian flags and great pictures of Khrushchev and Sukarno. Several arches were built and the most friendly atmosphere prevails.

Perhaps it is necessary for America to have access to the raw materials of Indonesia—tin, rubber, pepper, ore, etc.—as it is a country rich in natural resources. We probably can't turn the country to Russia without a struggle but we do not believe we are getting our money's worth. (We gave them some \$50 million last year.) We believe the entire country's economy is going to break down soon and that there is a good possibility of a rebellion. Some 2 million Chinese merchants have been refused the right to continue in business and are being moved out of the country. Last August the government took 90 percent of all funds in banks and gave the depositor 45-year bonds for these funds. The bonds can't be used as security, and, of course, there is no market for them. They are not worth the paper they are written on. The government simply took 90 percent of everyone's money.

Regardless of what our official position of assistance should be with Indonesia, our official position as far as tourists are concerned should be changed. Our Ambassador, Mr. Jones, apparently is going along with the myth that Indonesia wants tourists. This is not the fact and our Embassy knows it. The Indonesian Government should be advised to treat our tourists reasonably or no visas will be issued. Tourist visas for Americans are not being issued at our Singapore consulate because of the situation, and the issuing of visas in America should be stopped until such time as the conditions or attitude of the Indonesian Government changes. We called on Mr. Smith of the transportation division of the American Embassy requesting assistance in getting air space back to Singapore, and he said there was nothing he could do. He seemed to be willing to shrug and accept the situation as it is—he wouldn't even try to help. We know the Embassy has been plagued with tourists in trouble, but why should they continue to allow them to come in if they know they will get in trouble?

Our happiest moment in Indonesia was when we went up the ramp to board our plane to get away. Don't go to Indonesia.

Hon. Edward H. Rees

EXTENSION OF REMARKS OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. SMITH of Kansas. Mr. Speaker, few men who have announced their retirement from the House of Representatives have revealed more regret on the part of their colleagues than when Ed REES, of Kansas, said he would not be a candidate this fall. His colleagues, his constituents, and the people of Kansas sadly regret his decision.

As a fellow Member from Kansas, it would be an idle gesture and a waste of words to try and paint the Ed Rees picture as has been done by the foremost editor of Kansas, Rollo Clymer, of El Dorado, who, by the way, comes nearer than anyone to using the power-laden pen of that alltime great Kansan in the editorial field, William Allen White.

I commend this editorial to my fellow

Members and trust that in future years new Members may read and review the contents of this tribute:

END OF AN EPIC

(Rollo Clymer, editor of the El Dorado Times, who was present at the fourth district Republican convention in Emporia last Saturday, writes that Congressman Ed REES' announcement that he would not run again set off a tremendous scene, "the like of which I have never witnessed in any political gathering." Herewith are his observations and a tribute to Mr. REES:)

In the simple and straightforward fashion which has always characterized his every act, Representative E. H. REES stood before the Fourth District Republican convention at Emporia Saturday, and said:

"I am here not only to express my appreciation and gratitude to the Republican Party and to the citizens of the Fourth Congressional District, but to tell you that I am not a candidate for reelection in 1960."

This was a memorable and emotion-packed event in Kansas political history. For almost a quarter of a century—24 years at the end of his current term—Ed REES has carried the trust and confidence of his constituents in a degree with few parallels in the State's annals.

Some say sentiment has no place in politics; nearer the truth likely is the belief that sentiment rules as strongly in this field as in all other human relationships. At least, this was true at the moment when Ed REES—silvery-haired and bent from the public burdens he has borne—voluntarily surrendered the office with which he has so long been entrusted and which he has served so well.

He was given a rousing ovation when he first went to the rostrum; he was given another when he stepped down, after his brief address with its unwelcome announcement. Then two of his friends went to the microphone to pay him tribute. Their words were impromptu, halting, and unpolished—but minted directly from their hearts' deep feeling. When they had finished, a remarkable occurrence took place. The entire assembly arose—without cheers—and stood for a long moment in spontaneous silence, in token of deep affection for this man who has served his people's needs with unbroken and unwavering faithfulness.

Poignant regret hung like a blanket over the scene. Tears rolled unashamedly down many cheeks. A spirit of reverence and allegiance to the truest ties of friendship ruled the entire gathering. As a testimonial to a living man who was present, this instance comprises one of rare precedent.

ALWAYS HONEST AND CONSCIENTIOUS

What has brought about his singular standing that Ed REES enjoys among the hundreds of his fellow Kansans who know him best? He has no side. He has never practiced the arts of the statesman, nor employed the genteel tricks of the seasoned politician. He is not a brilliant orator. In all his long congressional tenure, he has never set himself at the head of a legislative crusade. In the main, he has worked quietly and diligently, without fanfare of any sort. What, then, has so endeared him to his district?

The answer lies in the rock-solid fact that he has always been his honest, conscientious self, that he has never indulged in double talk, that he has dealt fairly and squarely with all men over the years, and that he has been guided by unwavering uprightness and unshakable integrity.

He has carried his credentials in his square-hewed, Welsh features and has never departed from the basic simplicity of his character. He has rendered countless favors to the people of his district and has extended effective help in many important

instances. While steadfastly true to his party creed, he has never been domineering nor hidebound in his views—but gentle and persuasive in his approach. And so, he has made fast friends without number, and has always been able to turn back the sternest challenges to his occupancy of high office that the opposition has flung at him.

When the Fourth District came into its present form of 15 counties, it was so arranged with a practical political purpose. This was that the normal Republican majorities in the up-district counties would be sufficient to offset what was once a dominating district Democrat majority in Sedgwick County. Ed REES became the first Congressman of the remodeled district—and the force of his personality was such he went one better than the framers of the district had intended. He gained so much headway in the esteem of Sedgwick County that he frequently carried it by smashing margins. This originally unexpected development, coupled with his unbreakable hold upon the up-district counties, has combined to give him uninterrupted possession of his office. He retires with the satisfaction of never having been defeated.

REES IS "IKE'S CONGRESSMAN"

As a Congressman, Mr. REES has been industrious and always available. He has kept in close touch with his constituency, not just as an errand boy but as counselor and friend. He has enjoyed high standing among the House membership for his responsible and obliging ways. As chairman of the Post Office and Civil Service Committee, he performed a vast amount of useful service. He also has been a member of other important committees. Since Dwight D. Eisenhower calls Abilene his home, the President refers fondly to Ed REES as "my Congressman."

Now Ed REES is out of the congressional picture. He took himself out, making his own decision after long wrestling alone with his problem. He will serve out the balance of his term this year. In another 2 years the present form of the fourth district will have disappeared—under the knife of the State's enforced congressional redistricting—and another fourth (of impossibly speculative form) will have taken its place. So the old fourth will be gone and Ed REES along with it. It is not a pleasant outlook to contemplate for those who have always held pride and affection for the fourth as it now stands.

Mr. REES' abdication has left the field wide open for both Democrat and Republican contesting. After the election tumult and shouting has died, the fourth will have a new Congressman—and doubtless a good one, whatever his political affiliation.

Whoever he is, he will not be Ed REES. None will be like Ed REES. The mold that shaped him on a Lyon County farm, in the edge of the hills, 70-odd years ago has long been broken.

The fast-moving world of today will create its own paladins and prodigies. But to many thoughtful and sincere men and women in the Kansas Fourth District, Ed REES will always stand as the prototype of the finest figures in American public life in his day and generation.

Free Parliamentary Speech

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed

in the Appendix to the RECORD two excellent editorials on the subject of full and free debate in the U.S. Senate. One is entitled "Free Parliamentary Speech" and was printed in the February 20, 1960, issue of the Times and Democrat of Orangeburg, S.C., which is ably edited by Mr. Edward H. Sims and capably published by Mr. James L. Sims.

The other one is entitled "Senate's Refusal To Gag the South Encourages Hope for Free Country" and appeared in the March 12, 1960, issue of the News and Courier of Charleston, S.C. This outstanding newspaper has as its able editor, Mr. Thomas R. Waring who is well known for his staunch defense of the principles of constitutional government.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

SENATE'S REFUSAL TO GAG THE SOUTH ENCOURAGES HOPE FOR FREE COUNTRY

Refusal of the U.S. Senate to vote for cloture on the issue of civil rights carries a message of victory beyond the borders of the South. While specifically the vote of 53 to 42 sustains the right of southern Senators to present fully a case that has been willfully misrepresented before the American people and the world at large, the Senate's action also shows that constitutional safeguards are not yet repudiated in this Republic. Such a demonstration is welcome among sober citizens of all regions.

Though a battle has been won, the South is not yet secure from oppressive legislation in a campaign year. The fashion still is strong to flaunt the issue of race. We deem it important to continue defense of States rights not only for the sake of the South, but for survival of the Republic.

Many more rights are involved than the privilege of Negroes to vote in Southern States. Scores of thousands of Negroes already are registered voters. As more of them qualify, they will continue to exercise the franchise more broadly—and, we hope, more intelligently.

The principle now at stake in Congress is not the registration of Negroes, which in some instances may have been slowed or prevented as part of a long history of political immaturity. The principle is the authority of the States, as guaranteed in the Constitution—the original pact on which the Union was founded—to determine election procedures and qualifications. This authority, like the police power to keep order, is a key to self-government and liberty in the American sense of the word.

Election rules should and are being handled within the existing legal framework. If in some localities qualified Negroes find difficulty in registering, it must be remembered that no system is perfect. But southerners deny that political virtue and honesty are found exclusively north of the Mason and Dixon Line. They resent implication that they must be policed by Federal wardens. They feel fully able to maintain the institutions of a people experienced in Anglo-Saxon freedom long before the Republic was created. They resist designation as second-class States requiring overseers out of Washington.

With distortion typical of the paper Current Press, Time magazine's account of the filibuster charges the South with the aim of denying the southern Negro his constitutional right to vote. We cannot speak for every southern precinct, as Times dares to do, but from personal observation of South Carolina polls on election day we flatly deny the charge.

Time magazine picked up comments from two southern newspapers to bolster its own viewpoint. Naturally it chose to quote voices of the carpetbagger press: The Knox-

ville News-Sentinel (Scripps-Howard chain) and the Charlotte Observer (Knight chain). Said the Observer: "Here is a fight of words against time, of men against inevitability, of voices against the ebbing strength that portends eventual silence."

So long as freedom of speech exists—and the Senate's refusal to apply the muzzle gives us hope—there will be no silence about injustice to the South.

FREE PARLIAMENTARY SPEECH

An interesting situation arose in Albany, N.Y., recently. Albany, of course, is the capital of New York State.

In a move designed to curb the use of the senate floor for irrelevant discussions, the Republican majority in the New York senate pushed through two rules changes limiting debate.

A number of Democratic senators took the floor to denounce the changes as an attempt to gag and stifle freedom of speech and debate in the senate.

Ironically, down in Washington, southerners were being put to the test while using their traditional powers of free parliamentary speech in the U.S. Senate—on the perennial civil rights question. Southerners at one time had what was considered a foolproof filibuster device—unlimited talking, but they now are subject to debate shut off by a vote of two-thirds of those Senators voting.

No one would suggest that the Democratic senators in New York State and the Democratic Senators from the South, in the U.S. Senate, see eye to eye on certain facets of political, governmental and social progress. However, in this instance, they were fighting for the same principle—freedom of speech, as it is preserved in many of our upper legislative bodies in the States, and in the U.S. Capital, and it has been the safeguard or refuge of minorities for decades—which enables the majorities to fight successfully, sometimes, against what has been termed the tyranny of the majority, or punitive legislation.

A Million Dollars Saved

EXTENSION OF REMARKS

OF

HON. FRANK E. SMITH

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent I include the following editorial from the Memphis Commercial Appeal:

A MILLION DOLLARS SAVED

Quarter boats are a type of craft used by Army Engineers to house personnel engaged on bank protection projects during the working season on the lower Mississippi River.

The Memphis engineer district is in need of replacements in the quarter boat category and \$1,500,000 had been made available for that purpose. Col. Marvin L. Jacobs, district engineer, heard that the Navy had some craft in mothballs in Florida which might meet the district's needs. He sent his executive officer on a reconnoitering mission, the report was favorable and a full cooperative Navy agreed to lend the Army two of the craft. These had been built to house Navy Seabee battalions during the war, have had efficient maintenance care since, and are in excellent condition. They will be towed to Memphis and reconverted to meet river construction needs.

Conversion costs are not expected to exceed \$500,000 and will probably be less. If this expectation is realized, the Memphis district will have saved a million dollars. As we see it, this is the result of a most com-

mendable example of service unification operating as it should.

As for Colonel Jacobs, he is not only an officer not afraid or ashamed to use some Navy hand-me-downs but a gentleman decidedly after the taxpayer's heart.

Art for the Aged To Be Incorporated in San Antonio's Model Golden Age Center

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. YARBOROUGH. Mr. President, the Golden Age Center, a model public housing project for elderly people, that is being built in San Antonio, Tex., will offer a great deal more than four walls and a roof.

This Golden Age Center, 9½ stories high, is a model for the Nation. Designers and other people from all over the Nation have come to San Antonio to inspect this example of high rise housing for the aged.

Under the guidance of Mrs. Marie McGuire, executive director of the San Antonio Housing Authority, this home for the aged will be developed as a sort of USO for elderly people. It will have a library, indoor and outdoor recreation areas, and outstanding art exhibits.

Mrs. McGuire, working with some of Texas' best known artists and a group of civic clubs headed by the community welfare council, has been able to plan attractive, superb quality artwork into the basic design of the building. Two major examples of this are a ceramic sculptural group at the water fountain and a series of three mosaic murals flanking the main entrance to the building. All of these artists contributed their creations. All of us owe them our thanks for their generosity.

Mr. President, recently *La Prensa*, a newspaper in both English and Spanish published in San Antonio and circulated in the Gulf of Mexico area, printed an excellent article on this subject written by Mrs. McGuire. I ask unanimous consent to have printed in the Appendix of the Record the article from *La Prensa* of January 27, 1960, by Marie McGuire, headed "The Golden Age Center."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GOLDEN AGE CENTER

(EDITOR'S NOTE.—Marie McGuire, executive director of the San Antonio Housing Authority, is considered to be an authority on public housing and it has been through her vision, hard work and close cooperation with the architects that art has come to be accepted as part of our every day lives—as is evidenced by this housing center for the elderly. This is the first high rise Federal sponsored housing for the elderly. Will art be incorporated within city- and county-owned buildings that are projected for construction in the future?)

(By Marie C. McGuire)

It is safe to say that no public building is ever undertaken where controversy does not arise between the idea that a bare-bones structure is sufficient and the architect's desire to achieve some beauty of design within reasonable economy. When the San Antonio Housing Authority and its architects began studying housing for the low income elderly some 4 years ago, they determined that the first high-rise apartment building in the low rent program of San Antonio should make a contribution to the city's beauty as well as achieve the necessary functionalism and economy. The struggle was long and often bitter, but the result is a building that does not reflect the utter monotony of most public housing apartment buildings. The housing board, staff, and architects held tenaciously to the belief that ugliness was not necessary, given a little understanding by national and regional officials.

A competent city planner recently stated that we must get back to the fact that "the work of art should be a focus round which the harmony of the whole building revolves."

While fine art was not an inherent part of the housing authority's building, nevertheless the design lends itself to the use of beautiful art objects it will have through the participation by many of San Antonio's outstanding artists.

COMMUNITY INTEREST

The artists thus become a part of broad community interest that has marked this undertaking from its beginning. Under the leadership of the Community Welfare Council, funds are being received to furnish and equip the 5,600-square-foot center on the first floor of the building that will be a veritable USO for all the elderly of the city. Programs covering recreation, counseling, library, indoor and outdoor play and health are now being planned. The art work enhancing these activity areas will add to the joy and spirit of the surroundings and become a part of the everyday environment for living, which art should be. Garden clubs, civic groups and interested individuals are participating in large numbers.

The apartment building is 9 stories with 185 apartments located at Labor and Barrera Streets just seven-tenths of a mile from the city's center. It already has attracted some 700 applicants 4 months before building completion, demonstrating the stark need as well as desirability of the planning. The structure is T-shaped to provide exposure for all apartments to the prevailing breeze. The lead architects are Thomas B. Thompson of Noonan and Thompson and Kroker, and Harvey Marmon of Marmon and Mok.

BOLD THEME

Flanking the main entrance of the building on Barrera Street is Cecil Casebier's mosaic abstraction 45 feet by 6 feet. Seen across an expanse of lawn and trees, the bold theme executed in yellow, gold, gray, black, and white enriches and gives a glow to the entire building.

Entering the lobby, the floor and walls will be gay with multicolored patterns as the light filters through three panels of fused glass executed by Dorothy Steinhilber using a variety of imported glass.

Continuing along the east wing of the building, we find a mural in quiet shades of blue on one entire wall of the library. Choosing themes from the Old and New Testament, this large mural by Ruth Dunn will be an intrinsic and natural part of the library decor.

Across from the library one enters the private patio with its 8-foot chocolate brown walls. Looking straight ahead, June Kroll's sand sculpture employing her unusual technique and approach to this media will be seen. Using Genesis as her theme, this sculp-

ture of depth, set into the wall, demonstrates her personal style and use of the media.

The viewer will next see the corner rectangular pool. Seven San Antonio ceramists of note combined their talents to develop a whimsical fishing scene which will afford hours of delight for the elderly at rest or play in the shaded patio. A small boy 4 feet in height executed by Mary Vance Green shows content with his catch of a large enamel fish of golds and greens—the work of Nessye Scharlack. Surrounding the lad are several large ceramic birds, a frog, and plants in brown stoneware placed at different levels to catch the fountain water as it falls. Martha Mood, Bess Semmes, Margaret Wray, Mildred Cocke and Lola Smith are contributing these pieces as well as the small and brilliant enamel fish on the floor of the pool.

On the east patio wall, we come upon Amy Freeman Lee's "Enhanced Voyage." The two panels 6 feet by 40 inches each translate Mrs. Lee's paintings into ceramics. The day voyage and its imagery is developed in brilliant sunlight colors, using imported glass, while the night voyage is bathed in the softer shimmering colors of the moon's light.

LIMESTONE SCULPTURE

As we leave the patio through iron gates to the outside, we find a 5-foot sculpture in Texas limestone surrounded by trees and benches and set off by the brown wall background. This piece is the work of Robert Lancaster, director of the Arts Department of Southwestern University and is being executed in his studio at Georgetown.

The large recreation room in the west wing of the first floor will be enlivened by a games mural now underway by Margaret Pace in her home studio.

The enthusiasm of the San Antonio artists and the city's cosmopolitan spirit attracted also the interest of the renowned Mexican sculptor, Augusto Escobedo. He is fashioning a garden piece to take its place with the work of San Antonio artists, thus contributing to the good-neighbor policy in the cultural field. He expressed as his only regret his inability to contribute a large fountain for the front lawn which he felt befit the magnificence of the structure and what the social concept will mean to all American countries.

MANY WORKERS

Helping to make his wealth of artwork possible have been a host of other workers. Harold Rams, owner of the Orco Glass Co., gave space and labor for the execution of the three largest pieces. Volunteers ranging from teenagers to retired military personnel and "the boys in the backroom" at Orco put in long hours with the artists helping to place the thousands of small pieces in their designs. Some of the fountain sculpture was executed in the studio of Harding Black, nationally known ceramist and one of the outstanding experimenters in glazes in this country. Superintendent of the construction for Farnsworth & Chambers, Gerald Lyda, prepared the structure to accept the art pieces, and Elton Wyatt, architects' inspector, found time to join in the behind-the-scenes work and help make possible the vast undertaking of the artists. Architect Thompson, with Harvey Marmon to watch over his shoulder, acted as coordinator, passing on all designs, colors, and locations of the various art pieces.

Architects, planners, Federal, State, and municipal officials from across the country have come to see this development. Others are coming, some waiting for the building completion this summer. Over 600 copies of the Housing Authority's research study, "Housing the Elderly" have been requested from across the world. Five national magazines interested in the field of gerontology and modern municipal developments have

carried articles and pictures and made mention of the community cooperative plan that has achieved so much in social welfare and art. Is this a renaissance born in St. Anthony's pueblo? A renaissance in mañana town? Could be.

A Modest Proposal for Narrowing Any Possible Missile Gap Even More Rapidly—Put Polaris Missiles on Surface Ships

EXTENSION OF REMARKS

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. STRATTON. Mr. Speaker, in the past few weeks, as the debate with regard to any possible missile gap in the years immediately ahead has continued, more and more Members have recognized the tremendous potentialities of the Polaris ballistic missile firing submarine as a source of nuclear deterrent power for this country which is far more invulnerable than the present manned bombers of our Strategic Air Command, and which is today almost within our grasp as an operational weapon.

President Eisenhower himself has recognized the importance of Polaris, a weapon capable of ranging the seas at will and carrying a deterrent nuclear power which can be brought to bear on the Soviet Union at ranges much shorter than those required of an intercontinental ballistic missile. So important are the advantages of this remarkable new system, that many of us feel it should be developed even more rapidly than the President has requested, so that any possible gap between Soviet missile capabilities and our own can be narrowed just as quickly as we are humanly able to do. In that connection, I have myself introduced legislation to appropriate funds for the construction of some six additional Polaris ballistic missile firing submarines in the 1961 Defense Department appropriation bill. Even though these ships will be costly, totaling some \$975 million for the six of them, the security of an invulnerable deterrent which they can afford is well worth the cost to us.

Nevertheless, even with these 6 additional ships we will have only 21 Polaris submarines, which is less than half the fleet which our Chief of Naval Operations, Admiral Burke, has said would be required to provide us adequate protection and deterrent power in this novel and invulnerable way. While Polaris will be available to us more quickly than other types of missile systems, it is still a weapon that will require time in order to be built in sufficient quantities, largely, of course, because of the necessity of constructing the highly complicated nuclear submarines which are such a vital part of the system.

But, Mr. Speaker, in the discussion of the Polaris missile it should not be overlooked that the missile itself is already operational and has actually demonstrated its capacity in exhausting tests by the Navy. Only the more delicate marriage of the missile itself with the nuclear submarine remains to be carried out, although I have no doubt that this too will turn out as satisfactorily as Admiral Raborn and his associates predict.

Now, the other day there came to my attention an article which I believe to be of great value to those of us who are interested in the national defense and which I feel merits the immediate attention of this body. In our concern with the Polaris nuclear submarine we may have overlooked the fact that in Polaris the United States already has available the first solid-propellant effective intermediate-range ballistic missile. Surely it would be a mistake if we were to fail to utilize this part of the Polaris system as fully and as rapidly as possible, even while we wait for additional nuclear submarines to be built. Surely in the quest for the almost complete invulnerability which the nuclear submarine can give to the overall Polaris system, we would be making a serious mistake to neglect the substantial defensive possibilities of the more moderate degrees of invulnerability that could also be attained by placing these solid propellant missiles, in the form in which they are already available today, on existing surface ships of the Navy.

I am advised that equipping surface ships for this type of activity would not either be greatly expensive nor would it take great time; and even though a surface ship would not, of course, have the degrees of invulnerability that would be characteristic of a nuclear submarine, by placing these missiles on a larger number of surface craft, doing it more rapidly and moving these craft over the surfaces of the ocean we would achieve a degree of dispersal and hence a very real measure of invulnerability which it would be almost impossible for the Soviet Union to match. Without abandoning in any way the drive for increased production of Polaris submarines, Mr. Speaker, I believe we have a corresponding responsibility to the security of this Nation to make the missile itself available during this interim period for use on existing ships of the Navy, and perhaps even calling some ships back out of mothballs for this purpose.

Mr. Speaker, because I believe this proposal has such far-reaching consequences I commend it to my colleagues, and urge their attention to the article which appeared in Navy—the Magazine of Sea Power for March 1960 written by the brilliant military editor of the Washington Star, Mr. L. Edgar Prina, and which also appeared on March 14, 1960, in the Appendix of the Record in the remarks of the gentleman from California [Mr. HOSMER].

West Virginia Is Getting Shortchanged— XVII

EXTENSION OF REMARKS

OF

HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. HECHLER. Mr. Speaker, 16 times before I have addressed the House to advise my colleagues that West Virginia is getting shortchanged by the agencies of the Federal Government.

Particularly I have singled out the Defense Department, which controls the spending of more than \$40 billion a year, more than half of our national budget.

The Defense Department, on a per capita basis, has ranked West Virginia a dead last among the States in military and civilian payrolls and in the number of installations within the State.

This is doubly regrettable in view of the fact that our State has the highest rate of unemployment in the Nation today, and that improvement of the condition of the State's economy will require efforts on many levels.

One big boost for the economy would be the fair allocation of military contracts and payrolls within the State.

Today, Mr. Speaker, I want to present recent and comprehensive figures to prove that just the opposite is being done.

These figures pin down not only the total military and civilian payrolls, but also the total spent on supplies, services, and construction within each State.

I hardly need tell you where West Virginia ranks on a per capita listing of the 50 States and the District of Columbia. It is last, 51st.

In fact, although West Virginia is 30th among the States in population, it ranks a low, low 50th on the list of total funds spent. Only Vermont, with barely a sixth of the Mountain State's population, rates below the Mountain State on this list.

Mr. Speaker, I have never maintained that West Virginia is geographically or strategically situated in a manner that would justify an expenditure as great as California's or New York's.

But surely West Virginia deserves a per capita share more than one-fiftieth that of California's, or more than one-fiftieth that of New York's.

Surely it merits more than one-fiftieth that of Alaska's announced per capita share—which does not even include supplies, services, and construction spending.

And it seems hard to explain why Connecticut should get 37 times as much business as West Virginia on a per capita basis, and why Arizona should have 24 times as much spending on supplies, services, and construction.

Mr. Speaker, every single State in the Union shares in the annual budget to more than three times the extent that

West Virginia does—while our State remains the most sorely depressed in the country.

Mr. Speaker, the following statistical table documents the unfair way in which West Virginia is getting shortchanged:

States' apportionment of U.S. defense budget for year ending June 30, 1959

[Ranked on per capita basis]

Rank	State	Military spending for supplies, services, construction, etc.	Pay to military personnel	Pay to civilians	Total	Amount spent per capita	Rank	State	Military spending for supplies, services, construction, etc.	Pay to military personnel	Pay to civilians	Total	Amount spent per capita
		Million	Million	Million	Million				Million	Million	Million	Million	
1	Alaska	(1)	\$124	\$43	\$167	\$759	27	Ohio	\$1,031	\$79	\$211	\$1,321	\$166
2	California	\$5,283	757	780	6,820	644	28	North Carolina	321	248	56	625	154
3	Washington	961	185	142	1,288	537	29	Alabama	138	87	209	434	142

Research To Brighten Economic Outlook for Great Lakes Fish Industry

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. WILEY. Mr. President, in promoting economic progress for the country generally and for industry specifically, we recognize that research plays a tremendously significant role.

In many cases it provides the foundation essential for building progress for the future.

Today I would like to call attention to a specific problem that is confronting the fish industry in the Great Lakes region in terms of the need for an expanded research program.

Over the years the commercial fishing industry has depended upon the supply of choice fish in the waters of the Great Lakes for economic health.

Recently, unfortunately, the deadly lamprey have killed off large numbers of the lake trout, whitefish, and other prized species. As a result, the fishing industry in Wisconsin and the Midwest is facing serious difficulties.

Currently an antilamprey campaign underway is making progress toward elimination of the lamprey eels. However, it will be years before the lake is likely to be replenished with stocks of choice fish.

Meanwhile there is an abundance of other kinds of fish—formerly food for

the prize species—in the lakes, including Lake Michigan, which can be utilized for such commercial uses as pet and animal foods, and other purposes.

There are, however, serious difficulties in adapting processing techniques of the fishing industry for a changeover to this kind of commercial operation.

Currently the Bureau of Commercial Fisheries is carrying on research in this field to provide for better, wider utilization of these resources.

Recognizing the plight of the fish industry, I believe that Congress—before which the Fish and Wildlife Service appropriations are pending—should approve adequate funds for a good, sound research program. In addition, I have urged the Bureau of Commercial Fisheries to direct as much of the fish research as possible to meeting the specific problems in the Great Lakes regions.

At this time I ask unanimous consent to have a brief résumé of the kinds of research needed to resolve the problems and thus brighten the economic outlook for the fish industry in the Great Lakes region printed in the Appendix of the RECORD.

There being no objection, the résumé was ordered to be printed in the RECORD, as follows:

FIVE-POINT RESEARCH PROGRAM FOR COMMERCIAL FISHING INDUSTRY IN GREAT LAKES REGION

1. Exploratory fishing and gear research, including modern fish-finding equipment with trawls and other fishing gear to appraise the commercial potential of the fish stocks on Lake Michigan and Green Bay to determine the most economical means of capture.

2. Technological studies on the adoption of modern mechanized equipment to permit

efficient handling and processing of fish catching in sufficient volume.

3. Information on the chemical composition of raw fish supplies and the effect of processing factors on nutrient values of industrial food fish.

4. Market research to provide liaison between industry groups and the various State, Federal and other agencies at work in market development; and to assist producers, processors and industrial shippers in the location and distribution of fish supplies.

5. Biological studies of the entire lake waters to measure changes and to forecast fishery trends and conditions. These studies should be accompanied by statistical matter to aid in the management and regulation of future fishery harvests.

Government Subsidy Historical Review

EXTENSION OF REMARKS

OF

HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. LEVERING. Mr. Speaker, because of the great emphasis placed on subsidies in connection with agriculture by the various news media as contrasted with little or no public attention being called to the fact that practically every other segment of the economy is supported by our Government in one way or another, the average American appears to have a distorted view on the subject of subsidies generally. I dare say almost everybody thinks that farmers are receiving handouts from Uncle Sam, which of course is not the case, but

I doubt if very many people are aware of the fact that the Federal Government pours out \$10.2 million every day to subsidize transportation facilities alone; that postal deficits over a 10-year period in behalf of business have exceeded the cost of farm price support programs through the Commodity Credit Corporation over a 25-year period.

Mr. Speaker, under leave to extend my remarks in the Record, I include a study made by the House Committee on Agriculture which summarizes the use of subsidies to advance the aims and purposes of government since the First Congress to 1958, entitled "Government Subsidy, Historical Review." Irrespective of what the public thinks about the matter of Government assistance, I call the attention of my colleagues particularly to the conclusion of this study which indicates that few if any, areas of the economy are untouched by subsidies; that subsidies are as old as our Government and long have been used as an acceptable and serviceable adjunct to the free-enterprise economy; and that condemnation or praise of subsidies as such is academic and unrealistic, without taking their public purposes into account; that in agriculture, therefore, as with industry, business, and labor, the true evaluation of subsidies must depend on the public interest being served.

The study follows:

GOVERNMENT SUBSIDY, HISTORICAL REVIEW

The subsidy is the oldest economic principle written into the laws of the United States.

It has been used from time to time since the inception of this Government to influence the direction of economic development and to moderate the impact of the normal workings of supply and demand. The principle has been employed to promote science, the arts, research, and for other Government aims and purposes.

When the First Congress convened in 1789 its first act was to devise a system for administering oaths. The next business by the Members—legislating for the new Nation then populated almost completely by farm people—was the enactment of a tariff law, to protect and promote the infant and frontier industrial development of America. Significantly, moreover, this legislation set up a special subsidy mechanism to encourage the development of an American merchant fleet. It stipulated that goods imported into the United States on American vessels should have a 10 percent reduction in customs duties, and a tonnage tax also was imposed in favor of American shipping.

GROWTH OF SUBSIDIES

From this early beginning, subsidies through the years have taken many and various forms.

The Government granted 6,340,339 acres of public lands to private interests, between 1827 and 1866, to encourage canal building and river improvement, in addition to rights-of-way grants. The Government made other contributions by direct appropriations, stock subscriptions, and loans to private canal companies.

Approximately 183 million acres of Federal and State lands were granted to railroads between 1850 and 1871.

Many millions of dollars have been assigned by the Federal Government to ocean and airmail subsidies, to foster the development of transportation, as was the case in the special considerations for railroads and

waterways. This first mail subsidy was paid more than 100 years ago, in 1845, according to available records.

Additional millions of dollars have been used to subsidize the building of ships on American ways. As a recent illustration, approximately \$40 million in subsidy was paid on the private luxury liner, *United States*, that plies between this country and Europe. The total cost of the ship was given as \$76,800,000.

While originally the subsidy mechanism was employed to expand transportation, to encourage foreign trade, and to foster domestic industrial development, more recently subsidy and subsidylike programs have multiplied to such an extent that their impact is felt by virtually all elements in the Nation's economic structure.

TO CONDEMN OR TO PRAISE

The Legislative Reference Service of the Library of Congress, in a special survey, *Subsidy and Subsidylike Programs of the U.S. Government*, concludes:

"Diverse as these subsidy programs are, it is unrealistic either to condemn or to praise Federal subsidies as such. Each particular program which is determined to contain an element of subsidy must be judged independently, taking into account the economic, social, and political conditions prevailing at the time."

Any broad condemnation of subsidies as such confronts these hard facts:

America's infant industry, without the aid of subsidy laws in the early years after the formation of this independent Nation, would have been slow to develop and the emergence of the United States as a world power could have been retarded for many years.

Without subsidy there would have been no early development of an American merchant fleet. The first accomplishments of inland transportation in this country—by canals and river improvements—would have been delayed.

Had there been no subsidy, in the form of extensive assistance to railroads in spanning the continent, the settlement and development of the West would have been retarded for years.

The age of air travel in America, unless aided by subsidy, would have been late in arriving, and the contribution of airpower to our military preparedness would have been slowed down.

Without subsidy, no commercial seagoing ships—perhaps even now—would be built on American shores.

Subsidy has had a substantial and beneficial role in the Nation's overall industrial development.

It has been important in aiding the economy and the people—especially in times of depression.

It has been essential in stimulating vital production in wartime.

It has financed scientific development.

It has been used in efforts to balance the economic positions of vast segments of our total society.

TO DEFINE A SUBSIDY

Any study of the subsidy principle and its history and place in the Nation's economy and social structure is complicated by definition. There is no unanimous or uniform agreement on what constitutes a subsidy.

Some contend the tariff system is a subsidy structure, since it involves Government action that enables protected industries to charge more for their goods in the American markets. Moreover, some consider that accelerated tax amortization for defense plants subsidizes the owners of these plants, that "depletion allowances" provide subsidylike benefits to the petroleum and some other industries, that Federal noninterest-bearing deposits of billions of dollars in

private banks and certain services of the Federal Reserve System amount to subsidies for large private bankers, that sale of Federal surplus property at a loss is a subsidy to the purchasers, and that the postal deficit on second-class mail is a subsidy to business. Others confine their definition to direct Government payments, to the remission of charges, and to the supplying of commodities or services at less than cost or market price.

There is one concept of subsidy which extends to all persons and enterprises whose economic positions are improved, or whose purposes are advanced, as the result of Government action. This embraces industries whose profits would be less without protection of the tariff laws and the many other statutes that soften the full force of competition in a private enterprise economy; and this broad definition likewise encompasses all working people whose earnings are greater because of minimum wage, collective bargaining, and immigration laws.

It is pointed out, by those favoring this definition, that the economic benefits accruing to industry and labor, from Government policies, are paid for—as are the costs of the farm program—by the general consuming and taxpaying public.

INDUSTRY, LABOR, AGRICULTURE

Thus virtually all the population would seem to be in a subsidy recipient posture and, moreover, almost all are participating in the payment of the costs. It is certain that the total population feels the economic impact of the subsidy programs for industry, labor, and agriculture.

In this overall subsidy concept the Nation's agriculture no doubt is a lesser recipient than either industry or labor. Yet the farmer, in some areas of public opinion, seems to have been cast in the role of chief villain in a drama of Government largesse.

Perhaps an explanation is that public acceptance of a particular subsidy may relate directly to how well it is disguised as such, and to its adaptability for being covered up in bookkeeping. It certainly is true that, in the broad definition of subsidy, there is no way to measure in dollars the benefits to industry and to labor from all the laws aiding them; yet the principal costs of agriculture's programs are constantly subjected to strict and public accounting.

In the case of industry and labor, the benefits from Government policies are paid largely by consumers. In the case of agriculture, the benefits come principally from taxpayers. Of course, consumers and taxpayers are one and the same.

Currently the subsidy principle is thrust into public attention by the contentions over farm price-support policy. This has brought about a demand for facts and figures relating to subsidies received by agriculture, by industry and business, and by labor, down through the years.

The price-support operations conducted by the Commodity Credit Corporation in behalf of agriculture are at the core of the subsidy issue. The opposition to this farm program, in and out of Government, may have left an impression on the public mind that a subsidy is something inborn and inherent with agriculture, and entirely foreign to the remainder of the economy.

It is interesting, therefore, to note that CCC farm price-support losses from 1933 to January 1, 1958, have cost the taxpayers less than subsidies to business through postal deficits alone during the 10-year period 1946-56.

Moreover, the losses connected with price supports for farmers have amounted to only a fraction of the cost of business-reconversion payments, including tax amortization, and other financial aids to industry during the past few years.

The CCC farm price-support losses from the beginning of the program to January 1, 1958, amounted to \$5,173,746,788.

The House Committee on Appropriations published in the hearings on the agricultural appropriations bill for the fiscal year 1959 a table setting forth certain Federal expenditures in recent years for business aids and special services. This showed:

	Millions
Mail subsidies (10-year period 1946-56).....	\$5,968
Business reconversion payments (including tax amortization).....	43,262
Subsidies to maritime organizations (1938 through fiscal 1957).....	3,500
Subsidies to airlines (1938 through fiscal 1957).....	614

The foregoing shows in excess of \$50 billion of subsidy or subsidy-like benefits to industry, the greater part of which has occurred since World War II. The tabulation is meaningful only as an illustration since, as heretofore noted, there is no way to arrive at the dimensions of the benefits to industry and labor over the years as a result of Government actions such as the tariff and minimum wage and collective bargaining laws.

A significant part of our industrial establishment operates today on Government defense and other noncompetitive contracts, without normal risks, and with profits assured. Some 50 of the Nation's largest corporations have received \$80 billion in Government contracts during the past 5 or 6 years. Such contracts cannot be labeled as subsidies to industry, but they do reflect certain Federal financial support. It is notable, moreover, that the Government generally obtains the industrial materials of defense under contracts drawn to assure profits to the producers, whereas the food for the Armed Forces is procured generally without reference to profits or losses of farmers.

SUBSIDIES TO MAGAZINES

As heretofore set forth, the postal deficits over a 10-year period in behalf of business have exceeded the cost of farm price-support programs through the CCC during the last 25 years. The Post Office Department has made estimates of the annual revenues and costs involved in the handling of several larger magazines. These estimates were published by the House Appropriations Committee. Revenues were found to account for only 35 percent of the cost of handling these publications.

Here are the Post Office estimates of revenues and costs, for a year, along with a third column showing the difference, or amount of subsidy, involved, as published in the Appropriations Committee hearings:

TABLE I

Publication	Estimated revenue	Estimated cost	Amount of subsidy
Life.....	\$7,485,000	\$16,979,000	\$9,494,000
Saturday Evening Post.....	3,488,000	9,557,000	6,069,000
Reader's Digest.....	1,082,000	5,891,000	4,809,000
Look Magazine.....	1,534,000	5,016,000	3,482,000
Collier's (discontinued).....	1,238,000	4,415,000	3,177,000
Ladies' Home Journal.....	1,530,000	3,449,000	1,919,000
Woman's Home Companion.....	741,000	2,325,000	1,584,000
McCall's magazine.....	1,097,000	2,604,000	1,507,000
National Geographic.....	486,000	1,821,000	1,335,000
Good Housekeeping.....	881,000	2,175,000	1,294,000
American Home.....	623,000	1,753,000	1,130,000
Better Homes and Gardens.....	758,000	1,904,000	1,146,000
American Monthly.....	326,000	1,359,000	1,033,000
Coronet.....	180,000	976,000	796,000
Total.....	21,442,000	60,224,000	38,775,000

In general, the revenue estimates are based on data from administrative records cover-

ing the mailings of all issues of these publications for the month of March 1956, extended to annual revenues on the basis of the number of issues per year. However, other mailing periods were used for some of the publications, in computing mailing revenues and costs to the Government. Representatives of some of the publications have contested the Post Office estimates using average costs figures, as in the above table.

FARM PRICE SUPPORTS

The farm program, which evokes this review of subsidies in the total economy, came into being when agriculture was on the edge of bankruptcy during the grim depression of the thirties. This program was based upon the parity principle. It embodies the computation of prices at which farm commodities should sell to maintain agriculture in a reasonable income relationship with other segments of the economy. The "parity price" of a farm commodity, thus, is based upon the prices of things farmers must buy—tractors, fuel, fertilizer, seed, insecticide, etc.—and the parity price goes up or down with the prices of these things, fluctuating as do some wage rates in industry that are tied to the cost of living.

To maintain farm prices at reasonable levels, the Government decided to make loans on storable crops at a stipulated percentage of parity—never as much as 100 percent. The crops are put up as collateral by the individual farmers and, if the farmers do not repay the loans by a specified date, the Government assumes ownership of the collateral. The Government then stores the commodity and moves it into use at times and in a manner that will not depress normal farm prices. This is a major aspect of what is known as the farm program.

The following table summarizes the costs of the CCC price-support operations—first, for the 20-year period 1933 to 1952, inclusive, and second, for the 25-year period 1933 to 1957, inclusive:

TABLE II.—Summary of CCC program results from Oct. 17, 1933, through Dec. 31, 1957 (realized gains and losses)

Program and commodity	Oct. 17, 1933, through Dec. 31, 1952	Oct. 17, 1933, through Dec. 31, 1957

¹ Denotes loss.

The Commodity Credit Corporation costs, as shown in the foregoing table II, bear the brunt of antismuggling and antifarm program criticisms. Generally, these criticisms ignore or obscure the subsidy aspects in the rest of the economy.

The Department of Agriculture prepares a table each year under the heading, "Realized Cost of Programs Primarily for Stabilization of Farm Prices." This includes the CCC price supports and other costs, many of which have been challenged as not being justifiable charges against the farm program.

The Director of Budget and Finance of the Department has prepared a cumulative table which is presented by the Department as representing costs of programs "primarily for stabilization of farm prices and income," for the fiscal years 1932 through 1957. This table follows:

TABLE III.—Realized cost of programs primarily for stabilization of farm prices and income, fiscal years 1932-57

[Millions]	
Commodity Credit Corporation:	
Nonrecourse loan purchase, and payment programs.....	\$4,603.0
Supply, commodity export, and other activities.....	15.4
Interest, administrative, and other general costs.....	991.9
Total, CCC.....	5,610.3
National Wool Act program.....	63.5
International Wheat Agreement.....	899.2
Donations of commodities to other nations.....	384.3
Commodities sold for foreign currencies under title I, Public Law 480.....	931.6
Development of foreign agricultural markets, title I, Public Law 480.....	2.6
Removal of surplus agricultural commodities.....	2,154.3

TABLE III.—Realized cost of programs primarily for stabilization of farm prices and income, fiscal years 1932-57—Continued

[Millions]	
Sugar Act.....	\$373.6
Federal crop insurance.....	203.7
Soil bank—acreage reserve program.....	518.3
Acreage allotment payments under the agricultural conservation program.....	2,354.8
Acreage allotments and marketing quotas.....	177.6
Parity payments.....	1,016.6
Retirement of cotton pool participation trust certificates.....	1.4
Agricultural Adjustment Act of 1933 and related acts.....	571.1
Removal of surplus cattle and dairy products.....	76.6
Agricultural Marketing Act revolving fund, and payments to stabilization corporations for losses incurred.....	378.6
Other functions.....	38.2
Total.....	15,009.1

¹ Represents income or minus expenditures.

The first printing of Government Subsidy—Historical Review, in June 1954, carried a similar compilation by the Director of Budget and Finance of the Department of Agriculture, showing that the realized cost of programs, "primarily for stabilization of farm prices and income," for the period 1932 through 1952, amounted to \$7,510,400,000. Thus, these costs as set down by the Department have doubled in the last 5 years.

It should be emphasized that certain of the programs emphasized in the compilation of table III, involving large expenditures, result in important benefits to other segments of the economy and to many people who are not agricultural producers. This is particularly true with respect to programs for disposal of surplus agricultural commodities acquired under CCC price support and other stabilization measures. These include Government donations of foods to school lunches to the Veterans' Administration and to the armed services, and to millions of needy people at home and abroad. At this writing these foods go to approximately 14 million schoolchildren in the United States, 4.5 million needy persons in this country, 1.5 million people in charitable institutions, and to as estimated 80 million needy persons in 85 countries around the world.

The question, therefore, is: Should this program, where the benefits are shared so extensively by the consumers of the food acquired by the Government, be charged exclusively against farmers and the farm program?

CREATING PROFITS AND JOBS

This question would not arise, of course, except in response to the steady bombardment of the public mind with implications that farmers exist primarily on Government checks and that subsidy is the evil and virtually exclusive hallmark of agriculture.

Manipulation of the language can foster the impression that almost every Government dollar expended in relation to agriculture is a subsidy to farmers, while the billions of dollars in Federal outlays for nonfarm purposes—creating profits for industry and jobs for workers—are somehow more respectable and proper. Rarely are they labeled as "subsidies" to those who are benefited.

During the postwar period from July 1, 1945, through June 30, 1957, the United States extended aid totaling \$59,998 million to foreign governments and international organizations. This aid involved a great movement of the products of American industry to other nations, meaning profits for industry and

jobs for workers in our own country. But this is not deemed to be in any way a subsidy to our industry or our labor.

The Government, of course, has expended many more billions of dollars in purchases and arrangements for defense purposes. A substantial portion of our industry operates without risk and with assured profits, in producing for the Government. A sizable portion of our labor force is employed in producing for the Government. This is not, and should not be accounted as a subsidy.

However, it must be noted that when the Government ships food to other nations, or when it supplies food for the unemployed and their families in our own country, or donates food for school lunches, to the Veterans' Administration, and to the Armed Forces, the Government books list the charges against the farm program, and in the minds of many people this seems to be a subsidy to farmers.

It should be pointed out also that in the production buildup for World War II and for the Korean conflict our industrial expansion was underwritten by the Government. Profits in industry producing with Government contracts were guaranteed. When no longer needed, industrial war plants were recognized as surplusage, and charged off to war or defense. After World War II the billions in surplus war materials, including trucks, automobiles, and the many other items usable in peacetime, were kept off the normal competitive markets, to protect industry. All this was not, and should not be charged as a Government subsidy operation.

But in the case of agriculture, farmers responded to war needs with a 40 percent increase in their productive capacity. They paid from their own pockets for this vast expansion of their productive resources. At the end of World War II and again after the Korean conflict there excess capacity was not written off by the Government and charged to war. Their surpluses, from a war-generated capacity, still are listed on Government books as charges against the farm program, and some opinion seems pleased to regard these charges as subsidies to farmers.

"SUBSIDY" BECOMES A CATCHWORD

From the foregoing there would seem to be a cultivated propensity to tie a "subsidy" tag to any Government program that seeks to bring the income and living standards of farm families into a parity position with the other great segments of our economy.

"Subsidy" has become the catchword of a drive to break down the program of effective price supports for major crops. The drive, with support in and out of Government, is succeeding. A flexible system of deteriorating supports is supplanting the stabilizing supports which hitherto had applied to the group of major commodities. This has been followed by a general decline in the income structure of farmers and, ironically, a vast increase in agricultural subsidies.

Comparing 1957 with 1952, total farm production was up 6 percent, farm prices down 16 percent, farm parity ratio down 18 percentage points, total farm income down 20 percent, realized net farm income at the lowest point since 1942, purchasing power of that farm income down 24 percent (lowest since 1940), and the farm population had declined from 24,283,000 in 1952 to 20,396,000 in 1957. Farm debt has reached a record high, above \$20 billion.

The official reports of the Department of Agriculture show that the price-support program, through the CCC, operated for 20 years prior to 1953 at an actual profit of over \$13 million on the programs for the basic crops. The loss on all crop operations at the end of the 20 years was only \$1,064 million (as shown in table II), whereas losses in the last 5 years have amounted to more than \$4 billion. With price supports at 90 percent of parity for 11 consecutive years prior to 1953 the average prices for all farm

commodities in the marketplace were at 100 percent of parity or better, and farm program costs were negligible; whereas, during the following years of constantly deteriorating prices, program costs, or subsidies, have increased fourfold.

CONCLUSION

From the foregoing it is manifest that few, if any, areas of the economy are untouched by subsidies; that subsidies are as old as our Government and long have been used as an acceptable and serviceable adjunct to the free-enterprise economy; and that condemnation or praise of subsidies as such is academic and unrealistic, without taking their public purposes into account.

In agriculture, therefore, as with industry, business, and labor, the true evaluation of subsidies must depend on the public interest being served.

Russian Electric Power Programs

EXTENSION OF REMARKS

OF

HON. FRANK E. MOSS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. MOSS. Mr. President, Mr. Alex Radin, general manager of the American Public Power Association, was one of the consultants who accompanied a special subcommittee of the Senate Interior and Insular Affairs Committee and the Senate Public Works Committee on a visit to Russia last year to observe the hydroelectric power development of that country as compared with that of the United States.

Upon their return to this country, Mr. Radin wrote a series of three articles for the North American Newspaper Alliance, in which he summarized his observations while in the Soviet Union. In my opinion, the articles are well written and are very penetrating. I think they very well summarize the observations made by the subcommittee.

I ask unanimous consent that the series of three articles may be printed in the Appendix of the Record.

There being no objection, the articles were ordered to be printed in the Record, as follows:

REDS' POWER THREAT—AMERICA CANNOT AFFORD TO UNDERESTIMATE RUSSIA'S ELECTRIC POWER PROGRAMS—U.S. INSPECTION TEAM FINDS EVIDENCE WHILE ON TOUR THAT SOVIET UNION HAS ATTAINED DEVELOPMENT LEADERSHIP

(By Alex Radin)

WASHINGTON, November 28.—Americans have become painfully aware of Russian leadership in the exploration of space. A delegation representing two committees of the U.S. Senate, recently returned from a month-long, 12,000 mile trip in the Soviet Union, has impressive evidence that the Soviet Union has also overtaken the United States in the building of hydroelectric power dams.

We cannot afford to take lightly the Russian program in hydroelectric power development, and the possible impact of this program on world affairs.

In fact, the power program, though less dramatic, ultimately may prove to be of even greater significance than the missile and space exploration program—for electric power forms the basis of the industrial might of a modern nation.

INSPECTED 10 PROJECTS

The delegation inspected 10 waterpower projects on seven rivers, from the Ukraine in the east to the Lake Baikal region in Siberia. The group also held numerous conferences with officials of the U.S.S.R. ministry of power station construction, and visited a thermal power station, various other electric facilities, and four hydroelectric institutes. We found this evidence that the Russians have now attained world leadership in hydroelectric power development:

1. The Russians already have in operation the world's largest dam—Kuibishev, with a capacity of 2,300,000 kilowatts. Prior to completion of Kuibishev, the world's largest was America's Grand Coulee, with a capacity of 1,900,000 kilowatts.

2. The Russians are nearing completion on another dam, Stalingrad, which will have a powerhouse even larger than Kuibishev. Stalingrad's capacity will be 2,530,000 kilowatts.

3. A dam being built on the Angara River in Siberia and scheduled for initial operation in 1961 will have an installed capacity of 4,500,000 kilowatts—more than twice the size of Grand Coulee.

4. Still another dam, Krasnoyarsk, under construction in Siberia, will have a capacity of not less than 5 million kilowatts—which is almost twice the power capacity of all 31 dams in the Tennessee Valley.

5. The Russians have developed new techniques which they contend will revolutionize the art of building dams.

The author accompanied an 11-man Senate delegation which recently conducted a 31-day inspection of vital Soviet hydroelectric power projects. Mr. Radin is general manager of the American Public Power Association, representing more than 1,000 municipal and other local, publicly owned electric utilities throughout the United States. A former newspaperman, he has testified on electric power development before several congressional committees and was asked to accompany the Senate group.

LONGER DISTANCE

6. Power is being transmitted considerably longer distances in the Soviet Union than in the United States, and the ultimate goal of the Russians is to have an interconnected transmission system stretching all the way from Vladivostok in the east to Leningrad in the west—a distance of some 4,000 miles. Already the Russians are transmitting power for more than 600 miles; our longest transmission lines are about 300 miles.

7. The Russians are transmitting power at higher voltages than in the United States. The highest voltage now in use in the United States is 345,000 volts; the Russians are transmitting power at 400,000 volts, and within the next few months will step this up to 500,000 volts. Moreover, they are making plans to transmit power at up to 800,000 volts, by direct current.

8. Larger generating units are being used in Russian hydroelectric plants than in the United States. The largest generating units now in use in hydroplants in the United States are those at Grand Coulee, with a rated capacity of 108,000 kilowatts each. The Russians already have installed 115,000 kilowatt units at Stalingrad; they will install 225,000 kilowatt units at Bratsk, and 500,000 kilowatt units at Krasnoyarsk.

UNITED STATES HOLDS LEAD

9. Although the Senate group's mission was to study only hydroelectric power, the delegation also learned that the Russians now have a 2,400,000-kilowatt steamplant under construction in Siberia. The largest now in operation in the United States is the Tennessee Valley Authority's Kingston plant, with an installed capacity of 1,440,000 kilowatts. However, the size of the units in the Russian steamplant is smaller than the largest on order today in the United States.

To place the Russian power program in proper perspective, it should quickly be pointed out that, despite the leadership which Russia has achieved in the building of individual dams and generating units, the total power capacity of the Soviet Union is still considerably below that of the United States. As of the beginning of this year, Russia's total power capacity was about 53 million kilowatts, whereas that of the United States was about 142 million kilowatts.

The significance of the Russian power program, however, lies in several factors:

1. If the rate of growth of the United States and the Soviet Union continues at the present pace, the Soviet Union could equal if not overtake the United States in power capacity in the 1980's.

2. Even if the Russians have less electric power capacity than the United States, the Russians contend that they can outstrip the United States in production because they are devoting a larger share of their power to industrial uses. For example, the Russians now use 79 percent of their electric power for industry; we use about 49 percent of our power for this purpose.

3. The Russian hydroelectric power projects are being used as the basis for a vast complex of new industrial development, particularly in Siberia. One evidence of the Russian intentions in this regard is the fact that all of the construction camps for hydroelectric projects are built as permanent cities. As work on the dam slackens, industries are built in the immediate areas, and the new cities are used to house industrial workers.

4. Contrary to some statements, the Russians are not slowing down their construction of hydroelectric power projects.

In our first meeting with officials of the ministry of power station construction we questioned the ministry officials as to whether or not there was a cutback in the building of hydroelectric projects. The answer was a flat "No."

Officials contend that the pace of the dam building program was being maintained, but that the steamplant construction program was being accelerated, and added on top of the hydro program, mainly because of the Russians' desire for speed of industrialization.

REDS' POWER THREAT—REDS AID CHINA, INDIA, EGYPT IN PLANNING FOR HYDRODAMS

(By Alex Radin)

WASHINGTON, November 29.—Having established world leadership in the building of hydroelectric dams, the Russians are now taking advantage of this position by providing both technical assistance and equipment to Communist and non-Communist countries of the world.

As a byproduct of their recent 31-day tour of Russian hydroelectric power developments, an 11-man delegation from the Interior and Insular Affairs Committee and the Public Works Committee of the U.S. Senate learned a great deal about the work which the Russians are doing with other countries in the development of hydroelectric power.

In no country is this work of more startling proportions than in Communist China.

TWO HUNDRED AND FIFTY-FIVE DAMS UNDERWAY

We have learned that Red China now has 255 dams underway and that the goal of the Chinese is to have a capacity of 70 million kilowatts of hydroelectric power in production by 1970. (As of this year, the United States had a capacity of more than 29 million kilowatts of hydropower and a total capacity of more than 142 million kilowatts. The Federal Power Commission estimates we will have 45 million kilowatts of hydropower and a total utility capacity of 283 million kilowatts in 1970.)

A Russian engineer told us that the extent of the dam building and other public works

projects in Communist China is of such magnitude that the Chinese now have a shortage of labor, despite the fact that they have a population of more than 620 million, and women are used extensively in their labor force. The shortage results from the fact that the Chinese have undertaken a large-scale construction program with very little mechanization.

The power projects being undertaken by the Communist Chinese are of very considerable size. For example, we were told that the largest of these projects now underway would have an installed capacity of 3 million kilowatts—or half again as great as Grand Coulee Dam, the United States largest. The 3-million-kilowatt project is being built on a tributary of the Yangtze.

Although the Red Chinese attach great importance to power production, their primary objective in building these dams is flood control, according to the Russian engineers.

To assist the Chinese in this program, the Russians have assigned 50 engineers to Red China. At the same time, there are also a group of Chinese engineers undergoing training in the Soviet Union.

GIANT DAM PLANNED

The Russians reported that the Chinese engineers are most capable.

In addition to the projects underway, engineering work is going forward in Leningrad on a project that staggers the imagination—a dam at Itchang Gorge on the Yangtze River in China. The project would have an initial capacity of 25 million kilowatts (about 8 times the amount of power capacity in the entire Tennessee Valley Authority's hydroelectric projects) and the ultimate capacity of this project would be about 40 million kilowatts.

The first work on the Itchang Gorge project was done by an American engineer, John Savage, who was the designer of Grand Coulee, Hoover and many other dams. In 1943, at the request of Chiang Kai-shek, Savage was loaned to the Chinese Government by the Bureau of Reclamation, to make some preliminary studies of the Itchang Gorge project, which was needed primarily for the purpose of flood control.

Although the magnitude and velocity of the Red Chinese program was news to our delegation, we were not surprised, of course, that there was close cooperation between the Russians and the Red Chinese on power matters. We were, however, astonished at the extent to which the Russians are using their leadership in power development in order to strengthen their ties with many other countries.

For example, at the Electrosila Works, in Leningrad, where huge generators are manufactured, we learned that this plant is now supplying equipment for 23 countries—both people's democracies and capitalist countries, according to the director. The capitalist countries, he said, include India, Burma, Finland, and Egypt.

SOUTH AMERICA DISCUSSED

The various design institutes for hydroelectric projects also are working with many other countries. At one such institute we saw experimental work which was going forward on the Aswan Dam, in Egypt.

At the Leningrad division of the all-union hydro-energy project we asked the director whether they were doing any work for South American countries.

"No," he replied, "that is your business."

Despite this disclaimer of interest in South America, it was clear that there was no lack of interest in much of the remainder of the world and that the Soviets' leadership in hydroelectric power is being used today as an effective instrument of international influence.

RED'S POWER THREAT—SOVIET DAM BUILDING METHOD SHOWS DESIRE TO BEAT UNITED STATES

(By Alex Radin)

WASHINGTON, November 30.—“We are happy when we have a month with 31 days.”

This comment by a Soviet hydroelectric engineer typifies the driving force behind the Soviet Union's extensive program of building hydroelectric dams. Time and again Soviet engineers emphasized their principal problem is one of time—time to catch up with and surpass the United States in production. In fact, it appeared that time was a more important factor than money in the buildup of the Soviet economy.

In a gravel pit where workers were excavating rock for use in building a dam, in numerous conferences with Soviet engineers, in conversations with a director of a collective farm our group visited, we were repeatedly told that the primary objective of the Russian people is to beat the United States in the production race, and to do so at the earliest possible time.

PREFORMED BLOCKS USED

This race against time undoubtedly was the principal motivating force behind the Russians' development of significant new techniques for cutting both time and money in the building of dams.

Although we saw the use of these techniques in some of the dams under construction, it was not until our final meeting with officials of the Ministry of Power Station Construction that I. T. Novikov, the minister, proudly showed us a model of a dam that he said would “revolutionize” the art of building dams.

The principal construction feature of this 1 million kilowatt dam, which is to be built soon on the Volga River, involves extensive use of preformed concrete blocks.

Such blocks have been used in Russia for some time in building dams, but the Russians have now refined this technique to such a degree that it apparently will result in great savings in time and money.

In the model which we were shown, the Russians had standardized six different types of concrete blocks which will be used to build 65 percent of the structure. In fact, the only monolithic concrete to be used in this dam will be a pad or footings for the blocks.

By the use of these blocks, it will not only be possible to simplify the pouring of concrete, but, more importantly, the tremendous carpentry work in the building of wooden forms for concrete will be eliminated.

WORK IS TELESKOPED

The use of these blocks also will permit a telescoping of some of the work; the blocks can be manufactured at any time, without waiting for other work that normally would have to be done before pouring concrete.

As a result of this technique, the Russians expect to cut the time of building this single dam from the 5-year period which would normally be required, to 3 years. Savings in costs are expected to amount to 30 percent.

After showing us this new model, Minister Novikov turned to Senator FRANK E. MOSS, Democrat, of Utah, chairman of our delegation, and said, “Now do you see how anxious we are to catch up with you?”

After spending 31 days in the Soviet Union and traveling 12,000 miles through many parts of that vast country, our 11-man delegation could not but be impressed with the tremendous drive of the Russian people for industrialization.

Everywhere one is confronted with many charts showing the goals of the current 7-year program, and exhorting the people to fulfill the program in 6 years. And always the charts show the lines going upward at a steep incline.

Although our delegation readily conceded that the Russians had made tremendous advances in the development of hydroelectric power, and had achieved world leadership in this field, we did not feel the Russians had made any momentous scientific breakthrough. Rather, the Russian program seemed to represent primarily a determination to sacrifice other objectives, such as consumer goods, in order to build the all-essential electric energy base for productive capacity.

MOVING FORWARD SWIFTLY

As Senator MOSS put it, “The Soviet Government simply channels vast amounts of the Nation's resources to its power and steel and other developments rather than into consumer goods such as our people enjoy. Whatever one may think or say about this practice one must concede that Russia is moving forward very swiftly and her industrial might is everywhere apparent.”

Senator EDMUND MUSKIE, Democrat of Maine, another member of the delegation, noted that the Russians' power program “should give us pause to reevaluate our own power development. This doesn't mean—and I would not even hint—that we ought to adopt their methods, speaking of political and economic methods. But I think it is as important for us as it is for the Soviet Union to give appropriate attention to this natural resource.”

In the eyes of the third Senator of the delegation, ERNEST GRUENING, Democrat of Alaska, one of the best places to accelerate the momentum of our hydroelectric power program is in America's 49th State. Here, upon the conclusion of our tour of the Soviet Union, we flew over the Rampart Canyon in Alaska, where a hydroelectric project of about five million kilowatts has been proposed.

We could not escape the conclusion that what the Russians are now doing in Siberia might well be accomplished in the United States in our Far North frontier. Or in our other power-hungry areas, for that matter.

The Facts About the High Interest Policy as Disclosed by the Honorable Byron Johnson, of Colorado

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. PATMAN. Mr. Speaker, the gentleman from Colorado [Mr. JOHNSON] has prepared one of the best and most concise statements on interest rates that I have ever seen.

More than that, this statement brings out some new facts and some new ideas which I have not previously seen. It gives several facts which illustrate how the present high interest policy of our Government is reaching into the pocketbooks of the great majority of the American people. This high interest policy is shooting holes in everybody's pocketbook—everybody's pocketbook, that is, except a small minority of wealthy families who receive their income from clipping bond coupons and, of course, the bankers and other financial institutions, which are all profiting very handsomely.

The Members who read our colleague's statement will, I think, dismiss any question of removing the interest rate ceiling

on Government bonds as the President has requested, and dismiss any question of passing the Ways and Means Committee bill, H.R. 10590, which would have the same effect as removing the ceiling. Instead, I believe that the Members who consider this statement will demand an end to the policy of maintaining interest rates at their present artificially high levels. They will demand, in short, that interest rates be brought down to the point where Wall Street has only a finger or two in our pocketbooks instead of having both hands in our pocketbooks.

The statement which has been prepared by our colleague from Colorado [Mr. JOHNSON] is devoid of any oratory. It simply sets out the facts in 1, 2, 3 order. And the importance of these facts surely makes this statement required reading for all Members of the House. It is as follows:

FACTS ABOUT INTEREST RATES

IN GENERAL

Interest is a cost item; it is the price of money.

Higher interest rates increase costs without increasing output. Therefore, high interest is inflationary.

The administration opposes increasing the prices of everything except money.

THE MATHEMATICS OF PUBLIC DEBT

The increased cost to the taxpayer of a one-quarter of 1 percent rise in interest on \$1 billion of Government bonds is \$2.5 million a year; over 20 years it is \$50 million.

During the next year about \$100 billion of Treasury borrowing must be undertaken. Each rise of one-quarter of 1 percent will add \$250 million to the cost of carrying the debt each year; each 1 percent increase adds \$1 billion to the cost of the debt in the first year, and more in later years. Ultimately, each 1 percent adds \$2.9 billion a year to the taxpayer's burdens.

None of this increased cost gives the taxpayer a dime's worth of additional services. Instead it pushes up the cost of all the other money borrowed.

The cost of interest on the public debt was \$4.8 billion in 1946; \$5.8 billion in 1952. Note the rapid upward revisions in estimates now as a result of interest increases: It was first estimated at \$8.1 billion for 1960; in June 1959, the President raised it to \$8.6 billion for fiscal 1960. The present estimate is \$9.4 billion for fiscal 1960, and \$9.6 billion for fiscal 1961. This is more than the entire cost of the Federal Government in any New Deal year before World War II. The total Federal budget in 1939 for all purposes was \$7.9 billion.

THE EFFECT ON OTHER DEBT

Government debt is roughly one-third of all Federal, State, local, business, and consumer debt. Gross debt, public and private, is roughly \$900 billion.

The economy is paying at least \$10 billion more this year for the use of money than it would have paid under the rates prevailing in 1952. This is a part of the inflation created by the administration.

The Federal interest rate is basic to all others. Hence private interest rates and State and local interest rates will go up as the Federal interest rate goes up.

EFFECT ON INDIVIDUALS

Higher interest makes homes more costly. In 1952 a \$10,000 Government mortgage at 4-percent interest would be paid off over 25 years at a total cost of \$15,840, of which interest was \$5,840. In 1960, the same mortgage at 6 percent can be paid off over 25 years at a total cost of \$19,330, of which in-

terest is \$9,330. The increase of \$3,490 would have been enough to pay for two more bedrooms and a bath. To put it another way, if you wanted to refinance this 4 percent—25 year—\$10,000 mortgage on today's 6-percent market, and keep the monthly payments the same, you would need a 50-year mortgage, making the home twice as costly.

The higher interest rate has added the cost of a new set of tires to your car, which you pay for but do not get; on a new 20-room school, it has added the cost of 6 classrooms which you pay for but do not get. Higher interest makes costs to farmers and small business even higher, and leads to more liquidations and bankruptcies. Higher interest makes home appliances more costly. It raises the cost of living and cuts the standard of living.

HISTORY

The maximum rate of interest of 4½ percent was fixed by Congress in 1917 in the Liberty Loan Act. The Treasury has operated within that ceiling through World War I, a depression, a boom, the great depression, World War II, postwar readjustment, and the Korean incident, down to date. Within that ceiling the Federal debt soared in a few brief war years from \$45 billion to \$270 billion, but the 4½-percent interest rate ceiling held because the Federal Reserve co-operated with the Treasury.

The Treasury can sell its bonds without an increase in long-term interest rates and without inflation if the Federal Reserve will use the power it already has to preserve the value of Government securities by using its open market policies consistently to these ends.

The Federal Reserve notes in your wallet, which carry no interest, always trade at par. It is a sad commentary that Government bonds, bearing interest, are permitted by the Federal Reserve to sag indefinitely in value. The Federal Reserve is supposed to provide an orderly market for Government bonds. It should do so now. A firm statement by the Federal Reserve that it intends to do so, in a manner sufficient to meet the monetary needs of an expanding economy without inflation, would quickly firm up the market. Increased purchases by the Federal Reserve need not create inflationary pressure. If bank reserves rose too sharply, a simple increase in reserve ratio requirements would prevent any inflation. What is more, a more attractive inducement to the public to buy savings bonds—without piercing the 4½-percent interest rate ceiling—will also help the Treasury sell long-term bonds.

RECENT DEVELOPMENTS

Along with its hard-money policies, the widespread fear of inflation last year sent investors into stocks and out of bonds, which raised the yields on U.S. Treasury bonds. Forces are now in motion to lower the price of stocks and raise the price of bonds. As a result, the yields of Government bonds are falling. At the first of the year, 1960, almost every issue was selling at prices to yield more than 4½ percent, three of them to yield more than 5 percent. At the close of business on Friday most Government bonds were selling at yields below 4½ percent. All the bonds with 10 or more years to run were below 4½ percent. (See CONGRESSIONAL RECORD, Mar. 9, pp. 4679-4680). In the face of these market developments, there is no urgency in acting at this time. If these trends persist, there may be no need for action.

CONCLUSION

Any sanction of the proposal to breach the 4½-percent interest rate ceiling at this time would be a betrayal of our own party's position, as set forth in the 1956 party platform: "Debt management: The Republican debt-management policy of higher interest rates serves only to benefit a few to the detriment of the general taxpayer, the small borrower, and the small and middle-class investor in

Government bonds. We pledge ourselves to a vigilant review of our debt-management policy in order to reduce interest rates in the service of our common welfare."

It is economically sound, historically fitting, and a proper discharge of our duties to oppose further increases in interest rates.

India's Food Deficits and America's Surpluses

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. HUMPHREY. Mr. President, Mr. J. R. Wiggins, the distinguished executive editor of the Washington Post, has recently completed an extensive tour of India and has written a brilliant and exciting series of articles for the Post.

There is one that appeared on Tuesday, March 1, that I particularly want to call to the attention of my Senate colleagues. The lead paragraph gives the theme of the article:

India's food deficits and America's surpluses ought to go together like the "love and marriage" and a "horse and carriage" of the song hit.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MILLIONS HUNGER FOR SURPLUSES OF UNITED STATES

(By J. R. Wiggins)

India's food deficits and America's surpluses ought to go together like the "love and marriage" and a "horse and carriage" of the song hit.

They are as complementary as the parts of a mortise and tenon joint.

They do go together, to a degree. Under Public Law 480, the United States, since 1956, has agreed to furnish India surpluses worth \$959.73 million. These have been paid for in counterpart funds, the rupee accounts of which are expendable in India and thus do not add to India's foreign exchange problems. They have gone largely to projects under India's 5-year plans.

These programs have included more than 10 million tons of wheat and 350,000 tons of rice.

BILLION A YEAR FOR STORAGE

They have come out of the bulging warehouses of America's surplus agricultural commodities, on which the country is spending \$1 billion a year for storage (more than \$1 million a day for wheat alone).

To a sixth-grade student of arithmetic it looks as though we could save \$1 billion a year by giving India the whole stock—kit and kaboodle.

Why haven't we?

One of the reasons for my trip was to find out why India didn't ask for more and why we didn't send her more, if not all, of our surpluses.

There are encouraging reasons to believe the program will be stepped up. Among them is the projected visit of S. K. Patil, Minister of Food and Agriculture, who is bringing to the United States his plan to put from 1.4 million to 5 million tons of wheat in reserve storage. Patil began to

pull over his plan long ago. He got more steamed up over it as the result of figures supposed to have been given President Eisenhower:

"Every year the earth produces 1.7 billion tons of food. Divided equally among the planet's 2.8 billion people this would furnish a diet of 2,350 calories to each one. But the United States has surpluses worth \$9.2 billion—1.4 billion bushels of wheat."

STORAGE BINS ABUILDING

The Indian Government has begun to add to storage capacity and to buy land for more bins. A dispersed storage is envisioned so that supplies may be quickly available in case of crop failures. The plan has the interested backing of the Prime Minister. Patil is thinking of initial storage of 55 million bushels.

This is a needed and a useful and prudent thing to do in a country with limited storage facilities and the menace of local shortages. It costs the United States 17 cents a bushel to store grain; some Indian experts think they can store it for 7 cents. (FAO figures do not show this discrepancy.) It would meet a greater need at a lesser cost in India. It would help to stabilize prices in India, too.

The best place to store grain (and the cheapest) is in the bellies of hungry people. There is (according to social scientists) no large-scale starvation in India; but the odds are they are well-fed scientists. There are plenty of people who can and should eat more. Even 130 million bushels in Patil's outside plan wouldn't notably diminish the wheat stocks we are piling up at 400 to 500 million bushels a year.

OBSTACLES ARE LISTED

What holds up a larger movement? What are the obstacles in India?

There is some fear that accumulations of counterpart funds in rupees might have an inflationary effect, or at least put into foreign hands too much control over Indian monetary stability.

Some Indian officials fear Indian farm output might slow down if relieved of the pressure of stark necessity.

There is some fear that heavy inshipments would unsettle the markets of Indian farmers and thus slow up their production.

There is uncertainty about the ability to handle the off-loading and dock storage and transport of a greatly accelerated movement. Wheat shipments are all off-loaded in bags at a rate as slow as only 1,000 tons a day compared with 5,000 tons off-loading rate for bulk grain at modern terminals.

Flat storage construction might cost from 35 to 70 cents a bushel and not all experts agree it is as good as upright concrete storage which costs from 75 cents to \$2 in the United States. (This would be another drain on foreign exchange.)

In the Indian Government there is an astonishing unanimity of belief that food grains should not be brought in under title III in the form of grants for charitable distribution except in cases of flood, famine, and disaster. I heard warnings about demoralizing the needy with free contributions that I hadn't heard since debates on the relief bills of the 1930's in the United States.

Worry was expressed that our surpluses will not last forever and India might develop a dangerous dependence and then be suddenly left without American grains.

Many of these objections to larger intake of wheat do credit to Indian prudence, pride, and independence. They are, in part, however, considerations that a short diet for Cabinet Ministers probably would remove.

OBJECTIONS IN UNITED STATES

In the United States there are also objections based on:

Shipping costs (often compounded by returning ships empty).

Skepticism about the adequacy of storage in India (and pest control).

Fear of offending other grain exporters. (The Joint Wheat Utilization Committee, representing Canada, Australia, France, Argentina, and the United States, may help solve this issue.)

These attitudes, on both sides, are not altogether of imaginary origin. Still, there are those commercial warehouses bulging with 1,028 million bushels of wheat, those Commodity Credit bins with another 39 million bushels, those old Liberty ships with their 37 million bushels. (Fall of 1959 figures.) And there also are those hungry people.

It seems as though most of the legitimate fears of India could be met by more formally tying the food imports and their counterpart funds to a program for improving Indian agriculture at the same time. Some of them have been spent for this under existing programs. But what if the rupee accounts were committed officially to building drainage ditches, irrigation canals, bunds, terraces, farm-to-market roads, godowns (or storage pits), buying seed, building fertilizer plants and educating farmers? Then the American surpluses would fill the current and impending gap between production and need; and would hasten the day when there would be no gap to fill.

Apart from the mutual economic advantages of such an accelerated program there is that other consideration cited by Eugene R. Black, president of the International Bank for Reconstruction and Development:

"... never before in history was it possible to say, as we can say now, that the kind of poverty that destroys individual dignity and stifles individual creative effort is not necessary."

Some of the simple agricultural construction projects that would increase India's farm output would also attack its problem of underemployment and unemployment—most of it in rural villages. P. C. Mahalanobis, director of Indian statistics, has used figures that show 20 million Indians are employed less than 1 hour a day, 27 million less than 2 hours, 45 million less than 4 hours. He recently said he had heard it stated in another way—that there are 30 million people who work 5 days a month, 40 million who work less than 10 days a month, 53 million who work less than 15 days a month. This, of course, is no fault of the thrifty and would-be industrious Indian workers. To help diminish this staggering economic waste might greatly advance India's progress toward a self-generating economic growth.

World Refugee Year, Lake County, Ind.

EXTENSION OF REMARKS

OF

HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. MADDEN. Mr. Speaker, the Calumet Region of Indiana has grown in industrial expansion and population phenomenally in the last 20 years. Thousands of World War refugees have come to this area to make their home during this period of time. The Lake County (Ind.) Citizens Committee on World Refugee Year has contributed of its time and services to aid these new

citizens to establish themselves both educationally and economically to the American way of life.

I wish to incorporate with my remarks, an article from the Gary (Ind.) Post-Tribune regarding the activities of this highly necessary and deserving committee in the work which it has been doing in its preparation for cooperating in the World Refugee Year program.

I also wish to include a resolution unanimously adopted by the above organization at its recent meeting:

PLAN UNIFIED SUPPORT OF REFUGEE YEAR

Plans for coordinated Lake County support of World Refugee Year were discussed last night at a dinner meeting of 40 area religious, civic and educational leaders at the YMCA.

The Lake County Citizens World Refugee Year Committee named Donald Housekeeper as its permanent president and Miss Elizabeth Wilson as secretary, and appointed a committee to work on a countywide project for the week of April 18.

The committee includes Nick Stepanovich, East Chicago attorney; Paul Carter, Gary YMCA; Miss Gertrude Mack, Catholic Social Service Bureau; Miss Lynne Blanning, American Association of University Women; John Ziemba of the Polish National Alliance; Joe Milosevich of the First Presbyterian Church and D. R. McDevitt.

While World Refugee Year, conceived in England and authorized by a resolution of the United Nations General Assembly to run from July 1959 to June 30, 1960, is more than half gone, activity thus far has been largely on a national level and generally is only now reaching the local levels throughout the country.

Speakers last night included the Reverend Humphrey Walz of the Crown Point First Presbyterian Church, who said there were 41 million refugees from war, communism and disaster around the world; Stepanovich, area representative on the U.S. Committee for Refugees, who told of the international structure for the care of refugees, and Winston Cone of the Purdue Calumet Center, who gave impressions of visits to the Near East and Africa.

Carter, YMCA secretary, reviewed the community guide published by the national committee, and Miss Irene Gullette of the Gary Public Library told of films available on the refugee problems.

Last night's meeting adopted a resolution presented by Ziemba urging congressional support of a refugee program, including admission of 20,000 to this country as immigrants, the use of \$10 million from mutual security funds in helping solve the refugee problem, and use of surplus commodities for refugees coming to this country.

THE LAKE COUNTY CITIZENS COMMITTEE ON WORLD REFUGEE YEAR

Whereas the President of the United States has proclaimed the period from July 1, 1959 to June 30, 1960, as World Refugee Year to focus the concern and the ingenuity—and the generosity—of the people of the United States on the continuing problem of refugees; and

Whereas the Lake County Citizens Committee on the World Refugee Year was formed in order to coordinate the activities of the citizens of Lake County who were desirous of contributing their joint efforts to the support of the United States Committee for Refugees and international bodies aiding refugees; and

Whereas the Lake County Citizens Committee on Refugees has taken steps to keep the people of Lake County currently in-

formed about the refugee situation throughout the world and has urged active participation in the World Refugee Year; and

Whereas the sympathetic consideration of the U.S. Congress is necessary so that U.S. participation in the World Refugee Year is commensurate with the traditions and history of our country in rendering assistance to refugees and persons in dire need; Now, therefore, be it

Resolved, That the Lake County Citizens Committee on World Refugee Year go on record in appealing to all citizens and organizations, civic, cultural, and religious, of Lake County to extend every effort for active participation in the World Refugee Year program, and rendering such assistance, including financial, as may be necessary to insure the accomplishment of the desired objectives; be it further

Resolved, That an appeal be made to our legislative and governmental officials urging the adoption of the remedial legislation as sponsored by the U.S. Committee for Refugees, specifically,

1. A Federal appropriation of \$10 million over and above present outlays for refugee programs.

2. A generous allocation of additional surplus commodities.

3. New legislation permitting the annual immigration of 20,000 refugees beyond those authorized in existing quotas; be it further

Resolved, That a copy of this resolution be furnished to members of the Congress of the United States, to Federal, State, and local officials and to interested organizations in Lake County.

LAKE COUNTY CITIZENS COMMITTEE
ON WORLD REFUGEE YEAR.
D. L. HOUSEKEEPER, Chairman.

New Holiday for Superior, Wis.

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. WILEY. Mr. President, in April, the 1960 navigation season of the Great Lakes-St. Lawrence waterway system will open.

In Wisconsin and throughout the Great Lakes, lakeshore and inland communities are looking forward to a renewal of travel, trade and commerce that is of ever-growing significance to their economic life.

During 1959, the first year of operation of the completed and modernized seaway, the volume of traffic increased substantially over the previous years.

For 1960, the flow is expected to be even larger.

So great has been the beneficial impact, that many communities consider the arrival of a new season as cause for real celebration.

The Evening Telegram, of Superior, Wis., for example, recently published a constructive, forward-looking editorial on the opening of the 1960 navigation season. Because of the tremendous importance of deep-sea navigation, by way of the seaway, to Superior, the editorial constructively suggests the opening day

of navigation as a "New Holiday for Superior."

Reflective of the tremendous significance which the seaway is for Superior, as well as Wisconsin and Great Lakes communities—I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

NEW HOLIDAY FOR SUPERIOR?

Superior's most significant day of the year, economically, will soon be here. The opening of navigation.

There have been times, in the early years of Superior, when anxious folks, uninformed as to the date when the people of the settlement would again have their connection with the outside world restored, would hopefully stroll out toward "Bay" Street and see whether the ice had broken up in the harbor and whether possibly there were signs of steamboat smoke on the eastern horizon out over the lake.

If there were such signs a day of rejoicing was at hand. At least in one of those early years it meant that the threat of actual hunger was soon to disappear as the ship would surely carry flour and other food items that would replenish the supplies in the warehouse on Quebec pier, the source on which all the local stores at that time depended. The proprietor of the warehouse was R. G. Coburn, who early saw the necessity for rationing certain items, especially flour. He won the gratitude of the people depending on his stock by refusing to raise prices.

The conditions in modern day Superior are a far cry from those of the city's youth. Even in winter months railroads and trucks often haul to the elevators here enough grain to make a sizable year's business for some terminals that are considered grain centers. The one little Superior warehouse of 1860 is today replaced by vast terminals and by elevator capacity which in the summer season will receive and ship enough grain to supply flour to the whole Nation of 170 million people for a good share of a winter season.

Conditions have also changed otherwise in Superior. Even now ships that have been serving ocean ports are making plans for coming to Superior as soon as the locks and channels of the St. Lawrence Waterway are opened. That will be next month. In Montreal the tentative date has been fixed as April 15. Some predict it can be earlier.

Regardless what the date may be it will be a matter of but a few weeks. It will mark the opening of the first full year of ocean shipping for Superior. For generations the people of Superior have talked and dreamed about such an occasion. Now it will happen every year and each year should be fraught with increasing interest as Superior's connection with the whole world of commerce increases, as more and more cities and countries of other continents become our neighbors in trade.

Superior thus acquires a new red letter day in its calendar. It is both fixed and flexible, being thus of the greater interest because it combines certainty and uncertainty.

Preparations for the day start the trek of hundreds of men back to work. For 2 to 3 months their employment has been intermittent. For some of them it has been an inverted vacation, winter instead of summer. Insurance may have filled the financial gap for them, but they prefer the work and meet it with renewed zest and interest. Ore docks, coal docks, railroads have all participated in the slowdown. As they resume their normal activity the spirit with which they do so pervades the whole city.

Opening of Navigation Day should henceforth be anticipated and celebrated. In con-

trast to the unpredictiveness of the openings of a century ago, the date can now be closely predicted and even assisted in getting here on time. Likewise, its approach will differ in that instead of need for a period of rationing the many stores and warehouses here invite the use of their supplies and their competition prevents the need of the imposition of rationing. The stores themselves may well give their customer the cue and put them in the mood to celebrate Superior's Navigation Day.

Hungarian Freedom Day

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. WALLHAUSER. Mr. Speaker, we of the free world join today in the solemn observation of the 112th anniversary of Hungarian Freedom Day. Unfortunately, it is a day of sad contemplation, rather than one of great rejoicing.

It is a solemn day and one of sad contemplation because of the rules of Soviet Russia. In defiance of all that is legally and morally right, the masters of the Kremlin have placed the Hungarian nation under the yoke of Soviet Russia and taken from its freedom-loving people all the rights that are inherently theirs.

In observing this anniversary of Hungarian Freedom Day, it is well to relate some of the history of Hungary so none will ever forget the ruthlessness and cruelty of the Soviet and its ultimate aim—the placing of the entire world behind the Iron Curtain and making all people of the world its captives.

It was on March 15, 1848, under the leadership of the famed and great Louis Kossuth, that the patriots of Hungary boldly bid for freedom after being tied to Austria for centuries. It brought freedom and national autonomy.

Then in 1945, Hungary found its freedom crushed through occupation by the crawling octopus called Soviet Russia. Yet, the cruel yoke of the Communists could not crush the desires of the Hungarian people for a free and independent nation. It burned steadily in their hearts and in their minds. There were many evidences of it. Then, in the tragic fall of 1956 the Hungarian people again rebelled against alien rule.

Once again the Hungarians demanded freedom and independence and they fought courageously for it. Sadly, the freedom day victory of 1848 was not repeated. Soviet tanks and artillery proved too much for these inspired and dedicated people.

The shocking end of the Hungarian bid for freedom in 1956 cannot and must not be forgotten. Although physically and ruthlessly crushed by Russia's disregard for the fundamental aspirations and rights of mankind, the patriots of Hungary gave enduring proof that their desire for freedom remains unquenchable.

Since the uprising of 1956, the United Nations General Assembly has adopted 12 resolutions on Hungary, demanding the withdrawal of Soviet troops and free elections under international control, while condemning the brutality of the Soviet Union. The Soviet has defied each and every one of these resolutions.

The Soviet continues to defy the United Nations and its resolutions. In view of this and what continues to transpire within Hungary, I sincerely hope the opportunity will present itself at the soon-to-be held East-West summit conference for a full-scale discussion of the Hungarian situation. It is my strong belief that no effort should be spared in our striving for the restoration of independence to Hungary.

Today, as we commemorate an earlier era of Hungarian freedom, we honor all Hungarians for their gallant and tenacious longing for liberty and we pray that the day soon will come when the light of freedom and independence again will be burning brightly in their beloved homeland.

Spenders or Savers?

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix to the Record an editorial from the Clinton (S.C.) Chronicle of March 10, 1960, entitled "Spenders or Savers?" This excellent editorial poses a very important question for our presidential candidates and the voters of this country.

The Chronicle, one of South Carolina's best weekly newspapers, is published by Mrs. W. W. Harris.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

SPENDERS OR SAVERS?

Writing in U.S. News & World Report, David Lawrence points to "the most important question before the Congress." It is whether the expected Federal budget surplus for the coming fiscal year (estimated by the President at \$4.2 billion) shall be spent, or applied to the reduction of our national debt. As he puts it, "Shall we become 'spenders' or 'savers'?"

There is small doubt what will happen if the spenders rather than the savers have their way. The surplus will be dissipated, there is every possibility that a deficit will take its place, the already weakened dollar will become weaker in world money markets and there will be new rounds of inflation. In this connection, the President made a remark of the utmost significance: "Personally, I do not feel that any amount can be properly called a surplus as long as the Nation is in debt. I prefer to think of such an item as reduction on our children's inherited mortgage. And, once we have established such payments as normal practice, we can profitably make improvements in our tax structure and thereby truly reduce the heavy burdens of taxation."

Finally, Mr. Lawrence posed another big question in these words: "What presidential candidate will espouse the doctrine of paying off the public debt by annual contributions from surplus?" The country deserves—in this election year—an unequivocal answer.

Would Raising the Legal Wage Minimum Benefit Our Lower Paid Workers?

EXTENSION OF REMARKS

OF

HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. MICHEL. Mr. Speaker, Dr. Willford I. King, in a recent issue of *Spotlight*, discussed the pending proposal to raise the Federal minimum wage from \$1 to \$1.25. He questions whether raising the minimum would actually benefit our lower paid workers. Dr. King is an eminent economist, nationally known statistician, a former adviser to the U.S. Public Health Service, the Department of Agriculture, and the Bureau of the Census. In view of the timeliness of this article and the provocative thoughts embodied in it, under unanimous consent, I ask that the article be reprinted at this point in the Record:

At present, the average wage of U.S. factory workers is more than \$2 per hour. But, at the same time, cases are not lacking in which employees in various lines of work are paid only 50 cents per hour—or even less. It is an indisputable fact, that, in the United States, large numbers of persons receive rates of pay too low to enable them to live in the style that seems to most of us to be appropriate for Americans. Some of these workers actually are unable to earn enough to maintain the health of themselves and their dependents. Is not this clearly a case calling for governmental intervention to protect helpless workers from exploitation by grasping, ruthless employers? Labor leaders so contend, and hence demand that the legal wage minimum be raised to \$1.25 per hour.

All that advocates of minimum-wage legislation ask is that Congress require employers to pay decent living wages. Can anyone take issue with such an obviously reasonable demand? Clearly, poor people need additional income. Congress is admittedly the most powerful legislative body on earth. Is there any logical reason for its not acting at once to remedy this untoward situation?

Any defensible answer to this question must take into consideration the fact that, in any given plant, the various employees are likely to differ greatly as regards their respective endeavors or abilities to add to the values of the products turned out. So, in a typical hour, the value added by one worker may be only 50 cents, while another may increase returns by \$5. Any employer who pays an employee in the first category \$1.25 per hour is courting bankruptcy. But it may be profitable to employ such a worker at a wage of 40 cents per hour.

Worldwide experience throughout the centuries shows that production is maximized, not by having wage rates and other prices fixed by government, but, instead, by having them arrived at competitively. In either case, the results are determined by the laws of supply and demand, two of which set forth the general principles that raising the

price of a good tends to lessen the quantity of it which can be sold and increases the quantity of it which will be produced; while lowering the price has the opposite results.

And, despite popular opinion to the contrary, governments find it little easier to repeal these laws than to abrogate the law of gravity. So, when, in recent decades, our government has supported the prices of farm products at levels higher than those which would be determined by competition, it has been compelled to buy huge quantities of these products to keep their prices up to the artificially set figures. And the laws of supply and demand apply just as rigorously to the price of labor as to the price of anything else. Raising wage rates always reduces the volume of labor which can be sold.

Is it not distinctly antisocial to prevent the less efficient members of the working class from earning an honest living; or from at least earning as much of their living as they are able to pay for? Those who can pay their way ought not to be pauperized. For those who are too inefficient to make both ends meet, it is legitimate to make up the deficit out of relief funds, but there is no good excuse for not requiring every adult to go as far as he can in the direction of providing for himself.

A vital fact which is overlooked by most advocates of minimum wage legislation is that the total volume of products which can be sold is rigidly limited by the combined net new spending power of all potential customers. A nation's net new spending power equals the algebraic sum of its national income and any change in its volume of circulating medium. Careful investigation shows that, except in periods of currency inflation or deflation, the total amount of new spending power in any nation in any given month depends primarily upon the amount of the nation's income in the period just preceding. This means that, by and large, people govern their spending by their incomes. This is, of course, a matter of common observation. It follows that, if higher minimum wage laws compel employers to raise the prices of their products enough to cover added wage costs, they will find that their physical volume of sales will decline. When this happens, they will, of course, require fewer workers. Those laid off will be the least efficient. They, and not the employers, will be the principal sufferers from the advance in the legal minimum wage rates.

But, at this point, the labor leader will assert that we have ignored the fundamental fact that raising wage rates increases the spending-power total. Were it not for the fact that this fallacy is so widely accepted, one would not need to take the trouble to refute a contention so manifestly unsound. Obviously, if an employer pays out an extra thousand dollars in wages, he increases the purchasing power of the employees to the extent of \$1,000. But, just as obviously, he decreases his own purchasing power by \$1,000. The net influence on the total is zero.

If, by raising the price of labor, total purchasing power could be increased and prosperity induced, clearly the same principle would apply to raising the prices of other goods. Grocers could increase their purchasing power by raising the prices of foods, clothiers, by raising the prices of clothing, and so on without limit. Moreover, if this principle were sound, it would be the height of folly to discuss raising minimum wage rates to \$1.25 per hour. If Congress really has power to repeal the law of supply and demand and legislate prosperity, it is not doing its duty unless it raises the minimum wage rate to at least \$5 per hour. Why be niggardly?

Clearly, no firm can afford to keep on its payroll any employee who fails to earn his pay. So, when Government advances wage

rates, the employer who does not believe it feasible to raise his selling prices, he has no option except to dismiss those marginal employees whose services to him are worth less than the new legal minimum wage.

It is true that the demand for certain types of labor is inelastic. When this is the case, an increase in wage rates may appear to produce little unemployment. Let us suppose, for example, that the wages of bakers are raised from \$1 to \$3 per hour, and that as a result, the price of bread rises from 15 cents to 25 cents per loaf. In a country as prosperous as the United States, the probability is that bread consumption will not decline noticeably; hence few bakers will be discharged. Apparently, the minimum wage legislation has produced almost no unemployment.

This conclusion is, however, entirely unjustified. Customers are spending a dime more for each loaf of bread purchased. Their incomes have not been increased. Therefore, for every loaf of bread bought, they necessarily spend a dime less for something else—probably for some luxury. This decreased demand for luxury goods makes it unnecessary to hire so many workers in those fields of production. Workers there lose their jobs. The law of supply and demand has not been circumvented. It has worked just as inexorably as ever. Legislating upward the wage rates of the bakers has caused unemployment, reduced the Nation's production total, and made the Nation poorer.

As the law of supply and demand indicates, pushing up prices cuts down the physical volume of goods sold, and, with sales reduced, employers can get along with fewer workers; so layoffs result. Therefore, the number of unemployed is increased, and more people are thrown upon the relief rolls, thus adding to the burdens of the taxpayers.

Unfortunately, the laws of nature make it impossible to increase the real national income by any means other than the arduous process of producing goods. Such financial legerdemain as minimum-wage legislation results only in unemployment, diminished total production, and hence lower total real income.

What any minimum-wage law really does is to determine what portion of the potential working force of the Nation is to be condemned to idleness, and converted into a burden to be borne by those at work. This is the prime result of all minimum-wage enactments. Therefore, the real question before Congress for decision is what percentage of our citizens it believes it desirable to pauperize.

Construction Differential Shipbuilding Contracts for West Coast Shipyards

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. MORSE. Mr. President, the Commission of Public Docks of the City of Portland, Oreg., has brought to my attention a copy of Resolution 1467 adopted by the commission on March 1.

This resolution urges retention of the 6 percent construction differential for west coast shipyards as a fair and equitable measure designed to maintain a reasonable amount of shipbuilding work in west coast ports.

A strong and active shipbuilding industry on the west coast is important, not only to the West, but to the entire Nation.

Mr. President, I wholeheartedly endorse the continuation of the 6 percent construction differential. I urge serious consideration of the resolution by all of my colleagues, and I ask unanimous consent that the resolution be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION 1467 OF THE COMMISSION OF PUBLIC DOCKS OF THE CITY OF PORTLAND OREG.

Whereas the Merchant Marine Act of 1936 provides for an award of construction-differential shipbuilding contracts to west coast shipyards, in the event a west coast steamship company is involved and the bid is within 6 percent of any bid submitted by eastern or southern yards; and

Whereas it has been established that west coast shipyards are faced with higher costs than yards on the Atlantic and gulf coasts, principally because the suppliers of materials for ship construction and outfitting are generally located in the Eastern United States; and

Whereas the continuance of a major shipbuilding program on the west coast will be jeopardized if the present 6 percent differential is either reduced or eliminated; Now, therefore, be it

Resolved, That the Commission of Public Docks of the City of Portland, Oreg., urges the retention of the 6-percent differential as a fair and equitable measure designed to maintain a reasonable amount of shipbuilding work in west coast ports; and be it further

Resolved, That the Commission of Public Docks of Portland, Oreg., endorses the activities of the Western Shipbuilding Association which are aimed at preserving the differential and investigating other means of insuring that western shipyards continue to contribute to the economic welfare of the ports and vessel operators they serve.

THOMAS P. GUERIN,
Secretary.

Hearing-Aid Industry Conference

**EXTENSION OF REMARKS
OF**

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ALGER. Mr. Speaker, as the Forand bill becomes understood by the people, more and more opposition appears. The following resolution expresses the stand of the hearing-aid industry:

The hearing-aid industry yesterday went on record against the Forand bill, concerning broadening medical services to recipients of social security benefits, even though it might increase sales of its products.

The national trade group, the Hearing-Aid Industry Conference, adopted a resolution opposing the bill on the basis that "compulsory insurance on the Federal level would destroy voluntary insurance plans and result in medical care inferior to that evolved by the normal incentives of a free society."

"We are convinced this bill would lower the standards of medical care," Leland A.

Watson, president, commented. "Voluntary insurance plans, like most things in a democracy, are not perfect. But looking to the Federal Government is not the answer. Federal 'cures' are often worse than the 'illness.' Our study of this bill, based on our experience as an industry offering paramedical goods, convinces us it is in this category. From both the social and economic points of view, it would be detrimental. Medical care would become inferior and the taxpayer would be saddled with another burden."

The logical involvement of such a compulsory system would be provision of such prosthetic devices as hearing aids, eyeglasses, dentures, and so on, particularly because they are most needed by persons in the age groups covered by social security. On the face of it, Mr. Watson said, the industry should favor this, since it will act as a "built-in sales guarantee." However, the industry feels this would be a shortsighted point of view that might eventually lead to some Federal control of its own operations, as well as bringing a deterioration of medical care.

Mr. Watson urged the public, trade associations, civic and social groups, to go on record in opposition to the bill by writing Congressman FORAND and their own Representatives.

A Diplomatic Service Second to None

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. HUMPHREY. Mr. President, during my period of service in the Senate I have supported many measures designed to strengthen our Foreign Service. In these days of competitive coexistence with world communism we cannot afford to be second best in our official representation abroad. Mr. President, I elaborated this point in a recent article, "A Diplomatic Service Second to None," which appeared in the January number of *Stentorian*, a publication of the Public Administration Society, City College, New York, N.Y., and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A DIPLOMATIC SERVICE SECOND TO NONE

(By HUBERT H. HUMPHREY)

It is an old American custom to snipe at our diplomats. For generations the virile, aggressive man of business, the laborer, the frontiersman were representative of our forming national tradition. The diplomat, however, was looked upon as an un-American type, distrusted as too cultivated, too restrained. He seemed to be too much at home in the semiaristocratic atmosphere of European courts to be a real, he-man American. And it has only been during the past 30 years, since the Rogers Act of 1924 established a career foreign service, that American diplomacy has become fully recognized as a profession.

American diplomats have a remarkably sensitive and complicated task to perform. They represent abroad a vast, energetic, and diverse nation. Many Americans speak out with different voices, often contrary to the official policy the diplomat must represent.

Yet the diplomat must seek to represent, and interpret, the central, the basic American will and intent.

During the past 20 years few American professions have undergone such rapid change as diplomacy. Before World War II, the United States was believed to be splendidly secure; Europe's quarrels seemed quaint and distant affairs. Then the diplomat merely observed, reported, and kept his superiors in Washington informed. Incidentally, American diplomats even then had a very high reputation for knowing what was afoot abroad.

Since World War II, however, the American diplomat is in the front line of world conflict. We and the rest of the free world rely heavily on his sharp eye, his feel for intricate political or military developments abroad. He is the top administrator overseeing and meshing the complex activities of American military, economic assistance, and information missions. Each of these is made up of specialists, often persuaded that they alone know all the answers to American policies and American needs. It is the diplomat who must fit each specialist into his proper place in the total fabric of American national policy. He represents us in other countries; he also represents us at NATO and at the United Nations, not just during the headline days when the big names come but also during the dog days of patient discussion and the exploration of each party's point of view. He looks out for the needs of Americans doing business abroad.

He recognizes that each nation has its own set of interests that spring from its political life, its traditions and its peoples' sense of what is important. The interests of states often conflict. Specific American interests often contradict the ardent desires of other countries; their needs often work against our own. Our own interests must be protected in such a way as to retain the goodwill of the foreign country with which he deals. If we trample on our friends today, who shall stand with us tomorrow? The diplomat's task is also to seek out areas of agreement and mutual adjustment, to overpass disagreement or details by emphasizing agreement on larger, more fundamental issues.

In dealing with the Soviet Union and China, he takes the measure of the Kremlin's vaulting ambitions; he knows how to interpret Mr. Khrushchev's optimism about the future. He understands the necessity of strength in all its many forms, of showing determination and power in the face of Soviet demands. He also comprehends the costs of ill-considered stand-patism. Often, by refusing to budge in a fast-moving play, the man who loses the initiative also loses the game. The slow-moving Sunday driver is as much a hazard on the highway as a speeder the police have not yet apprehended.

These are special skills of judgment and personality. They are not given to any man at one moment. Only by training and experience can they be acquired.

American diplomats are often accused of becoming too close to whatever government happens now to be in power. The error is obvious, it is said, since every government now in power is bound to be out of power 10 years from now. The critics argue that we must be friendly with all political groups in a country so that we shall be "in" with a future government. But this is not always easy outside of Europe and North America. In many countries, the notion of a loyal opposition is unthinkable; opponents of the government are looked upon as traitors. For diplomats to consort with them is to render our representatives incapable of performing their principal duty—to represent American interests in dealing with the sovereign government. Yet we must be sensitive to the currents of public opinion, to the ideas of organized

labor, or racial or religious groups in other countries. The diplomat must be friendly with these political forces that may mold the politics of tomorrow while he deals directly with the governments of today.

For the sake of serving their country abroad, the diplomats give up normal family life; they stay in no one post more than 4 years as a rule; they forego the warmth of neighborhood, of a permanent circle of friends and loved ones. Mothers abroad sometimes watch their children become stricken with strange diseases. The social obligations of foreign service wives are very heavy, and family life for young children is often disrupted. As children grow, their parents must send them home for advanced education. Our diplomats wander the world like nomads, having seen all places, but profoundly at home in none. Those of us who remain at home might ponder what our lives would be like if we had to uproot ourselves once in every 3 or 4 years for the balance of our working lives, moving from one country to another. These men and women should be amply rewarded for their services.

We continue to show our disregard of the diplomat's skill by our unwillingness to provide highly qualified career men with necessary entertainment and representation allowances, although every salesman and business executive with one-tenth the responsibility of these men have generous entertainment allowances indirectly falling upon the taxpayer through deductible business expenses. As a result, we block the advance of our most qualified men from the responsibilities of some of our most important embassies. These go, instead, to political appointees as rewards for political support and for having been endowed with a private income. The best man for the job is often passed over.

Of course, no profession is perfect. There have been instances where professional American representatives abroad have lacked the necessary sensitivity, curiosity, and openness to cultures that are often very different from our own. Too few of our diplomats in the past have known necessary foreign languages. In exotic lands where mothers do worry about their children's health, where local food and household supplies are short, or where the very safety of our representatives may be at stake, Americans may live too much apart from the local community. Local governments may even encourage the clustering together of American families because it is easier to protect American and other diplomats from local upheavals. Contacts with the local people may then be impeded. Political appointees, ignorant of the country they go to, ignorant, even, of the name of the country's Prime Minister, take a long time to understand the rigorous and difficult art of diplomatic representation. These are all weaknesses we must overcome.

It has been very encouraging to me to see the growing evidences of the American people's interest in the quality and performance of our Foreign Service officers abroad. Numbers of highly qualified young applicants are again competing for Foreign Service appointments by taking very stiff examinations. The Congress has authorized and the State Department has undertaken expanded language training programs. Officers in mid-career now have opportunities to be temporarily relieved of their duties for a period of study and contemplation. New men experienced in Washington have been drawn into the Foreign Service.

These are all good steps in the direction of providing us with a diplomatic service adequate to the task of confronting the total Soviet challenge. We should settle for nothing but the best.

More on Trade Policy and the Automobile Industry

EXTENSION OF REMARKS

OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. KNOX. Mr. Speaker, surely it is becoming apparent to those in various Federal departments who sit in judgment of American industry in matters involving foreign trade that further efforts to perpetuate the myth of reciprocal trade can only result in additional serious damage to our economy.

Over the past 2 years an impressive body of evidence has accumulated to prove beyond doubt that our Nation's ability to compete effectively in world markets is deteriorating. We are at one and the same time the victims of our own inflated economy and the rugged resistance to American products abroad.

Consider, for example, the great U.S. automobile industry, pioneer of mass production. Few industries can match our auto manufacturers in their degree of mechanization. Auto making is a highly efficient industry, geared to produce a modern durable product for the largest consumer market in the world.

Yet this streamlined industry, this model of American inventive genius and mass-output efficiency, has seen its market deeply penetrated by overseas competitors. Over 10 percent of its domestic market has been overrun by imports, and in 1959 exports of American cars tumbled to their lowest point since World War II.

One of the reasons for the loss of foreign markets is the determination of many countries to maintain stiff barriers against American products. Other factors, of course, play a part. High wages and costs in American industry has elevated the price of our autos to a non-competitive point.

Furthermore, it may surprise some of my colleagues to learn that it costs our producers more than twice as much to ship a car to Europe as it costs their competitors to ship a car from Europe to the United States. This is not simply a matter of size. It applies even if the identical car is involved.

This grossly unfair situation is explored in a timely article appearing in the March 10 issue of *Iron Age* magazine. I commend this article to the attention of all Members of the Congress who are seriously concerned about the crisis in our country's international trade.

CAN UNITED STATES HURDLE EUROPE'S WALL?

Popularity of foreign cars isn't the only reason for an out of kilter import-export picture in the United States.

A major reason why imports sell like hotcakes in the United States, while most U.S. built models are shunned overseas is "discriminatory practices" in duty, taxes and shipping rates, says W. H. Thoreson, director of automotive export for American Motors.

ROAD BLOCKS

Mr. Thoreson says duty and taxes in European countries are set at almost prohibitive levels, and shipping charges from our east coast ports to Europe are double those for the same car returning to the United States. Consequently, only wealthy Europeans, as a rule, are buying American cars.

These barriers have been rough to overcome, he says. They led to a postwar low of 116,520 cars from the United States to foreign markets in 1959. Meanwhile, import shipments soared to a record 668,070.

"At best, the United States will hold its own in 1960," Mr. Thoreson predicts, "even though many of the cars built abroad are too small for average family use, and are underpowered." He doesn't see domestic cars putting much of a dent in the overseas market, even though Rambler sales abroad are continuing to climb and other U.S. compacts are now available to whet European interest.

ONE-WAY STREET

"Duty rates and taxes on U.S. cars in Europe are impossible," he points out. "They range from 35 to 69 percent in countries with their own car-making plants, based on landed cost price, including ocean freight and marine insurance, on engine cubic inch displacement, and on weight."

By contrast, the United States charges a flat 8.5 percent import duty on all cars, excluding ocean freight, plus 10 percent Federal excise. All imports get the same treatment, regardless of size, horsepower, weight, price or country of origin.

"The U.S. rate used to be higher. But at intervals in recent years it's been lowered by 0.5 percent to help bring about tariff reciprocity. But reciprocity hasn't been realized from an automotive point of view," claims Mr. Thoreson. "It's time we stopped making automotive tariff reductions a one-way street."

LIMITED ACCESS

The AM official says the situation isn't improving. "Certain car-producing countries in Europe, which now have a great stake in the U.S. market, claim they have eased restrictions against our cars," he says.

"But the steps have been mostly meaningless. We feel other automobile manufacturing nations, which enjoy relatively free access to the U.S. auto market, should give our automobiles reasonably similar treatment," Mr. Thoreson contends.

Formation of the European Economic Community (Common Market) isn't likely to ease the situation, as Mr. Thoreson sees it. West Germany, France, Italy, the Netherlands, Luxembourg, and Belgium formed the group a year ago. They decided on an eventual average of a 31 percent import duty rate on cars imported from nonmember nations, plus taxes set separately by each member nation.

At the same time, duties are being reduced on EEC member products. By 1970 there will be no duties levied against any products of these countries. Similar objectives were set later in 1959 by the Outer Seven Free Trade Area. This group includes Great Britain, Switzerland, Norway, Sweden, Austria, Denmark, and Portugal.

YANKEE STAT HOME

Mr. Thoreson says shipping charges set by international ocean shipping conferences also work to the disadvantage of U.S. auto makers. "For example," he says, "a Rambler shipped from New York to Germany has a freight bill of \$328. But if the same car is shipped back to New York the charge is only \$158."

"This illogical and unfair method of determining ocean rates serves further to dis-

courage the purchase of American-built cars in Europe, and to encourage the importation of European cars into this country," he says.

Mr. Thoreson takes exception to arguments that perhaps domestic auto makers shouldn't be too upset by their current import-export disadvantage because it was the other way around for many years. "The disparity in our favor in early postwar years wasn't caused by discriminatory taxes on our part. It was because Europe simply didn't have the capacity to produce cars in great quantity."

Mr. Speaker, the discriminatory trade practices by foreign countries against U.S. exports must be brought to an immediate end.

Canning: How It All Began

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. PROXMIRE. Mr. President, this year is the 150th anniversary of the invention of canning. The science of food preservation by canning has taken such great strides in recent years that this anniversary is of special significance. In my own State of Wisconsin the canning industry began in 1887, when Albert Landreth established the first cannery in Manitowoc. Today, about one out of every eight people employed in industry in Wisconsin is engaged in the processing of food. A few statistics reveal Wisconsin's place in the canning industry. Forty percent of the canned peas produced in the United States are produced in Wisconsin. Wisconsin also ranks first nationally in the canning of carrots, beets, and sweet corn; second in sauerkraut, cranberries, and pickles; and third in green and wax beans and green lima beans. Wisconsin also cans major quantities of cherries and apples, in various forms. There are about 120 canning plants in the State, which employ as many as 40,000 people in the harvesting season. They produced about one-fifth of all the canned vegetables in the United States last year, which works out to five cans for every person in the country.

Beer and milk are two other leading canned products in which Wisconsin leads the Nation. All this canning activity has led to another huge industry in Wisconsin; namely, the tin can industry. Well over 2 billion cans are manufactured each year in Wisconsin.

In each case cans provide a vital link between the producer and the consumer. As Norman Sorenson, 1959 president of the National Canners Association, recently wrote:

The art of canning, as discovered by Nicolas Appert in 1810, freed mankind from the bondage of the seasons. It has enabled the farmer to plant his crops free of the fear that his work of many months might be lost in a few days at the market place, and has enabled almost everyone, everywhere, to enjoy the products of the field without regard for the calendar.

As we view the multicolored array of canned foods now available to every consumer it is difficult to realize that just a century and a half ago the need for a reliable method of preserving food was so desperate that the French Government offered a generous prize for a method of conserving food so that it could be conveyed on long sea voyages. To bring the exciting tale of the development of canning from the discovery of the basic technique to its present position as one of the Nation's leading industries, I ask unanimous consent that an article entitled "Canning: How It All Began," by Nelson H. Budd, information director and assistant executive secretary of the National Canners Association, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CANNING: HOW IT ALL BEGAN—A VIVID HISTORICAL DIGEST

(By Nelson H. Budd)

In 1960 two important holidays will occur:

January 30 marks the 150th anniversary of the birth of canning—the official acceptance by the French Government in 1810 of Nicolas Appert's method of preserving food by cooking it in a hermetically sealed container.

And on August 25, 1810, 6 months after Appert's method was published to the world—the first patent for the manufacture of a metal container was granted by George III of England.

These important happenings led to the establishment of two great industries—canning and can manufacture. In 1960 these industries have a right to be proud and to broadcast the information that they have been "serving mankind for 150 years."

Accordingly, joint ceremonies are planned for the convention of the National Canners Association at Miami Beach during the period January 17-20. In programming these events, NCA is joining hands with the Can Manufacturers Institute in launching a year-round observance during 1960 of the birthday of the food preservation method known as canning and the beginnings of the metal container, which has played so great a role in carrying canned foods into the kitchens and pantries of a vast world population.

Most hardheaded businessmen have no patience with the past. They regard observance of anniversaries and birthdays as trivial, sentimental, even wasteful activities. This was apparent in 1952 when NCA staged official celebrations with the French Embassy of the 200th birthday of Appert. Nevertheless, because of the publicity that ceremony received, millions of consumers were made acquainted with the accomplishments of canning, with the scientific and economic progress it has made, and its great contributions to public health and welfare. As President Sorenson has pointed out, "The very act of paying honor indicates to the bystander that honor is due." He has urged that canners take the lessons of the past, apply them to the present, and in that manner be looking to the future. The NCA policy on the sesquicentennial year activities is to use past events only to illustrate and measure to the consumer the progress of the industry to its eminence of today.

THE HISTORY OF CANNING

In 1795 France not only was fighting most of Europe but was in the throes of revolution at home. She was victorious over enemy nations, but her governing body—the Di-

rectory—was gravely concerned over one enemy found to be unconquerable. French soldiers and sailors were dying from scurvy and malnutrition. Except when they could forage, their diet was largely salt meat and bread.

The problem was critical. The Directory voted to offer a 12,000-franc prize to the citizen who could devise a method of preserving food for transport on military and naval campaigns.

An obscure confectioner and chef named Nicolas Appert worked for 14 years on the problem. His simple theory was that if food is sufficiently heated while sealed in a container that excludes air, the food will keep, and this is the fundamental modern principle of canning as practiced today. Appert filled bottles with various foods, sealed them with wired and wax cork stoppers, and cooked them in boiling water. Samples of his preserved vegetables and fruits were put on sailing vessels and sent around the world. They retained their wholesomeness and, on January 30, 1810, Appert was awarded the prize by Count Montallivet, Minister of the Interior. The Emperor, Napoleon, succeeding the Directory as head of the government, maintained support of the project, because he, more than any other French leader, realized its importance to successful military campaigns.

Appert's procedures, used in canning some 70 different products, were set forth in his treatise, "The Book of All Households; or the Art of Preserving Animal and Vegetable Substances for Many Years," published in June 1810, and immediately widely distributed and translated into many European languages.

From Appert's time to the present, the history of canning is a story of inventive genius devoted to the development of better containers, improved equipment, timesaving machinery, and research. All of this had led to the discovery and understanding of the scientific principles on which canning is based and the practical application of science to the industry's operations. Although the humble Appert was not a scientist, he had the scientific instinct. He knew that his process preserved food, but not why. It remained for the great French scientist, Louis Pasteur, to reveal to the world that food spoiled through the process of fermentation because of the action of ever-present bacteria. Pasteur magnanimously acknowledged his debt to Appert, stating, in 1873, when he published his experiments on wine conservation, "I made only a new application of the method of Appert." Due to the foundations laid by Pasteur for the science of bacteriology, the canning and preserving of foods made real progress, although it was near the end of the 19th century before the pioneer studies of H. L. Russell in Wisconsin and Samuel C. Prescott and W. Lyman Underwood of Massachusetts, demonstrated the importance of destroying bacteria in order to make food keep.

Two months following publication of the Appert treatise in Paris, Peter Durand, a merchant in England, applied to King George III for a patent covering a "method of preserving animal food, vegetable food, or other perishable articles a long time from perishing or becoming useless." His application, filed on August 25, 1810, contained a description including the statement "I place and enclose the said food or article in bottles or other vessels of glass, pottery, tin or other other metals of fit materials." This being the only particular in which the Durand description differs from Appert's it has been referred to in much of the canning industry literature as a first patent for the manufacture of the tin can, although no record has been found that Durand either manufactured canned foods or a metal container. Durand sold his patent to John Hall.

founder of the Dartford Iron Works, and his partner, Bryan Donkin. They used tin canisters made of iron coated with tin, which a good tinsmith could turn out at the rate of 10 cans a day.

Donkin and Hall, in 1813 sent tins of food to authorities of the British Army and Navy for trial. Supplies, sent to stations at St. Helena and in the West Indies, added desirable variety to the diets of these garrisons. By 1818 considerable amounts of canned meats, vegetable combinations, and soups were being supplied to the Admiralty. The term "bully beef" is said to come from sailors' efforts to pronounce "soup and bouilli," a popular canned food of those days.

"Tinned foods" steadily gained acceptance, not only among soldiers and sailors, but also among civilians.

CANNING LAUNCHED IN AMERICA

William Underwood arrived in America from England in 1817 determined to establish food canning in this country. His efforts met only with rebuffs, and from New Orleans, where he had landed, he decided to strike north. Without funds, he is said to have walked the entire distance to Boston, endeavoring en route to interest people in his project, but without success. Finally, in Boston, after 2 years in America, he was able to establish a small canning plant where he packed fruits, pickles, and condiments in bottles, most of which were sold in South America and the Far East. Authorities are not in full agreement as to which operation was first, but there is record of the packing of salmon, lobsters, and oysters in New York by Thomas Kensett and Ezra Daggett in 1819. Kensett was granted the first American patent on the tin container in 1825. An Underwood Co. book-keeper began to abbreviate "canister" to "can," and a new and important noun was born. The word "canning" came to be the designation for the operation of sterilizing food by heat and sealing it in airtight containers, regardless of whether the container was tin or glass, or whether the food was being prepared commercially or in the home.

CRUDE STEAM COOKER

In 1839 Isaac Winslow began a series of attempts to cook corn in a crude steam cooker at his home in Maine. Between 1840 and 1850 salmon and lobster were canned in Maine and New Brunswick, oysters in Baltimore, and tomatoes by Crosby in Pennsylvania.

During the next decade commercial canneries were started in New York, Maryland, and Delaware. Gall Borden in 1856 became one of mankind's greatest benefactors through his development of a process for condensing milk and sealing it hermetically.

A technical advance was achieved by canners in 1861, when they began to add calcium chloride to the water in which the closed cans were cooked. This method measurably increased production volume.

The real expansion of the canning industry in the United States actually began in that decade. Processing plants for fruits and vegetables sprang up in Ohio, Indiana, Illinois, and California. Winslow finally was successful in his efforts to can corn, and in 1862 was granted his patent. Pacific Coast salmon was first canned on the Sacramento River in 1864 and on the Columbia River in 1866.

The War Between the States gave many people their first taste of canned foods, although the more adventurous had become familiar with their use on numerous westward migrations as the country was being settled.

One of the great developments which helped the growth of the industry was the invention of the retort, or pressure cooker, by A. K. Shriver of Baltimore in 1874. This enabled canners to control temperatures accurately while cooking the sealed cans. In

fact, the half-century immediately following the war was characterized by numerous mechanical developments and inventions, each of which helped put canning on a progressive automatic mass production basis. For salmon canning an automatic device was perfected to clean and trim the fish; for corn, special machines to husk the ears, free them of cornsilk, and cut kernels off the cob; for tomatoes, machinery to wash, scald, and fill; for peas, device that removes the entire pea vine from the ground and shells the peas without picking pods. There were refinements in the speed and accuracy of machines to fill the various foods into cans and ingenious conveyors to move the raw food, cans, and other supplies from stage to stage of the processing line. Canning thus became a pioneer in automation.

PLANTS START IN MANY AREAS

Naturally, the industry continued to expand. Canning plants were started in new areas, and new products were added to the canned food lists. Vegetable canneries appeared in Iowa between 1870 and 1880. Meats were canned in Chicago in 1872; shrimp in New Orleans in 1875 and canned sardine production began in Maine the next year. In 1878, a salmon cannery was built in Alaska; peas were first canned in Wisconsin in 1881. The first pineapple cannery was built in Hawaii in 1892, although pineapple was among the foods Appert had packed successfully. Soups had been among the products canned by the English pioneers, Donkin and Hall. Condensed soups were added to the canned product list in the United States in 1897. The number of establishments increased from less than 100 in 1870 to 1,800 in 1900 to some 2,700 today.

Another important technological development that did much to expand canned foods production was the invention of what was called the sanitary can, about 1900, which in less than two decades practically replaced all former types of metal food cans in commercial use. This was the open-top cylindrical can, into which canners could fill larger pieces of food, with no damage to the food particles such as had been experienced with the "hole and cap" can which it outmoded. The new sanitary can was so made that the lid could be crimped on by machine. The solder once used to seal cap holes no longer came in contact with the food.

And then in 1903 came the mechanization of glass blowing, making possible the mass production of glass food containers, the most revolutionary advance in the realm of glass container since the birth of the Mason jar in 1858.

The 20th century witnessed a continuation of canning industry expansion and further development of automatic machinery. Mechanisms were devised to pit cherries; to peel, halve, quarter, slice, and core apples and other fruits; and to snip the inedible ends off beans. The industry trended toward a scientific basis. The National Canners Association was formed in 1907 and 6 years later established important research laboratories to study canning technology. From this research came important scientific findings that resulted in safe times and temperatures for processing and many other developments that improved the industry's products. Canning leaders were in the forefront of efforts that resulted in establishment of the original Food and Drugs Act of 1906. Research was applied to the growing and control of the raw products of the farm and orchard. Many strains of fruits and vegetables particularly suitable for canning were introduced.

During World War I, an enormous amount of canned foods was consumed by our armies. Soon after we entered the conflict the War Department bought up 75 percent of all available canned salmon, 40 percent of the tomatoes, and other foods in quan-

tity. The industry, through N.C.A., developed the system by which canners were ordered to set aside and reserve varying percentages of each year's production for first call by the Army and Navy.

In peacetime between the two wars canners continued their awareness of the changing needs of the homemaker and tried to keep pace with modern requirements through introduction of new products. By 1921 canned citrus juice and grapefruit segments were being shipped out of Florida. In 1924 tomato juice was first marketed in Indiana. Other fruit and vegetable juices found immediate favor and grew to become volume packs. Canned baby foods also were introduced in the early 1920's. The rapid development of these three items—canned citrus, baby foods, and juices—was a notable reflection of the growing public acceptance of canned foods.

World War II accentuated their essentiality, the Government granting priorities for scarce metals needed to maintain canned foods production at peak. Two-thirds of the food supply used by the fighting forces of America and its allies came to them in cans and jars. The seizure by the Japanese of the important tin sources in Malaya brought about a critical conservation of tin and led to new packaging practices. Glass containers, always in use for certain preserved foods, helped relieve the demand on tin.

In the postwar period it was found that the public would consume the full production capacity of the industry, and record annual packs have been made.

Since the days of the crude experiments by Appert about 150 years ago, canning has been brought to such a high point of efficiency, through the genius of American inventors, scientists, and businessmen, that civilized progress could not exist without it. Canning is a priceless boon to the housewife; furnishes profitable outlets for the products of the farm, the orchard, and the sea; reduces food costs for the average family; and places choice, nutritious, and wholesome foods within the reach of all, producing for America in particular the highest of living standards.

And so now, today, to measure the growth and tremendous expansion of this industry from Appert's crude beginnings, here are some facts about the size and economic importance attained by the industry he fathered:

The canning industry comprises about 2,700 canneries in 49 States, which annually produce some 1,200 different canned food items: fruits, vegetables, juices, fish and sea foods, meat, poultry, soups, baby foods, milk, and many formulated foods.

Production of the canning industry amounts to more than 22 billion pounds annually representing about 9 percent of the Nation's food supply, packed in about 700 million actual cases (about 22 billion containers) of canned and glassed foods, having a retail value of about \$4.7 billion.

Farmers and growers market a large portion of their annual harvest through canners and often are guaranteed a cash income which helps absorb risks involved in marketing other crops on the fresh market. Canners contract in advance of planting for many vegetables. They pay farmers and other producers about \$1.5 billion annually for the raw products.

Workers in the canning industry receive wages and salaries totaling more than \$500 million a year. At peak season employment in the industry totals as many as 350,000 persons.

The canning industry was one of the first to utilize the principle of automation. The industry today is one of the most highly mechanized of all American industries.

The canning industry is the Nation's third largest user of steel. The quantity of steel used by the canning industry for cans, ma-

chinery and other equipment is exceeded only by the totals for the automobile industry and the construction industry.

Canned foods are available at any place, at any time, for consumption in homes or restaurants. Canned foods provide important sources of vitamins, minerals and other nutrients. They have become a necessity in time of war.

Russian Efforts To Conquer Space Are Really Designed To Win Control of the Earth—and Us—an Address by Gen. James Doolittle

EXTENSION OF REMARKS

OF

HON. WALTER H. JUDD

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address given recently by Gen. James H. Doolittle on the occasion of his receiving from National Business Publications its Silver Quill Award. This is about the finest brief statement I have seen of the essential priorities America must adopt in dead earnest if we are to win this hard world struggle or even to survive. The address follows:

Mr. Chairman, Admiral Burke, distinguished guests, ladies, and gentlemen, I am proud and grateful to be the 1959 recipient of the Silver Quill Award. I especially appreciate the generous words that have been addressed to me in presenting it.

Your business publications have contributed much to the advancement of our national knowledge. You who plan and publish them are educators of a high order. The professional man does not complete his education in the university. To excel he must continue to study for the rest of his active life. Your publications provide regular refresher courses to keep busy executives, farmers, lawyers and doctors abreast of the rapidly changing times. For the scientists and engineers your technical periodicals are "must" reading. They do indeed help, to use your phrase, to "power the progress of our technology."

I have followed the discussion tonight with keen interest. It has given timely recognition to the new development in the struggle between Communism and freedom. The panel has emphasized that the American economy must be strong and our leadership enlightened and firm.

In my mind, there are six fundamental factors which must be considered if we are to deal with the Soviets:

First. There is no sound indication that they have abandoned or indeed altered their basic objective of world communization and world domination.

Second. Our military might has to date deterred them from quickly achieving their objective by force of arms.

Third. They will continue to endeavor to advance the cause of communism by propaganda, infiltration, subversion, and if permitted, by limited warfare.

Fourth. Over the long haul, economic warfare may well offer the best means of achieving their objective.

Fifth. The present Soviet peace offensive must be considered in the light of their desire to reduce military expenditures,

strengthen their economy and improve their present low standard of living.

Sixth. "Peaceful coexistence," to the Soviets, means the eventual imposition of communism by means other than all-out-war.

Against this background, I want to talk with you about national priorities—important not only in the present struggle but to our future.

May I begin by drawing your attention to a striking fact: the Soviet economy is, in effect, a space economy now while ours is largely a consumer economy. They are concentrating on the space race as much of their scientific, technological and economic resources as they think necessary to win it.

I'm sure they don't expect to win converts to communism on the Moon or Mars. They are using their space "firsts" in an effort to win converts here on Earth—in the Middle East, Asia, Africa, Europe, and the Americas.

When we probe space, we insist—and rightly—on getting a high yield in scientific information for our investment. And we weigh such investment against alternatives that might produce bigger dividends in national security and national welfare. By contrast, the Soviets measure the value of their space ventures, regardless of any other results, primarily in terms of waging and winning the cold war.

During my visit to the Soviet Union last summer, I found that their priorities differ greatly from ours. Education, science, heavy industry, power, and transportation—these are key words which identify their top priorities, with military strength as the overriding objective. Consumer goods have a very restricted claim on their allocation of resources.

I do not cite this comparison to suggest that we scrap our consumer economy. For the standard of life it has given us has been historically our sputnik, drawing world attention and, if not admiration, at least envy. The question now is whether we can hold to that standard and at the same time meet the priorities of the space age. I believe we can. But we must understand that in a butter and eggs, high-fat economy, it is necessary to work hard—produce much to match a Spartan, all-out-for-space economy.

It is quite obvious that the Soviets can outdo us in selected fields by investing more of their resources in a particular activity than we are willing to do. There is, however, no doubt in my mind that we can still outdo them in any field of endeavor if we choose to concentrate enough of our human and material resources on a specific goal.

I believe we have to make some hard choices in the next decade concerning what we, as free people, want to do with our talents, our technology, and our time. That means selecting and giving attention to certain priorities.

Walter Lippman recently wrote, "The critical weakness of our society is that our people do not have great purposes which they are united to achieve, the public mood is defensive, to hold on and to conserve, not to push forward and create." The danger implied prompts me to plead the case for setting our sights on five points which are essential, in my judgment, to clarifying and then achieving our national purposes.

Of first priority is an appreciation of moral values and a commitment to live in accordance with them. This is the sound foundation on which our ideology must rest.

There are many differences between our system and communism, but the basic moral difference can best be expressed by the difference between the Golden Rule—"Do unto others as you would that they do unto you"—and the law of expediency, "The end justifies the means."

The one leads to improvement of the human species, to making man more nearly approach the image of his Maker. The oth-

er degrades man. Our morality gives us our greatest long-range advantage over communism. We must explain this to our own people and to the peoples of the world, to many of whom Russian communism and American capitalism appear to be only competing materialisms.

A second priority is the improvement of our educational system. Any individual or nation will profit and progress in direct proportion to what they know and to what they do with what they know. Knowledge and effort spell success.

I have nothing against cosmetics and horse racing, but we can no longer afford, if we ever could, to spend more on such luxuries than on our schools. The low esteem in which education has been held for years is evident from the dollar value we have attached to its support. The consequence is a serious shortage of classrooms, of teachers, and of highly trained people, particularly in science and technology, in research and development.

The average teacher's salary of \$5,000 falls some 60 percent below the average income prevailing in 17 other comparable professions. It is a wonder that we face only a teacher shortage, not a teacher famine. This is explained, in large part, by the motivation and dedication of our teachers.

Yet the gap between what we have and what we must achieve in education cannot be closed by dollars alone.

Parents have a responsibility to help close that gap by sending their children to school disciplined, eager to learn and unafraid of the difficult.

The basic differences between Soviet education and our own is that they better understand the importance of education and the Soviet child is more disciplined and studies harder.

No group has a bigger stake in better education—from elementary through graduate schools—than business management. I feel I am putting this proposition to the right audience.

Let's take the lead in supporting a revival of learning. Let's insist that the scholar get at least the accolades accorded the athlete. Let's call a halt to the march toward mediocrity. Let's make our school courses difficult enough so the average student has to study hard—so even the gifted does not find it so easy that laziness is encouraged.

Let's help all who are willing to learn and let's provide extra faculty guidance and stimulation for the gifted as well as for the retarded. We must find, encourage, develop and utilize genius.

Our success in every major endeavor, whether in social and political life, or in technological advance, depends largely upon what we do now to elevate American education.

A third priority is the need to step up the pace of science and technology to serve better both human needs and national security. Science must increase our stockpile of basic knowledge and technology must apply that knowledge for human welfare.

We could lose all by allowing an adversary to gain a technical advantage in space weapons. We almost did when we allowed Stalin a nearly uncontested 8 years head start on rocket and missile development. It took us 6 years of all-out effort to catch up—technologically. In this connection I would like to say that our last 15 Atlas ICBM firings have been successful and the accuracy, CEP, circular error probable, has exceeded our optimistic expectations.

But to win the world for freedom takes much more than weaponry. It calls for the application of science and technology to human needs—making the deserts bloom with desalinated seas water, converting solar energy to power, unlocking the secrets of the living cell to achieve a longer, healthier

life span, and eventually through the life sciences and social science, developing better understanding and cooperation between peoples.

A fourth priority is a sound and expanding economy. In this connection I would like to refer you to two excellent addresses on this subject, before this august group, by two distinguished former recipients of the Silver Gull Award; Senator HARRY F. BYRD and Mr. Benjamin F. Fairless.

Almost everything we do, from helping to keep the free world united to deterring aggression, depends upon a thriving, ever-expanding U.S. economy. In my opinion, this is so all-important that we simply cannot be content with a mere 3 percent annual increase in our gross national product. We must raise that to a 5-percent rate of economic expansion just to maintain our present lead over so determined a competitor as the Soviet Union.

The Soviet economic objective is outlined on a billboard I saw in Crimea. It said: "By 1965 the Communist bloc will account for more than half of the world's production"—will produce more than all the rest of the world put together. To stimulate their people to greater effort they promise them that: "Within 10 years the Soviet citizen will be the most contented in the world"—that is to say will have a higher standard of living than the American. To counter this we must produce more. We must employ improved methods. We must work harder.

A final, overriding fifth priority is national security itself. Weakness, on our part, would encourage aggression—would lead to war. Only adequate military strength can deter war. Furthermore, it is vital in the present global contest for all of us to keep in mind that a weaker economy can overwhelm and defeat a stronger one by giving the military demands a higher priority than civilian needs. I would point out that while the Soviet steel production is only half of ours their rate of increase in steel production is twice ours and almost all of it goes into heavy industry and the military. Very little goes into consumer goods—where most of ours goes.

The problems of national security take on new dimensions in the space age. For one thing, deterrent power that really deters has to exist in a state of split-second readiness. It has to be safeguarded against a surprise first strike with nuclear weapons. Civilian indoctrination and protection, especially against fall-out, is vital to the ability to sustain and recover from a nuclear attack.

The importance of the race for space comes into sharper focus when we consider the need for perfecting satellites for reconnaissance, communications and early warning systems. We are already at work on second and are thinking about third and even fourth generation space vehicles for a wide variety of military missions. Adaptations of these space vehicles can also serve the national security by providing reliable methods for inspection of arms control agreements. Such vehicles can be used to patrol peace as well as to deter war.

Perhaps we can better understand the role of national security if we think of it as the roof over the whole structure of American life.

These, then, are the high national priorities as I see them:

1. Commitment to moral values.
2. Support for education.
3. Concentration on science and technology.
4. A sound and growing economy.
5. Dedication to national security.

These priorities are interrelated and interdependent. Our principles, our knowledge and our effort are foundations for what we do in using science and technology to expand our economy and provide for the national security.

We must establish and support these priorities if we are to maintain our way of life, preserve our freedom, and meet our obligations to the free world.

Mr. Chairman, may I conclude by again expressing my heartfelt appreciation for the honor bestowed upon me tonight and also for the privilege of sharing my thoughts with this distinguished company.

Heal the Sick and Feed the Hungry

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. HUMPHREY. Mr. President, the needs of the peoples of the Middle East for food, clothing, and medicines and for schools and hospitals are urgent. I have long felt and often said that we Americans have a special responsibility in conscience to share from our abundance of food, fiber, and technical skill with the peoples of the underdeveloped nations still living in desperate poverty.

Mr. President, I ask unanimous consent that an article I wrote which appeared in the March 1960 issue of *Adult Student*, periodical of the general board of education of the Methodist Church, and which is entitled "The Christian Imperative: Heal the Sick and Feed the Hungry," be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE CHRISTIAN IMPERATIVE: HEAL THE SICK AND FEED THE HUNGRY

(By HUBERT H. HUMPHREY)

For years the underdeveloped Middle East has needed medicine, not machineguns. It has needed schools, not soldiers. It has needed food, not foxholes. Medicine, schools, and food are the three ingredients necessary to battle the "Four Horsemen."

For a long time, some of us have been contending that:

First. Most of the critical areas of the world do not need American arms, guns, and tanks as much as they need American helping hands.

Second. If America will put more of her international effort into constructive channels—such as medicine, schooling, and food—we shall have far more of an impact on the minds of the underdeveloped countries of the world than we shall if we proceed by way of the military type of aid which we tend to extend.

Third. Conditions among the average people in the underdeveloped countries are so bad that they will tend to accept almost any form of quick, dramatic salvation. The tragic truth, which we must realize, is that while the living standard of the people in the industrial nations is rising, that of the people in underdeveloped countries is actually deteriorating.

Interestingly enough, while President Nasser, of the United Arab Republic, continues with his so-called diplomatic victories, the truth is that the standard of living of his people is abysmally low; in fact, there has been little or no improvement. I have heard that there has actually been a drop in the per capita income of the people of Egypt. What a shame. These

people desperately need a more constructive use of their meager resources.

Something can be done about this matter; but it cannot be done by the sending of tanks, guns, and soldiers. Instead, it can be done by meeting the needs of these people, by sending to them teachers, medicine, food, social planning. It will not be achieved by sending military missions or by trying to bolster up old, feudalistic governing groups which will be rubbed out of existence as surely as the dawn follows the night. Today a revolution is underway. No amount of patching up or firming up old, feudalistic, monarchial, or aristocratic systems will succeed; and we shall be well advised if we kept that fact in mind.

This situation means that we must have a program which at least will lend itself to constructive results.

The Middle East is not only a hotbed of intrigue, conspiracy, and East-West conflict but also a hotbed of human disease and suffering. With such conditions, it is impossible to have peace; the world's peace is bound to be threatened. The people of these countries are emotional and explosive in temperament; and with such problems ever present and, indeed, becoming aggravated, there is an inevitable trend toward trouble.

Let the American people ask themselves about the ragged rioters—the pro-Nasser demonstrators—in the streets of Tripoli, Lebanon, or Beirut, or in the streets of Baghdad, Iraq, or Amman, Jordan. "Exactly who are these rioters—these riflemen and hand grenade throwers? What is their condition in life? What, if any, possessions do they have in the world?"

Let the American people also ask, "How well, physically, are these people and their families?"

If we ask ourselves the latter question, we shall find that in these Middle East countries we are dealing with populations which contain a fantastically large number of sick and diseased persons. It is not surprising that in bodies so often racked with pain and disease, judgments may be distorted, and demagoguery may be heeded and followed.

The available health statistics on these and other underdeveloped countries are woefully deficient. But they do reveal a tragic picture.

For example, the very eyes with which the people of Egypt or the people of Iraq or other lands view man's problems are, in literally hundreds of thousands of cases, racked with the disease of trachoma, which can lead to blindness. In some places—for instance in some villages in Egypt—the trachoma rate is over 90 percent.

So we would do well to remind the peoples of Egypt and their leaders that we are prepared to wage war against the disease of trachoma, and that our facilities for waging war against disease are even more efficient than are our capacity and our facilities to maintain military defense and to wage war, if need be, in behalf of our own freedom.

Approximately 1 out of every 5 persons in Iraq is suffering from trachoma or some other form of eye disease. In those two countries, the rate of malnutrition is appalling. Well over 50 percent of the entire population is underfed, the victims of hunger and malnutrition.

Egypt and Iraq are plagued by the snail-borne disease known as schistosomiasis, which goes on from generation to generation, racking and debilitating whole segments of the population.

In Syria, malaria is still a long way from conquest, with more than three-quarters of a million persons living in malarious areas.

In some areas of Jordan, 9 out of every 10 people are infected with intestinal worms and diseases.

I have seen those people; and I want to say that never in my life did I experience

such emotional pain as when I saw the hunger, the privation, and the disease of literally hundreds of thousands of people.

Is it any wonder they are in rebellion? Is it any wonder they are emotional? Is it any wonder they follow demagogues? Is it any wonder they kill? What do they have to live for? Our answer, all too often, has been more guns for ruling groups, rather than more food, medicine, teachers, and books for the people.

It is not as if we had no way of doing these things. We can work through the United Nations, the World Health Organization, the International Cooperation Administration, and the Food and Agriculture Organization. We can work through these great international organizations and give leadership and counsel against man's ancient enemies of ignorance, poverty, and disease. We can work through our great philanthropic foundations, our colleges, our churches, and our many private groups.

There is no doubt that we must maintain our armed strength in the current worldwide struggle. We would do well to maintain our shield of strength so that there could be no doubt as to our ability to defend ourselves and our allies; but we do not need to continuously shout about it—a little less talk and a little more doing. But this is, and can only be, a negative aspect of our foreign policy. The United States must demonstrate that Americans genuinely and unselfishly are interested in helping to alleviate deprivation and suffering of hundreds of millions in the underdeveloped nations.

There is only one way to win the cold war in those areas, and that is with a warm heart and a clear mind. I might add, a clear and clean mind—a mind that states our objectives and then represents a will to fulfill those objectives.

When are we going to start to act like this? When are we going to demonstrate to the world that our main interest is people, and not power; that our main interest is human welfare, and not just natural resources like oil? We refuse to really use the strength we have. No wonder we are in trouble. No wonder Khrushchev enjoys batting us from one end of the world to the other with his propaganda, because we play the Communists' game of power politics, when indeed we should be acting like ourselves, and being the compassionate, generous, kindly, considerate Americans that we are, and letting the banner of righteousness and doing the right thing be our flag and our shield.

Therefore, from the highest offices and councils of this Republic, from every political and civil and lay leader, let there come the desire, and the expressed desire, to mobilize the great human resources of the free world in an attack against ignorance, poverty, and disease. Indeed, the cost will be little compared to the fantastic costs of arms in which we have indulged ourselves year after year.

Sometimes I wonder where we are going. We voted for a \$40 billion defense budget in the Senate in less than 5 hours of debate. Yet we argued for days about \$1 billion of food under Public Law 480. Why, we have argued for hours about the extent to which we are willing to utilize our surplus foods to relieve human suffering. What is wrong with us?

This only spells disaster and doom. We are playing into the Communists' hands. We are acting like they act. We are using the tools they use. We cannot win that way. The only way to act is to be one's self, and not to be made over. There is no need to be vindictive; no need to be vituperative; there is a need only to be right; to be firm; to be ourselves. In that way we cannot help but mobilize tremendous popular support. As the great Abraham Lincoln said so beautifully and profoundly: "With malice

toward none; with charity for all; but with firmness in the right as God gives us to see the right."

The mistakes of the past cannot be undone, but there may still be time to develop a new relationship with the peoples of the Middle East and other parts of the world. It should be a relationship expressed in terms of food, of education, of jobs, and of medical care.

Diseased bodies and empty stomachs produce warped minds, and indeed bitter hearts. We cannot find peace in a world which is afflicted with diseased bodies, empty stomachs, warped minds, and bitter hearts. These conditions are not conducive to reasoned political decisions. The sooner we begin to attack the fantastic problems of hunger and illness the sooner we are going to see sound political development.

It is not only, in my mind, un-Christian and immoral, but it is positively dangerous to remain smugly content that we are the best fed, best housed, and healthiest people in the world. Until we recognize the brute facts of suffering among other peoples, and put our tremendous resources of food and medicine to work for others, we are simply going to find ourselves ever more isolated in a rising sea of hostility.

But we always think in terms of military aid. We can spend millions of dollars to move tanks to Lebanon. But I ask the question, How much medicine have we moved to the sick? I ask the question, How many teachers have we sent to the illiterate? I ask the question, How much of our abundance of food have we given to the hungry?

Not enough—indeed, not enough. But these are the tools which we must use. These are the wonder drugs, so to speak—the food, the teachers, the technicians, and the schools—the real "wonder drugs" to cure some of man's diseases: diseases of body, of mind, of spirit, and of will. These are the wonder drugs we can use to combat the virus of Communist totalitarianism.

College for Five—It's Murder

EXTENSION OF REMARKS

OF

HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. FOGARTY. Mr. Speaker, in the Saturday Evening Post of January 30, 1960, there is an article written by Oscar Kiessling entitled "College for Five—It's Murder." This is a well written, personal analysis of the problem facing a family trying to finance the college education of several of its children. It is a problem which, I am sure, faces a great many families throughout the length and breadth of this land and one which, to my mind, cries aloud for some form of remedial action.

It is my firm conviction, Mr. Speaker, that the difficulties of this day and age call for effort on behalf of education on a greater scale than at any time in the past. As I have said before, the cost of attending college is increasing rapidly, and all signs point to continuation of this increase. A U.S. Office of Education study of tuition and fees in 196 representative institutions of higher education, accounting for 55 percent of the Nation's total undergraduates, indicates that these charges increased 32.6 per-

cent between 1954 and 1958 in public institutions and 39 percent in private institutions. In the same period the cost of living index, which has a direct bearing on room, board, and other costs borne by college students and their families, increased by some 8 percent. The average cost of sending a student to college has now risen to \$1,500 annually in our public institutions of higher education and \$2,000 in private institutions. Since increases in college enrollments are coming more and more from families of modest means, this increase in costs constitutes a serious burden for many of our citizens.

It was because of these facts that a year ago, I again reintroduced my bill, H.R. 7105, providing for tax relief for educational expense. This proposed legislation would permit a taxpayer to deduct from his gross income, expenditures for tuition and other educational expenses. There is a limit set that such deduction shall not exceed \$1,500 for any one individual in any one taxable year. The taxpayer could make the deduction for his own expenses or for those of his spouse or any of his dependents. In addition to tuition expenses, other deductible charges could be for books, fees, uniforms, board, lodging and other expenses necessarily incurred in or incident to the effective pursuit of an education.

I doubt if anyone will disagree with me when I say that in the face of the present high cost of living, many families are hard pressed to finance their children's higher education. I know that in my State of Rhode Island, there are many such families who are forced to make more than reasonable sacrifices in order to provide a college education for their children. They are certainly to be commended for their efforts in this regard but in my opinion something more than commendation should be offered—some affirmative help should be given them in their laudable endeavor. I believe that my bill will do just that. It will give such needed assistance by permitting them to claim as an income tax deduction moneys expended for education. I believe that it will also benefit the entire field of education for it will serve as an incentive for families to send their children to college who presently find it impossible to do so.

Mr. Speaker, under leave to extend my remarks I include the article written by Oscar Kiessling entitled "College for Five—It's Murder":

[From the Saturday Evening Post, Jan. 30 1960]

COLLEGE FOR FIVE—IT'S MURDER

(By Oscar Kiessling)

"Isn't she wonderful," Alice whispered to me fondly as our eldest child, Julie, marched across the high school auditorium stage with her classmates to get her diploma. Despite the oppressiveness of the humid June night, our other four children, strung out like stair-steps beyond Alice, beamed with family pride. "Yes," I whispered just as fondly, but with a trace of pessimism, "and when she gets her college diploma, she'll be miraculous."

My pessimism stemmed from no scholastic shortcomings on Julie's part. Our parental hearts swelled a few moments later when her name was read among those on the scholastic honor roll. But my recent experience with

the scholarship mirage had convinced me that for parents of moderate means, putting five children through college was going to be a formidable, nip-and-tuck proposition, even for an economist with a doctor's degree like myself, accustomed to juggling millions of dollars—other people's money, of course.

Until a few weeks before, I had naively supposed that a virtually painless solution to my college problem lay in the scholarships available for bright and needy students. I had been reading about them for years. Certainly Julie was bright; a practically straight-A average showed that. Pete, 2 years younger, was going great guns in science, especially chemistry; and Brenda, 2 years younger than Pete, had just won a junior-high spelloid and was in the top echelon of her class. Deborah, then nearly 10, and Douglas, 3 years her junior, were still in elementary school, but in the fast track—the advanced learner groups—of their classes. As for proving need, I certainly held all the cards. Where, I would ask, is there a family of moderate circumstances with five children that isn't automatically in need?

Well, that was 6 years ago, and I know better—or worse—now. In fact, what amazes me most is how a parent as realistic as I thought I was could goof so on the scholarship business. It was soon painfully apparent that colleges were not knocking on our door with attractive propositions, and so I began making a few discreet inquiries myself. I found that some scholarships, ranging up to \$1,500 a year or more for 4 years at colleges of the students' own choice, were available to high school graduates. But there were not many of them, and they were sparingly distributed among relatively few high schools throughout the country to a few top students in the genius or near-genius category. Our youngsters were all in the upper 20 percent of their classes, which is not bad in the egghead counties around Washington. Because of the concentration of universities and governmental offices here, there are probably more Ph. D. families per square mile than in any other area in the United States. But none of our kids is in whatever category leads to those super scholarships, and we moved on to the next line of attack, applying for grants on the basis of need. For anyone who has never had this experience, let me say that applying for a scholarship on the basis of need is a course in education by itself.

This process started with a parental headache hereinafter called the form, a 3- or 4-page questionnaire, detailed, intricate and tricky sometimes calling for information a parent wouldn't ordinarily keep and can't easily calculate. Its purpose was obviously to give college officials a comprehensive inventory of a family's real and personal possessions, assets, actual and potential earnings, resources, and debt. I am not challenging the propriety or necessity for the information requested, but whatever adeptness I had acquired in 30 years of filling out forms as a Government economist was taxed to the limit. The Form requires specifics down to the model year of the family automobile and amount and number of installments due. Julie was applying at four schools, which meant four versions of the form, each different enough from the others to make it a separate project.

Since then many of the private schools have got together and arranged for an original form to be filed with the college scholarship service at Princeton, N.J., an activity of the college entrance examination board. The board furnishes copies at \$2 each to colleges which the applicant may specify. This arrangement aims not only at efficiency but also at discouraging parents from filing varying financial statements with different schools in order to determine by trial and error just what degree of poverty to plead to trap a scholarship. Even State universi-

ties are coming to this central-agency arrangement, although some schools still require supplementary information.

Perhaps I am not such a good form-filler-outer as I thought I was. It may have been that I didn't show enough relative need; my \$11,800 salary at the U.S. Tariff Commission with seven exemptions left me \$9,783.98 take-home pay. Conceivably some college administrators might have harbored a subconscious hostility to Federal bureaucrats like myself. At any rate, only one school gave any encouragement. A college in the Midwest wrote for more information; but since the amount of money it suggested might be available would cover only the cost of transportation to and from school, we passed that up. All our other efforts fell flat. We never learned definitely what the criteria were, and they probably vary from one college to another and between students in different geographical areas.

The more I looked into the scholarship question—with four children to go I couldn't stop with Julie's case—the more I was convinced that the opportunities were highly overrated. That isn't sour grapes. We had no right to expect better-than-average treatment, and are not complaining now. But despite rosy reviews, scholarship grants were and still are relatively small, even insignificant, compared to zooming college costs. Comprehensive statistics are not easy to come by, but those at the U.S. Office of Education indicate that of the 3,600,000 students attending colleges and universities in 1958-59, about 300,000 received grants approximating \$100 million, perhaps a little more. The most liberal were those offered by business firms and corporations—the National Merit Scholarships for example—but there were only about 28,000 of them in 1957-58 for a total of \$18 million—an average of \$643 a year. Most scholarships were given out by or through the schools themselves. In 1955-56, the latest year for which detailed figures are available, some 1,500 colleges and universities awarded 237,000 grants totaling nearly \$66 million. That made the average scholarship worth only \$278, and the median was even lower—\$229. In public institutions one-half—and in private schools one-fourth—of the grants were for less than \$125. That's not very much when it costs a student \$1,500 a year at a public school and \$2,500 at a private institution. That means the bulk of the students below the very top rungs of the scholastic totem pole are not getting much financial help.

With scholarships out of the picture, Alice and I turned to what was then gaining increasing public attention and is currently being touted as a cure-all—long-term educational loans. For decades parents have been borrowing on their life insurance, homes and other assets to finance their children's college educations. In the past several years banks have gone in for financing education as an investment, which it certainly is, with steady parental employment as collateral. Following passage of the National Defense Education Act of 1958, the Treasury Department dished out \$30 million for loans the first year and is allowing an increase for fiscal 1960 for students to borrow against their future employment. They can borrow as much as \$5,000 and repay it over a 10-year period starting a year after graduation. But loans didn't seem a proper or desirable way to meet college expenses, especially for us. Alice and I are in our 50's and expect the expense of a large family to continue for another 10 years. We could hardly take on a debt of \$20,000 or \$30,000 that would help temporarily, but would have to be paid back after our earning power was greatly reduced or terminated.

The children could borrow the money individually, of course, and there seems to be a trend in that direction. But the prospect

of a diploma with a c.o.d. tag for \$5,000 somehow repelled me. "A fine graduation present," I said to Alice, "that has to be paid for when the kids will be getting married and need all their dough for furniture, obstetrical fees and baby food." Alice nodded and added, possibly with three daughters in mind, "What a dowry a \$5,000 I O U would be for a prospective husband." So we ruled out student loans except as a last resort.

At the risk of seeming to be somewhat on the soft side, I'll go further and say we didn't want to borrow or have the children borrow for their college education. We didn't even want them to work their way any more than was absolutely necessary, at least during the school year. Don't tell me about all the students who have gone to college with 30 cents in their pockets and, by dint of hard work, earned all expenses and finished cum laude. I know one guy personally who did all that and finished cum money in the bank. But they are the exception, and they also missed a lot of the things they'll never again have a chance to get.

The labor market is overcrowded in most college towns, and a student has to work so many hours he can't assimilate the knowledge or training he came for, let alone develop the personal associations that should be an integral part of a college education. Even without their working part time, college has been no picnic for our children. Not only is there more to learn than when I went to school 30 years ago but the standards of performance are much tougher than most parents realize. If my youngsters had time on their hands, I'd prefer they take additional courses to broaden their backgrounds.

But when scholarships, loans, and part-time jobs were ruled out, all that seemed to be left for us was some sort of pay-as-you-go, do-it-yourself plan. That wouldn't mean any drastic change in our living pattern. Our circumstances had always been moderate and actually have changed little since the beginning of our college program, except that my salary of \$11,800 in 1954, Julie's first year in college, has increased to \$14,400. Alice is a psychiatrist and contributes by her practice; but under our setup she is a mother first and a doctor afterward, and we all share the household responsibilities.

Our home—a large frame house—is paid for, but old enough to need maintenance constantly. The expense of rearing a large family on a moderate income precluded the accumulation of what might be called an investment portfolio. But we have a few securities and moderate reserves in savings and the cash or loan value of insurance policies to provide a last line of defense in case of emergency. Our situation may be more or less fortunate than that of other large families with the same educational problem. But it was from this conglomeration that the wherewithal must come to finance the children's college educations—with the accent on the plural.

Making out a college budget for a large family comes under the heading of serious business, and even if you're wellheeled financially it is surprisingly big business. Our present costs are about \$2,500 a year per child, which covers only the essentials without frills or fat spending allowances. Thus the cost of a 4-year college course comes to \$10,000. "That," I observed impressively at the dinner table one evening, "puts it in the price range of high-powered luxury limousines, to give you a rough idea." The cost at publicly controlled colleges within our own State would be lower, possibly as much as 25 percent, but at several big-name colleges would be higher. Although Alice was graduated from Cornell, and I from Wisconsin, we did not try to influence the children. Their choice was governed by the

courses offered, a desire to go where their friends were going or by other personal considerations most parents would consider valid. Simple arithmetic put the family's higher education bill tentatively at \$50,000.

While that \$50,000 figure sounded formidable enough, it was soon obvious that it would have to be adjusted upward because of two additional factors. The cost of both tuition and living at private and publicly supported colleges was even then mounting rapidly. We estimated that the annual expense would rise to at least \$3,000 before the last of the Kiesslings finished. We added a flat \$7,500 to the total bill as a rough approximation. The second factor was graduate study. None of the children is committed so far to law or medical school, but the trend toward graduate work even for a public schoolteacher career, such as Julie was working toward, seemed to warrant adding another \$2,500 apiece—which times five is \$12,500—for a grand total of \$70,000. That's after taxes, of course; and Alice and I figured that to net that much under Federal and Virginia tax laws we'd have to gross \$105,000.

The figure was downright frightening. The only consolation was that it might have been larger if any of the children had professional ambitions—say, even to be an economist like the old man. Another consolation was that it could be divided by the number of calendar years the children would be in college—in our case, 16. The \$70,000 total net thus averaged out to about \$4,500 a year, although actual annual payments varied widely. For the first 2 years, starting with the fall term in 1954, Julie was at Oberlin College in Ohio at a mere \$2,500 a year. During the next 2 years while she was still at Oberlin, Pete attended St. Lawrence University at Canton, N.Y., raising the tab to a stiffer \$5,000. For one peak year, 1958-59, when Brenda was a freshman at Oberlin, Pete was a junior at St. Lawrence and Julie was taking graduate work at George Washington University in Washington, a maximum of \$7,500 was spent for one rigorous annum I'll long remember. But our worst year is over, and from now on things should be getting better until Douglas finishes in 1969. We have less than 10 years to go. Being a Federal employee, I don't have to retire until I'm 70. It's going to be a photo-finish.

Our first attack on this \$4,500 annual nut began with economies in housing and automobiles; it's remarkable how much you can save by living with outmoded versions of both. Our old house is built on locust posts, has a primitive heating system and doesn't remotely resemble the ramblers and split levels you see advertised on the real-estate pages. We need and should have better housing, but it was one of the things we realized we could do without, and so we put it aside. The car of tomorrow doesn't darken our driveway either. We have two cars because Alice needs one in her practice, but they were bought secondhand and have kept us rolling without breaking the bank. Maintenance on the house is kept to a minimum and is largely do-it-yourself; even the girls are handy with a monkey wrench or hacksaw. Clothing budgets get a careful going over, and the family understands that costly recreation, extensive vacations and travel are simply out.

Shrinking expenses, of course, has practical limits. Bills for utilities, taxes, insurance and medical and dental services don't bend much, if at all. Fortunately the habit of eating is one on which we haven't had to economize overly. We live on an 8-acre tract on the edge of Washington's suburbia, where it's still lawful to keep a cow, chickens and even goats. It's cheaper these days to buy poultry and eggs than for a small operator to raise them, and I gave up chickens a couple of years ago. But we have fruit trees and nut trees and a vege-

table garden that, with judicious shopping at the supermarket for meat and staples, keeps the Kiessling table pretty well supplied. Altogether, saving effected by economizing add up to about one-third of our \$4,500 college budget.

Since that isn't enough, we have to increase earnings somehow, and there are several ways of doing that. Properly steered into summer jobs, student labor can turn up a second third of the necessary shekels, we've found. Steering consists of shopping early for jobs, preferably jobs that last through the summer. The two youngest, Deborah and Douglas, belong to 4-H Clubs and have already started their college bank accounts with money they've made selling surplus garden truck and raising goats. Alice and I bat in the cleanup spot in the extra-earnings lineup, taking on occasional special assignments in our respective callings to make up that last one-third and balance our collegiate books.

What our college project is making us do isn't hurting us, at least not much. Sure, there are things we'd like to have that we don't have, and once in a while neighborhood explanations seem called for. After getting an earful from a playmate about his father's air-conditioned sedan, young Douglas snapped scornfully, "Oh, we've got big cars, too, three of 'em; but they're all away at college." My remark about college educations costing like limousines must have sunk in.

But we're all well nourished and reasonably well dressed. And the kids have discovered many interesting and worthwhile activities that are priceless, yet practically costless too. For example, they've built a sizable swimming pool with filter for about \$120. When a road-construction crew was working nearby a couple of years ago, they wangled some sort of barter deal—it left us short of vegetables for a month—for a bulldozer to scoop out the general contour. They shaped it up themselves, laid strips of tarpaper crisscross over the bottom and sides and tarred the cracks so it would hold water. With the filter, that's all there is to it. I believe they have recovered their original investment over the years by giving bargain-rate swimming lessons to small fry in the neighborhood. Julie, Pete, and Brenda are all Red Cross lifesaving instructors and would prefer spending the summer in the water if it were practicable. And so while we would prefer reading or strumming the guitar, painting, or just playing with the dogs to working during our spare time, and though we might get more benefit in the long run, we realize that not all is sweetness yet on this planet and that you take the bad with the good.

If the financial tribulations of the Kiesslings were my only theme, the story might end about here. But what worries me, and should worry many more people than it does, is the fact that despite our basementless house and 4-year-old cars, Alice and I are in that favored financial stratum, the 10 percent of the Nation's families with an income of more than \$10,000 a year. If you are among those who have been dealing with some of the problems I've been describing, consider how much harder a time the 41 percent of the families with incomes between \$5,000 and \$10,000 are having sending their children to college. And what are the 49 percent of the families with incomes of less than \$5,000 able to do about it? Too many of them are doing what you might expect—not sending them.

Surveys by several private and Government agencies indicate that at least 100,000 and perhaps as many as 200,000 high-school graduates in the top quarter of their classes don't go to college because they lack the necessary funds. That number represents only part of the real loss, because in most high schools, students who finish in the top

half of the class—sometimes an even larger segment—are considered good college material. And this has been going on for years.

That's a terrific waste at a time when the country needs more and better brain power than ever before. It's also undemocratic to make higher education a class privilege. A recent scholarship analysis mentioned an eastern factory city where less than 20 percent of the high-school graduates went to college, while in a residential suburb 10 miles away the proportion was 80 percent. And if wasteful and undemocratic don't move you, let me add it's lousy economics. Everybody knows that the more education you have, the better job you can get at higher pay, which means higher income taxes to Federal and State Governments. The Office of Vocational Rehabilitation, an agency of the Department of Health, Education, and Welfare, puts out money and advice to handicapped people to restore or upgrade their earning power. Comprehensive statistics show this Federal-State program returns not dollar-for-dollar, but \$10 in income taxes over the years for every \$1 spent. We invested about \$15 billion in GI education after World War II—on many who didn't even have a high-school diploma—and the estimate now is that we are collecting \$1 billion a year in higher income taxes as a result.

I think we're being nickel and dime foolish in our niggardly approach to developing our youthful brain power. Greatly augmenting our scholarship program will help some, but doubling or quadrupling it is not apt to make the difference between college or no college for those 200,000 or 400,000 high school graduates in the top half of their classes who just don't have enough money. Loans may have a place in emergency or hardship cases, but they're not the real solution. In the long run parents bear the brunt of the financial burden of college education. It seems to me the best way to get more youngsters to go to college, to stay there longer or to have more time to absorb the knowledge they came for would be to give the parents some help in the form of income tax deductions. Any income taxes lost temporarily while the student is in college will be recovered manifold after he gets out.

Even Congress has begun to see the merit in this approach, and more than twenty bills have been introduced to mitigate the plight of the student or his parents by helping in various ways. A typical bill introduced by Rep. JOHN EDWARD FOGARTY of Rhode Island would allow a deduction of up to \$1500 for expenses actually incurred for each dependent in college. This deduction would be in addition to the \$600 deduction for the same student as a dependent. Another bill would allow a second \$600 deduction—a total of \$1,200—while a dependent attends college. But these bills and others like them have one common deficiency—they involve a revision of the present tax laws and are therefore referred to the House Ways and Means Committee. There they stand in line awaiting the next tax cut, if any, or general revision of the Nation's tax structure, if ever. No hearings were held on these bills at the first session of the present Congress, and none appears to be in prospect in the 1960 election year—at least unless parents become much more articulate than they have been.

It won't help any for Uncle Sam to shake his finger and say the Kiesslings knew the facts of life and, having brought five prospective students to the college gates, they should not now ask special favors to get them through. First, if that's going to be Uncle Sam's attitude, he'd better tell everybody right away because the Bureau of the Census reports that things are getting worse—families are getting bigger instead of smaller. In the last 8 years the number of families with no children or with only one child has been

decreasing relatively, while families with two children have increased 20 percent, families with three children 50 percent, and families with four or more children have increased 60 percent. There will be more, not fewer, families with my college problem in the years ahead.

Second, looking on college students as a liability, for which parents shall be held strictly accountable except where gaunt need can be proved, seems to me to be looking through the wrong end of the telescope. The country should be as glad to have these youngsters as the parents are and should make it easy, not difficult, to contribute to their best abilities. I'm not for imitating the Russians just because they hit the moon first, although a little imitating here and there might not hurt. But according to the recent report of the first official U.S. education mission to the U.S.S.R., we're competing against a system that doesn't charge anything for tuition at any college or university and actually pays 80 percent of the students who attend—the higher the grades the higher the pay—instead of having them wait on tables or wash dishes. Incidentally, the remaining 20 percent who have to pay their own living expenses are the scions of rich parents, such as—ho, ho—teachers, writers, and the like who are in the highest income brackets. What a topsy-turvy world we live in.

Whether the Klessing family gets the benefit of higher income-tax deductions is a personal matter of no great moment. Our five children will probably muddle through to bachelor's or master's degrees sooner or later regardless. But a lot of families won't be able to manage as well unless something is done to ease the financial load. This is a big country. If our economy is to continue to grow as it should, we will need a one-third increase in our managerial, proprietorial, and technical positions in the years immediately ahead. We need more than a few Einsteins, Oppenheims, and Tellers, as well as some near-geniuses. We need the broadest kind of program to upgrade the general educational level of the whole country. One way to start is to take college education out of the luxury-limousine class.

Loyalty Oath—National Defense Education Act

EXTENSION OF REMARKS

OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a number of editorials which have appeared in student newspapers regarding the affidavit provision in the National Defense Education Act. These editorials disclose considerable student opposition to the affidavit provision. The editorials represent the views of the following institutions: Cornell University, Upsala Gazette, Smith College Sophian, Pembroke Record, Oberlin Review, and Queens College, the Phoenix.

There being no objection, the editorials were ordered to be printed in the Record, as follows:

[From the Pembroke College Record, Jan. 13, 1960]

LOYALTY IN EDUCATION

The National Defense Education Act of 1958 represents the Federal Government's first general program of aid to higher education. One of the provisions of this act is the granting of Federal funds to colleges and universities to be used for low-interest student loans. For every \$9 of Federal funds granted, the institutions must add \$1 of their own. In the administration of these grants, schools are required to give primary consideration to students pursuing study in science, math, engineering, or foreign languages, or who are preparing to enter elementary or secondary school teaching. Those who enter the teaching profession are required only to return one-half of the money borrowed.

Under section 1001(f) of the act, to receive a loan a student must sign: (1) A disclaimer affidavit that he does not support any organization which believes in or teaches, the overthrow of the U.S. Government by force, violence, or by any illegal or unconstitutional methods. (2) A loyalty oath in which he affirms that he will bear true faith and allegiance to the United States and will support and defend the Constitution and the laws of the United States against all its enemies, foreign and domestic. Fraudulent statements made by a student are subject to a maximum fine of \$10,000, maximum imprisonment of 5 years, or both.

I affirm belief in the desirability and necessity of Federal aid to higher education. However, I believe that the loyalty oath and the disclaimer affidavit provisions of the NDEA are objectionable, and I urge their repeal for the following reasons:

1. Both represent an affront to freedom of belief and conscience:

(a) The affidavit proscribes certain beliefs and actions.

(b) The loyalty oath commits one to certain future actions.

2. Both discriminate against college students. Farmers and manufacturers who receive Federal aid in the form of tariffs or subsidies are not required to sign an affidavit or oath.

3. Both represent a serious threat to academic freedom:

(a) Refusal to sign on principle incurs suspicion of disloyalty.

(b) As precedents, they may serve as a basis for more restrictive legislation in the use of Federal funds for education.

(c) They reverse American jurisprudence implying guilt before trial, calling into question and undermining the basic loyalty of American students.

(d) They must be administered by the school for the Government in return for the school's own money.

4. Neither protect the United States against supervision. Section 1001(f) in no way provides for the exposure or taxation of subversives.

5. Both are terminologically unclear, (e.g., the words "defend," in the loyalty oath; and "believe in," "supports" and "illegal methods" in the affidavit) leaving a wide area for interpretation and possible resultant expansion of their meanings.

As students, this issue affects us directly. We have a responsibility as individuals to study the NDEA and section 1001(f), take our stand and make it known to our Senators and Representatives. Only with the help of student protest will the loyalty oath and disclaimer affidavit provisions be removed. Your SGA district representatives have considered the question and have written their Congressmen urging the repeal of these pro-

visions. I sincerely ask each of you to do the same.

NANCY WOLANS,
NSA Coordinator.

[From the Upsala College Gazette, Jan. 8, 1960]

NDEA CONTROVERSY

Less than a year after the Soviet's first sputnik, Congress passed the National Defense Education Act. The money allocated by this bill was supposed to "strengthen the national defense, advance the cause of peace, and insure the intellectual eminence of the United States, especially in science and technology, through programs designated to stimulate the development and to increase the number of students in science, engineering, mathematics, modern foreign languages, and other disciplines."

According to the conditions of the act, the funds supplied by the Federal Government are granted to accredited institutions of higher learning for low-interest student loans. Recipients of the loan who intend to teach are forgiven up to half of their borrowings, and thus, receive a partial scholarship. A net sum of \$295 million for the loan program was authorized by Congress over a period of 4 years ending June 30, 1962. For each \$9 of Federal loan money an institution receives, it must add \$1 of its own.

The NDEA is the Government's first general program of aid to higher education and sets a precedent for future action. Recently, however, there have been many protests from academic circles concerning the affidavit and oath requirements. A student is not eligible for the loan unless he (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods, and (2) has taken and subscribed to an oath or affirmation in the following form: "I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic."

This provision of the act has caused several prominent and highly rated schools to refuse the loan. Recently three others, Oberlin, Harvard, and Yale reconsidered their participation and returned the funds that had been granted them to make a total of 15 institutions which are dissatisfied with the program.

There are many reasons for educators and students to object to the "loyalty provision" but it is the affidavit not the oath that most of the dissenters are opposed to. Many doubt the constitutionality of the affidavit because it may infringe upon the first amendment's protection of freedom of belief and association. Some say the affidavit is not only "superfluous and discriminatory," but "imposes an impossible burden upon our educational institutions to interpret the section, for each school may have a different concept of what is necessary to prove a 'belief' in an organization which 'believes' in the overthrow of the U.S. Government by 'unconstitutional methods'."

Others resent the bill because it singles out only students who are going to school and as JOHN SHERMAN COOPER, Republican of Kentucky, stated: "You must prove your loyalty to the United States of America." He continues, "The very essence of our system is that it is free—freedom of ideas, freedom of search for truth. We must believe that the free system of education will win

out over conformity—the conformity of communism.”

Why should the Government single out students and educators for a loyalty provision when other Federal loan programs, housing and bank loans, do not require a statement? This, of course, does not mean an affidavit should be required for the others, rather the educational disclaimer should be dropped. After all, if a Communist or subversive character wants a loan, signing an affidavit or taking an oath is not going to bother him in the least.

The question of the loyalty provision has been debated in Congress and a bill was introduced to remove the highly controversial section. However, the bill was shelved and recommitted to the Committee on Labor and Public Welfare. The vote for recommitment was 19-42. Although it is difficult to account for the shelving, there are several key factors.

One is the fact that only seven (at that time) of the 1,227 colleges taking part had withdrawn in protest of the loyalty provision. Other opponents of the bill depicted college presidents as “well meaning, but impractical eggheads, far removed from the harsh realities of life.”

At present there are many institutions who are against the disclaimer, however, they are not financially able to withdraw. Upsala is a participant in the NDEA but it would be foolish to suggest its withdrawal, since the money received is badly needed. It is possible, however, to register a protest and still stay within the program so as not to lose any of its student loan money.

[From Smith College, the Sophian, Dec. 8, 1959]

TO END THE AFFIDAVIT

The faculty of Smith along with Mr. Men-denhall decided unanimously to take a definite position against the disclaimer affidavit of the National Defense Education Act. In taking this position the faculty has drawn the line between the loyalty oath and the disclaimer affidavit. This is contrary to the view taken by the House of Representatives last spring. The House of Representatives felt that both the oath and the affidavit should be withdrawn from the act.

There is a case to be made for the right of the Federal Government to require an oath of loyalty from persons who are to receive Federal aid. It does not seem logical that the Government needs to grant aid to persons who are admittedly disloyal. We might point out, however, that farmers and businessmen who are subsidized do not have to sign any oath, neither do those claiming social security benefits.

The stand against the affidavit is wholly warranted and justified . . . “a fundamental concept of democratic government is the assumption that a citizen, insofar as crime is concerned, is innocent until proven guilty; that, insofar as his general behavior as a citizen is concerned, the assumption must also be that he is loyal until it has been proved that he is other than loyal. The assumption of the affidavit provision of the National Defense Education Act is just the reverse of this.” (The Nation, December 5, 1959, “Oathism” on the Campus.) A proof of innocence in terms of a signed statement is not only illogical, but also ineffective, as many critics of the affidavit have pointed out.

The affidavit discriminates against students, as has been repeatedly pointed out by all of the protesters. The editorial in the New York Herald Tribune of November 26, states the affidavit represents “the singling out of needy students as a group who must be specially challenged on their loyalty to free institutions.”

A further implication of the affidavit is that “by requiring students to swear that

they do not believe in any organization that believes in overthrowing the Government by unconstitutional means, the required oath goes far beyond any disavowal of active participation in a conspiracy.” “It enters directly,” the Tribune editorial continues, “into the realm of conscience, requiring the student to declare not only his actions but what may be his innermost thoughts. Certainly no necessity exists today to justify such an invasion of the privacy of the mind.”

Among the other objections that have been raised is that the Government is injecting political screening into the educational process. This could effectively put a damper on the right to freedom of academic inquiry.

Whereas in the oath, the Government has a case, we firmly believe that the existence of the affidavit is endangering the existence of certain basic freedoms of the individual and of academic life.

We feel that the stand taken by the faculty is the most practical stand that a college can take which needs Federal aid, as Smith does, and yet finds the affidavit odious. Federal aid has meant an 80 percent increase in all the loans given out to Smith students; therefore, it would be financially detrimental to return the funds. In view of this it might be reasonable to follow the protest to its logical conclusion, refusal of future funds, if the law is not changed.

S. A.

[From the Oberlin Review-Nov. 20, 1959]

SIGNIFICANT SACRIFICE

The board of trustees' action last Saturday of making official and final the college's withdrawal from the NDEA loan program, so long as signing of a loyalty affidavit is required of participating students, concludes for Oberlin the first phase of higher education's fight against disclaimer affidavit requirements. Last November and December the American Association of University Professors and the Swarthmore College Student Council took the first strong stand against the loyalty provisions of the Education Act and communicated their opinions to faculty and student groups across the country. Now, 11 months later, legislative efforts to remove both the oath and affidavit provisions have not succeeded, but about 15 other colleges have joined Swarthmore in withdrawing from the NDEA program and many others have expressed alarm at the offensive section 1001(f).

By renouncing the present program, Oberlin and the other colleges are expressing their opposition to the loyalty requirements in the most significant and effective manner. Congressmen will be less likely to trifle with complaints about the act's incursions upon academic freedom of inquiry and thought, when they see the clichéd idealists taking a stand which may mean material sacrifice.

The next phase for the college in the fight against the section 1001(f) must include encouragement of other colleges to take a clear position on the offensive provisions, and continued expositions to Congressmen on the necessity of removing the affidavit requirement. We have stuck by our idealism—students, faculty, trustees, and all. Now we should hope to see our ideals take the form of “remodified legislation.”

T.T.

[From the Phoenix, Nov. 4, 1959]

FIGHT FIERCELY, HARVARD

At last an institution of higher learning has taken an enlightened stand on the loyalty oath provision of the 1958 National Defense Education Act.

Harvard University has announced that it will hold the funds received under this act in escrow until a referendum has been taken among the students to determine

whether or not they wish to accept funds, regardless of the stipulation that all recipients of loans must sign an oath swearing fidelity to the United States and disclaiming membership in any “subversive” organizations.

Harvard has taken into account the position of those students who claim that although individuals may demonstrate disdain for the loyalty oath provision by not applying for loans, outright acceptance of these funds implies, at worst, approval of this clause and, at best, indifference, when the price is right, to individual dignity and freedom of inquiry.

We have discussed the reasons against the security provision of this act in past issues of the Phoenix. Briefly, the most cogent arguments are that it discriminates against students by singling them out for suspicion; that it serves no real purpose, since any subversive would not hesitate to sign it; that it violates the first and fifth amendments; that it limits freedom of opinion and inquiry; in short, that it is an insult to the integrity of the American student.

We are pleased to note that there is one university in the Nation which shows respect for its students, their maturity, and their ability to make decisions for themselves. Harvard's treatment of this issue is especially judicious when contrasted with Queen's College's actions on student problems. Here the administration has shown almost total disregard for student opinion, as exemplified by its banning of John Gates' speech 2 years ago, by its termination of Crown and Rampart last semester, by its discontinuance of February graduations, and by the recent acceptance of Federal funds without consulting and considering student opinion.

Last year, when Senator JOHN KENNEDY, of Massachusetts, unsuccessfully attempted to have this provision removed from the bill, he stated that through political maneuvering, the loyalty oath provision was added in such a manner that there was no time for students to dissent. Those at Harvard now have the opportunity to demonstrate their disapproval of the loyalty requirement, a piece of legislation that accentuates the lack of respect in this country for the student and the scholar.

[From the Cornell Daily Sun, November 1959]

LOYALTY OATH—TWO QUESTIONS

In the midst of the debate over the loyalty oath provision of the National Defense Education Act, two distinct facets of the problem which demand separation and detachment from each other have been so closely interrelated as to confuse and obscure much of the essence of the decision which a university must face in determining its own policy toward Federal aid.

The first and most essential aspect of the question involves whether or not the loyalty oath provision is at all desirable or necessary, and whether or not it fulfills any worthwhile function. The second involves the university much more directly, and that is whether or not, given the fact of the legislation, the university is justified in issuing a blanket refusal to accept Federal aid in protest over the loyalty oath, thus depriving the student of the opportunity not only to enjoy financial aid but also to make any significant decision concerning the oath himself.

The act requires a student applying for a loan to swear that he does not believe in, belong to, or support any organization that believes in or teaches the overthrow of the U.S. Government by force or violence or by any illegal or unconstitutional methods.

Some advocates of the provision argue that the Federal Government has the right, if not the obligation, to prevent the use of its funds by any individual who believes in

the illegal overthrow of the Government. On the surface this argument seems reasonable enough.

With regard specifically to the National Defense Education Act, however, this argument becomes invalid and ineffective. The purpose of the act, apparently, is to maintain the national security and the American way of life. Yet the loyalty oath may well be said to violate in spirit, if not fact, one of the essentials of our way of life: the protection afforded to an individual by the first amendment to the Constitution.

The further consequence of this violation is that the act cannot fulfill its objective. Anyone capable of working toward the overthrow of the Government is clearly capable of perjuring himself in signing a loyalty oath enabling him to receive Federal aid. On the other hand, the act denies Federal aid to the many idealists who will not sign the oath solely because it violates, in their minds, their constitutional rights. These individuals are further subject to the opprobrium of a society which often refuses to differentiate between the loyal objector and the disloyal one.

The loyalty affidavit, then, is unnecessary and self-defeating. But this fact does not make the decision a university must make a great deal easier. For most universities must face another fact: that they do not have sufficient funds to provide financial aid to all the students who need and deserve it.

Cornell provides an excellent example of the university which in fact cannot afford to dismiss lightly the approximately \$150,000 it receives annually under the provisions of the National Defense Education Act. We do not have the financial capacity of a Harvard or Yale. We cannot meet the justifiable demands of all the students who request financial aid each year.

Faced with this dilemma, there seems to be but one alternative which can effectively balance the financial needs of the students against the need of a university to maintain its integrity. The university must oppose the loyalty affidavit in the strongest terms, working toward the eventual elimination of this unfortunate legislation. But unless the university can provide all its students with sufficient financial aid, it must continue to accept Federal aid, leaving the moral decision to the students themselves. This is the decision which Cornell has made. It is essentially a wise one, one of which there is no reason to be ashamed.

[From the Cornell Daily Sun, November 1959]

DISCLAIMER OATH—POSITION REAFFIRMED

President Malott has reaffirmed his position with regard to the disclaimer oath provision of the National Defense Education Act. In a statement to the Alumni News, Mr. Malott has once again gone on record as being vigorously opposed to the disclaimer oath. And he has reaffirmed his intention to maintain Cornell's participation in the program of Federal aid to education.

Mr. Malott's attitude toward the oath provision has not changed since his initial statement concerning that legislation. His objection is based on the "fact that beliefs are not subject to legislative control" and that the disclaimer oath is "superfluous." There is no question but that his objections to the oath are valid ones. A number of major universities throughout the country have adopted this position, some refusing to take part in the program at all.

As for Cornell's continued participation in the program, we must again agree with Mr. Malott. At present, Cornell students are receiving some \$150,000 annually from the Federal Government as part of the program established under the legislation of 1958. This year, because the Federal funds arrived

too late last year to be put to any use, Cornellians will be sharing in some \$300,000.

The university cannot afford to refuse this money, for the reasons cited by President Malott. First, students should be given the opportunity to share in these funds, if they, as individuals, are willing to sign the disclaimer oath. The university does not have available sufficient funds to cover all student applications for aid. If it did, the entire situation would be different. But given the existing deficiency, the student must be given the choice.

One item in the president's statement must not be overlooked. He has unmistakably made clear that for any student who cannot, as a matter of principle carry out the provisions of the act, the university will make every effort to obtain funds from sources other than the Federal Government.

To date, some 150 students have applied for aid under the provisions of the National Defense Education Act. Not one has voiced any protest over the loyalty oath provision. This fact may not be terribly significant. Nevertheless, it is of the utmost importance that no student be deprived of financial aid on the basis of his principles. And the university must make this perfectly clear to any student applying for such aid.

One of the major objections to Cornell's continued participation in the loan program is that in order to effect the repeal of the legislation a united front of major universities refusing to accept any funds under these provisions must be presented to the legislature for its consideration. Undoubtedly, this action would prove most effective in any attempt to demand the repeal of the disclaimer oath.

But if the university's financial status demands our continued participation, there still remain other methods of expressing our disapproval, both student and administrative. The university's position has been made clear by the President's statement and by his letter to Arthur Flemming, Secretary of Health, Education, and Welfare.

But the student voice has as yet not been heard from, at least, not the official voice of the undergraduate student body as expressed by the executive board. Ultimately, the issue of the disclaimer oath affects the student body. It must be the choice of each individual student either to accept the provisions of the act or object to them. But vigorous criticism of the entire program cannot be confined to those students applying for aid, if anything is to be done about the legislation. We feel it is the obligation of the executive board to consider the issue and to add the voice of the Cornell student body to the many others which have already been enlisted in the struggle to repeal the disclaimer oath.

Government Interest Rate Ceiling and Adequate Housing

EXTENSION OF REMARKS

OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. KNOX. Mr. Speaker, the National Association of Home Builders of the United States in its Washington Letter has expressed support of H.R. 10590, as recently reported by the Committee on Ways and Means. It will be recalled that this legislation represents a step in the direction of giving to the Secretary of the Treasury greater flex-

bility in the management of the public debt by alleviating the stringency of the existing 4¼ percent interest rate ceiling on Government bonds.

While most individuals who are students of monetary and fiscal affairs would have preferred that the legislation provide for outright repeal of this archaic 4¼ percent ceiling, it is generally recognized that the bill H.R. 10590 will at least help the Treasury Department in the foreseeable future in its debt management responsibilities. The Washington Letter of the National Association of Home Builders points out that in the absence of legislation of this sort "the Treasury will be forced to go into market this year to refinance some \$80 billion worth of securities. If it can only go into the short-term market, we are bound to suffer severely."

While I do not concur with the views expressed in this letter in its allegations with respect to tight money, I will place the entire letter in the RECORD so as to not take any of it out of context. I would observe on the subject of so-called tight money that the best answer to this problem is for the Federal Government to take less in taxes of the net national product of our citizens and thereby leave more to them for savings and investment. If the Government will spend less, the American people will be able to save, invest, and spend more.

Mr. Speaker, as a part of my remarks I include the National Association of Home Builders Washington Letter of March 11, 1960, as follows:

WASHINGTON LETTER OF THE NATIONAL ASSOCIATION OF HOME BUILDERS OF THE UNITED STATES, MARCH 11, 1960

MESSAGE FROM THE PRESIDENT

"We must support H.R. 10590. . . . It will permit the Treasury to refinance the Government debt without unduly invading mortgage funds. . . . Passage will make possible a more stabilized debt management to the benefit of home buyers, builders, and the general public. . . . Defeat could well mean tighter mortgage money and higher interest rates. . . . Your help needed at once."

Your national officers, executive committee, regional vice presidents, and several NAHB past presidents attending meetings just concluded in Washington agreed unanimously that NAHB and the homebuilding industry have no choice but to endorse the bipartisan effort in the bill (H.R. 10590) recommended February 29 by the House Ways and Means Committee to aid the Government in its financing without repealing the statutory 4¼-percent ceiling on Government bonds having a maturity in excess of 5 years. We urge your strong support for passage by Congress of H.R. 10590 at the earliest possible date.

This bill has been urged by leaders in both parties as the most effective means of aiding the Treasury in its debt management under the existing statutory ceiling. Previously, President Eisenhower had called for removal of the ceiling as imperative and fully consistent with the public interest. If partisan politics is permitted to defeat H.R. 10590, the supply of funds for the homebuilding industry is bound to be affected adversely and severely. The purpose of this letter is to tell you briefly what H.R. 10590 would do and why it is so very important to us.

PROVISIONS OF H.R. 10590

First, the bill provides a series of limited adjustments to the 4¼-percent ceiling which

will permit the Treasury to issue bonds in excess of 5 years and thus avoid future high-interest, short-term issues such as the "magic 5's" issue of last December which effectively took away large sums of mortgage money from savings banks, savings and loans and other mortgage lenders.

Second, without removing the 4½-percent ceiling, the bill is designed to give the Secretary of the Treasury more flexibility in managing the public debt. It should enable him to economize in interest charges to the Government; to lessen the competition of Government financing with certain areas of private credit, and to cut down the inflationary effects of public borrowing. Needless to say, if he succeeds in all of these purposes it will greatly benefit mortgage financing and homebuilding.

Specifically, H.R. 10590 will provide the following:

(1) Permit the Treasury to refund outstanding bonds in advance of their maturity by exchanging them for new bonds with longer terms. This is called "advance refunding" and is especially important in refinancing currently outstanding long-term Government bonds which will mature in the next few years. Under H.R. 10590, any discount at which the new bonds might be issued will not be counted in applying the 4½ percent limit.

(2) Upon a finding by the President of the United States that the national interest requires financing above the 4½ percent limit, the bill also would permit the Treasury in any fiscal year to issue new bonds up to a total of 2 percent of the public debt. This, in effect, is an "escape valve" for the whole Government financing structure. To the extent the authority is not used during fiscal 1961, it would be carried forward for use during the next 2 fiscal years.

(3) Also upon a finding by the President that the national interest requires the action, the bill would authorize the Treasury to provide special issues of U.S. securities to Government trust funds and also savings bonds at rates in excess of the 4½ percent limit. This provision is expected to be non-controversial.

THE BILL HAS BIPARTISAN SUPPORT

Influential Democratic leaders in the House of Representatives urge passage of this bill as an effective way of meeting the urgent request of President Eisenhower and the Secretary of the Treasury. The bill was reported favorably in a bipartisan 18 to 7 vote from the House Ways and Means Committee. It should be on the House floor for debate and voting within the next 2 weeks. This is the crucial time therefore to advise your Congressmen.

Although the Treasury and the President have asked for complete removal of the bond interest rate ceiling, the Secretary of the Treasury has testified that the financing permitted by this bill "is adequate" to provide for the Treasury's needs in the foreseeable future.

The Ways and Means Committee report emphasized that "retaining the interest rate ceiling without modification would not reduce the level of interest rates either for the Government or for private borrowers. However, not to modify the interest rate ceiling would raise the cost of financing the public debt and, at the same time, would make the management of the debt more difficult."

Despite these well considered conclusions, it is clear that the proposed legislation faces rough sledding in the House and perhaps later in the Senate. It will be attacked on a partisan basis and by many who strongly protest, as do we, the tight money and high interest rate policies of the Federal Reserve and other monetary authorities. We are convinced such an attack will be ill-founded;

yet the vote is bound to be close and the bill will need our complete support if it is to pass the Congress.

WHY THE BILL IS IMPORTANT TO NAHBS

Certainly in our own interests as homebuilders, we should realize fully the significance of this legislation to our industry. Expressed very simply, the tight money policy and the resulting high level of interest rates have put the Treasury in a position where it must do virtually all of its financing in the short-term market. The rates it has been paying (and unless H.R. 10590 is passed, the rates it will probably have to pay in the future) are so high that the Treasury's unavoidable financing activities are draining money out of the very institutions on which we must rely for mortgage credit.

When short-term Treasury bonds are issued at an interest rate of 5 percent it is not difficult to understand why thousands of depositors in savings banks, savings and loans and banks line up to withdraw their deposits in order to buy short-term Government bonds which will net them more than the interest they have been getting on their deposits. If this trend continues it is bound to create serious problems for all builders, and particularly for a great number of our membership who rely on conventional loans for their mortgage commitments. Passage of H.R. 10590 will prevent this.

The bill's provisions will permit the Treasury to negotiate with these same financial institutions and exchange new long-term issues for bonds which will be maturing shortly. Further, the President's budget for the next fiscal year contemplates a surplus. This means the Treasury will not be in the market for new funds. In fact, for the first time in a long while the Treasury may be able to pay off some of the public debt. It is in the interest of the homebuilding industry that the Treasury be able to manage the public debt in a way which will not disrupt the long-term investment market in which we have so great a stake. Only passage of H.R. 10590 can make this possible.

The Treasury will be forced to go into the market this year to refinance some \$80 billion worth of securities. If it can only go into the short-term market, we are bound to suffer severely. For this reason alone, all of us who have studied this admittedly complicated matter are convinced that we have no choice except to support the bipartisan effort in Congress to pass the Ways and Means Committee bill, H.R. 10590.

I should like to emphasize as strongly as I can that this conclusion in no way changes the basic policy position of this association in opposition to tight money and high interest rates. We deplore the disproportionate reliance of monetary authorities upon tight money and higher interest rates as primary means of combating inflation. It has been carried to the point where even the U.S. Treasury cannot manage the public debt on a sound and businesslike basis because of a statutory interest rate ceiling.

We shall do everything we can to convince the monetary and fiscal authorities in Government that the policies they have been pursuing for a number of years are responsible not only for our financing problems but for those of the Treasury as well. At the very least we hope to bring about a change in basic attitude on this matter. In the meantime, the current crisis facing the Treasury must be relieved soon by passage of H.R. 10590. Otherwise, the Treasury's problems will make even more difficult the efforts of homebuilders to obtain the funds they need, at prices buyers and builders can afford, to finance the volume of homebuilding needed in this country.

CONGRESS MUST KNOW YOUR VIEWS

Every one of your elected Representatives and Senators finds himself in a difficult po-

sition on this legislation. Your views will be of vital importance to him in arriving at his decision to support or oppose this bill, H.R. 10590. Therefore, I urge you to communicate at once with your Representatives and Senators upon your receipt of this letter.

Your Congressmen should know that you and your industry support the passage of H.R. 10590 at the earliest possible date. Our reasons are simple. They are:

The Treasury's hands must be untied if we are to prevent an excessive drain of small depositors' funds out of the pool of mortgage money which supports our industry and into Treasury short-term obligations. Passage of H.R. 10590 will accomplish this.

Mortgage lenders must be able to plan their future commitments to builders with greater certainty of having funds available and without fear of being raided by Treasury financing. Passage of H.R. 10590 will contribute substantially to this.

Stability in the mortgage market requires stability in the general long-term investment market, which will be aided substantially if the Treasury is permitted to refund outstanding debt with new and longer term securities. Passage of H.R. 10590 will authorize this.

Congressional and administration leaders are convinced the public interest now demands that the Treasury be given greater flexibility in management of the public debt without removal of the statutory ceiling and congressional control over maximum Government bond rates. We concur in this view.

The bill, H.R. 10590, is a sincere, well-considered bipartisan effort to accomplish this objective in the national interest. It should be supported with the full vigor of the homebuilding industry. I urge that you advise your Congressmen at once of your views.

Sincerely,

MARTIN L. BARTLING, Jr.,
President.

Sacramento Host to Foreign Olympic Athletes on People-to-People Basis

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Tuesday, March 15, 1960

Mr. HUMPHREY. Mr. President, we have all heard a lot about the winter Olympics and about the fact that the United States is, at least, closing the ice hockey gap with the Soviet Union, but what has been relatively unpublicized is a post-Olympics event of real significance.

I refer specifically now to a commentary by the respected and well informed Edward P. Morgan over the American Broadcasting Co. on March 4 in which he describes how the people around Sacramento, Calif., started a blossoming people-to-people movement of their own.

Hundreds of Californians offered to host the Olympic athletes in their homes, and more than 300 of the 850 competitors were able to accept, despite the short notice. The participants included Russians, Poles, East Germans, and Hungarians. I, for one, think that those from the Communist countries are going to be a bit more hesitant to believe virulent anti-American propaganda, after having experienced gracious hospitality in the average American home.

I quote Mr. Morgan's concluding paragraph:

Herr Doktor Alois Lugger, the mayor of Innsbruck, Austria, which will be the site of the 1964 winter Olympic games, was one of the guests and he was treated just like plain folks. He was thrilled with the whole operation and is on his way home with his head swimming happily with plans for similar hospitality with a Tyrolean twist. It would be good if he could stop off at Geneva and give the disarmament boys a fill-in on how disarming ordinary people can be when they get a chance.

I ask unanimous consent that Edward P. Morgan's commentary be printed in the Appendix of the RECORD.

There being no objection, the commentary was ordered to be printed in the RECORD, as follows:

EDWARD P. MORGAN AND THE NEWS, MARCH 4, 1960

Ordinarily, the first place you'd expect to breathe the bracing air of good fellowship would be at the Olympic games. Billed as the inspirational flame of international sportsmanship, these festivities can rival an atomic howitzer as the source of carnage. There were plenty of squabbles at Squaw Valley before the winter Olympics ended last week and these were all duly headlined. But in their dutiful pursuit of petulant prima donnas, contention, and bad blood, the intrepid, earmuffed journalists on the scene missed the most astonishing story of the whole shebang—at least I saw nothing of it in this world capital—and it's a story which could, in its own homespun way, shake the entire technique of international understanding right down to its frustrated foundations.

The scenario starts with an earnest little group of Californians and a simple—even hackneyed—idea. They wanted to sample some of this people-to-people contact stuff that governments have talked pompously about. They decided to invite visiting foreign athletes and officials into their homes to stay a night or two after their respective events were over, trade borscht and hamburger recipes and get acquainted, like. The response to the idea, spawned in Sacramento, the State capital, was staggering. One hundred and fifty citizens, speaking 19 languages, volunteered as interpreters. The State fair grounds were leased for \$1 as a welcoming center. The Greyhound people donated 34 buses to haul the guests down from Squaw Valley, 110 miles away, and for San Francisco sightseeing. Mrs. William Campbell, ex-president of the Sacramento League of Women Voters, mobilized a staff of 80 to find host families. Local broadcasts gave time for announcements. Six hundred homes were offered the first day.

To keep the operation tidy but devoid of diplomatic redtape and formality and strictly on a local level, the group incorporated; the Sacramento Bar Association took care of all the legal niceties for free. Officers of the corporation included a jet plant space researcher; a German war bride, wife of a Sacramento high school teacher; the executive director of the city YMCA and the president of a frozen foods outfit. On the board were a lumberman, a banker, the head of the California State Employees Association, and the top legislative counselor to the State legislature.

Today they seem to have a dazzling success on their hands. Their total corporate expenditures, \$600. Of 850 foreign athletes and officials at Squaw Valley, more than 300 visited Sacramento homes, 2 to a household. Many of the rest were genuinely bereaved their rigid schedules prevented their visiting too. The routine: sightseeing, much

talk, drives around town, visits to friends and neighbors. Participants: Russians, Poles, East Germans, Hungarians, West Europeans, Koreans, Japanese. Untoward incidents: none.

The American families had been advised not to talk politics with Communist countrymen. One night at dinner after a visit to a high school one East German boy remarked to his host out of the blue, "You know, nobody wants another war." On a drive near the Governor's mansion, an English-speaking Russian athlete spied a sign reading, "This way to shelter." Told what it meant, he said, "You do not need these because of us."

Each host family was encouraged to give each guest a little parting gift, cost limit, \$3, usually invested in lipsticks, nylons, et cetera. Two Korean boys were embarrassed because they had no gift in return. When their Sacramento family drove them to their homebound plane, they pressed upon their hosts the Korean Olympic emblems stitched to their blazers.

Herr Doktor Alois Lugger, the mayor of Innsbruck, Austria, which will be the site of the 1964 Winter Olympic Games, was one of the guests and he was treated just like plain folks. He was thrilled with the whole operation and is on his way home with his head swimming happily with plans for similar hospitality with a Tyrolean twist. It would be nice if he could stop off at Geneva and give the disarmament boys a fill-in on how disarming ordinary people can be when they get a chance.

This is Edward P. Morgan saying good night from Washington.

The Late Walter S. Steele

EXTENSION OF REMARKS

OF

HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. SMITH of Kansas. Mr. Speaker, as the years roll on there disappear from the Washington scene many men of high stature. Some of these top quality men are defeated for high office, some voluntarily retire, some are called to their final home by the unseen hand of Him who controls all things.

Recently there passed from our national scene one of the most dedicated and most sincere patriots whom it has been my pleasure and good fortune to know since coming to Washington some 14 years ago.

Walter S. Steele, editor and general manager of the National Republic, a magazine of basic and fundamental Americanism, died on March 2, 1960. America and freedom-loving Americans will always be indebted for his advocacy and his burning desire to protect the basic doctrines of the Constitution and Bill of Rights. Walter Steele was unrelenting in his attack on any cause or principle that tended in any way to undermine the institutions of this Republic. It was always to be noted in his endeavors to teach Americans their basic rights that the word "democracy" was little used. He well knew that our U.S. Constitution does not use the word "democracy." This document states our Government is a Republic and guaran-

tees to each State a Republican form of Government. Walter Steele well understood the difference.

Back in 1918, some 42 years ago, a group of farsighted and patriotic Americans saw the necessity of assembling and pointing out some dangers that were beginning to appear—dangers to the well-being of America. This group did not go out parading up and down the street waving the flag to the tune of brass bands. They started out with the quiet purpose of collecting documentary and other reliable facts for presentation to the American public on the dangers of subversion and collectivism within the structure of our own Government.

Walter Steele many years ago became convinced that the American Government would not be destroyed from without, that the real danger was subversion from within our own borders. The sole purpose of his group and the National Republic was to try to get every patriotic citizen to share some of the responsibility for our national security. He well knew and this publication has through the years tried to point out that mere denunciation will not achieve the desired ends—that only through constant endeavor, constant research, constant attention to the ways of "the enemy within" could America be properly made to understand its danger.

Walter Steele was no mere propagandist. He knew the ways and means of the Collectivist, Socialist, Communist, and front organization. He knew their pattern and method of operation. His basic belief was if patriotic Americans could keep American workers, American youth well taught in the principles which made this Nation great, the Communists and Collectivists would have a hard time destroying America from within. Walter Steele knew that the story of why America occupies its present position must be repeated and repeated constantly.

He also knew what apparently is unknown to many, that communism and collectivism is in general a disease of the mind and not a disease of the stomach as many international do-gooders, one-worlders, and demagogues are always proclaiming.

Over the years Walter Steele and his great organization, through their office, maintained a most thorough library on subversive activities in the United States. This National Republic has done more to unmask and expose Red front organizations and Communists at work than any other private organization in America.

It is also a well-known fact that Government security agents check the files of the National Republic as a first source of information. Over 100 front organizations were first exposed by the National Republic which were later placed on the Department of Justice's subversive organizations list.

It is not commonly known that this organization—National Republic—has a card index file of 400,000 names of Communists and their front carrying agents. This work and the large index of subversive members and organizations is a product of planning and work

by patriotic Americans with very little pay and no acclaim from the American public at large. This National Republic organization has carried on as the squawkers, the pinks, internationalists, one worlders seem to become more active and deadly in their attacks on our ancient time-proven American principles.

The American people know very little of the service this National Republic has rendered under the guidance of Walter Steele. He never lost courage although many dark clouds appeared. He never compromised his principles for expediency. He lighted his lamp only by the desire to serve his God and country. Certainly, the life of Walter Steele exemplifies the motto for "God and country" to the highest degree.

A great many Americans know full well the debt that is owed to this man. There is genuine sorrow in the ranks of patriots at his passing. The only smiles, no doubt, are those of the Communists and their sympathizers, because they full well know that their best informed enemy of their ways and designs has passed away.

It will be difficult to find another American eagle to sit in his place as one of the guardians of our American heritage. Walter Steele full well realized, in the words of Capt. Tom Gibson of Friars Point, Miss., who has so aptly said, "The American eagle can't fly much longer on two left wings."

The Forthcoming Disarmament Conference

EXTENSION OF REMARKS

OF

HON. WAYNE MORSE

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. MORSE. Mr. President, a considerable number of the members of the faculty of Johns Hopkins University and Goucher College have released a statement on the forthcoming disarmament conference. It deals with their views in regard to the importance of a cessation of nuclear testing. I ask unanimous consent that their statement, together with a list of signers, be printed in the Appendix of the RECORD.

There being no objection, the statement and list were ordered to be printed in the RECORD, as follows:

The Honorable CHRISTIAN A. HERTER,
The Department of State,
Washington, D.C.:

The forthcoming disarmament conference at Geneva impels us, members of the faculties of the John Hopkins University and Goucher College, to make the following statement which represents our personal views:

"Never have the peoples of the world spent so much on armament in time of peace and never have they been so insecure. During the past year the arms competition between the United States and the Soviet Union has become more intense than ever. The

continuing spread of nuclear weapons to an enlarging circle of nations increases the danger of war and makes disarmament ever more difficult. The survival of civilization requires the control of armaments of unlimited power and their eventual elimination as instruments of national policy.

"The Soviets in disarmament negotiations have shown suspicion of American proposals for inspection and control, and our own representatives have been reluctant to consider any scheme that would not eliminate every risk of deception. But every alternative open to the United States involves risk. Insistence upon a perfect system only insures that there will be no inspection and no control; the result must be an unrestricted arms race which sooner or later will almost certainly bring about unrestricted nuclear war. The present impasse must be broken.

"Serious as are the conflicting interests between the United States and the U.S.S.R., both countries, we believe, have been too preoccupied with their differences and not enough concerned with their common goals. Americans need not shed all their scepticism about Soviet words and actions; successful international agreements are based more on mutual advantage than on trust. Although the prevailing attitude of distrust has made agreement difficult, the American and Soviet positions on a test ban are now very close as a result of mutual concessions. Any resolution of the remaining differences is preferable to the dangers which would follow a breakdown of negotiations.

"The United States and the Soviet Union have a strong common interest in preventing the spread of nuclear weapons, which appears inevitable without an agreement to stop testing. Recent administration suggestions that such weapons be furnished to American allies would, if carried out, jeopardize further negotiations to end the arms race.

"We believe that the test ban is an essential first step toward comprehensive arms control. In view of the gravity of the present situation we are convinced that the United States should if necessary accept considerable risks to achieve the goal of general disarmament in order to avoid the far greater risks attendant upon continuing the arms race."

IDENTIFICATION OF SIGNERS

The Johns Hopkins University faculty members: D. C. Allen, professor of English; Donald H. Andrews, professor of chemistry; Charles A. Barker, professor of history; Ernst Cloos, professor of geology; Leighton E. Cluff, associate professor of medicine; Elliott Coleman, associate professor of English writing; Fred F. Converse, instructor of psychiatry; Richard T. Cox, professor of physics; J. D. H. Donnay, professor of crystallography and mineralogy; Nathan Edelman, professor of romance languages; Leon Eisenberg, associate professor of psychiatry and pediatrics; A. Murray Fisher, associate professor of medicine; Jerome D. Frank, professor of psychiatry; John Freccero, assistant professor of romance languages; Palmer H. Futcher, associate professor of medicine and assistant dean of the school of medicine; Olcott Gates, assistant professor of geology; Hans Gatzke, professor of history; H. Bentley Glass, professor of biology; J. L. Gossman, assistant professor of romance languages; Richard H. Green, assistant professor of English; Carola B. Guttmacher, instructor of psychiatry and pediatrics; Albert L. Hammond, associate professor of philosophy; Thomas R. Hart, Jr., assistant professor of romance languages; C. A. Hopson, assistant professor of geology; Stanley D. Imber, associate professor of medical psychiatry; Julius R. Krevans, assistant professor of medicine; Simon Kuznets, professor of political economy; W. G. Lambert, associate professor of oriental seminary;

Frederic C. Lane, professor of history; Louis Lasagna, associate professor of medicine; Victor G. Laties, instructor of medicine; Owen Lattimore, lecturer in history; Allan H. Levy, instructor of microbiology; Victor Lowe, associate professor of philosophy; Fritz Machlup, professor of political economy; A. J. Mandy, instructor of psychiatry; William H. McClain, associate professor of German; Clara P. McMahon, assistant professor of education; Eugene Meyer, associate professor of medicine; G. H. Mudge, professor of pharmacology and experimental therapeutics; Earl H. Nash, Jr., instructor of psychiatry; Helen Nash, instructor of medical psychiatry; Abraham G. Osler, associate professor of medicine; Lee C. Park, assistant professor of psychiatry; E. T. Penrose, lecturer in political economy; F. J. Pettijohn, professor of geology; Kingsley Price, associate professor in philosophy and education; Herbert J. Rapp, assistant professor of microbiology; Jerzy E. Rose, associate professor of physiology; Lawrence J. Ross, assistant professor of English; Francis E. Rourke, associate professor of political science; Regina Slaughter, instructor of psychiatry; F. Wilson Smith, assistant professor of history; Lex B. Smith, instructor of psychiatry; David Spring, associate professor of history; Joseph H. Stephens, instructor of psychiatry; Anthony R. Stone, instructor of psychiatry; Wolfgang Thormann, assistant professor of romance languages; Robert W. Tucker, associate professor of political science; Robert R. Wagner, associate professor of microbiology and assistant dean of the school of medicine; Esther Walcott, inspector of psychiatry; John Walton, associate professor of education; Bruce Wardropper, professor of romance languages; Earl R. Wassermann, professor of English; Bernard Weiss, instructor of medicine; William D. Wheat, instructor of psychiatry; Frances Williams, instructor of psychiatry; M. S. Wilson, instructor of medicine; C. Vann Woodward, professor of history; Kenneth R. Zierler, associate professor of medicine; and Frank Albrecht, secretary.

Goucher College faculty members: Sherodd Albritton, assistant professor of music; John V. Chamberlain, assistant professor of religion; Virginia Canfield, associate professor of English; Lester G. Crocker, professor of modern language; Sara deFord, professor of English; Rhoda M. Dorsey, assistant professor of history; George A. Foote, assistant professor of history; Elliott W. Galkin, assistant professor of music; William L. Hedges, assistant professor of English; Lincoln F. Johnson, Jr., associate professor of fine arts; K. Lems, assistant professor of biological sciences; John I. Lodge, associate professor of physics; Jane Morrell, assistant professor of education; Walter M. Morris, associate professor of religion; William R. Mueller, associate professor of English; Rolf Muuss, associate professor of education; William L. Neumann, professor of history; Enrique Noble, associate professor modern languages; Clifford R. Noll, Jr., assistant professor of chemistry; Sonia F. Osler, associate professor of psychology; Brooke Peirce, assistant professor of English; Olive Westbrook Quinn, associate professor of sociology; Norma K. Raffel, assistant professor of biological sciences; Donald Risley, instructor of fine arts; Frederick G. Reuss, professor of economics and sociology; Marion Robinson, associate professor of English; Alice J. Reynolds, assistant dean; Annelles A. Rose, professor of psychology; Peter J. Guthrie Speers, chaplain and adjunct professor of religion; Martha Taber, assistant professor of economics; Richard Waldehlich, assistant professor of English; Kenneth O. Walker, professor of history; and John C. Williams, assistant professor of classics.

The People of the First Congressional District of Nebraska Are Asked To Give Their Opinions on Basic Issues

EXTENSION OF REMARKS

OF

HON. PHIL WEAVER

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. WEAVER. Mr. Speaker, I am today mailing out to a number of my constituents my regular legislative report and annual questionnaire.

I have made it a practice since coming to Congress to seek the advice and counsel of my constituents on many of the basic problems and issues of the day. To me, this sounding out of public opinion is the very essence of representative government.

I am including in the RECORD both my report and the questions I have asked:

WASHINGTON, March 15, 1960.—When new Government programs are mentioned, they're always talked about in terms of billions of dollars. The figures are always so big that they're hard to understand and comprehend.

What, exactly, is a billion dollars?

As 1 of the 44 million American families struggling with a household budget, it's \$22 you can't spend for food or for shoes for the youngsters.

What I would like to do in this report is relate Government spending and—more important—fiscal honesty and responsibility to you, your dinner table, and your family clothing budget.

This approach seems to me necessary because there has been too much of the "something for nothing" philosophy in Washington over the past quarter-century when the spenders in Congress, after Congress have launched into new and bigger programs of giving the Nation something. When the Federal Government is writing the checks it seems so far away, so easy. Let the Government do it.

But pause just a moment.

What will that school construction program the Senate passed a few weeks ago and which is now pending before the House mean to you?

If you are part of an American family, then it means a dress and a pair of shoes for mother, nearly 2 weeks of groceries for the whole family, half a month's payment on a new Buick or Mercury, or just about half a month's payment if you're buying a new home.

Or how about urban renewal which is being pushed so hard?

A new suit for Dad—3 weeks of pretty good eating for the family—a year's school clothes for the grade-school youngster.

So, when someone tells you that the school-construction program only costs \$1.8 billion, or urban renewal just costs \$3 billion, associate them with yourself, your family.

There is no such thing as "something for nothing" even when Uncle Sam is footing the bill. You are paying for it with hamburger instead of roast beef, with a second-hand car instead of a new one, by living in an apartment instead of buying a new home.

Take another look at this business of fiscal responsibility.

What does that \$290 billion national debt mean to you?

It means that your family owes \$6,380.

How about the total obligation written onto the lawbooks by the recent Congresses

of the present majority party totaling \$680 billion?

Your family owes \$14,960.

Can you afford to keep on paying for the luxury of getting "something for nothing?"

MONEY SAVED

The business of saving tax dollars belongs to the House Committee on Appropriations. Our job is to weigh each request for budget money, to measure the needs against the ability to pay for them.

Each bill, and there are 15 major money measures, is first carefully and thoroughly examined by a subcommittee. This takes weeks of testimony. Then it is analyzed dollar-by-dollar and the final bill written. The full Appropriations Committee then reexamines the bill in detail, and votes it to the floor of the House where once again it is carefully gone over.

This is the normal process—the way it should be done. But the spenders have found ways around our committee.

Back door raiding: Tricky methods have been worked out to give some agencies direct access to the Treasury without going through Congress. These back door deals or earmarked funds deny to the Congress, and therefore the people, constitutional controls over the purse strings.

A new method was worked out last year when the Tennessee Valley Authority was given permission to issue its own bonds in competition with the U.S. Treasury without regard to the national debt ceiling.

Regardless of the merits of TVA itself, this new proposal permits a bureaucracy to perpetuate itself without any controls by the people.

So far we on the Appropriations Committee have trimmed Federal spending by \$800 million, and we have considered only six bills. It is my firm belief that when we are through we can save up to \$2 billion—and I shall most certainly work toward this goal—without impairing our strength or those essentials which tend to help our free economic growth rather than hinder it.

OUR NATIONAL DEFENSE

A great political smokescreen has been launched concerning our national defense posture primarily by a group of men running for the Presidential nomination who are willing to substitute doubt and fear for facts.

For 15 months I have listened to a long series of witnesses and, on assignment by the committee chairman, I have personally looked into our military programs. Our job has been to get the full facts on defense. The man responsible for bringing out these facts is one of the most honored men in Congress—GEORGE MAHON, of Texas, a responsible, hard-working Democrat who has studied the problems of national defense since World War II days.

What does Mr. MAHON have to say about the confusion of charges made by certain Senators, charges that we are lagging behind the Soviet Union, that we are becoming a second-rate power, and that the missile gap means disaster?

Mr. MAHON spoke out recently on a TV program. Here's what he had to say:

"We have a greater overall striking ability than the Soviet Union. * * * This Nation is stronger than any nation in the world today."

Ours is a balanced defense system leaning heavily at present on our bomber fleets capable of delivering a nuclear punch anywhere. Slowly these fleets will be augmented by Atlas and Titan ICBM's, and supplemented by Polaris submarine-launched missiles capable of striking at the heart of the Soviet Empire.

With the span of a few years a much cheaper, equally potent missile, Minuteman, will come into operation. Minuteman is mobile and less expensive than the Titan and Atlas weapons.

Along with this growing arsenal of deterrent weapons we are concentrating on an antimissile missile, the Nike-Zeus for protection against a potential missile attack upon America.

The question is not whether we match Russia missile for missile, or whether we have one or 100,000 ICBM's. The question is: Do we have enough striking power to deter the Russians from attacking us or the free world?

Mr. MAHON's answer to that is: "We have greater overall striking ability than the Soviet Union."

Mr. MAHON has also expressed his opinion against so-called crash programs to build vast arsenals of soon-to-be outmoded ICBM's. He says it may take slightly more money for some parts of the Defense budget than the President requested but that this money can be "recouped by making reductions in low-priority items."

This is an altogether different estimate than the one we hear from Senator SYMINGTON and others of his group who are attempting to build near-hysteria for political advantage. This statement from GEORGE MAHON is by a responsible man of SYMINGTON's own political party who knows as much about defense perhaps as any civilian in Government today.

QUESTIONNAIRE

To measure the attitude of the people of the First Congressional District is the very essence of representative government. Each year since being elected your Congressman I have asked you to assist me by expressing your personal opinion on various public questions. I must assume full responsibility for my votes. However, in doing this I must carefully weigh the views of those whom I am elected to represent. Your individual opinions therefore, will be extremely helpful.

You need not sign this form.

Your further comments are welcome and will be helpful.

If you have such comments to make, please feel free to do so.

1. The President has predicted a \$4.1 billion surplus this year.

Do you favor using this money for:

A. Reduction of the national debt _____.

B. Reduction of taxes _____.

C. A combination of both _____.

D. Using this money for further expansion of Government programs _____.

2. Do you feel the President is best qualified to know what money is necessary to provide a strong, flexible defense posture? Yes _____; no _____.

3. Do you favor matching Russia missile-for-missile in an all-out arms race? Yes _____; no _____.

4. If your answer to No. 3 is "Yes," would you favor financing such an arms race by:

A. Increased taxes _____.

B. Increased public debt _____.

Please fill out the above and return to Congressman PHIL WEAVER, Box 1550, New House Office Building, Washington 25, D.C.

Thank you for your cooperation and guidance.

Loyalty Oaths

EXTENSION OF REMARKS

OF

HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. WESTLAND. Mr. Speaker, one of the American Legion posts in my district recently passed a resolution which supports the principle of loyalty oaths

for students receiving Federal loans or grants. This is a resolution which I also support as a Legionnaire.

Under leave to extend my remarks in the RECORD I include the resolution as passed by the Earl Winehart Post No. 96 of Snohomish, Wash.

Whereas every member of this American Legion post has a great measure of faith and pride in this country; and

Whereas these members were willing to make the supreme sacrifice in the service of that country and for its ideals; and

Whereas no person who claims the benefits of this wonderful land which has been preserved throughout its entire history by the sacrifices of many, will tolerate interference of their liberty; and

Whereas these same men feel that no person who enjoys this life of peace, liberty and plenty should have any objection whatsoever to signing any oath of loyalty at any time for any cause: Now, therefore, be it

Resolved by the 276 members of Earl Winehart Post No. 96, American Legion, That this post go on record in favor of any person, including students who get Federal aid, taking the loyalty oath or forfeiting his or her right to such aid; be it further

Resolved, That this post is on record as admonishing Congress to continue its stand of insisting of such loyalty oaths which this post feels would be gladly given by any person who loves his land; and be it further

Resolved, That this post favors laws by Congress which will not allow loans, payments or aid of any kind to any person who refuses to give an oath of loyalty to the U.S. Government.

EARL WINEHART,
AMERICAN LEGION POST NO. 96.

REA Co-ops and the Interest Rate

EXTENSION OF REMARKS OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 15, 1960

Mr. HUMPHREY. Mr. President, The able manager of the Minnesota Electric Cooperative, Mrs. Genevieve A. Kelley, has taken issue with the U.S. Budget Director's insistence that the Federal Government discontinue making rural electrification loans at 2 percent interest.

Mrs. Kelley also has pointed out that Budget Director Stans is in error in his claim that electrification of this Nation's farms has been completed.

Mr. President, I ask unanimous consent that an article by St. Paul Pioneer Press staff writer, Alfred Stedman, reporting Mrs. Kelley's penetrating analysis of the needs and opportunities of rural electrification, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Paul Pioneer Press, March 8, 1960]

STATE CO-OP SPOKESMAN DEFENDS 2 PERCENT LOAN RATE

(By Alfred D. Stedman)

Assertions by Budget Director Maurice H. Stans that the U.S. Government should stop making rural electrification loans at 2 percent interest were challenged in St. Paul Monday by Genevieve A. Kelley, manager of

the Minnesota Electric cooperative. Stans had expressed himself in an interview when in Minneapolis last week to address the annual farm forum there.

Mrs. Kelley contended the Budget Director is mistaken in his view that electrification of the Nation's farms is now virtually complete. She also disputed his contention that the 2-percent loans are subsidizing the rural co-ops to cut into business of private power companies. And she said that special legal requirements for service on the co-ops would make it unfair to require them to go to the money market for their loans as the Budget Chief had advocated.

"The farmer is using 10 times more electricity now than when the REA program came into being," Mrs. Kelley argued in a letter. "There is much work to be done in keeping up with this ever-increasing demand. New substations have to be built (and) facilities have to be expanded."

As to competition with the utilities, she contended that rural electric co-ops produce only a minor part of the power they distribute and therefore must buy most of it from the private power companies. For instance, in 1951, the co-ops thus purchased \$43 million worth, she said. "We have not taken away a market from them," she said. "We have given them a market."

Rural co-op members buy a billion dollars worth of appliances and equipment a year and have bought \$14 billion worth thus far, greatly assisting business, she argued.

Tied to the 2-percent loans is a requirement that rural electric co-ops provide services to all regardless of economic feasibility, she said. They "average two consumers per mile of line while the national average for the private utility is 26," she contended. These she described as among the circumstances justifying continuance of the 2-percent rate. Mrs. Kelley argued that through tax writeoffs, accelerated amortization, and other aid, other business including private power has received much more Government help than the rural electric co-ops.

Dennis Baker, of Winchester, Mass.,
Science Talent Search Winner

EXTENSION OF REMARKS OF

HON. EDITH NOURSE ROGERS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mrs. ROGERS of Massachusetts. Mr. Speaker, among the 40 top winners in the 19th annual science talent search, the major science scholarship competition of the Nation's secondary schools was, I am very proud to say, a high-school senior from my congressional district, Dennis Graham Baker, 17, of Winchester High School, Winchester, Mass. These 40 boys and girls were selected from 29,402 high school seniors to be invited to Washington to attend the Science Talent Institute March 3 through 7, and to be judged for the Westinghouse science talent search scholarships and awards in the final phase of the science talent search conducted by Science Clubs of America. I had the pleasure of being Dennis' guest at the Science Clubs of America dinner on Friday, March 4, at the Statler-Hilton Hotel.

There were 9 girls and 31 boys in this group of winners, who excel in such qualities as creative curiosity, independ-

ent reasoning, scholarship, and strong drive to explore untried areas of knowledge. They were picked by the judges from among the 29,402 contestants, after having completed their entries by taking a science aptitude examination, obtaining recommendations, and writing a report on "My Scientific Project."

Dennis Baker's project was a 4-year program in meteorology, representing 4 years of weather reporting at his weather station at home. In his project report, he discussed data he collected on five different weather elements: climatological observations; semidiurnal pressure change; local thunderstorms; precipitation totals; and photography of cloud types. When he finishes at Winchester High School, Dennis says he will go on to Harvard College and study physics. Meteorology is his first choice for a life occupation, and physics is a possible second. He has taken second and third prizes at his high school's science fairs. He plays French horn in the orchestra. He is continuing his weather observations "to improve the accuracy of the climatological results" and will keep his camera handy to photograph any unusual cloud types that pass over this station.

Dennis is the son of Dr. and Mrs. James G. Baker. Dr. Baker, an optical physicist and associate research astronomer, is the inventor and designer of the Baker-Schmidt telescope at Harvard University.

Dennis Baker's mother is also an eminent scientist.

Chicago Truck Drivers, Chauffeurs and
Helpers Union of Chicago and Vicin-
ity—Independent

EXTENSION OF REMARKS OF

HON. DANIEL D. ROSTENKOWSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. ROSTENKOWSKI. Mr. Speaker, the Chicago Truck Drivers, Chauffeurs and Helpers Union of Chicago and Vicinity was founded in 1908 and it is one of the outstanding independent labor organizations of the in the city of Chicago and vicinity. In conforming with the provisions of the Labor-Management Relations Act of 1947 and the Labor-Management Reporting and Disclosure Act of 1959 they have made public their yearly financial statement, which is certified by a leading firm of certified public accountants. Their statement has been published in the four daily newspapers of Chicago as well as the Wall Street Journal.

Under leave to extend my remarks, I include their financial statement which appeared in the Chicago newspapers on Friday, March 11, 1960, and which I will present in three consecutive issues of the proceedings—the first one today covering the health and welfare fund, and those of the pension fund and union funds to follow in that order.

The article referred to follows:

CHICAGO TRUCK DRIVERS, CHAUFFEURS, AND HELPERS UNION OF CHICAGO AND VICINITY—INDEPENDENT

To Our Members, Employees, and the Public:

Pursuant to our past practices and in conformity with the provisions of the Labor-Management Relations Act of 1947, and the Labor-Management Reporting and Disclosure Act of 1959, we present herewith financial statements for the year ended December 31, 1959. These statements have been certified after audit by Peter M. Shannon & Co., certified public accountants. Copies of the full text of these audit reports, including subsidiary schedules, are available upon request by letter or telephone.

ED FENNER.

STATEMENTS OF FINANCIAL CONDITION FOR YEAR ENDED DECEMBER 31, 1959—HEALTH AND WELFARE FUND

The health and welfare fund is operated under rules and regulations adopted by its trustees. The purpose of the fund is to provide medical and surgical benefits and compensation and death benefits to union members and their dependents.

Balance sheet, Dec. 31, 1959

Current assets:	
Mid-City National Bank—checking account	\$174,246.09
Mid-City National Bank—savings account	270,805.79
Petty cash	200.00

Total 445,251.88

Fixed assets:	
Office furniture and fixtures	5,573.38

Grand total 450,825.26

Liabilities:	
Death benefit certificates issued	16,000.00
Less death benefits advanced	5,000.00
Total	11,000.00

Net worth:	
Surplus	439,825.26

Grand total 450,825.26

Statement of cash receipts and disbursements for the year ended Dec. 31, 1959

Cash receipts:	
Contributions received from employers	\$1,671,035.75
Contributions received from members	43,994.32
Interest income	6,366.54
Total	1,721,396.61

Cash disbursements:	
Benefits:	
Death benefits	155,564.00
Compensation benefits	396,136.76
Hospitalization	507,593.24
Professional services:	
Nonaffiliated medical doctors	227,065.61
Advances on death benefits	1,460.00
First aid and ambulance	7,227.62
X-ray and laboratory	15,222.24
Clinical services:	
North Avenue Medical Center	136,690.99
Kildare Clinic	81,840.50
Specialists	44,977.25
Total	1,573,778.21

Statement of cash receipts and disbursements for the year ended Dec. 31, 1959—Continued

Cash disbursements—Con.

Administrative:	
Salaries—office personnel	\$72,129.69
Trust fund contributions for employees	2,955.06
Payroll taxes	4,025.78
Office supplies	3,920.08
Utilities (rent, electricity, telephone and telegraph)	6,091.06
Postage, printing and stationery	7,376.24
Insurance	1,203.25
Legal	2,405.10
Auditing	10,000.00
Publication of financial statements	5,490.34
Medical consultant	7,500.00
Trustee fee—public member	7,500.00
Grand total	1,704,374.81

Cash receipts in excess of disbursements	17,021.80
--	-----------

Respectfully submitted.

GEORGE W. DIXON,
Arthur Dixon Transfer Co.,
Employer Trustee.

ED FENNER, Union Trustee,
JOHN C. FITZGERALD,
Loyola University Law School,
Public Trustee.

WILLIAM B. CRAWFORD,
Alternate Union Member
and General Counsel.

Political Preservation of Peasantry

EXTENSION OF REMARKS

OF

HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the respected Secretary of the Massachusetts Farm Bureau Federation, Mr. Carleton I. Pickett:

POLITICAL PRESERVATION OF PEASANTRY
(By Carleton I. Pickett)

Somebody wrote a story about the "Magnificent Decline of Agriculture" the other day. It strikes us that all the tears wept over our vanishing farm are tears of nostalgia and that the political furor over solving the farm problem is good campaign material but hardly sound economics.

The decline of numbers in farming is accompanied with the growth of agriculture as a whole, the increase of productivity, and a better profit and loss statement for those who can meet the challenge of change.

This kind of philosophy can get rocks thrown at you if expressed at most farm gatherings. The farmer is the only individual on earth who is not proud of making money. In fact, no matter how much he makes he will conceal it and gripe about the money he didn't make.

Thousands of farmers are working for a bare subsistence while others do well; under the best of conditions some farmers lose

money and some cling to the farm long after they should have entered better paid jobs.

No political formula will ever be found to remedy a situation when society seems to want to keep farms in existence just to retain the pastoral scene of the country side.

The Swiss, the Germans, the French, and the British have each tried by law to make peasantry profitable. Their agricultural law predates the American and is far more sophisticated and regimented than Americans would stand for. Canada is a few jumps ahead of us.

Why it is that good old moss-backed conservatives who will fight socialistic or governmental devices in everything else will fall for political promises of a more socialized agriculture in the United States will always be the most curious political paradox of the last half of the 20th century.

Yet there it stands—a political record in agriculture that not only makes the poor on farms poorer but puts off the day when agriculture must readjust itself to producing what is needed for markets in places where it can be profitably produced.

Farm organizations can do much and are doing much to keep some of the thousands in business where only economic conditions, unjust taxation, improper zoning, burdensome administrative regulation, and so on, cut just enough from net income to make profit too low. This Farm Bureau works at every day of the year.

It is equally possible that Farm Bureau can provide farmers with bargaining associations. This we have started. In addition, the farmer can be organized to receive business services which up to now have been played at by some public agencies.

There is a future for agriculture that is not all dark clouds by any means. The surest way for agriculture to not succumb to the blandishments of political help in a political year.

Price supports must be done away with over the next few years. Surpluses in Government storage must never come on the American market in competition with the American producer. The practice of paying farmers for doing things that make the land more productive must be reexamined. Some land, like some farmers, ought to be otherwise employed.

These are controversial views. They are views that deserve a little thought by all those truly concerned with the farmer. I want to see the farmer enjoy as good a home as any business executive. I want to see him take his family on the vacation to which they are entitled. I want to see him build an estate sufficient to care for his own emergencies and old age. I want to see it a part of the modern age, an occupation with dignity to which some sons may look forward to returning from college.

This can be. But neither subsidy nor political cure-all will bring it about. Only the farmer can—unhindered by governmental intervention—use his talents best for a prosperous future. May the Lord save us from political preservation of peasantry.

Parliamentarian Role Calls for Calmness

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following article which appeared in the Evening Star, Washington, D.C., Thursday, March 10, 1960:

PARLIAMENTARIAN ROLE CALLS FOR CALMNESS

Full name: Lewis Deschler.

Claim to fame: Parliamentarian of the House.

Home: 101 Lucas Lane, Bethesda, Md.

Birthday: March 3, 1905. Born, Chillicothe, Ohio.

Education: Miami University, Oxford, Ohio, 1922-25; George Washington University, 1925, National University, Washington, master of patent law and doctor of jurisprudence degrees, 1932; doctor of laws, honorary degree, 1947.

Jobs: Timekeeper for Speaker of the House, December 1925 to January 1927; Assistant Parliamentarian of the House, January 1927 to January 1928, Parliamentarian of the House, January 1928 to present.

Family: Married Miss Virginia A. Cole, January 18, 1931. Children: Lewis Deschler II, and Jean Mari (Mrs. William B. Eddy).

Hobbies: Fishing and reading history and biography.

A man who towers 6 feet 3 inches tall and weighs 250 pounds will be one of the biggest figures in the House civil rights debate which gets underway today.

Unobtrusive nonpartisan, and mild mannered, he is not even a House Member. Yet he literally is the man closest to the Speaker's ear, and what he says usually goes, in situations that are taut and intricate.

Lewis Deschler, the House Parliamentarian, has devoted more than 34 of his 55 years to service to the House. On his birthday, March 3, he was praised by Democratic and Republican leaders for his ability, fairness, helpfulness, and patience. Many other Members took the floor to not only commend him, but to congratulate Congress on having him to smooth its parliamentary path so decisively and quietly.

Representative HOFFMAN of Michigan, Republican, who often adds to Mr. Deschler's task of untangling parliamentary tangles, pulled out all the stops and perhaps broke a congressional record for infinitive splitting when he declared:

"Very, very few in the world have the ability to—while clearly pointing out your error—send you away satisfied and sometimes delighted with the new knowledge as does our Parliamentarian."

EXPECTS A WORKOUT

The civil rights debate and the prospect of a parliamentary field day by opponents of the bill during the next 6 or 7 days hold no terrors for Mr. Deschler. He, nevertheless, concedes it will be one of his more troublesome workouts.

"It won't be mainly a problem of parliamentary decisions," he explains. "It will be the tension. This is an emotional issue, and the situation will be very tense. I suppose the Parliamentarian will need calmness and good humor."

From all accounts, "Lew" Deschler has those qualities in plentiful supply for making trigger-quick decisions, calling the shots as he sees them and remaining completely impartial and as inconspicuous as possible.

SIDE READING GOT JOB

Mr. Deschler practically read himself into his present position. While a junior at Miami University in his native Ohio he decided to study for the Foreign Service. He came to George Washington University for that purpose in 1925. In December of that year he got a House job as timekeeper at the Speaker's desk.

"I had time on my hands during long speeches," he recalls, "and generally picked up the House manual and other rulebooks for reading. The then Speaker, Nicholas Longworth, must have noticed my interest in the subject. He asked me if I would be

interested in a position as Assistant Parliamentarian.

"I was on the verge of not taking it. But I thought I might as well, because if I didn't make good, they would soon find out and fire me. So the job of Assistant Parliamentarian was created by act of Congress and I took it in 1927. In January, 1928, I became Parliamentarian, and here I am."

He has been Parliamentarian longer than any other in House history. He has served with Speakers Longworth, Garner, Rainey, Byrnes, Bankhead, Martin, and Rayburn. Only five Members still in the House were there when Mr. Deschler began as timekeeper.

Sitting near the Speaker and staying on the alert to provide information and advice on a multitude of parliamentary problems is only part of his work. When the House is not meeting he has plenty to do as editor of the House manual on rules. He keeps up a multi-volume library of House precedents, standard reference works on parliamentary law and procedure and compilations of decisions of former Speakers. He is at the call of House committee and individual Members for answers and suggestions. He often receives requests to help outside organizations in all parts of the country.

"When I started in this job," he says, "I used to keep a notebook at my bedside to write down parliamentary questions that occurred to me. The next morning I would try to find the answers."

While becoming proficient as Parliamentarian, Mr. Deschler studied law at National University here. He was admitted to the District bar in 1934. He belongs to various parliamentary groups, writes for professional publications, and has been active in national and international gatherings of parliamentary experts.

Unlike many veteran officials at the Capitol, he is not especially fond of reminiscing, particularly about the more ticklish and critical occasions of past years. He maintains "it probably is best to forget them and do the job immediately at hand."

Civil Rights

EXTENSION OF REMARKS

OF

HON. EDWIN B. DOOLEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, March 11, 1960

Mr. DOOLEY. Mr. Speaker, H.R. 8601 has my support, not only because it is aimed at a vast area of demonstrated need, but because it will help eliminate a grave injustice which is obvious to all who have read the facts concerning this highly controversial issue.

Thousands of good Americans are being disenfranchised regularly for no other reason than that they are members of the Negro race. Official reports indicate that this is an established fact.

It is axiomatic that legislation cannot effectively thrust on the people, or a segment of the people a mandate unacceptable to them. But today time and winds move swiftly and there seems no other alternative than that of passing legislation to accomplish the desired end that freemen can act as freemen and exercise their lawful prerogative. No man should be denied the right to vote.

The bill has other features regarding fugitive felons; bombing of schools and

churches, and so forth, but in essence it is aimed at protecting the right to vote.

With the world watching the outcome of the controversy, it is high time we faced up to the crux of the problem by passing H.R. 8601.

Fee Charged for Visiting the Washington Monument Should Be Removed

EXTENSION OF REMARKS

OF

HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. REECE of Tennessee. Mr. Speaker, I received a letter from one of my constituents expressing his amazement that there should be a charge for visiting the Washington Monument. In view of the inspiration which students and other citizens from over the country receive from visiting Washington Monument, this constituent does not understand why there should be a charge to visit this inspiring national shrine.

I think there is much to be said in that the monument is not in the category of national parks and other places where charges are made, especially since it was built in part by public funds and the remaining by Government funds, and is operated by the Government for the public.

My constituent prefers that his name not be used.

DEAR CONGRESSMAN: This is a request that you take such steps as are necessary to bring about the freeing of the Washington Monument.

I have been embarrassed many times in the past by the reaction of friends and relatives visiting Washington for the first time, when they learned they had to pay a dime to ride the elevator to the top of the monument.

After viewing the majestic Capitol, admiring the beautiful tree-lined Mall, and the quiet dignity of the many Federal buildings comprising the Federal Triangle, the clean crisp lines of the White House, the awe-inspiring size of the Pentagon, the restful atmosphere of the Arlington Cemetery, respectfully viewing with bated breath the quiet precision of the ceremony changing the guard at the Tomb of the Unknown Soldier, visiting the Lincoln Memorial and having a lump form in their throat as they gaze upon the calm, sad features of the statue of President Lincoln, visiting the many breathtaking views of the parks and gardens, they always turn to the landmark by which they keep their bearings, that magnificent architectural accomplishment, the obelisk pointing to the heavens, erected in memory of the Father of our Country, our first President and greatest citizen.

Of course, they anxiously await the experience of riding to the top and viewing the matchless panorama of the Nation's Capital. This is the time I have learned to dread. When they get in line and eventually reach the man who so efficiently makes the change and collects the dimes they invariably register surprise and disillusionment. I have had them turn astonished and say "Do they really charge for this—I thought it belonged to the Government."

My feeble attempts to explain away their shock and amazement by telling them that former Secretary of the Interior Ickes placed the charge upon riding the elevator to help pay the cost of maintaining and operating the monument meets with indifferent success. The usual reaction is "But all the others are free, why of all things, do they charge to go up in Washington's Monument?"

The reaction of many after visiting Washington's Monument is that, after all, the things they have seen are false fronts, tinsel and glitter, and Washington is somewhat like Coney Island except that the elevator ride in the monument is less expensive than some of the rides at the island.

I'm sure many people have had the same experience and feel the same as I. The charge for Washington's Monument seems to be a rude and deliberate attempt to give a commercialized atmosphere to our beautiful Capital, in which all our citizens should feel proud. I'm confident the annual receipts from the dimes collected from visitors to ride up the monument is small after the cost of collecting and accounting for the money is deducted. It is especially small when compared to the effect it has on the feelings of our visitors. If the money is so badly needed, why not free Washington's Monument and place a charge on the Smithsonian Institution, or the Zoo, or the Capitol Building, or even Arlington National Cemetery?

I hope you can, somehow, bring about the freedom of the Washington Monument, and the return of it to the citizens of the United States of America.

If the Shoe Fits

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 8, 1960

Mr. ROBISON. Mr. Speaker, undoubtedly every Member of this body has been serious concerned over what has been happening to America's share of world trade as a result of our unexpected success in aiding underdeveloped nations to modernize their productive facilities and the economic offensive mounted by the Communist bloc.

The congressional district I am privileged to represent is a true cross section of America. It is both industrial and agricultural. Its products are many and varied, but one of the most important thereof has been footwear. Shoe imports from nations having much lower living standards than ours have been steadily rising and have now reached a point where relief may be vital.

I am deeply worried. However, I still cling to the belief that a solution for this and allied problems cannot be found behind high tariff walls or quota barriers that will, in the long run, solve nothing. I have felt it would be better for American industry to sharpen their pencils once again and to apply what we have always heretofore believed to be our acknowledged ingenuity in finding better ways of production, modernizing plant facilities, diversifying products and so on. In such an attempt, the Federal

Government certainly has a part to play by giving American industry the incentive to do these things, and enacting legislative reforms that will permit easier capital formation and encourage research and technological advances. Our antiquated and patchwork corporate tax structure is hardly conducive to these things at the present time.

It may also be that what we are now experiencing is only a transitional period, naturally difficult to undergo, in which other nations, friendly to us, are coming into their full economic flower and that, as their people finally begin to enjoy a standard of living approaching that of our own, vast opportunities for new American markets abroad may open up. In other words, although the pattern of world trade is changing and will change continuously, total trade and new American opportunities should also increase.

Thus, growing world industrialization may be a threat to us only if American industry, business, labor, and government react to it defensively and with hostility. On the other hand, if we can somehow regard it as the challenge that it is, and go forth confidently to meet it, it could offer an opportunity beyond measure to promote and safeguard freedom by building better lives for freemen everywhere.

So it was that I was pleased to read the following account by the syndicated columnist, Sylvia Porter, as published in the Binghamton Press of Binghamton, N.Y., on March 8, 1960, which has special reference to one segment of the American shoe industry:

YOUR MONEY'S WORTH—SHOE FIRM DECIDES
MADE IN UNITED STATES BEST

(By Sylvia Porter)

NEW YORK.—Last year, when imports of foreign shoes to our country registered a towering 1,000 percent increase over 1948, one of America's manufacturers of footwear entered negotiations with the powerful Tang family of Hong Kong for a partnership deal on a shoe plant in that exotic city.

The aim of the U.S. corporation was obvious. It figured that if it could use the enormous supply of low-cost labor available in Hong Kong, it could produce low-priced women's flats there which would compete with the flood of budget-priced imports from such countries as Japan and, possibly, India and Italy.

The anxiety of the U.S. company was equally obvious: It feared that it couldn't make competitively priced, comparable shoes in its Mississippi plants with employees getting hourly wages more than 10 times the Hong Kong level, and thus, it decided it was wiser to join than to fight the competition.

Plans for the shoe plant have now been abandoned.

Genesco—the U.S. company which distributes over 30 million pairs of shoes annually under such famed brand names as Delman, I. Miller, Mademoiselle, Johnston & Murphy, Jarman & Flagg Brothers—and the Tang family have concluded that despite the huge spread in wage costs, Genesco's streamlined plants in Mississippi can turn out attractive, durable shoes so cheaply that Japan and Hong Kong can't compete.

This is a wondrously inspiring story with a vital message at this moment when scare talk continues to spread that America's higher wage levels will price us out of the world's markets and invite any low-wage na-

tion to beat our industrialists on our own home grounds.

Know-how, made-in-the-U.S. imagination, advanced technology and techniques, hard selling—these are the weapons with which Genesco is sure it not only can meet but also discourage cutthroat competition from foreign producers.

With these weapons—and not with any retreat in our living standards—just about any American industry can compete successfully in the broadening global markets of this new epoch.

Let us have no illusions about the upsurge in foreign shoe sales and the mounting protests of both shoe manufacturers and unionized shoe employees against the imports.

Imports of footwear (other than rubber) from producers in Canada, Britain, Spain, Italy, and West Germany totaled almost 22,300,000 pairs last year, up 18 percent over 1958, and comparing with next to zero a few years back. Imports from Japan alone totaled almost 8,900,000 pairs on top of 12 million pairs the year before. And this has been in the face of tariffs ranging from 5 to 20 percent.

As chilling as any statistics are the comparisons in costs:

The average price per imported pair of shoes is 47 cents from Japan, 62 cents from Hong Kong, less than \$2 from all countries. The average U.S. factory price per pair \$3.78.

But now comes Genesco's cold decision that its new, efficient shoemaking machinery, techniques, and factory setup at its Fulton, Miss., plants have made it more than competitive with budget-priced imports. And the company claims that there have been no layoffs due to automation; workers simply have been transferred to new jobs at equal or better pay.

In view of the conditions which make this tale top news, it is a pleasure to pass on the comment of Genesco's chairman, W. Maxey Jarman, that "this is an indication of how determination and ingenuity can reduce labor costs here so that in spite of our far higher hourly wage rates, foreigners find it difficult to compete with us."

Surely any defeatist about our Nation's ability to compete with cheap-labor imports should ponder this message well.

The Illusion of Soviet Economic Growth

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. OSTERTAG. Mr. Speaker, we are all familiar with the gloomy warnings that the Soviet Union's economy is expanding far more rapidly than is our economy, and the Soviets will overtake us in production before too many years. These questionable claims form the basis for constant demands that the Federal Government intervene more actively in the Nation's economy with more so-called pump-priming measures.

There is a great deal of evidence which refutes all these contentions, and a prominent British economist has recently gathered and published the evidence in a book, "The Real Productivity of the Soviet Union." He points out that the supposedly rapid Soviet economic growth is an illusion, based upon comparisons with the immediate postwar

period when Russia's economy was drastically reduced by the war. In truth, Soviet economic gains are mediocre, he concludes; not up to ours. And what we should never lose sight of, even these mediocre results have been attained at the expense of personal liberty, national traditions, and religious worship.

Under unanimous consent I insert in the RECORD a newspaper article from the Washington Post and Times Herald of March 12, 1960, which reviews this situation in detail:

RED GROWTH RATE FOUND LAGGING—ECONOMIST FINDS SOVIET PERFORMANCE MEDIOCRE

(By Frank C. Porter)

The specter of burgeoning Russian productivity has caused considerable consternation in the United States.

Politicians, businessmen, economists, and scientists have pointed to figures showing an annual Russian growth rate of 6 percent or more against our 3.5 percent average.

Some have called for extraordinary measures to close the gap, to protect the U.S. productive superiority, to give the lie to Khrushchev's boast that the Soviet's real national product will match or top ours in a decade or so—a boast which many Americans seem to fear may prove only too true.

Almost alone is a British economist who, in effect, calls the whole thesis tripe.

"Like so many other things which everybody knows, this supposed growth trend of the Soviet economy is an illusion," writes Colin Clark, Oxford University economist and research director of the Econometrica Institute. Fortune magazine has printed the main conclusions of Clark's forthcoming book, "The Real Productivity of Soviet Russia," in its current issue.

The illusion arose, Clark says, through expectations that a spurt in Russian productivity, reflected in data for the period 1948-53, will continue indefinitely. He chides fellow economists for overlooking a commonplace: After a war or other disaster which has drastically reduced its productivity, a nation will go through a period of rapid growth followed by gradual deceleration of this rate "as productivity approaches that position on its normal trend line which it might have been expected to reach had the war not occurred."

"The information for the years after 1953 shows in actuality the rate of (Russian) growth slowing down," he points out.

Clark likens neurosis over Russian growth to the prognosis of a physician who, finding that a child recovering from a serious illness shows a rapid gain in weight for 2 successive weeks, plots the figures on a logarithmic diagram and tells the parents that in a year the child will weigh more than the father.

As for Clark's own figures, he finds the annual rate of Soviet growth per man-hour to be only 1.2 percent over the period 1913-56. Reckoned from 1928, the average is 1.7; from 1939, only 1.6 percent.

Against this, the average rate of growth per man-hour in the United States has been 2.3 percent a year from the 1890's, Clark says.

Since population increase is also a factor in growth of the total national product, Clark takes some pains to show that the Soviet Union falls far behind the United States in this category as well.

Russia's rate of population growth has been 1.5 percent and possibly is now decreasing while the U.S. rate stands at 1.8 percent and is increasing, Clark claims.

The British economist comes to a political and moral conclusion: "Governed by fanatical materialists, the Russian people have been called upon to sacrifice their personal liberties, their national traditions, and their religion for the sake of material progress;

and all that they have received in return is a rate of material progress far below that of most other countries. . . . It should be made clear how very mediocre the economic results of communism have, in fact, been.

Landrum-Griffin Act Works for Rank and File

EXTENSION OF REMARKS OF

HON. WILLIAM S. BROOMFIELD

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. BROOMFIELD. Mr. Speaker, slowly, but surely and effectively, the Landrum-Griffin Reform Act passed last year is proving to be wholesome and beneficial as an influence on the union movement. Attesting to that statement is the article by Walter Pincus which appeared in the Washington Sunday Star of March 13, 1960. The article, reprinted below, is typical of many news stories appearing since the effective date of the new law:

LABOR ACT WORKS—SLOW BUT FIRM

(By Walter Pincus)

The Federal Government is quietly but forcefully moving to put into operation the Labor Management Reporting and Disclosure Act of 1959.

The Labor Department has turned over to the Justice Department for investigation and possible prosecution the case of Harry Bridges' International Longshoremen's and Warehousemen's Union which has refused to give information to the department with regard to alleged Communist affiliation of union officers. Section 504 of the act prohibits Communist Party members from holding office in a labor organization and makes it a crime for unions to willfully employ party members if they have knowledge of such affiliation.

The Federal Bureau of Investigation has been requested by the Justice Department to check the backgrounds of 492 members of one union, believed to be Bridges' ILWU, for possible Communist affiliation.

The Bureau, at the request of Justice's Internal Security Division, has begun a wide-scale review of all labor unions in the country with the aim of turning up Communist membership of union officials.

The Justice Department's Criminal Division has requested FBI investigation of more than 92 individuals for possible violation of a section 504 provision which prohibits former felons from holding union office within 5 years after conviction or following the end of their imprisonment.

FUNDS' MISUSE ALLEGED

The Labor Department has forwarded to Justice for further investigation about a dozen cases involving alleged misuse of union assets, violence in union activities, and fraud in local union elections.

The Compliance Division of Labor's new Bureau of Labor Management Reports has begun its own investigation of a number of labor relations consultants who failed to file reports of their activities as required under the act. Only 12 have done so.

The division has received some 200 complaints monthly, most of which come from rank-and-file union members who request investigation of some alleged violation of the act by local officials. A large number of these cannot be prosecuted, because the alleged incidents took place prior to enact-

ment of the bill into law September 14, last year. The Department already has closed 194 cases after determining it did not have jurisdiction.

However, as of January 31 this year, more than 400 complaints had progressed to cases under active investigation by Labor Department agents in the field.

In the area of union reporting, more than 50,000 charters, constitutions, and bylaws have flooded the Labor Department for review and filing. More than half of these, Department officials report, had to be returned for correction, a majority showing minor discrepancies such as unsigned documents and improper completion of forms. In a number of cases, however, unions were informed that in order to conform with provisions of the law, some basic changes were required. A number of locals had to include provisions for secret ballots during elections, and in some cases the requirement for elections themselves had to be written into the rules.

FINANCIAL STATEMENTS

Union financial statements, which do not have to be filed until the close of the fiscal year, have been coming in more slowly. The Department has created a review process with the aid of the General Accounting Office. Statements to undergo the closest scrutiny will be those containing information on union loans to officers and outside business enterprises along with salaries and other miscellaneous disbursements.

Under the act, employers are also required to file statements if they lend money to union officials or spend money to influence union activities. Up to January 27, only 6 employers had filed such reports although some 10,000 are expected eventually to comply.

Employers are understood to be balking at the extent and type of information the Labor Department is requesting them to file.

Union officials who maintain personal financial dealings with employers, such as stock in companies or association in other enterprises, are also required to file under the act. Through the end of January only 12 such reports were received although estimates on the number who may file have run as high as 100,000.

The main thrust of the act, according to Justice Department officials is found in these reporting sections and legal action stemming from any false reports won't be initiated for many months as the reports are closely reviewed and compared after their receipt.

To date, however, the act has had significant effects on the Nation's unions.

LOCALS' SELF-GOVERNMENT

Faced with the requirement of filing extensive information on locals in trusteeship, parent unions dissolved 94 of them, giving self-government to the locals involved. Some 503 trusteeships, however, still remain.

James Hoffa, Teamster president, announced publicly following the President's signing of the act that he had sent telegrams to his locals removing from office the ex-convicts who fell under section 504 of the law. A private Department of Labor report indicated that more than 100 Teamster officials were suspended by the Hoffa telegram although the Teamsters themselves will admit to only 5.

A 14,000-member Illinois local has been forced by its rank-and-file members to publish all that transpires in what were formerly closed leadership meetings. Attendance at the union meetings themselves has so increased that a larger meeting hall had to be selected.

Says a Labor Department official charged with putting the act into operation, "Our impact on unions will be tremendous—but in the long run it will be the best thing that could have happened to them."

This Day of Ours Is Beautiful

EXTENSION OF REMARKS

OF

HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. DENT. Mr. Speaker, this House took cognizance of the fact that this date, March 14, was celebrated by the Slovaks as their Independence Day.

We all know that Slovaks in the free world, and especially those of these United States take great pride in the history of their country and are deeply concerned with the enslavement by Communists.

The Rev. J. Dragos-Alzabetincan, a Canadian-Slovak priest, in commemoration of this important date has penned a beautiful tribute, headed "This Day of Ours Is Beautiful."

Mr. Speaker, I ask unanimous consent that the remarks of the Reverend J. Dragos-Alzabetincan be made a part of the Record of the Congress:

THIS DAY OF OURS IS BEAUTIFUL

(By Rev. J. Dragos-Alzabetincan)

One day in the year is outstandingly beautiful. It is March 14, 1939. It is a day beautiful as the heavens. A day to be remembered; a king among other days in the year. A day which a just God hath made. A day on which heaven stooped to nestle in our country, on which God granted freedom to the Slovaks. The day on which the Lord came to visit us. A day which remains a beacon light to Slovakia.

This day of ours is beautiful as the heavens. It is the day on which our Parliament unanimously declared, that it is a new independent Slovak State; and we proudly sang "Hej Slováci." The day on which our nation rose from a dark grave. The day which is like a glorious Easter and on which truth rose again. The day on which the eyes of our brothers were alight with joy. The day on which, after a thousand years, our Slovak land began again to breathe freely to live, and our Slovak President, our Slovak representatives in a Slovak Parliament began to function unhampered.

This day of ours is beautiful as the heavens. Never before did we have a day like this. A day really Slovak, holy, and blessed. A day on which a horrible curse fell from the nation. A day of deliverance from agony and shame. A day, on which the dark, heavy, horrible storm clouds, hovering over the Tatry, have been dispersed. A day when from the lips of old and young rushed forth the cry: We are free, Lord. The day on which tyranny over the country ceased and the yearnings of generations were fulfilled. A day, unique in our history. A day which lifted our people from slavery to glory.

This day of ours is beautiful as the heavens. It saw the triumph at last of the right to a free life; the triumph of the goal toward which generations of our ancestors strove unceasingly. And what they endured and suffered—no tongue can express. It marked the waving of white, blue, and red flags over a new Slovakia. And bells rang out joyously throughout our cities, our villages, and our towns. It led the whole country and all its people to church to thank God at the altar. Forever the Slovaks will hallow and cherish this day of freedom. Freedom like that of the enchanting spring when all things seem to come back to life after the cold, cruel winter.

This day of ours is beautiful as the heavens. A day on which from our meadows, cottages, and palaces, from fields, lands, and plains, from chapels and churches, grateful voices rose heavenward. A day that shed a fragrance like a rosebush in a meadow. A day which saw great rejoicing in town, city, and hamlet; when joy and brightness gave a solo; a day which saw no fading twilight. A day on which a whole country sang to God; when the Tatry lifted their heads proudly; when plants, flowers, opened to sun; when the birds, too, rejoiced in song. It is a day on which Slovak elements pulsed for the first time in the nation and foreign elements were banished. The day on which brotherhood, harmony, and mutual love were triumphant, when we encountered forgiveness everywhere.

This day of ours is beautiful as heavens. Whatever in life is good, beautiful and humane—suppressed until now—was revived. A day on which magnanimity, honor, and love of peace—a Slovak trait—again prevailed. When the name of our beloved Slovakia—after a lengthy era—was put on the map; a day on which the Slovak became his own master, and no foreigner would again overstep his rights. The day on which our nation determined to march forward; the day on which it brilliantly passed a test of maturity and demonstrated to the world its ability to govern itself in justice.

This day of ours is beautiful as the heavens. The day on which Slovak became the official language and took its rightful place in the schools. The day on which the defense of free Slovak country was placed in the hands of our own Slovak soldiers for the first time. The day on which the Slovak people were given preference in schools, in offices, business and other undertakings. The day which brought to Tatry lands support from trade and tax funds. A day, that was given to me, to see and experience. It is etched forever in my soul; its echoes I hear even here in exile. A day bright and real; it was not a dream.

This day is beautiful as the heavens. A day most commemorated among the Slovaks. My pen has described but little of the beauty of this day—Independence Day—and what joy stirred our hearts that day.

For the time being March 14 rests quietly. But we shall rouse it again—for day must follow the night.

The 41st Anniversary of the American Legion

EXTENSION OF REMARKS

OF

HON. THADDEUS J. DULSKI

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 14, 1960

Mr. DULSKI. Mr. Speaker, on March 15, 1919 some 463 officers and enlisted men, representing the combat divisions and major units of the Services of Supply of the American Expeditionary Force, met in Paris. One of the moving spirits was Theodore Roosevelt, Jr., son of the great President; another was Bennett Champ Clark, son of the then Speaker of the House of Representatives, a future Senator and judge. The one was a Republican; the other, a Democrat. At this meeting the American Legion was born. From this initial gathering sprang the meeting at St.

Louis on the following May 10, when the Legion came formally into being. To the constitution adopted for their organization the veterans of World War I affixed the following preamble:

For God and country we associate ourselves together for the following purposes:

To uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a 100-percent Americanism; to preserve the memories and incidents of our association in the Great War; to inculcate a sense of individual obligation to the community, State and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness.

From these original 463 men, the Legion has grown to number 2,702,992 in 1959 and 2,026,637 members, as of the 4th of February of this year.

I am proud indeed to be a member of the Adam Plewacki American Legion Post No. 799, Buffalo, N.Y. It is with no small satisfaction that ours is not only the largest post in the State of New York, with 3,862 members, as recorded last year, but actually the seventh largest in the Nation. On January 19, our post had 3,900 members with still 10 months to go.

Since the Legion was founded, 41 years ago, its members have passed through a record World War. We pray that there may never be another; but whatever befalls, as we enter upon the fourth decade of our existence, we rededicate ourselves "For God and Country," bound to another in a tie which shall not be broken.

Farm Facts for the Taxpayer

EXTENSION OF REMARKS

OF

HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. DEROUNIAN. Mr. Speaker, I call to the attention of all Members of the House of Representatives the following unvarnished facts concerning the farm program that had been legislated by the Congress. Mr. McFarland's article appeared in the Washington Daily News on February 23, 1960, and I include it herewith:

MONSTROUS TROUBLE IS SEEN FOR CURRENT FARM PROGRAM

(By Kermit McFarland)

Our so-called farm program has the Government in a squeeze which can mean nothing but monstrous trouble, no matter what's done about it.

The program got its real push in World War II, as an incentive to farmers to produce for war needs. It worked.

But the politicians decided if it was good for war, it was good for peace. They kept it going when the war was over—to prop up the farmers' prices.

As a result, the Government accumulated mountains of surpluses, market prices

sagged, the farmer was subjected to a strait-jacket of controls and the taxpayer was soaked for many billions in losses.

The surpluses became so unmanageable, the sheer cost of storing so staggering that the Government desperately hunted for ways to get rid of them.

BIG DISPOSAL PROGRAM

As a result, we now have a tremendous disposal program—we sell the stuff abroad where we can, we barter it away, we give it away at home and overseas. What's sold overseas is sold for foreign currencies, and we spend the money in the country where we get it—for our own purposes, for grants and loans to the same country.

So what we now have is not only a farm program, but a half-dozen disposal programs all started to overcome the disastrous results of the farm program.

Since 1954, we have sold grains, fats and oils, beans, milk, rice and raw cotton abroad—all out of these surpluses—having an export value of more than \$4.1 billion. But these commodities cost the Government nearly \$5.8 billion. The difference was an outright loss to the taxpayers.

Since 1954, we have given away nearly \$1.8 billion in these commodities. Most of this went overseas, and most of it went to peoples in dire need, to victims of floods, famines, droughts, typhoons, crop disasters and just plain needy—all over the world.

This phase of the program is strictly humanitarian—although motivated by the necessity of getting rid of these mountains of surpluses. It probably is the greatest producer of good will toward America in the whole foreign aid undertaking.

Yet, with all this tremendous disposal program, the Government still owns more than \$9.5 billion in surplus crops, an all-time high. The storage costs alone are running \$1.7 million a day.

A MAJOR OBSTACLE

And the vast disposal program, ironically, has become a major obstacle to achieving the very thing it was designed to do—eliminate the surpluses. Sixty million persons in 92 countries have come to depend on this free food. If the surpluses are wiped out, the free food stops. The immense good will created by the food is erased.

Moreover, 14 million schoolchildren in this country get free lunches out of this program, and another 5.4 million needy get allotments of the surplus foods. What happens to them if the surpluses are eliminated?

The Government is caught in a monumental trap of its own making. If the farm subsidy program continues as is, the cost to the taxpayers and farmers will be even more staggering than now—if, in fact, the program doesn't collapse of its own complexity. If the program is stopped, the humanitarian and charitable programs here and around the world collapse—with suffering to the people who now count on them and serious damage to the Nation's standing as a benefactor.

Pellmell Socialized Medicine

EXTENSION OF REMARKS

OF

HON. JAMES B. UTT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. UTT. Mr. Speaker, certain labor bosses and other architects of the welfare state are directing a massive effort to sell America on a program constitut-

ing a major step in the direction of socialized medicine administered by a Government bureaucracy.

The paternalistic welfare state advocated by these gentlemen would pay the medical and hospital care cost of a selected group of Americans at the expense of all Americans in payroll taxes and inflation; it would tend to fill our already over-crowded hospitals with individuals not requiring professional hospital care; and it would threaten the breakdown of our entire social security system. These are not the dire predictions of an alarmist but are instead reasonable observations based on experience with socialized medicine as operated in other countries.

In their desperate bid to sell their program to the American public and to distract attention from the lack of the true merit in the proposal, the well-organized and well-financed proponents of this step toward socialized medicine have printed cards urging support of their proposal which bear a verse taken from the 71st Psalm which reads:

Cast me not off in time of old age; for-sake me not when my strength faileth.

This verse from the Psalms is tragically taken out of context and put to distorted use. Read in context, this verse from the 71st Psalm is indeed a prayer to God and manifests faith in His bounty. This is evident from the first verse in the 71st Psalm which reads:

In Thee, O Lord, do I put my trust; let me never be put to confusion.

The Forand bill proponents presumably would have us transfer our faith to the materialism of paternalistic government.

The advocates of a governmental medical care program have never succeeded in establishing the need for a Federal program to undertake sole responsibility for the cost of providing for the health of our citizens. Their indifference to this basic question suggests shortsighted political motivation that carries with it inherent dangers to our free enterprise system. The average American family of any age pays more annually for housing, food, and transportation than it pays for medical care. If those who want socialized medicine really wanted to do something for the American people, perhaps they should advocate programs providing for free housing, free food, and free transportation. I submit that before America is ready to embark on an ill-considered program that would lead inevitably to socialized medicine, we must first demonstrate the existence of a national need and a national desire for such a step. The present advocates of this step are unable to demonstrate either such need or such desire.

In the March 19 issue of the Saturday Evening Post the lead editorial is captioned "A Race in Welfare Programs Is Just What We Don't Need." This editorial comments on the legislation pending before the Congress to provide Government sponsored health and medical services under the social security program. The editorial states that this proposal "could trigger a can-you-top-this competition in welfare promises." The

editorial characterizes legislation on this subject as constituting "the longest breakthrough yet toward socialized medicine in the United States."

The editorial properly points out deficiencies in our existing social security program that should be corrected before we embark on an entirely new aspect of socialized endeavor.

So that the contents of this Saturday Evening Post editorial can be available to my colleagues, I will include it as a part of my remarks in the RECORD:

A RACE IN WELFARE PROGRAMS IS JUST WHAT WE DON'T NEED

Renewed controversy over socialized medicine and allied subjects is promised by consideration in Congress of the Forand bill and its running mate in the Senate, the Kennedy bill, both of which provide broad health and medical services for those covered by the social security program. This could trigger a can-you-top-this competition in welfare promises. Politicians seldom accept the truth of a remark by D. W. Brogan in the New Leader: "People are less grateful for benefits than irritated by minor annoyances accompanying the benefits."

Indeed, the necessary increase in social security taxes on workers and employers—estimated at around \$2,100 million—would outweigh in many minds the attractiveness of the additional hospital, medical, nursing and clinical services provided in both these bills. Both bills are under heavy attack as constituting the longest "breakthrough" yet toward socialized medicine in the United States.

The above comments do not mean that the social security systems is perfect. For one thing, there is no reason why 50 should remain the minimum age at which workers are eligible for disability benefits. The age limit was put into the bill in 1956 as a concession to Members of Congress who feared that the disability provisions would bankrupt the plan. Although chronic illnesses occur more frequently in older people, men and women under 50 also become disabled, and it is difficult to see why their troubles should be ignored on the theory that they are too young to have troubles.

Another reform is one we have urged before—namely, the removal of the limitation on the earnings of social security annuitants between ages 65 and 70. This limitation is widely regarded as unfair and discriminatory. It produces a sense of frustration in men who are often upset by retirement from routine employment, besides denying them the opportunity to offset to some extent the effect of inflation on their social security checks. It is doubtful that this change would add greatly to the cost of social security as an appreciable part of the earnings of annuitants would be recouped in income tax.

Another possible shoring up of the disability provisions lies in the field of administration. Representative CLEVELAND BAILEY, of West Virginia, reports complaints of inconsistent rulings by social security officials on applications for disability allowances. He cited one case of a man who had been described as totally disabled by a life insurance company, but was turned down for disability allowances as not disabled within the meaning of the social security law. Congress might well setup uniform standards to govern these procedures.

In any event, there is no virtue in jumping headfirst into State medical care without attempting to smooth out the bulges in the existing system. Neither the Forand bill nor the Kennedy bill seems to take account of the existence of hundreds of public, private and mixed hospital and health plans all over the country. Stimulated by threats of Government health programs, the private insur-

ance business has come up with all sorts of new security devices. The insurance information office of Pennsylvania is authority for the statement that 123,038,000 Americans are already protected for medical and hospital care—including 40 percent of all persons over 65.

This awakening might well have occurred earlier. It is true that an insurance company is required by law to maintain reserves against emergencies, while the Government, if faced with an insolvent insurance plan, need only increase the tax. Nevertheless, a little intrusion of political prescience into the actuarial calculation might avert the trend toward welfare socialism in this country.

As President Eisenhower has said, "The Federal Government alone cannot and should not undertake to meet all these needs. Where assistance is needed, much of the initiative is rightly being taken by the States and communities, by families, employers, labor organizations, voluntary groups and religious bodies throughout the Nation."

If anything could weaken the determination of such groups to take care of their own—not to mention the desire of individuals to provide for their own rainy days—it would be the news that everything was being taken care of by the welfare state.

Ireland's Future Related in St. Patrick's Story by William James Conlon of Lynn, Mass.

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an excellent article on Ireland and St. Patrick by my constituent, William James Conlon of Lynn, Mass., a man well versed on this subject, a lifelong student and well-known writer on this matter which is of course close to the hearts of all Irishmen:

IRELAND'S FUTURE RELATED IN ST. PATRICK'S STORY BY CONLON

(By William James Conlon)

In the course of my 40-odd years, I have attended a great many St. Patrick's Day celebrations—listened to a great many speeches in praise of St. Patrick in particular and the Irish, God love 'em, in general. I have even made a few myself. Looking back on them now—my own included—I think they may have been bad speeches, although they went over big. They were pretty much the same. They recounted the glorious history of St. Patrick, followed up with the accounts of the Irish heroes of history and their heroic deeds and then the speaker sat down with his audience emotionally charged and cheering.

I think now that those speeches may have been bad. Not because they were not oratorical masterpieces, nor because they were not true—but because they dwelt too much on the glories of the past and said nothing constructive about the future in which we and our children and their children must live.

Now I do not intend to ignore St. Patrick—he wasn't the kind of man you can ignore. Neither do I intend to forget the countless other Irish heroes, saintly or warlike or both. What I want to do is to place

those ancestors of ours in the context of our times and to say what I think they would say about the future of Ireland and the world and Ireland's place in the present crisis and the future struggle.

The age in which Saint Patrick lived was one in which the ancient institutions were breaking down and confusion reigned in men's minds. The Roman Empire was disintegrating and with it the political structure of the civilized world. Fear and uncertainty were everywhere in that chaotic time. Into this part of that world—into Ireland Saint Patrick brought two great and related ideas—faith and freedom. He was first and foremost an apostle of the Catholic faith. There were apparently Christians in Ireland, but he made the country dominantly Christian and so thoroughly that Ireland became for the next several hundred years a center of learning and a center of missionary activity. It remained so in fact until the energies of the people were consumed in fighting off the attempts of their neighboring island to conquer them and they had no more left for teaching their arts and ethics to others. Up until that time Irish missionaries had gone to Scotland, to northern and central Europe and Ireland was a kind of headquarters of culture and religion for Western Europe. As well as being an apostle of faith and quite as logically, Saint Patrick was an apostle of freedom. He had been a slave.

He endeavored to make people free. He challenged the royal authority of the pagan chieftains, protested and opposed raids by British bands, who carried Irish captives off into slavery and raised money from the ransoming of these captives. Ladies and gentlemen, the story of Saint Patrick has peculiar relevance today because we live in a chaotic age when the old structures, political and otherwise, on which humanity rested, are breaking down under the force of wars and history. Fear and uncertainty reign in many places and in many minds. Moreover, there is a great and powerful concerted attack on just the things for which Saint Patrick stood. The specter of Soviet Communism which is stalking over the world today, is the denial of religious faith and at the same time the denial of human freedom. (Communism is godless.) It is also a system of slavery, based on contempt for and oppression of the common man.

But there are weapons which will defeat Stalinism and Khrushchevism. They are same weapons as those wielded by Saint Patrick in his fight against false gods and inhuman men. On the one hand he held to his faith in God. On the other to his faith in human freedom and the human will to be free. These are indestructible and when we cling to them we are indestructible, too. That is the lesson of Saint Patrick for this year, 1959. We know how these weapons served the Irish people—helped along, it is true, by other weapons which Irish courage saw fit to use—in the long struggle against domination, a struggle not yet completely won from the three O'Neills to the days of the immortal Wolfe Tone, from O'Connell and Parnell to the immortal Terence McSwiney.

The Irish have kept their faith and freedom of spirit and their fists alive to fight against religious persecution and foreign control. The present government in Dublin is only a hindrance to complete freedom of all Ireland as advocated by the immortal Wolfe Tone and the united Irishmen of his time. Though the illegal wall built by the English stooges and partitioners is a scourge inflicted upon the Irish by the puppet stooges known as the Stormont clique and dictated to by England temporarily casts a gloom over Ireland. But the Almighty God never put a dividing line around the six northern counties.

Therefore it must definitely be wiped out. The coming generation of Irish youth will take care of and see to it that the six northern counties will be part and parcel of an all Ireland. As the immortal Mohart Emmett and Wolfe Tone advocated that it should be. There we will have a sovereign Irish state as the Almighty God left it by his own hands. The Irish have not fought for freedom in Ireland alone. The United States can count an endless number of heroes of Irish birth or descent. Charles Carroll, founder of the State of Maryland, was one of these and it was in Maryland that religious freedom was really born in this country. Twelve signers of the Declaration of Independence were Irish.

Eleven Irish generals of the Revolutionary Army, including a Sullivan and a Conway. The American Navy's Barry and McDonough and thousands of others who either of Irish birth or descent, who fought to set this country free from British tyranny and domination. Andrew Jackson, great defender of democracy was of Irish descent. The list goes on through General Phil Sheridan to Alfred Emanuel Smith, ex-Governor of the great State of New York, and the many Irish heroes of World Wars I and II including General McAuliffe who said "Nuts" to the Germans at Bastogne. Cohen Kelley, who gave us renewed courage after Pearl Harbor and the five Sullivan brothers who gave up their lives when the cruiser *Juneau* was sunk by the Japanese in the Pacific. Now the achievements of these men were remarkable but they did not achieve what they did simply by sitting in admiration of St. Patrick. They followed the old precept of (go thou and do likewise). The glory of St. Patrick was reflected in their deeds but they also infused something of their own spirit. They took the god saint's principles and they fitted them to their own hour and their own need.

There is a lesson in that for we Irish, both here in America, in Ireland, and throughout the world. Ireland and God knows our hearts are with her is now in what may be hoped are the last stages of the fight to end the pernicious partition and to become what Cardinal O'Connell referred to as "Ireland, one and indivisible, though the heavens fall. The opposition to partition—the fight for a united Ireland—are in the very best of Irish tradition. It has been a bitter war marked by British deceit and brutality and by typical Irish courage and patriotism.

It should not be forgotten nor should it be shelved. The world today has great need for the courage and faith in God and His principles that Saint Patrick gave to the Irish. The whole world is now lined up in a cold war in which the issues are clear. The choice is between Western democracy and man's right to his belief in his God, on the one hand, and godless communism on the other. A world conflagration may break out at any moment.

In such a situation, I have no doubt at to what St. Patrick would do or say. He would be in the vanguard of forces for freedom and Christianity leading the drive to rid the world of the serpent of communism. St. Patrick did not do his fighting from the sidelines, he led the way. It may be a bitter pill for the people of Ireland and for its leaders to realize that while the United Nations with the United States in the lead, are throwing the weight of the Western world into the battle in Korea, in an effort to throw out a foreign power occupying a part of the nation and to end the partition if possible. Ireland herself suffers under a no less unjustifiable occupation and partition and the rest of the world does nothing about it. England is left to work her will in the six stolen countries against the over-

whelming majority of the Irish people in all Ireland.

In spite of this, we of Irish blood cannot afford to ignore our obligations to the principles laid down by St. Patrick, the principle that faith and freedom must be fought for if they are to be won and held. Communism has made fewer converts in Eire than anywhere else in the civilized world in proportion to population. It is up to Ireland to beat down the English threat which faces it and please, ladies and gentlemen, believe me, very sincerely, this won't be accomplished by the tactics of the present Dublin government in power. DeValera and his spineless crew in the Dail in Dublin are holding young Irishmen in the Curragh internment camps in County Kildare without a trial. This is the exact same thing that Khrushchev is doing in Hungary and England is doing the selfsame thing in the six counties of Northern Ireland.

And remember, ladies and gentlemen, DeValera fought side by side with those young men he is holding in the internment camps in the Curragh camps in Kildare. It means just one thing, that DeValera and England are working in conjunction with each other to keep Ireland a mutilated nation as she stands today and to think of what the Easter week martyrs died for.

The late Gen. Michael Collins was shot in his own native County Cork for signing the so-called Free State which split Ireland into two parts because England wanted it that way. The mutilated portion of Ireland now known as Eire has a delegate sitting in the United Nations for the past 6 or 7 years, and he never opened his mouth about what England is doing in the six stolen counties. This delegate is just a dummy in the United Nations. He is not telling us what the Government is doing in the 26 counties. Frank Aiken, Minister of External Affairs in the Dublin government, came to the United Nations in New York and officially voted for the admission of Red Communist China into the United Nations, and all this was taking place.

When His Eminence John Cardinal Dalton and Eamon De Valera were in Vatican City, Rome, Italy, having an audience with the late Pope Pius XII, and when Eamon De Valera returned to Dublin, he stood up in the Dail and defended Frank Aiken's un-American and un-Irish tactics in the United Nations. So both De Valera and Aiken are looked down on in this country. Ireland and the Irish all over the world are disgusted and disgraced with this un-American and un-Irish job in the U.N.

Both Aiken and De Valera have lost all their millions of friends in these United States. In the city of New York, where De Valera was born, he has lost all of his hordes of friends over this matter. It's high time we had a new election in Eire and let De Valera retire to private life, and the members of the Dail government should retire also. The present government is doing nothing, only England's police work in Ireland. Their activities are a disgrace to the memory of the Easter Week martyrs of 1916 who were executed by the British Government because they represented a free and independent Ireland. We have been thrilled by the details of the battle around Dublin Castle and the heroism of the martyrs of Easter Week. We have grieved over those who died in the uprising, or were executed afterward.

We know that though the uprising failed of its immediate purpose, it lit fires in the hearts of Irishmen everywhere which have not yet been extinguished. For 2 years thereafter the civil conflict continued, with the Sinn Feins leading the way and leading the Irish people in their resistance to British rule. Eventually, in December of 1918, a general election was ordered for the

whole of Ireland, supposedly to settle once and for all the question of independence for Ireland.

The costly attempt to maintain control by force and the weight of world opinion as varied in the proclamation of the right to self-determination by the victorious democracies in World War I, had forced England to this step. Despite the fact that the election was carried out while a British Army occupied the whole island, the result was overwhelmingly in favor of national independence. Out of 105 electoral divisions 79 voted for independence and only 26 against. The popular vote was over 80 percent in favor of complete independence. In response to this expression of the national will the elected representatives of the people of Ireland assembled in Dublin on January 21, 1919, and declared Ireland an independent nation and established a government and the Dail Eireann the national legislature.

The English going back on their promises refused to recognize this action and thus a virtual state of war broke out between the Irish Republic and Great Britain. The British sent in their black and tan's imposed martial law and tried to force Ireland to give up her national independence. Ireland, of course, continued the battle. Finally as a last resort the British Parliament on December 23, 1920, without an Irishman voting, passed a Government of Ireland Act—the act of partition—whereby the six stolen counties were cut off (from the homeland) by England, of course, without a political mandate of the people of Ireland.

The Irish people rightfully refused to accept this settlement. The Sinn Feinn again led the war against the black and tans that constituted the British occupation forces and the attempt to force the acceptance of the British was wholly (unsuccessful) in the greater part of Ireland. Despite the fact that a Northern Ireland Parliament was set up in Belfast, even this was the will of the English Government only and was opposed by the majority in the six stolen counties cut off by England. It was during this period that the heroic hunger strikes took place and Terence MacSwiney in giving up his life, brought world sympathy to the Irish cause.

In the partition election of May 1931, intended to put the Government of Ireland into effect, out of a total of 186 seats in both the north and the south parliaments, 140 were won by the Republicans. Thus Ireland as a whole, repudiated the act. The British again set up martial law and bitter fighting again took place. Finally, on December 6, 1921, after 6 months of negotiations between the leaders of Sinn Feinn and the British, a treaty was signed establishing the Irish Free State and partition became an absolute fact. Even with this, the English deceit was not ended. Since the treaty called for raising the boundary between Northern Ireland and the Free State to free some of the Irish Republicans who form a majority in four of the six stolen counties, and this was never done.

England's latest act, intended to cement her position in Northern Ireland, was to pass the so-called Ireland bill in May of 1949. In this bill they presumed to declare that Northern Ireland would never cease to be a part of the United Kingdom, without the consent of the Parliament of Northern Ireland.

Incidentally this is a fine time for England to begin to worry about obtaining the consent of her northern subject government, when questions of how they are to be ruled came up. This Ireland bill has served to keep Ireland out of participation in the North Atlantic Defense Treaty. Since one of the purposes of that treaty is to preserve the territorial integrity of participating nations and Ireland fears that her adherence to

the pact would be interpreted as recognizing England's claim, that Northern Ireland is an integral part of the United Kingdom.

That is where the matter stands today. Despite protest after protest, the English have refused to concede that by any standard Ireland should be one and united. Irishmen in either north or south consider themselves as Irish and not English or British, or anything but Irish. The population is homogeneous. The island is one geographic unit. Her history and traditions are distinctly national and even her churches, whether Catholic or Protestant, are organized on a national, all-Ireland basis. Her learned bodies and her sports organizations are nationwide. Ireland is divided only in the minds of the Government of England and in measures England has forced on that gallant little nation. What can we here do to end this intolerable situation?

It is true that our State Department has said that we should be concerned. But I say that is no more internal than South Korea and we are certainly involved there. It is no more right that the island of Ireland should be divided than that the Korean Peninsula should be.

Fortunately we Americans of Irish descent or birth do have a program for putting the great moral weight of the United States behind the fight to end partition in Ireland and to end English rule there for evermore. In April of last year the Committee on Foreign Affairs of the House of Representatives held hearings on a number of resolutions which had been introduced in the House and which would have put the United States solidly on record as favoring the unification of Ireland. Some of these resolutions provided means for our active participation in action leading to unification. Those resolutions had been introduced by members of Congress of Irish descent and received strong support in the hearings on the subject. Unfortunately the Foreign Affairs Committee did not see fit to report any of them to the floor of the House. You may be sure, however, that this program will not be allowed to die and we hope that the U.S. Congress will eventually take action, placing this country in the fight to end partition and leading this fight as it should. Ireland has made great contributions in culture and leadership to the United States. She has given the same strong support to democratic ideals. It is high time that the United States do something to help Ireland gain her complete freedom.

We of Irish blood in Congress did something else last year to open the eyes of the English to how strong the feeling in this country is in opposition to the partition of Ireland by England.

On March 29 of last year, or I should say 2 years ago, when the Foreign Assistance Act of 1959 was under consideration by the House, an amendment was introduced by Congressman JOHN FOGARTY, and was accepted. This amendment was designed to withhold assistance to the United Kingdom until partition in Ireland was ended. Although the amendment was later stricken from the bill, it did awaken England to some consciousness of American and world feeling on the matter. As a matter of fact, there was much scurrying about the Capitol and the State Department by worried British diplomats during the period of debate on the bill.

These sections have forced England to take a new look at her policy in Ireland, you may be sure, and all the other Congressmen who have engaged in this fight until England does more than simply take a new look. We want her to take positive action and get out of Ireland and we will not be satisfied until she does so. If Irish people everywhere get behind this program

of pressure on England from the United States, we may be able to write a new page in Irish history for our grandchildren to read. The story of how the English were finally driven out of Ireland, knowing this history of persistent courage and remarkable leadership on the part of the Irish people, who can doubt that their full participation in the titanic world struggle now shaping up would provide inspiration for the rest of the democratic world—inspiration, which might spell the difference between victory and defeat?

I realize, however, quoting an official Irish Government memorandum, that although "Ireland is earnestly desirous of playing her full part in protecting Christian obligation and the democratic way of life . . . [She] is faced with grave difficulties from the strategic and political points of view." This is true, both because the continued partition of Ireland is naturally and bitterly resented by the Irish people and because without a single integrated authority either the defense or the effective utilization of the island's capacities are impossible.

Therefore, call upon the Irish people at home to stop hobnobbing with the enemy (England) and come out for a general election. Clean out the present government of De Valera, Alken & Co., Ltd. Liberate the Irish Freedom Fighters in the internment camps and let nature take its course. You cannot stop the onward march of any nation that wants to be free. Sinn Fein and the IRA won a complete victory in the 26 counties. Now, for God's sake, stop quibbling with England in the six stolen counties. The only language that England understands is the language of the IRA. But before this is done the Irish people will have to elect a government in Dublin with a determination to be absolutely free and let them recall their delegate in the United Nations who represents a mutilated Ireland and not a nation (as such). Then when this is done the millions of Irish in the United States and all over the world will be with them to a man. And by this constructive change in policy you will make the soul of our immortal St. Patrick happy in heaven forever afterward.

Prize-Winning Essay

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following prize-winning essay by Miss Barbara Maier, senior student at White Haven (Pa.) High School, which appeared in the Hazleton-Plain Speaker on Wednesday, March 9, 1960: WHITE HAVEN SENIOR WINS ESSAY CONTEST

First-prize-winning essay written by Barbara Maier, senior in White Haven High School, for the national contest conducted by the President's Committee on Employment of the Physically Handicapped is published below.

The local phase of this contest was promoted by the Tri-County Committee on the Employment of the Handicapped. Therese Zogby, chairman. Rev. Harry A. Bump is chairman of the subcommittee on contests.

Barbara's essay was judged best by a committee of staff members at Hazleton campus of the Pennsylvania State University. The judging was accomplished anonymously.

Each high school judges its own compositions, sending the best to the tri-county committee. One each from the participating high schools is entered in the final local competition. The White Haven High School entry was finally selected as best of the 316 written in this area.

Second prize was taken by Arlene Butala of McAdoo High School and third prize went to Caryll Ann Gallagher, St. Gabriel's High School.

The topic, on which all essays were written, is "Jobs for the Handicapped—Passports to Dignity."

Here is the winning essay:

"Just think of the number of great men who would have been lost to the world if they had to pass a rigid physical examination to hold the jobs that they had. Certainly Franklin Delano Roosevelt would have failed to pass such a test after being crippled by polio. Beethoven would never have had a chance to write his greatest symphonies. His deafness would have disqualified him.

"The world would have been a poorer place without such great men as Edison who was deaf, the Greek poet Homer who was blind, the hunchback Steinmetz, an engineering wizard, club-footed Lord Byron, and tubercular John Keats. So too, in our everyday life the business world will be a poorer place if it rejects the men and women whose ability in one area more than compensates for a disability in another area.

"SENSE OF PURPOSE

"Physically handicapped employees have a sense of purpose and usefulness in their work. The dignity of self-support is new to them. They have great enthusiasms for their work, show great initiative and they have unusual loyalty to the job. In many cases statistics have shown that the performance of the physically handicapped is strikingly better than that of the non-handicapped worker.

"While industry can be proud of its record in fostering rehabilitation of these people and in providing jobs for the handicapped, full credit must be given the handicapped themselves who in their day-by-day performance on the job more than justified their employers' confidence in them. Given the opportunity the handicapped made good.

"We are now entering into an era in which the handicapped will be welcomed not only as citizens deserving an even break with able-bodied workers, but as badly needed participants in the production of vital goods and services. They will be helping themselves to gain confidence and a place in the sun, but also they will be helping to sustain the Nation's economic strength and our continued climb toward better lives for all of us.

"USEFUL CITIZENS

"The President's Committee on Employment of the Physically Handicapped works to make useful citizens out of people who at one time in our civilization were considered to be a drag upon society. In changing them into useful citizens, giving them the feeling of oneness with the rest of us, they are satisfying the human longing to be part of something, to contribute to something that is worthwhile so they can get satisfaction out of saying 'I helped to build.'

"Employers should not pamper or make special berths for the handicapped. They don't want it. They want to take the rightful place side by side with other employees according to their abilities. We should open the door of opportunity to them and invite them in.

"Opening the doors to the physically handicapped does something to them beyond the powers of medical science. It makes the difference between a life of despair and a life of useful fulfillment.

"The Federal Security Agency provides a program of work training for persons who are physically rehabilitating themselves. So, it is in the community where he will find his job, live his life. The handicapped person is not a national statistic, he is a human being with roots in his home town or city, with friends, neighbors, and family with his own place to make through his own efforts and abilities.

"The rehabilitation of the physically handicapped is a humanitarian work that builds a stronger America. We have the obligation of giving the physically handicapped every opportunity to restore themselves to positions of independent and useful citizens so they may obtain the full benefits of society in which all men are free and in which each has a full opportunity to develop himself to the limit which his abilities and talents will permit and achieve for himself the kind of life to which he aspires.

"NEED A CHANCE

"Abilities, Inc., is a factory run by and for the disabled to prove that they can help themselves if people will only give them a chance. It was started in 1952 with one paralyzed worker in a grimy, unfurnished garage. Within 5 years it had grown to a million dollar business with 300 employees. Everyone there is unemployable by almost any other standards.

"Its low accident rate has led other employers to reexamine their own hiring policies. All over the world, organizations patterned after Abilities, Inc., were formed. Corporations like this enable men and women to rebuild a human life from ruins and restore their dignity.

"The inalienable rights of life, liberty, and the pursuit of happiness, which the founders of this Nation set forth in the Declaration of Independence, are not qualified or conditioned by race, color, creed, economic condition of birth, or by physical handicap. And to fail to provide the physically handicapped with every possible opportunity to achieve dignity, independence, and profitable employment, is to deny in part the high principles upon which our Nation was founded.

"We think so much of the dignity of every individual that we take the least among us, the most helpless cripples, and give them medical restoration, rehabilitation, vocational training, and finally put them in a job so that they may regain their self-respect and have their dignity be respected by all. Hiring the handicapped is truly the passport to the dignity of these individuals."

Small Independent Business and Professional Men Vote Overwhelmingly for 25-Percent Cut in Business and Agricultural Subsidies to Big Businessmen and Big Farmers in Poll Conducted Among Its 150,000 Members by the National Federation of Independent Business

EXTENSION OF REMARKS

OF

HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. McDOWELL. Mr. Speaker, of 150,000 small independent business and professional men polled recently by the National Federation of Independent

Business, 89 percent voted "for the reduction by not less than 25 percent of all business and agricultural subsidies."

The nationwide poll was made on my House Resolution 361.

George J. Burger, first vice president, National Federation of Independent Business, today notified me of the results of the poll. Only 8 percent voted against the measure I have sponsored, with 3 percent not voting.

My resolution requests President Eisenhower to prepare and transmit to the Congress advice, suggestions, plans, and proposals, including legislative recommendations "which are better, sounder, and more specific than heretofore" provided, which would not only prevent further increases in Federal expenditures but actually reduce them.

Business and agricultural subsidies to big businessmen and to big farmers, including but not limited to direct grants, disguised grants in the form of nonrepayable loans, postal subsidies, shipping and airline subsidies, although perhaps—desirable as a means of assisting special groups to retain their relative positions in the economy, should now be reexamined in the light of the overall need for rigid control and a sizable reduction of Federal expenditures.

I have sponsored a number of bills in the Congress to assist small businessmen, farmers, and veterans but there is more interest in this particular bill to reduce subsidies to big businessmen and big farmers than in almost any other bill that I am familiar with.

The National Federation of Independent Business has approximately 500 members in the State of Delaware alone.

It polls each month its national membership of 150,000 small independent business and professional men on 5 legislative and economic issues affecting small business with the purpose of determining their views on these matters.

The National Federation of Independent Business conducts its polls with complete fairness, without bias, and without attempting to lead its members to any predetermined conclusions.

The 16-year-old National Federation of Independent Business is highly thought of by leading Republican and Democratic Members of the Congress.

By invitation in 1948, 1952, and 1956, George J. Burger, first vice president of the National Federation of Independent Business, has appeared before the platform committees of both the Democratic and Republican conventions on behalf of small business.

I have found that many informed people competent to judge these issues consider the polls taken by the National Federation of Independent Business to be at least as accurate and honest as those better known polls which report regularly to the mass media on matters of general interest to the public.

The argument for my House Resolution 361 was stated this way in ballot 254 of the Mandate, published by the National Federation of Independent Business:

BALLOT 254

Make these fellows stand on their own two feet—that's the aim of this bill. Their profits are running at, or near, all-time highs. There's no need for them to continue dipping their arms into the public till. By enacting this bill, Congress could save upward of \$5 billion yearly, and cut this out of spending. This would go a long way toward keeping Government finances in balance, and would relieve all our people of the constant pressure for higher and higher taxes. It could result in some cuts.

I include as part of my remarks the text of my House Resolution 361 for the information of my colleagues:

Resolved, That it is the sense of the House that in view of the increase in the Federal debt by \$19 billion in the past six years, and the increase in the cost of interest on the Federal debt from \$5,800 million to \$8 billion during the same period, there is a pressing need for substantial reductions in Federal expenditures in order to reduce the staggering burden of our ever-increasing Federal debt with its constantly rising interest and refinancing charges and resulting dangerous inflation. The House finds that business and agricultural subsidies to big businessmen and to big farmers, including but not limited to direct grants, disguised grants in the form of nonrepayable loans, postal subsidies, shipping and airline subsidies of various kinds, accelerated tax amortization programs, and indirect grants through long-term, low-interest-rate loans and other methods and programs, although desirable as a means of assisting these special groups to retain their relative positions in the economy, should be reexamined in the light of the overall need for rigid control and a sizable reduction of Federal expenditures.

SEC. 2. In view of the foregoing, the President is requested to prepare and transmit to the Congress, by January 1960, advice, suggestions, plans, and proposals, including legislative recommendations which are better, sounder, and more specific than heretofore, to provide (1) for the reduction by not less than 25 per centum of all business and agricultural subsidies, together with such other specific proposals, including specific legislative recommendations, as he may deem advisable in order not only to prevent further increases in Federal expenditures but to actually reduce them, and (2) for the reduction of Federal income taxes in aggregate amounts equal to the total of the reductions in subsidies effected for the taxable years involved pursuant to such legislative recommendations.

Outstanding Physicians Endorse the Forand Bill, H.R. 4700

EXTENSION OF REMARKS

OF

HON. AIME J. FORAND

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. FORAND. Mr. Speaker, two of the Nation's outstanding physicians are among the many doctors who have heartily endorsed the Forand bill—H.R. 4700—extending the social security system to provide health benefits to retired workers.

With their permission I am inserting in the Record the text of letters from Dr. Basil C. MacLean, who recently retired as president of the National Blue Cross Association, and Dr. E. M. Blue-

stone, hospital administration professor at Columbia and New York Universities, backing his bill.

I am extremely impressed by the fact that Dr. MacLean, a man who has crowned a brilliant career with several years at the helm of America's largest voluntary nonprofit health insurance plan, the Blue Cross, should write me of his conviction that the health costs of the aged cannot be met by existing health plans, and that the social security system should be used.

Both Dr. MacLean and Dr. Bluestone have spent their lives in active efforts to meet the problems of financing and providing high quality medical and hospital care. Dr. MacLean is a past president of the American Hospital Association, was commissioner of hospitals in New York City from 1954 to 1957, and was hospital superintendent and director of three outstanding hospitals for 27 years prior to that.

It is also significant that in the face of the usual closed-mind opposition of the American Medical Association, two distinguished doctors, closely acquainted with the problem, take an opposite view.

I quote from Dr. MacLean's letter:

A lifetime's experience has led me at last to conclude that the costs of care of the aged cannot be met, unaided, by the mechanism of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these the scope of care that is required, nor do the stern competitive realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged.

And from Dr. Bluestone's letter:

For whatever you may think my opinion worth, may I respectfully suggest that the sheer humanity of those who are in approval far outweighs the arguments of those who, motivated largely by professional self-protection (which I consider misguided and ill-advised) are in disapproval. Passage of this bill into law would be a boon for the great majority of our elderly population who have the right to look to our legislators for relief at a time in their lives when they may need it most. It has all the wholesome earmarks of voluntary prepaid medical care insurance with the added advantage of Government partnership to see to it that no citizen is neglected in the late time of his trouble.

The two letters indicate that corporate medicine, as represented by the AMA, does not speak for doctors who really know the problem.

I think it is a tragedy that the general public should get the impression that doctors as a whole are opposed to health protection for the aged.

This is simply not true. Unfortunately, a great many doctors, overworked as they are, simply parrot the AMA position without examining the facts.

The Forand bill is awaiting action by the House Ways and Means Committee. Hearings were concluded last year.

The text of the letters from Drs. MacLean and Bluestone, together with brief biographies follows:

BASIL C. MAC LEAN, M.D., M.P.H., NEW YORK CITY
Medical superintendent, Montreal General Hospital, 1927-30; hospital superintendent, Touro Infirmary, New Orleans, 1930-35; di-

rector, Strong Memorial Hospital and professor of hospital administration, University of Rochester, 1935-54; commissioner of hospitals, New York City, 1954-57; president, National Blue Cross Association, 1957, until his recent retirement; charter fellow and onetime president, American College of Hospital Administrators; director, Companion Life Insurance Co.; award of merit, 1953, American Hospital Association; president, American Hospital Association, 1941; and chairman, Commission on Hospital Service, AHA, 1936-41.

FEBRUARY 29, 1960.

HON. AIME FORAND,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FORAND: As an individual I want to add my voice in support of your bill which would provide health benefits to aged persons under the social security mechanism. The good sense of this measure and the urgent need that created it recommend its passage without delay.

I will not detail the special problems of the aged with regard to meeting the costs of health care at a time of life when income is reduced and need expanded. The facts have been quite adequately drawn in the material before you now, in the hearings on the bill, in the report of the Department of Health, Education and Welfare, and in the proceedings of Senator McNAMARA's Subcommittee on Problems of the Aged. Financing health benefits for the aged by means of the payroll tax provides a way of dealing with the question with dignity and effectiveness.

I have been in close contact with the problem for many years and in many capacities. As a physician, I have had an intimate look at the special and personal health needs of the aged. As a hospital administrator, I have seen that need reflected as a burden of obligatory and uncompensated service that acted as a constant drag upon the hospital's economic support and growth. As New York City commissioner of hospitals, I have seen these problems further translated into financial and social deficit for the entire community. As a president of the National Blue Cross Association, I participated firsthand in the attempt to meet some of these problems through existing voluntary prepayment organizations.

A lifetime's experience has led me at last to conclude that the costs of care of the aged cannot be met, unaided, by the mechanism of insurance or prepayment as they exist today. The aged simply cannot afford to buy from any of these the scope of care that is required, nor do the stern competitive realities permit any carrier, whether nonprofit or commercial, to provide benefits which are adequate at a price which is feasible for any but a small proportion of the aged.

As an individual I favor legislation so drafted that it would permit the Government to utilize voluntary nonprofit plans such as Blue Cross. In my personal opinion Blue Cross would thus be helped in its efforts as a community plan to serve all economic groups; but Blue Cross cannot, of course, include a large high-cost group like the aged without raising its rates to everybody. When Social Security funds pay for the aged, everybody else would benefit also. I do not believe that commercial insurance companies should be recognized as intermediaries. It does not make sense to try to insure on a business basis persons whose incomes are not far from the subsistence level. Legislation along the lines of the Forand bill offers a means of settling an area of difficulty and relieving the voluntary prepayment mechanism to concentrate on better programs within its areas of demonstrated competence. Surely, if OASDI health benefits are "contracted out" voluntary prepayment will be thereby strengthened and its programs will rest upon sounder economic footing.

For hospitals, the measure will provide, for the first time, adequate payment for services rendered to aged patients, relief from an unnecessary burden of long standing, and the kind of dependable financial support that produces growth and vitality for the community's health facilities.

You may make this letter public if you wish. I have sent a similar letter to the Honorable WILEY MILLS, as chairman of the Ways and Means Committee.

Sincerely yours,

BASIL C. MACLEAN, M.D., M.P.H.

E. M. BLUESTONE, M.D., NEW YORK CITY
Assistant professor of hospital administration, Columbia University School of Public Health; professor of public administration, New York University; director (1928-51), now consultant, Montefiore Hospital, New York.

MARCH 2, 1960.

The Honorable AIME J. FORAND,
U.S. House of Representatives,
New House Office Building,
Washington, D.C.

DEAR SIR: As a longtime student and teacher of medical care, and particularly geriatric care, I am taking the liberty of writing to you about the bill bearing your good name which the Ways and Means Committee now has under consideration. I have taken great interest in this bill from the beginning, having awaited its advent with eager anticipation; discussed it in class and in various conferences; and have listened attentively to those who have expressed opposition to it. For whatever you may think my opinion worth, may I respectfully suggest that the sheer humanity of those who are in approval far outweighs the arguments of those who, motivated largely by professional self-protection (which I consider misguided and ill-advised) are in disapproval. Passage of this bill into law would be a boon for the great majority of our elderly population who have the right to look to our legislators for relief at a time in their lives when they may need it most. It has all the wholesome earmarks of voluntary prepaid medical care insurance with the added advantage of Government partnership to see to it that no citizen is neglected in the late time of his trouble.

I earnestly hope that the Congress will follow your lead and pass this humanitarian bill, thus writing a new and comforting chapter in the history of modern geriatrics.

Respectfully yours,

E. M. BLUESTONE, M.D.

N.B.—I shall be glad to see you use this letter at your discretion as a personal opinion on my part.

Resolution of the Omaha Woman's Club

EXTENSION OF REMARKS

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 10, 1960

Mr. CUNNINGHAM. Mr. Speaker, I am pleased to enter in the RECORD a resolution adopted on March 7, 1960, by a unanimous vote of the Omaha Woman's Club.

A copy of this resolution has been sent to other clubs in the State of Nebraska, and I am sure that a full discussion of the problems covered in this resolution will cause other civic-minded and community-minded groups to join the Oma-

ha Woman's Club in their recommendations.

The resolution follows:

RESOLUTION PRESENTED BY THE LEGISLATIVE CHAIRMAN, MRS. FORREST J. AUSTIN, TO THE OMAHA WOMAN'S CLUB AND ADOPTED BY UNANIMOUS VOTE OF ALL MEMBERS PRESENT

Whereas the recent Supreme Court decisions have weakened our law concerning Communist subversive activities in our defense plants, Government position and other activities where Communists may influence or undermine the defense efforts and Government control of the United States of America: Be it

Resolved, That the Omaha Woman's Club and a member of the GFWC, does hereby urge the President of the United States and the Congress to enact legislation to correct the Supreme Court decisions; be it further

Resolved, That control of the issuance of passports be the responsibility of the State Department and that the practice of denying passports to known Communists and Communist organizers be reinstated and that other laws be passed for the protection of the national security against communism in the United States of America.

The Zoo and You

EXTENSION OF REMARKS

OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. TOLL. Mr. Speaker, one of the educational features of the great city of Philadelphia is the Philadelphia Zoological Garden, which is over 100 years old. Its Penrose Research Laboratory has won recognition for its pioneering studies of the proper feeding and control of diseases in captive animals, and it is now aided by U.S. Government agencies in its research on diseases common to animals and mankind. I submit for the RECORD the condensation of remarks by the president of the Zoological Society of Philadelphia, Mr. Radcliffe Cheston, Jr., and the director of the Philadelphia Zoological Garden, Mr. Freeman M. Shelly, at the February 5, 1960, meeting of the citizens council on city planning. This should be of interest to many Members of Congress:

THE ZOO AND YOU

Mr. Radcliffe Cheston, Jr., president of the Zoological Society of Philadelphia, reviewed the history, needs and future plans of the zoo. The society was granted its charter by the Commonwealth of Pennsylvania on March 21, 1859. Although it was not opened to the public until 1874, due to the intervention of the Civil War, the Philadelphia Zoo was America's first zoo.

The zoo was an immediate success, and within a few years several major exhibition buildings had been constructed with the use of private funds. By 1930, however, it was evident that virtually the entire plant was outmoded, unsanitary by modern standards, and some buildings, since replaced, had become unsafe.

To alleviate this problem to some extent, all available society funds were used to construct a service building, a new elephant house, and to completely remodel the birdhouse. At this point the zoo exhausted its private capital. With mounting taxes and

living costs, it was no longer possible to obtain large sums from private sources, and the zoo had to turn to the city of Philadelphia and to public funds for assistance.

City funds have been made available by city council for construction of a new lion house, opened in 1951, and to improve the main entrance to the garden.

The zoo has considered the feasibility of increasing the admission charges. It has decided that it is not possible to charge enough to completely finance the zoo, since any substantial increase in admission price would substantially reduce attendance. It has found an additional source of revenue, however, in the operation of all souvenir and refreshment stands in the zoo. Mr. Cheston mentioned parenthetically that through a provision in its charter, the zoo is not allowed to increase its earnings by training animals for show purposes.

Both the zoo and the society have earned an international reputation. The zoo's centennial last year was greeted with congratulatory messages from the world over. The zoo is an important educational asset to Philadelphia, and its Penrose Research Laboratory, established in 1901, has won recognition for its pioneering studies of the proper feeding and control of disease in captive animals. It is now aided by U.S. Government agencies in its research on diseases common to animals and mankind.

Mr. Cheston stressed that only with the help of continued capital funds from the city can the zoo maintain its first rank. Proposed improvement plans for the zoo's future include the following:

- (a) Construction of a new rare mammal house on the site of the old lion house which is now vacant.
- (b) Modernization of the reptile and small mammal houses.
- (c) A new giraffe and antelope house.
- (d) A new penguin house on the site of the present obsolete antelope house.
- (e) An African plains exhibit.
- (f) New bear grottos and wolf dens.
- (g) A new kangaroo house.
- (h) Completion of modernization of the present primate house and new refreshment stands.
- (i) New administration building and an auditorium to be used by school classes and other groups.

Funds are now scheduled in the 1960-65 capital program for the first two of these projects.

Mr. Cheston expressed the zoo's gratitude for the interest and encouragement shown in its program by Mayor Dilworth, the city council, the city planning commission, and the citizens' council on city planning.

Mr. Freeman M. Shelly, director of the Philadelphia Zoological Garden, spoke of the visitors to the zoo and of its animals. He described the long process which must be followed when a new animal is acquired from its native habitat. Although the zoo never sends expeditions into the field to obtain the animals, each of the three curators has at some time escorted some rarity to Philadelphia from a foreign land or from another zoo.

Some animals, especially native ones, are donated to the zoo but the zoological society itself supplies most of the exhibits. Friends and members of the zoo have given or willed money expressly for the purchase of animals. All animals are bought with private funds; public funds are never expended for this purpose.

Mr. Shelly noted that the large species are expensive. Indian rhinos cost \$10,000 each, reticulated giraffes \$7,500 a pair, gorillas \$5,000 each, and ostriches \$1,200 a pair.

Although the Philadelphia Zoo does not have the greatest number of exhibits of any zoo, it does have a thorough and representative cross-section of the animal kingdom.

The Philadelphia Zoo holds many records for longevity of animals in captivity.

Through the research of the Penrose Laboratory, tuberculosis has been eliminated from the collection of apes and monkeys, and outstanding advances have been made in discovering proper animal diets. The work of the laboratory has attracted international attention. Students have come from all over the world to work and learn in the Philadelphia Zoo.

Mr. Shelly believed that probably the most important measure of a zoo's success is its acceptance by the public. Although the Philadelphia Zoo charges admission, three quarters of a million people have visited it in each of several recent years. It attracts more visitors than any other cultural institution in Philadelphia. In fact, from the standpoint of attendance, it is exceeded only by the Phillies Baseball Club.

An important fact is that most visitors come to the zoo in couples or family groups. The children's zoo is particularly popular, for the children come into close contact with young, tame animals. The zoo is making an important contribution to education for all age groups in the Philadelphia area. Some 137,000 children came to the zoo during 1959 in school classes and other organized groups. The zoo is used also by art and college students, and certain curricula in natural history courses are related directly to zoo exhibits.

The zoo has become one of the largest and most important "bureaus of information" in the city; and is continually deluged with questions about animals. It also has several educational radio and television programs.

The Philadelphia Zoo's slogan is "America's First Zoo." It has the first zoological society, the first zoo laboratory, the first children's zoo. It was the first to test and quarantine primates and exhibit them behind glass, and the first to study diets on a wide scale and feed animals scientifically.

Mr. Shelly concluded his remarks by pointing out that although the Philadelphia Zoological Garden has established an enviable record, it needs assistance in replacing or modernizing its older buildings in order to continue to enjoy its first rank in America.

The U.S. Comptroller General Says, Regarding Patents Derived From Federal Research and Development Programs, "The Government Should Retain the Property Rights Thereto"

EXTENSION OF REMARKS
OF
HON. HARRIS B. McDOWELL, JR.
OF DELAWARE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 15, 1960

Mr. McDOWELL. Mr. Speaker, I have joined with the gentleman from New Jersey [Mr. THOMPSON] in offering legislation which would establish an overall U.S. patent policy. Other countries, among them Great Britain and the Soviet Union, have overall patent policies which clearly have advanced, not impeded, research and development.

At the present time there is no overall Federal Government policy on patents. Since many contracts with the Federal Government cut across several Federal departments and agencies, the contractor may be forced to deal with half a dozen patent policies on a single project. There is a growing recognition of the

fact that U.S. Government patent policies are "a mess." With the Federal Government now footing the cost of more than half the research in the United States, agitation for a general overhaul of the system is increasing both in the Congress and elsewhere.

Government funds devoted to research have grown rapidly in recent years, and the National Science Foundation estimates the total obligations for scientific research and development of all Federal departments and agencies for 1960 at the stupendous sum of \$8,148 million. How well this vast amount of money is spent must become a matter of the utmost importance to the Federal Government, as it is already a subject of growing concern to U.S. taxpayers.

Many people today are asking why the United States does not at least recoup its research costs by taking a cut of the commercial royalties. The British Government has been doing this for over 50 years. The Vickers Viscount, developed under government contract, has returned enough to the British treasury to pay off the original research cost and yield a profit. Jet engines have proved to be a profitable investment for the British Government.

The Comptroller General of the United States, Joseph Campbell, in his official report of March 10, 1960, on the bill I have cosponsored with the gentleman from New Jersey [Mr. THOMPSON] declared:

An examination made by us of the operations of a major defense contractor disclosed that 218 invention disclosures arose from work financed under Government contracts. Of these, 62 patent applications had been filed, 33 applications were approved for filing, 57 disclosures were under evaluation, 3 were awaiting evaluation, and the remaining 62 disclosures were in an inactive status. Two disclosures were combined in a simple patent application. Most of these disclosures for which patent applications were filed or approved for filing were classified by the contractor as having commercial value. The circumstances that the work was sponsored and financed by the Government and performed for the express purpose of accomplishing research and development in the particular field seem to afford persuasive reasons for urging that, in addition to the right to the free use of any inventions, improvements, or discoveries resulting therefrom, the Government should retain the property rights thereto, including any patents that might be granted therefor.

Under the Thompson-McDowell bill—H.R. 5448 and H.R. 7705, 86th Congress—the Government would share in patent royalties on inventions resulting from Federal research contracts, and small business would be given tangible assistance in the form of Government contracts instead of the lipservice which this administration gives to the 4 million small businessmen of our Nation. The present strong monopolistic trend which today dominates the \$8 billion Federal research and development program would be halted if the Thompson-McDowell bill was enacted into law.

The magazine Product Engineering, published by McGraw-Hill says:

Excessive channeling of research contracts into big business is causing considerable worry. Big business (over 500 employees) gets at least 95 percent of the Government

research, and 100 firms get 85 percent among them. The top 14 companies getting contracts between 1954-1956 were all big electric and aircraft companies. The Attorney General has warned that channeling all this patent potential into big business is just building up the monopoly trend.

The House Small Business Committee recently spoke of the ominous shadow cast on the future with the monopoly of technology by big business.

The House Small Business Committee insists that since the Nation's 4 million small businessmen help to pay the staggering costs of the Federal Government's research and development programs through taxes they should at least have access to the patents developed at the taxpayers' expense.

There is a growing awareness in the Congress of the importance of a Government-wide patent policy. Senator RUSSELL B. LONG, chairman of the Subcommittee on Monopoly of the Senate Select Committee on Small Business, held some very important hearings on the patent policies of departments and agencies of the Federal Government on December 8, 9, and 10. Important results are expected to ensue.

More recently, Senator JOSEPH C. O'MAHONEY introduced S. 3156, a bill "to provide for the protection of the interests of the United States in basic research with respect to patent rights arising from research conducted under projects financed by the United States."

In introducing his bill, S. 3156, Senator O'MAHONEY said, in part:

The Judiciary Subcommittee on Patents, Trademarks, and Copyrights was authorized in the 85th Congress by Senate Resolution 236 to conduct a series of studies on the practices of the various Government agencies. So much divergence among the various Government agencies was discovered that there is every indication that the subcommittee should give immediate attention to establishing a uniform policy among the various agencies.

Senator O'MAHONEY went on to point out that—

The Government's basic research should be promoted and protected because it is growing clearer every day that the comparable positions of Soviet Russia and this country will depend upon the success and proper conduct of this program and the successful establishment of a uniform and sound Government policy.

As usual, when the present administration ought to be moving decisively in a matter of this gravity it has established yet another committee to study the matter. In accordance with the administration's usual practice of postponing difficult decisions, it has established an interagency committee composed of representatives of the major agencies having an interest in patent policy. The Honorable Robert C. Watson, Commissioner of Patents, is serving as chairman.

After initial examination of the subject, the new interagency committee felt that more factual information should be secured. The interagency committee passed the "hot potato" along by entering into a contract with the Patent, Trademark, and Copyright Foundation of the George Washington University providing for the development of "fac-

tual information reflecting both Government and private industry experience under practices heretofore followed," according to a report on the Thompson-McDowell bill by the General Services Administration.

This matter has been under study for more than 13 years by the Federal Government. In 1947 Justice Tom C. Clark, former Attorney General, after intensive study, recommended that the Government should take title to all inventions produced in the performance of research contracts with the Federal Government except in special cases approved by the Government Patents Administrator, an office which he also recommended should be established, and the heads of the agencies involved in making the contract.

On November 9, 1956, former Attorney General Herbert Brownell submitted a report to Congress as required by the Defense Production Act of 1950 in which he found that present patent policy "may be one of the major factors tending to concentrate economic power."

Yet, despite the repeated recommendations by the Attorney Generals of both Democratic and Republic administrations, here we go again on another study, a study which can be only for the purposes of postponement and obfuscation since the factual information already available is voluminous and detailed.

If there had to be another study, why wasn't the Attorney General, who has some competence in the matter, placed in charge of it?

I include as part of my remarks a section of the report by the Comptroller General of the United States on the bill which I have cosponsored with my dear friend and colleague, the gentleman from New Jersey [Mr. THOMPSON].

COMPTROLLER GENERAL OF THE
UNITED STATES,
Washington, March 10, 1960.

HON. EMANUEL CELLER,
Chairman, Committee on the Judiciary,
House of Representatives.

DEAR MR. CHAIRMAN: Further reference is made to your letter of September 2, 1959, requesting a report on H.R. 5448, 86th Congress, 1st session. "A bill to amend chapter 27 of title 35 of the United States Code with respect to the rights of the United States in certain patents."

It seems quite evident from the reports on the studies made thus far that there are many divergent views on the subject. The basic problem is whether the Government should take title to patents developed by private concerns under research and development contracts; or whether, in the light of present-day circumstances, the Government's interests may be sufficiently protected by retaining a royalty-free license covering all governmental uses. The former is basic policy under the Atomic Energy Act of 1954 and the National Aeronautics and Space Act of 1958. The latter has been the prevailing practice in the administration of research and development contracts entered into by the military agencies.

Despite the divergent views on the subject, we believe there can be little disagreement as to the need for uniformity where contracts are being performed in the same or similar research and development areas. For example, the Department of Defense and the National Aeronautics and Space Agency sometimes contract with the same contractor on similar types of research and develop-

ment work, but with entirely different contract provisions on patent rights. Under the Defense contract, the contractor obtains the patent and the Government receives a royalty-free nonexclusive license to practice or have practiced any inventions conceived in the course of the work. Under the NASA contract, all inventions become the property of the Government unless the Administrator determines that the public interest is better served by a waiver of the rights.

As illustrative of the position of the Government, an examination made by us of the operations of a major defense contractor disclosed that 218 invention disclosures arose from work financed under Government contracts. Of these, 62 patent applications had been filed, 33 applications were approved for filing, 57 disclosures were under evaluation, 3 were awaiting evaluation, and the remaining 62 disclosures were in an inactive status. Two disclosures were combined in a simple patent application. Most of these disclosures for which patent applications were filed or approved for filing were classified by the contractor as having commercial value. The circumstances that the work was sponsored and financed by the Government and performed for the express purpose of accomplishing research and development in the particular field seem to afford persuasive reasons for urging that, in addition to the right to the free use of any inventions, improvements, or discoveries resulting therefrom, the Government should retain the property rights thereto, including any patents that might be granted therefor. Cf. *United States v. Houghton* (D.C. Md., 1927, 20 F. 2d 434), affirmed by the Fourth Circuit Court of Appeals, 1928 (23 F. 2d 385), holding that where an employee of the Public Health Service made a discovery or invention while employed to conduct experiments for the purpose of making it, his invention was the property of his employer, the United States; and *Ordnance Engineering Corp. v. U.S.* ((1929) 68 C. Cls. 301, cert. denied, 302 U.S. 708), where the court was of the view that a Government contractor may occupy the same position as a Government employee with respect to rights in an invention made at the Government's direction and expense. We recognize, however, that persuasive reasons, particularly incentive on the part of the contractor, can be advanced for allowing the contractor patent rights to inventions, improvements, or discoveries made during the performance of a research and development contract with the Government.

In considering the provisions proposed by the bill a number of significant differences may be noted between its provisions and those of comparatively recent enactments dealing with specific Government agencies; for example, the National Aeronautics and Space Act of 1958, 42 U.S.C. 2457; Atomic Energy Act of 1954, 42 U.S.C. 2181-2190; and the National Science Foundation Act of 1950, 42 U.S.C. 1871. These differences seem to indicate that the provisions proposed by the bill need clarification so as to minimize the possibility of conflicting interpretations, some of which may be illustrated, as follows:

1. The laws governing patent rights under certain AEC and NASA contracts provide basically that inventions shall become the property of the United States, except that the rights of the United States may be waived under proper conditions. H.R. 5448 states only that the United States shall have a royalty-free, nonexclusive license to practice or have practiced such inventions, improvement, or discovery.

2. The language in H.R. 5448 which describes the circumstances under which the United States shall have an interest in an invention differs from corresponding language in existing law.

3. A provision of the National Aeronautics and Space Act of 1958 stated: "Each such waiver made with respect to any invention,

shall be subject to the reservation by the Administrator of an irrevocable, non-exclusive, nontransferable, royalty-free license for the practice of such invention throughout the world or by or on behalf of the United States or any foreign government pursuant to any treaty or agreement with the United States." The language of H.R. 5448 does not provide the United States the right to assign royalty-free use of an invention to a foreign government pursuant to treaty.

The following general considerations are submitted with respect to the specific provisions of the bill:

1. The relationships between the provisions of the bill and those of existing statutes relating to specific agencies should be set out.

2. H.R. 5448 contains a provision that "Each research or development contract hereafter awarded by the United States shall provide that in the case of any patent covered by the preceding sentence, the United States shall receive a percentage, determined by negotiation as provided in the contract, of the income from the commercial utilization of the invention, improvement, or discovery patented." Some situations might be encountered where it would be impractical to determine or make a reasonable estimate of the income, gross or net, derived from commercial utilization. An example would be where the invention conceived under a research and development contract is used by the contractor as an integral part of the production of his commercial products. It might also be impractical to determine on a reasonable basis what part of the income could be attributed to the conception of a given device as opposed to its engineering development.

3. The income provisions of the bill would be made applicable only to contracts "hereafter awarded." Contracts for services and use of facilities for research and development may be in force for many years, subject to the availability of appropriations. It appears that where long-term contracts are already in existence, the contractors involved would be in a preferential position. It might, therefore, be appropriate to amend the language to cover these situations.

4. The bill does not include provisions for application to subcontracts, and clarification of this aspect seems desirable.

5. The proposed new subsection 35 U.S.C. 268(a) apparently would apply only to research and development contracts or the performance of any prior experimental, developmental, or research work done upon the understanding that a contract (whether or not a research and development contract) would be awarded. It would not seem to include a contract not considered to be primarily a research and development contract but which would have as one of its purposes experimental, research or development work, except in a case of performance of prior experimental, developmental, or research work done upon an understanding that a contract would be awarded. An appropriate amendment to clearly establish the intent is suggested.

6. Consideration might be given to the inclusion of a provision in the bill similar to 42 U.S.C. 2182 to provide full disclosure of any invention, improvement, or discovery conceived or actually reduced to practice in the performance of any research and development contract, etc.

7. Provisions with respect to the effect of an omission of the contract terms specified would seem desirable as an enforcement aid and to fix the validity of contracts not in conformance with the requirements.

8. The proposed requirements relating to the inclusion of specific provisions in Government contracts might be appropriately included under title 41 U.S.C. dealing expressly with "public contracts."

It is apparent there is a need for the establishment by Congress of basic policies for the determination of patent rights derived from Government research and development programs. Whether the policies should provide for retention by the Government of patent rights, or for the granting of those rights to contractors with royalty-free licenses for Government use in the manner provided by H.R. 5448 is a matter which is for determination by the Congress. However, we are of the opinion that thorough consideration of all the various aspects and divergent views concerning this matter is warranted before legislation is enacted establishing a general policy of retaining royalty-free licenses with waiver of such property rights as it might have or acquire in patents arising out of the prosecution of its many extensive research and development projects, as proposed by the bill.

It is suggested that, in lieu of establishing one uniform policy governing patent rights under research and development contracts, consideration might be given to legislation which would give recognition to the functions and problems peculiar to the activities of individual agencies, as well as the differences in the types of research and development being contracted for by the Government. Such legislation might appropriately set forth broad general policies, including basic principles, guidelines, and criteria, permitting a measure of flexibility in administration where circumstances so dictate, and might embrace some features of the present administrative practices and methods. We believe such legislation could give full regard to all considerations designed to serve and protect the national interest, the Government, and contractors. Legislation along these lines would facilitate improved methods and practices for administering and carrying out our extensive research and development programs and bring about a degree of standardization in the handling of patent rights, with substantial benefits to all concerned.

Sincerely yours,

JOSEPH CAMPBELL,
Comptroller General of the United States.

Sugar

EXTENSION OF REMARKS

OF

HON. CORNELIUS E. GALLAGHER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, February 18, 1960

Mr. GALLAGHER. Mr. Speaker, yesterday I submitted to the House a bill, H.R. 11138, which I hope will provide some direction of a new approach in our relationship with Cuba.

H.R. 11138 was the product of my concern with the folly of automatically renewing the present Sugar Act in view of Mr. Castro's charges that this act was enslaving the Cuban people. Similar was my concern that if we eliminated Cuba from the Sugar Act we may be creating additional hardship for the Cuban people, which is not the desire of anyone in the United States.

H.R. 11138 would extend the present act for an additional 4 years when it expires on December 31, 1960. The renewal would, however, be amended with a flexibility permitting the President to adjust or eliminate the Cuban sugar

quota at any time during the life of the bill if he deemed it necessary to protect the national interest.

I feel we must adopt a realistic attitude in view of the new challenges presented to us by the irresponsible conduct and policies of Mr. Castro. Sugar quota and sugar price levels are vital factors in dealing with the Castro regime. I therefore feel that control with flexibility should be given to the President, who has the responsibility for dealing with foreign nations. I sincerely hope that the President never has cause to use this authorization. The bill authorizes the President to increase the quota of other sugar producers covered in the act pro rata in the event the Cuban quota must be decreased. Further, H.R. 11138 has a retroactive provision which would create this flexibility in that part of the present act which is unexpired.

Sugar accounts for 76 percent of total Cuban exports. Cuban sugar production accounts for roughly 20 percent of the total world production, and a little over 50 percent of this is sold to the United States.

Cuba, because of its natural advantages as a sugar producer, has a large excess capacity and must therefore regulate its own production. In addition to providing an assured market for over half of its annual production, the U.S. quota for Cuban sugar also allows Cuba to benefit from the higher U.S. price on the commodity. In 1958 this differential amounted to 1.91 per pound which gave a total premium to Cuba of \$132 million. In addition, Cuba enjoys a tariff preference of 12.5 cents per hundred pounds which in the same year provided a total additional return of \$9 million.

I believe that we have demonstrated great patience toward the outrageous accusations made by Mr. Castro against the United States. The United States has acted with dignity and maturity in this very difficult situation. I believe, however, that we must show our friends and those not so friendly that we can act with dignity, maturity, patience, and at the same time with firmness.

I do not believe that merely because we are a great and powerful Nation that we cannot possess a feeling of patriotic pride and self-respect. I do not feel that merely because we are strong and powerful we must constantly assume a bovine posture when some irresponsible leader of a smaller nation challenges our national integrity.

Because we are a great freedom-loving Nation we have greater responsibilities and obligations in the exercise of patience and understanding toward the less fortunate. This, however, should not be allowed to become the basic premise of every hostile planner seeking to undermine the prestige or power of the United States, for they interpret this as a hole in our armor rather than a virtue in our national character. We should not allow our enmity to become a greater advantage than our friendship.

We have secured liberty and maintained our freedom because American leadership was guided by a sense of

justice and an adherence to conscience. This should be our guiding principle to the new challenges of our times. The opinion of our enemies whether voiced directly or indirectly should never outweigh our own good sense of doing what we think is right.

Dependent on our sense of right is the real hope for freedom everywhere.

The Four Chaplains of the "Dorchester"

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. CANFIELD. Mr. Speaker, a few weeks ago the Passaic County American Legion presented a "Back to God" program honoring the four chaplains. I am inserting in the CONGRESSIONAL RECORD the stirring speech delivered at that time by the Reverend William J. Hayes, O.F.M., pastor of Assumption Church, Wood Ridge.

Other speakers at the affair were Dave Sadewitz, Passaic County Legion commander; Mrs. Cecilia Johnson, Legion Auxiliary president; Walter Porter, Jr., State department vice president, and myself.

The Reverend Anthony J. O'Driscoll, O.F.M., county chaplain, offered the prayer of dedication; the Reverend George H. Talbot, D.D., First Presbyterian Church, Passaic, offered the invocation and Rabbi Eugene Markovitz, Clifton Jewish Community Center spiritual leader, the benediction.

Following is the speech of Reverend Hayes on February 28, 1960, in the Alexander Hamilton Hotel, Paterson:

This is the story of four brave chaplains and their men. Only God knows how their actions have affected and will affect the generations to come.

It was an Arctic night in 1943. The troopship *Dorchester*, filled to the hull with 900 American soldiers, was chugging through icy, broken slush toward Greenland. After a month at sea, the soldiers were not only weary at heart of the constant cold, but homesick and filled with foreboding about submarines that were following. On board were four chaplains: two Protestant ministers, Rev. George Fox and Clark Poling; a Jewish rabbi, Rev. Alexander Goode; and a Catholic priest, Father John Washington.

The chaplains did not know that this was to be the last night for the *Dorchester*. Neither did the soldiers. But according to their practice all this long month at sea, before the men retired, the chaplains tried to say something to each of them. It was nothing seemingly very important. Maybe a cheery good night. Or if a man were in a mood to talk about his children at home and show pictures, Rabbi Goode would sit down and listen to him, because he had four children of his own. The two ministers were warm and understanding about the throes of homesickness, too, for they had each left wives and children behind to make this long trip with the men on the *Dorchester*. Or if a man wanted to go to confession, he could go to Father John Washington even in the desolate and remote reaches of the Atlantic. The chaplains made the rounds as usual that

night, not knowing that out of every little gathering of three men to whom they gave counsel, two of those three would die. The chaplains said what their calling trained them to say—and well they did for out of every three on board two were going to meet their God sometime that night, side by side with the chaplains.

In one way or another, all of the men had been spoken to that night before the torpedo from a Nazi U-boat struck. Perhaps they did not hear words on religion itself. I do not know. But when the men saw the chaplains, even though the name of God was not spoken, they could not help but think of God. For these were men of God, who had given their lives to His service. Whenever they appeared on deck or in the oily-smelling cabins, a little of the peace they carried within them, some of their certitude entered into the hearts of the men.

Looking back on these men on the doomed ship, our first impulse is to pity them. Our hearts wrench at the thought of their last night on earth, thinking of them trying to sleep with the winds lashing the side of the old troopship. But if we try to see this last night in a broader perspective, if we try to remember that all of us have to get ready to face death, that no one is excused from that hard task from the greatest general down to the humblest cabin boy, we will see that these men on the *Dorchester* were not so utterly unfortunate after all. How many of you during the last month God gives you to live will see each day of that month four chaplains, walking in your midst, listening to your troubles, consoling you—not once a week, or once a month, or on some state occasion of a wedding or a funeral, but every day as a matter of common occurrence? Do you realize that each day that those men saw the chaplains, no matter what the topic of conversation was, they could not help but think of God? And think of God in His tranquility, His strength, His love for common man? Three of the chaplains had left wives and children and hearthside to bring this thought of God to embittered, questioning men. In his turn, Chaplain Washington had given up all expectancy of family life when he took his solemn vows so that he could be there, albeit unknowingly, with 600 men who at the end of that month were going to meet their Maker.

When soldiers saw these men of God, they were more willing to say "So be it" to the sacrifices they had to make in their own lives. And this was very important in the homesickness, deprivation, and questioning they had to suffer in their slow progress through dangerous waters of the north. Those who did not know how to pray when they went to sleep that night, who had never prayed perhaps in their whole lives, could not lie there long without a thought of one of the chaplains flickering through their minds—and, with that thought, a momentary thought of God who had called forth these men to represent Him—and perhaps it was that momentary thought of God before the torpedo struck that was all they needed to earn their passage into heaven that night. For this cause, the chaplains had left behind the comforts of home. And, because the men saw that the chaplains were men among men, they respected them—and respected the God they served. Yes, the *Dorchester* was old and small and smelling of oil—but because of four men who were aboard her that last month it was as though she contained four cathedrals, temples; and these were visited every day—because men did not have to come to the cathedrals—the cathedrals came to them in the person of Father Washington, Chaplains Fox and Poling, and Rabbi Goode.

When the torpedo struck after midnight that night, many died before boarding the lifeboats. The chaplains helped the men

board the boats that were not washed away and gave their lifejackets to those who had none. Of the 900 men on that boat, over 200 reached shore safely. The last they saw of the chaplains, they were standing arm in arm, knee deep in water, going down with the *Dorchester*. The men who had to die on that cold, Arctic night found the strength to die well from the chaplains. Somehow, we can still see the flare of moonlight that lit up the forms of those four men, standing together on the deck. Why? Is it their togetherness that haunts us, that makes us want to be kinder to our fellow man no matter who he is, knowing we all have a common Father in heaven?

Or is it that we are struck with the sense that here are four men who can say to God, "We have done the task You have given us to do. We have finished the work You have set before us. We, too, are now ready to meet You face to face—our work for our brother done."

The 600 men who died that night could have died at home, at the factory, on the highway—if God so willed. But by dying on the *Dorchester*, the whole history of their last month on earth had changed. If they had died on shore at work, would they have talked every day of their last month with four chaplains? It is the mercy of God that He takes each one of us when we have attained the greatest possible grace in our lives. It is very possible to believe that those men on the *Dorchester* attained greater grace through their daily contacts with the chaplains than they would if they had spent that month on land.

But no man need be less rich, less ready than those fortunate 600 men on the *Dorchester* with the many churches there are in every town and city of our land. We don't have to walk a slanting deck with a presentiment of a submarine following us to visit our churches. Even on a sunny day, when everything is going fine, God likes to have someone drop into the quiet of a church and thank Him for the blessings he has received.

The choppy, uncertain waters around the *Dorchester* are no different than the uncertainties of hydrogen bomb warfare that strike a chill at the heart of man in the cities. Like the men in the *Dorchester*, the only way we can meet the challenges and tensions of the present day is to spend a part of every day thinking of God. We don't know who the four men are who wore the lifejackets of the four chaplains of the *Dorchester*—but in a sense, the chaplains flung those lifejackets to us—to you and to me—to wear to safety in the choppy waters of today's tensions. We must wear them well, knowing from whom we have received them. And wearing them, we must not neglect to put our arm around our fellowman, no matter who he be, in understanding brotherhood, with compassion and forbearance. And why? Because God, our common Father, measures our stature in the next world by the measure of love we have given to our fellow man in need, whether that need be great or small. America was founded upon the principle of brotherhood and upon a strong, personal love for Almighty God, who has given us not only our first hour on earth but also, with all its trials and tremendous potentialities for sanctity, our last hour on earth. Not everyone's last hour will come as suddenly upon him as it did upon the soldiers and four chaplains upon the *Dorchester*. Searching as we have the hearts and the vocations of the four chaplains, we have a comforting conviction that no matter how sudden that hour was for the soldiers aboard, they were spiritually prepared. Perhaps this is the lesson of the four chaplains; the indelible words written upon the lifejackets they have tossed across the seas to modern, fear-ridden men: "God awaits you. Be prepared."

**Statement by G. Russell Clark, New York
State Superintendent of Banks**

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following statement by G. Russell Clark, New York State superintendent of banks, before the joint legislative committee to revise the banking law, senate chamber, Albany, N.Y., on February 25, 1960:

**STATEMENT BY G. RUSSELL CLARK, NEW YORK
STATE SUPERINTENDENT OF BANKS**

My name is G. Russell Clark; I am superintendent of banks of the State of New York. I appreciate having the opportunity to appear before the members of the joint legislative committee to revise the banking law to state my views on the various proposals, presently being considered by your committee, regarding the banking structure of this State.

The bills being considered by your committee deal with problems that have been pending for at least 5 years. There have been many attempts made to deal with these problems and many solutions suggested. No solution, however, has as yet been achieved. Last summer, in the hope that it might be possible to obtain some basis of agreement between the various segments of the banking industry of this State, the members of your committee and I conducted a series of informal meetings throughout the State to solicit the views of representatives of all segments of the banking industry of this State. Not one iota of progress, however, was made in regard to obtaining some basis of common agreement between the various components of the industry. It is my sincere belief that the failure to achieve agreement may be attributed primarily to the selfish economic desires and ambitions of many of the participants at the meetings.

At these meetings your chairman, Senator John Cooke and, upon other occasions, the majority leader of the senate, Walter Mahoney, and other members of both the senate and the assembly, stated unequivocally that if some agreement could not be obtained among the various segments of the banking industry, it would then become incumbent upon the members of the legislature to pass a bill which would effect the long-range solution to our problems, a bill which would be fair, a bill which would not give each segment of the industry everything it wanted, but above all, a bill which would be in the public interest and to the long-range economic benefit of the State of New York and of its people.

I am certain that you have heard in the past, and will hear today, many arguments, but when these are analyzed, they have one common genesis, namely, the fear that any change in the present banking structure of this State will result in reduced profits or put an end to ambitions or facts of dominance in a particular community. I believe that your committee will not be misled by such arguments but rather will consider whether any proposed change will benefit the public and the long-range economic interests of our State. If we assume that the economy of the State of New York is going to become moribund, then there is no need to consider any change in our banking structure. If we assume that the public will not benefit from increased competition or a wider choice of

banking facilities, there should be no change in the banking structure. If we assume that any alteration in the law in regard to holding companies and branch banking will inevitably result in diminution of services presently enjoyed by the public, then I repeat there should be no change in our banking structure. And lastly, if by our actions we are content to allow this great State of New York, the leading banking State in the country, containing the greatest financial center of the world, to become a follower, instead of its traditional role of banking leader, then it seems to me that we have failed to face up to our responsibilities to the people of the State.

I do not intend to take this committee's time by discussing all the bills now before you. Instead, I wish to indicated my unequivocal support of one of these bills, Senate Introductory No. 3503, which, I believe, will lead to increased competition and afford the public wider choice of banking facilities without denying to the public any of the services of which they now receive the benefit—a result which is in the interest of the people of this State and will aid the long-range expansion of the economy of this State.

First, Senate Introductory No. 3503 permits the formation of holding companies in this State, but provides that no holding company may cross traditional district lines without the approval of the banking board. In considering such an application, the banking board is required to follow the definitive criteria specified in the bill. This proposal is consistent with the views expressed by the New York State Bankers Association through its executive committee.

Second, this bill would put an end to the statutory monopoly now granted to the one large holding company in this State. In meetings last summer, I was most impressed by the favorable comments of many of the independent bankers who are in competition with subsidiaries of the one statewide holding company in New York. Based upon their experience, I think it is safe to assume that the competition afforded to the independent banks by holding companies, unequivocally demonstrates that the independent banker should have nothing to fear from the formation and expansion of other holding companies. Indeed, the proposed bill contains sufficient safeguards in the criteria which must be considered by the banking board which will serve to prevent the commercial banks from being swallowed up by a few large holding companies. In addition, any holding company formation and expansion will be subject to the further approval of the Board of Governors of the Federal Reserve System and will at all times be subject to the standards of the Clayton Act and the Sherman Act, as enforced by the Department of Justice. Consequently, dominance over commercial banking in this State by a few of the larger institutions in New York City cannot be achieved.

Moreover, from the supervisory standpoint, holding companies are often desirable. There are many instances in which a small independent bank may be inefficiently operated or may not be in a position to offer comprehensive service or in which, although efficiently operated, there may be an inability to raise sufficient capital, or a problem of management succession, which has unfortunately, and to the great detriment of independent banking, been the motivating factor in altogether too many mergers in recent years. Acquisition of the stock of such banks by a holding company has often achieved an eminently desirable consequence for the people in the community in which such bank is located. In addition, in certain areas of the State such as Nassau County and the Buffalo area, formation of bank holding companies should help to reduce the problem of an undue concentration of commercial banking assets by affording the pub-

lic the benefits of more stringent competition. Another consideration of many who advocate statewide holding companies is the opportunity for the large stockholders and executive officers to have their bank acquired by a holding company which acquisition will result, perhaps, in increased salaries, broader pension benefits, and increased marketability of the stock acquired as the result of such acquisition. I, however, assessed no importance to this in reaching my conclusions.

I firmly believe, however, that the principal argument in favor of permitting the formation and expansion of statewide holding companies, subject to the safeguards and criteria contained in the bill I am supporting, is that it can both be geared to, and become a motivating force in, the expansion of the economy of our State. The services which can be offered by banking subsidiaries of holding companies, both qualitatively and quantitatively, cannot help but be in the public interest. If comprehensive services are being offered by an independent bank, it should have nothing to fear from competition from a subsidiary of a bank holding company. If adequate services are not now being offered, this competition will at least insure that such services will become available. In addition, not one unit bank will be forced to sell but will be able to continue in business under the umbrella of the statutory monopoly now granted to it by law.

As I stated, I do not intend to discuss the other bills before this committee, but I would like to briefly mention that another suggestion is to let the freeze expire and to do nothing further. The danger in this is that all control over holding company expansion in New York State would then be in the hands of the Federal Reserve Board in Washington. While I am certain that they would perform their responsibilities conscientiously, we should attempt to retain some power over decisions regarding holding company expansion in this State within the hands of New York State officials who are in the best position to know local conditions and evaluate banking and economic circumstances within the State, even though Federal Reserve approval would still be required. In addition, an increased centralization of powers over activities of commercial banks and holding companies in Washington, together with an absence of power in New York, will inevitably lead to an end to the dual banking system. As to another alternative—continuing the freeze—I have grave doubts about the constitutionality of any protracted freeze, be it indefinitely or on a year-to-year basis for any great length of time in the future where the effect is to grant a statutory monopoly to the one statewide holding company.

There have also been other bills submitted, two of which would make no changes in branch powers of either commercial or savings institutions. It would not be desirable to permit holding company expansion while blocking any change in branch banking laws. For reasons I will discuss, it seems to me that the public interest requires a broadening of branch powers of savings institutions and of New York City commercial banks. These changes should, in my opinion, be made together with changes in the holding company law.

Turning now to the branching provisions of this bill, it would permit New York City commercial banks to branch either by merger or by de novo branches into counties with over 700,000 population adjoining New York City, meaning Nassau and Westchester, while banks in these two counties could branch into New York.

What would these changes in the banking law mean for the businessman and the general public? First, wider branch powers for New York City commercial banks will serve to enhance competition in the highly

populated suburban communities around New York. I would call your attention to the results of a recent study financed by the Nassau-Suffolk Financial Council which indicated that rates on both short-term business loans and business installment loans were lower at New York City commercial banks than on Long Island. I attribute this to the high degree of competition which exists within New York City, a degree of competition which can and should be extended to these newer areas, thereby reducing borrowing costs for the small businessman and borrower. In fact, the study that I have just cited indicates that rates are also lower at New York City banks for home improvement, personal installment, and automobile loans. Thus, the consumer who wishes to obtain a loan for improvement of his home or for various types of consumer needs would thereby be able to obtain such loans at lower cost from branches of New York City banks located in the suburbs. Second, wider branch powers would broaden the degree of choice which the public may exercise as regards the institutions in which it wishes to place its funds.

You may possibly hear other witnesses today who will deny that loan rates are any lower at New York City banks. Such a denial, if made, would indeed be strange since the facts I have cited come from a study financed not by the New York City commercial or savings banks, but by Long Island institutions themselves. Other studies have also shown that loan rates are lower in New York City. Perhaps it will be argued, however, that even though rates are higher on Long Island, this is more than offset by the fact that local banks are willing and able to make types of loans, particularly to small business, that New York City banks would not make. If this is the case, I would suggest that the local banks need not be concerned about the entry of the New York City institutions. If the New York City banks fail to provide the needed or required services, it stands to reason that they will not have much success in obtaining the banking loyalty of the residents of those areas. Again, I say, let competition determine where the patronage of the public will be directed. Such competition can only lead to better and more efficient services and to more competitive rates, which will redound to the public's advantage.

In addition, the efficiently operated independent bank should have nothing to fear since home office protection is not only maintained but strengthened. As a practical matter, the New York City banks are not going to be able to open branches all over Long Island or Westchester, nor will they be able to enter any city or village where a Long Island or Westchester bank has a principal office. What do these banks have to fear? If they are doing the job as efficiently as possible, why should they be afraid of competition? No one is forcing them to become part of a holding company or to merge. Perhaps a few banks are not doing the job they should. If so, those banks which are unable to compete or, as may more probably be the case, will not desire to compete, can either merge with other local banks, with New York City banks or become part of a holding company.

Nor do I place great credence in the fears of stockholders of such banks that their stock will be less valuable if New York City banks are permitted to branch into Westchester or Nassau. On the contrary, it seems to me that there will be extensive bidding for the shares of those banks which do not wish to remain independent or cannot compete, and I expect that one of my principal supervisory problems will be to insure that the premiums paid for the stock are not unreasonably high. Indeed, it was for this reason that the department has not been

completely in favor of permitting mergers between New York City banks and those in Westchester nor Nassau. However, the department has conferred with the comptroller of the currency and agrees, under existing law, that in the event of a merger in which a national bank is the receiving bank, it may continue to operate any branch in any area in which a branch could be lawfully operated by a State bank with its principal office in the same place as the receiving national bank, regardless of whether State banks similarly located could merge. As a result, we are of the opinion that State banks and trust companies, so located, must be permitted to merge in order not to place them at a competitive disadvantage relative to national banks.

Another factor deserves emphasis. Before a branch can be obtained by a State-chartered institution, it must indicate to the complete satisfaction of the department and the banking board that such a branch will further the public convenience and advantage in the area proposed, that it has a reasonable assurance of successful operation within a relatively short time, and that the impact on nearby institutions will not be adverse. The burden of such proof is upon the applying bank. The department carefully evaluates the evidence presented, analyzes the area concerned, and considers all possible aspects before coming to a decision. A favorable decision is further subject to review by the Board of Governors of the Federal Reserve System. Similar investigations are made by the comptroller of the currency in the case of national banks. Let me assure you, as well as all bankers, that the stringent standards and criteria which we have developed over the years will continue to be applied, and that changes in the banking law to permit wider branch powers will not be allowed to result in a disorderly creation of new branch offices. Each such application will be carefully analyzed in light of the above-mentioned criteria before any new branches are authorized.

In regard to branch powers for savings banks, the bill proposed permits New York City savings banks to branch anywhere in New York City, thereby enabling them to expand into parts of the city which can and should be serviced by branches of savings banks. This bill would also permit New York City savings banks to have no more than one branch each in Nassau County. There is now only one savings bank in Nassau, and I can see no valid reason why the people of that county should not have access to and be served by other such institutions. New York City savings banks would, however, be barred from Westchester, where there are now 11 savings banks. Based upon the present population of that county, I believe that it is being adequately served by the local savings banks now in existence there. Upstate, the only new branch power granted to savings banks is for those located in Rochester, Syracuse, and Buffalo, all major urban communities. Even then, this additional branch power is limited to one branch within 5 miles of the city limits. State savings and loan associations are also given additional branch privileges, for the most part restricted to the city or village in which their principal office is located. What, then, do the upstate commercial bankers have to fear? It has been argued that to permit the expansion of savings institutions or New York City commercial banks into suburban areas would harm existing institutions. This emotion-laden claim is simply not supported by evidence or by dispassionate analysis. Let me point out, as regards the competitive impact of savings banks, that in all 59 communities in New York State in which there are savings banks, commercial banks today exist and prosper side by side with them. But, some may say, in these cases they have grown together over many years, while the

presently proposed changes in branch powers would suddenly upset the banking picture in these communities. My reply to this would be, first, the expansion that is being proposed is into suburban areas which are rapidly growing. In such communities, I do not believe that anyone would be hurt by branch expansion. On the contrary, competition would be enhanced and all types of financial institutions would share in the growth of these areas. Second, as already indicated, branch applications would have to meet the approval of the superintendent and the banking board, and I have yet to hear of any banker in this State complaining that the banking department was too lax in its branch approvals. I am convinced that no superintendent of banks and no member of the banking board would approve of any such branch request where there was any danger of harm to the continued well-being of existing banks.

Furthermore, to those who are concerned about the dangers to smaller, independent banks from the competition of larger commercial banks, again let me stress that branches would continue to be barred from communities where the head office of a commercial bank is located. In addition, we have made studies of the question as to whether a small independent bank can compete effectively against branches of larger institutions, having recently completed a study of postwar mergers involving situations in which a chain bank absorbed one of the small banks in a local community, leaving one or more other small independent banks. We sought to determine whether the remaining independent bank in that community was placed at such a competitive disadvantage as to adversely affect its present or future prospects. We found conclusively that in the great majority of cases, neither the growth nor the earnings of the remaining independent bank was adversely affected by competition from the large chain bank. In other words, our studies indicated that the small independent bank is usually able to compete effectively against the branch of a large institution. Furthermore, several years ago the Comptroller of the Currency made a similar analysis on a nationwide basis and arrived at similar conclusions which were publicly reported. In view of these findings, I suggest that some of the fears frequently expressed that small banks cannot compete effectively against large chain banks are simply not supported by the available evidence.

I think it bears mentioning in this connection that my two predecessors as superintendents of banks of New York State—men representing both political parties—favored wider branch powers in highly populated suburban areas as being in the public interest. I would ask those who fear the effects of such legislation to consider whether three superintendents of banks, including myself, would favor such legislation if its effect could really be expected to harm our existing institutions, either small or large.

Another major argument is that before any changes in the branch banking laws for mutual savings institutions should be permitted, they must first be subjected to Federal income tax treatment similar to that of commercial banks. Until this occurs, it is maintained, they should not be permitted any broader branch powers. This argument implies two things which I do not believe are supported by careful analysis. First, it means that changes which may be desirable from the standpoint of the people of this State should not be permitted until the U.S. Congress makes changes in tax laws. It does not seem to me that State policy can properly be forced to wait upon actions by the Congress, actions which may or may not occur in the near future. Furthermore, suppose that Congress does alter the tax laws with regard to mutual institutions, but not

to the extent that many commercial bankers favor. What then? Is the Legislature of New York State to have its hands tied until the tax laws are made to coincide with the wishes of certain elements in the banking industry? It would seem to me that the question answers itself. If a policy of wider branch powers is in the public interest, this is so regardless of the status of the Federal income tax laws.

Further, for many commercial banks whose improvements in earnings in recent years warrant and permit the paying of rates more competitive with those now paid by mutual savings institutions, they are held back by the existing ceiling of the Federal Reserve Board. Here is another instance where I do not believe it is justifiable to ask the State legislature not to make any changes in State branch laws which are necessary and desirable, while we await the actions of a Federal agency.

Second, this tax argument tends to sell short the vigor of our commercial banking system by implying that they would be unable to meet effectively the competition for savings without tax law changes. It disregards the advantages which commercial banks have over all other type of institutions in being able to offer one-stop banking service, a literal department store of banking in which every conceivable type of service may be offered. I might say that the commercial banks have become increasingly astute in their advertising of this to the public, and, as they continue to do so, they should become increasingly successful in attracting savings deposits, even though they may not be able to match the rates paid by other types of savings institutions.

Finally, let me stress that we are operating today under both a dual commercial banking system as well as a dual savings system. Even if the commercial bankers who are afraid of the competition which may be offered by mutual thrift institutions were able to prevent additional branching for savings banks and State savings and loan associations, they could not prevent the formation and expansion of Federal savings and loan associations. I personally believe that the public will place their thrift deposits in whatever institution pays the highest rate and affords the traditional safety through insurance. When people in other parts of the State are receiving higher interest rates, those who are not will also want to receive those rates. All that the opponents of additional branch powers for State savings institutions are achieving is the rapid placement of the savings of the people of this State in the hands of Federal institutions. To illustrate, since 1951, there have been 14 savings and loan associations in New York State which have converted from State charter to Federal charter. Ten years ago, about 46 percent of the assets of all savings and loan associations in New York State were under State supervision. Today, that percentage has declined to 36 percent. Why has this happened? Largely because the Federal Home Loan Bank Board refuses to follow State policy in regard to branch privileges for Federal savings and loan associations, because they consider the State law to be unrealistic. The home loan bank board, despite repeated requests of your banking department for the exercise of moderation in granting branches to Federal associations in areas where New York State laws prohibit State-chartered associations to establish branches, has continued to authorize such branches. This ridiculous situation is further compounded when spokesmen for Federal associations protest against the right of the State to prescribe the rules of the game under which State associations must operate, preferring that the State laws not be changed, thereby giving Federal associations a competitive advantage over State-chartered associations. It should also be noted that serious proposals have been made

to authorize Federal charters for savings banks, a step which could remove these institutions from State supervision.

It can be argued that savings banks and savings and loan associations should be given even wider branch powers. However, we must be realists. Savings banks and savings and loan associations cannot be granted the full branching powers which not they, but the people of this State who are deprived of their choice of institutions in which to place their thrift deposits, deserve. Not everyone can get all he wants. And let me add that because he gets less this year, does not mean that he can expect to get a little more next year and the year after and the year after. We are here today, hopefully, to discuss the merits of a bill which will endure for years to come. I have heard the argument that to grant a little this year will be to grant a little more the following year. Such an argument is an insult to the members of this committee, who have, in good faith, stated that it was their intention to propose a bill that would endure, not a temporary expedient for the year 1960. I believe that if this bill is enacted, there should be no change in the banking structure of this State for quite a few years. There should be a respite from the controversy and bitterness which has permeated the air in the last few years. This should provide ample time for those opponents of additional branch banking powers for savings institutions of this State to reassess their function in the economy of our State, and, I hope, to come to the conclusion that the best interests of the public should at all times be served and then to decide on new ways to serve the public. At the same time, the savings institutions of this State would do well also to reassess their function and not try to become commercial banks, but work rather to fulfill the needs of the people of this State. I might add the State has a duty to see that such needs are fulfilled without the imposition of provincial or arbitrary barriers.

If we look at this from a long-range point of view, it is essential that the power and authority of the New York State Legislature in the banking field not be eroded. I am certain that the legislature does not wish, nor do I wish, to preside over the liquidation of State authority in the banking field, yet this may well be the longrun result unless we attempt to keep our banking law up to date and consistent with changing economic circumstances. I believe that the bill I have been discussing would adequately meet these objectives. There are more than adequate legal and administrative safeguards surrounding such expansion to eliminate any fears that destructive or unwholesome competition might result, to the detriment of any existing institutions. And most importantly, it is my sincere belief that the furtherance of the public interest would be enhanced by a broadening of branch powers and by State control over holding company expansion by increasing both quantitatively and qualitatively the services being offered and by reducing costs to the public.

Thank you.

Council of Churches

EXTENSION OF REMARKS OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. DORN of South Carolina. Mr. Speaker, the Honorable FRANCIS WALTERS and his great Committee on Un-

American Activities should receive the gratitude of every real Christian. In exposing the antichrist forces of communism and how they operate this committee is rendering outstanding service to the cause of Christianity.

The following article by David Lawrence is timely and worthy of our earnest attention:

TESTIMONY ON MANUAL RELEASED—AF PASSES ON COUNCIL OF CHURCHES, RIGHT TO KNOW BACKED AT HEARING

(By David Lawrence)

Are the American people getting a fair report on what the Air Force Reserve training manual said about the "people's right to know" and about communistic activity in the churches? Many Members of Congress think not.

The best way perhaps to give the viewpoint of those Members of Congress is to present some of the testimony, originally heard in executive session, when the Air Force Secretary, Dudley C. Sharp, testified. This now has been released for publication.

First of all, it's necessary to read in full text the paragraphs in the Air Force manual dealing with the "right to know" controversy. Here they are:

"When a newspaper prints some so-called secret data, it merely means the Government no longer considers that particular data secret—it does not mean we have no secrets left. Or it could mean that clever newsmen took pieces of unclassified information which they were authorized to have, put them together and came up with the right answer. However, because such accounts may have given the correct information does not mean that the information is no longer classified. Newspapers are not official—and until the Government declassifies security information, it remains classified."

"Another rather foolish remark often heard is that Americans have a right to know what's going on. Most people realize the foolhardiness of such a suggestion. If a football team should start telling the other side the plays it planned to use, their opponents would sweep them off the field. It's the same in war—hot or cold; if we tell our secrets, we are likely to be beaten, and beaten badly."

Immediately after this quotation in the printed testimony there occurs this exchange between Richard Arends, staff director of the House Committee on Un-American Activities, and the Secretary of the Air Force, Mr. Sharp:

"Mr. ARENDS. Mr. Secretary, the whole import of that language is that the military is entitled to protect secrets, is it not?"

"Secretary SHARP. Yes, I would think so, sir."

"Mr. ARENDS. It is not intended, as you read the two paragraphs in entire context, to convey the impression that the American people as such are not entitled to know in general what is going on; isn't that correct?"

"Secretary SHARP. That certainly is correct; yes, sir."

At another point in the same executive session, Mr. Arends took up the section dealing with Communist infiltration in the churches and read again from the manual which declared that the Communist Party in this country had instructed many of its members to infiltrate the churches. The manual had made this comment:

"Again, to stop Communists we must be careful not to attack the majority of faithful ministers and churchgoers. We must merely search out those who back Moscow right down the line."

Mr. Arends said to the committee: "In view of the Secretary's repudiation of the information conveyed respecting the National Council of Churches of Christ in America, the chairman (Representative

FRANCIS E. WALTER, Democrat, of Pennsylvania) issued a statement to the effect that the leadership of the National Council of the Churches of Christ in the United States of America had hundreds, or at least over one hundred, affiliations with Communist fronts and causes. Since then we have made careful, but yet incomplete checks, and it is a complete understatement.

"Thus far of the leadership of the National Council of Churches of Christ in America, we have found over 100 persons in leadership capacity with either Communist-front records or records of service to Communist causes. The aggregate of affiliations of the leadership, instead of being in the hundreds as the chairman first indicated, is now, according to our latest count, into the thousands, and we have yet to complete our check, which would certainly suggest, on the basis of the authoritative sources of this committee, that the statement that there is infiltration of fellow travelers in churches and educational institutions is a complete understatement."

Representative DONALD L. JACKSON, Republican of California, a member of the same committee, charged that some newspapers last Friday twisted the words of Cardinal Spellman, of New York into a defense of those who had criticized the Air Force manual. The cardinal, in his statement referring to protestant chaplains with whom he was associated in wartime, said he would "deplore it if any unfair deductions from general accusations were interpreted to reflect in any way on their loyalty to our country or on the loyalty of the general body of ministers whom they represent."

Representative JACKSON called Cardinal Spellman's attention to the misinterpretation of his statement as a defense of those who had criticized the Air Force manual. He received from Cardinal Spellman a telegram in reply which said:

"I cannot understand how some of the press distorted my statement. I respect the fact that Congressman WALTER, you and other members of your committee have rendered outstanding service in exposing Communist activities."

It is indeed on the whole an unfortunate controversy, and maybe the clergymen who aired it publicly in the first place would have been better advised if they had written privately to the Defense Department and called attention to ambiguous paragraphs or to those which might better have been omitted.

Peace on Earth Controlled From Space

EXTENSION OF REMARKS

OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 7, 1960

Mr. WOLF. Mr. Speaker, I commend to the consideration of all Members the excellent article on why space is important militarily.

I can suggest, herein are excellent answers to those who say we have no business in space.

The article follows:

[From Space Digest, March 1960]

PEACE ON EARTH CONTROLLED FROM SPACE

(By James H. Straubel)

"The far side of the earth—the not the far side of the moon—represents the immediate and appalling threat to peace and freedom . . . the threat of surprise attack.

"Only in space—with our new line of sight—can we employ an electronic alarm system."

In these waking hours of the space age we are fascinated with the new worlds that emerge out of the morning mist.

We plunge into the outer regions—into the unknown—while at our feet is a world that revolves around an axis of age-old problems.

It is a world where people reach high levels of technical achievement, while remaining crude in their relations with one another; of people who seek peace with freedom, but cannot prosper without enforcing rules for law and order.

In our conquest of space, our first goal must be peace with freedom—through control—on planet earth.

The great reaches of the universe offer—not only new worlds to conquer—but a new line of sight to scan the earth as never before.

Space flight has opened the door to a revolutionary era in electronics and communications. That is the first great discovery of the space age.

As a result, space becomes more than a propaganda medium for exploring national prestige—more than a wilderness to explore for exploration's sake—more than a new arena for military operations.

The so-called space race with Russia—more of an Olympics than a race—is a scientific crusade for military, political, cultural, and economic objectives.

To date in the electronic revolution, the marriage of human intelligence and mechanical brains has produced an offspring made for terror and destruction. This first-born—the big ballistic missile—is as yet the only consistent user of space.

What of the countless manmade objects that will use space in the months and years to come?

Here we find the great challenge: To use space in the pursuit of goals that will benefit—rather than destroy—all of mankind.

These are goals to be pursued with both hard realism and shining vision.

Man's natural desire to explore the heavens must not compromise his fundamental responsibility to insure the survival of his species on earth.

Shooting for the moon—like disarmament—must be a means to an end—not an end in itself. It cannot be pursued at the expense of shooting for information on the other side of our own planet.

The far side of the earth—not the far side of the moon—represents the immediate and appalling threat to peace and freedom.

It is the threat of surprise attack.

Our earthbound and airbound methods for detecting surprise attack must be continued and improved—but at best these are only expedients. We continue to live under the gun.

Only in space—with our new line of sight—can we employ an electronic alarm system to effectively warn against surprise attack.

The job can be done with our present knowledge of electronics—and with our present rockets and boosters. We need not wait. The job can be done.

In recent weeks the space warning mission has been given new support by Government leaders—support that is late but welcome.

Still to come is a broad space program leading to "controlled peace."

This program would center in advanced space systems for warning, reconnaissance, and communications, backed by a strategic attack system kept modernized at all times.

A space-borne warning patrol would greatly strengthen our ability to deter aggression. However, it could play an even greater role.

It could lead to the establishment of a global warning network for all nations, with international direction and participation.

Our strategic attack system—alerted by space warning—would be prepared for fast and commanding action against would-be breakers of the peace.

The next step could well be the pooling of the world's strategic attack forces into an international enforcement agency, geared to the global warning network, directed by the United Nations.

With all the world alerted against aggressive action, the need for huge national attack forces would deteriorate, and voluntary reduction of armaments would be encouraged.

In reducing the threat of surprise attack, the program could eventually justify the curtailment of arms to minimum levels.

This is the great utilitarian mission to be found in space.

We must—while we explore the moon—give this broader mission our highest priority—and full public support.

In the new world of the Space Age, "controlled peace" must be our legacy to future generations.

Non-Service-Connected Pension Legislation Program of Veterans of World War I of the U.S.A., Inc.

EXTENSION OF REMARKS

OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. TEAGUE of Texas. Mr. Speaker, the national junior vice commander of the Veterans of World War I of the U.S.A., Inc., Mr. George M. Leary, in his capacity as chairman of the national legislative committee, has outlined legislative objectives of that organization and his report follows:

STATEMENT OF GEORGE M. LEARY, NATIONAL JUNIOR VICE COMMANDER AND CHAIRMAN, NATIONAL EXECUTIVE LEGISLATIVE COMMITTEE, VETERANS OF WORLD WAR I OF THE U.S.A., INC., BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE, MARCH 15, 1960, REGARDING THE NON-SERVICE-CONNECTED PENSION LEGISLATIVE PROGRAM OF THE ORGANIZATION FOR 1960

Mr. Chairman and members of the House Veterans' Affairs Committee, may I preface my remarks by giving you a little of my personal background. I am a veteran of World War I, having enlisted April 25, 1916, serving on the Mexican Border and in Mexico; then later in France in the American Expeditionary Forces with the 26th Infantry Division, 103d Infantry. I was gassed and wounded in action.

I am a charter member of the American Legion, in which organization I have held many elective and appointive offices, including membership on the important National Rehabilitation Committee.

I am also a charter member of the Veterans of Foreign Wars, the Disabled American Veterans, and the Yankee Division Association.

I am presently the National Junior Vice Commander of the Veterans of World War I.

As a service-connected disabled veteran, I believe that my experience in veterans' organizations, and in the service, qualifies me to speak for the veteran of World War I.

The justification for a separate and liberalized pension for the veteran of World War I goes back to the days of the early

history of our country, when George Washington, in his Farewell Address, said:

"We hold that the legislature has the right to pass such laws as those here in question upon the theory that it is not, indeed, consistent with reason or justice, to expect that one set of men should make a sacrifice of property, domestic ease and happiness, encounter the rigors of the field, the perils and vicissitudes of war, to obtain those blessings which every citizen will enjoy, in common with them, without some adequate compensation. It must also be a comfortless reflection to any man, that after he may have contributed to securing the rights of his country at the risk of his life and the ruin of his fortune, there would be no provision made to prevent himself from sinking into indigence and wretchedness in his old age."

May I refresh your memory with a few statistics. The total enlisted or inducted men in World War I was 4,791,000, of which number, and in accordance with the best statistics available, 3 percent served less than 90 days, leaving approximately 4,648,000 who served more than 90 days during World War I. Of this number, 118,000 were killed in action. From statistics compiled by the Veterans' Administration, there are an estimated 2,749,000 living today. Breaking this figure down in age groups, their report shows 8,887 between the ages of 50 and 59; 987,617 between the ages of 60 and 64; 1,268,811 between the ages of 65 and 69; 438,380 between the ages of 70 and 74; 35,146 between the ages of 75 and 79; 8,901 between the ages of 80 and 84; 1,200 between the ages of 85 and 89; and 64 between the ages of 90 and 94. Their report further shows that there will be one man living in 1996.

It has been estimated by reliable statistics that these men are now dying at the approximate rate of 120,000 per year. We may assume for all practical purposes that the above figures are estimates only, and that there are alive today approximately 2,500,000 veterans of World War I, and taking the 3 percent, or 75,000, from that number, we find 2,425,000 who served more than 90 days. From that figure, we must take the approximate 300,000 figure of service-connected cases who would not come under the provisions of this bill, leaving a figure of 2,125,000. From this figure, we must consider that there are now approximately 800,000 receiving a non-service-connected disability pension in the amount of \$66.15, or \$78.75, depending on the age and degree of disability. Therefore, based on our research and the best statistics available, we find only the approximate figure of 1,250,000 veterans of World War I who would benefit were our bill H.R. 9336 to be enacted into law, from which it can be seen that the payment of a pension to a veteran of World War I, in accordance with the provisions of our bill, is not the major problem as would appear from casual study, nor does the cost of payment reach the astronomical figures that some reports indicate.

We must also, at the present date, take the statistics which are available which show that the following number of non-service-connected veterans, and as quoted in the recent Veterans' Administration Annual Report, are on the rolls in the amount of \$66.15 per month, and the additional number herein quoted are on the rolls at the present date in the amount of \$78.75, which we must evaluate as not to be included in the total cost estimates at \$100 per month for this group of pensioners.

From a study of all available documents which we have been able to find with reference to the old World War I veterans of today, it is our firm belief that if this legislation as now before your committee, were to become law, it would affect not more than 1,250,000 veterans who would meet the requirements contained in this bill, in accordance with title 38, United States Code.

We must at this time lend our thinking to the period in which the men of World War I rendered their service in defense of the Nation. Unlike our comrades of World War II and Korea, medical and service records were not considered important. They were not complete and accurate, leaving many thousands of veterans of World War I unable to establish service-connected disabilities upon application for disability allowances, notwithstanding the fact that many rating boards throughout the country were established to determine these cases, and study shows many unjust and doubtful decisions were adopted which became quite detrimental to this group of worthy veterans. The fact that this condition exists and is recognized is confirmed by the fact that the chairman of this great committee has seen fit to introduce legislation to create a separate court with jurisdiction over all such disputed claims.

We must remember that the veteran of World War I, when he returned from service, barely had time to establish himself when the great depression hit this country, which further left such an impact on their lives that they have never entirely recovered, and after a few short years, World War II began. Then the veteran of World War I took the leadership in the enactment of legislation known as the GI bill of rights, which made it possible for his sons, daughters, and grandchildren to reestablish themselves, on their return from service, to their rightful places in their communities without the great sacrifices experienced by the veteran of World War I, and in so doing, self was forgotten and only in recent years has the veteran of World War I come to the realization that he put his efforts in the interests of his later comrade to find, because of lack of experience and knowledge as to the workings and the needs of the veteran of World War I, the veteran of World War I had become the "forgotten man." We are the martyred generation of veterans.

In this connection I wish to refer briefly to the effect of social security legislation and payments provided under this law. The veterans of World War I had little time, due to the depression, to build up a sizable account under the social security law. As a matter of fact, the first deductions made under this law were as of January 1, 1937, and a large group of veterans of World War I who were engaged in the pursuit of agriculture were not covered until 1955; likewise the self-employed.

Think, if you please, what the legislation you now have pending before you would do to the economy of America in relieving local, State, city, town, and governmental agencies of the responsibility for providing relief to the men and their families for whom we are now asking your most sincere consideration, and who are in that age group in which the President, in his creation of the Commission on the Aged, said to the Congress that the time has come when we must begin to consider the aging citizen of America.

You must further realize that if these men were in receipt of a pension free of conditions, the impact it would have on their everyday life, because it would make them feel that they were able to stand out in their own communities as economically free Americans.

Therefore, Mr. Chairman and distinguished members of this committee, I know and I feel, as a taxpaying citizen, that you, in your deliberations in your executive sessions, will trend your thinking back to fit the era in which these men fought the first great World War to make the world safe for democracy, and did just that, and served in the hope that they had fought the war to end all wars. We ask that you, the members of this committee, and your colleagues of the 2d session of the 86th Congress, will write in

the history of America that you, too, showed by your actions that you believe, as did our Founding Fathers, that we must never forget those who bore the battle, and that our pension bill will be favorably reported to the House for consideration of the Members of the Congress.

On behalf of the national membership of our organization, the Veterans of World War I of the United States of America, I thank you for the privilege of appearing before you.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at \$1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Address by Hon. Robert S. Kerr, of Oklahoma, Before New York State Waterways Association

EXTENSION OF REMARKS

OF

HON. MIKE MANSFIELD

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. MANSFIELD. Mr. President, on February 19, of this year, the distinguished senior Senator from Oklahoma [Mr. KERR] made an address before the New York State Waterways Association in New York City. In that speech, which I think is worthy of the attention of every Member of the Senate—and I think we ought to keep in mind that the Senator from Oklahoma is chairman of the Select Committee on National Water Resources—the distinguished Senator had the following to say:

The Nation as a whole will require 2½ times as much municipal water in 1980 as we used 5 years ago. The six major water-using industries will use 3½ times more water in 1980 than they were using in 1954. The electric power generating facilities will require 4½ times as much water for cooling purposes.

Water is more than a natural resource. It is a necessity of life. It is the priceless ingredient for continuing increase in population and growth in industrial and agricultural production. The necessities and uses of water in modern society are so tremendous that they stagger the imagination.

Mr. President, I ask unanimous consent that the text of the speech delivered by the distinguished Senator from Oklahoma, chairman of the Select Committee on National Water Resources, be incorporated in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS OF SENATOR ROBERT S. KERR BEFORE THE NEW YORK STATE WATERWAYS ASSOCIATION, NEW YORK CITY, N.Y., FRIDAY, FEBRUARY 19, 1960

I was happy when your fine president, Mr. David A. Wright, invited me to address you. I am especially honored to have a part in your program as you observe your 50th anniversary.

New York City and State have always possessed a strange fascination for me. I am thrilled each time I visit this city, the greatest upon the earth.

New York City is not only the largest center of population in the world; it is more than that. It is a symbol of progress, of the most powerful of all nations. The heartbeat and pulse of American industry, trade and commerce, growth and development, are here in this wonderful metropolis. All America shares your pride in this city and all America has a part in your success.

We, out in the middle prairies—all of the people between the two great mountain ranges, and those beyond the rugged western Rockies—have an interest in your further progress and development.

We see the mystic beauty of your skyline, unequaled in the realm of architecture; the sweep of your harbors; fleets of commerce sailing from every corner of the seven seas; the hum of your industries, unparalleled in the annals of time. All of these we have seen and heard. We have felt that this is a picture, not only of your progress but also of the Nation's development, of the strength of all the people, North, East, South and West. For truly, New York City is an expression of the production that takes place throughout the Nation and around the world.

And your city is but a part of the great Empire State. One of the countless assets of your State and one of its greatest is a man of rugged character and manner, and of tremendous ability and vision—Robert Moses.

I wish we had one such human dynamo and leader in each of the 50 States. It has been my privilege to watch and feel his drive, not only in connection with the St. Lawrence power project, but also the Niagara power project as well. I led the fight to give the State of New York the right to build the Niagara hydroelectric power project—one of the greatest in the world. You are now building it. You are bonding your own assets to finance it.

I led the fight to enable you to consume most of the power to be generated by it for domestic and industrial use within your own State.

That power is a necessity for the continued operation, the growth and expansion of domestic consumption and your thriving industrial economy. That great project and Robert Moses, who did so much to get it underway are, however, but symbolic of the building of the Empire State.

It was in the early dawn of our Nation's history when the pressure for a transportation route to the West induced New York to build the Erie Canal. Its promotion and building are now history, but it has long been a monument to the vision, daring and courage of the people of your State.

To me, however, its greatest significance is in what it has meant to the Nation and what it symbolizes as we think of the future.

The Federal Government long since took a leaf from your book and launched its own program of improvement of rivers and harbors, building of inland waterways, dams for flood control, hydroelectric power, and irrigation.

Attracted by these improvements, people by the uncounted millions have migrated to the improved areas to play their part in the enjoyment of the benefits and building the economy in the areas where the Federal Government has thus far spent great sums of Federal tax money. Efforts of people everywhere have increased to an intensity never before known to expand the Federal Government's program of development of our natural resources, primarily soil and water.

We in Oklahoma are working with the zeal of crusaders for such projects. We know that their development will determine what opportunity we can have in building an industrial economy in which our State and its people can grow, increase and prosper.

Now, the people of New York pay more income taxes to the Federal Government than those of any other State. We know that you are keenly aware of this fact. Yes, even painfully aware of it. I hope that your feeling in this regard is helped to some degree by the knowledge and assurance I now give you that we, in Oklahoma, are really grateful to you for the tremendous sums of Federal taxes you pay. In fact, and I say this in all reverence, we hope and even pray that you may live long and prosper more and more and accordingly pay more and more Federal taxes in order to make it possible for us to expedite the building of projects in Oklahoma.

We, too, pay vast sums in Federal taxes, and when we have developed our soil and water potentialities, we will pay much more. We know that this will be of benefit to our country, and also to your State which has the largest volume of trade and commerce of any State in the Union.

And, then I want to make this clear to you that while we are more interested personally in the development of the soil and water resources of Oklahoma, we will work just as diligently for the development of your soil and water resources as is appropriately possible.

Your navigable waterways have been of inestimable value in the development of your industrial economy. If it conforms with your wishes, their improvement, enlargement, extension and operation should be paid for by the Federal Government as are those throughout the Nation.

Yours are a part of the 23,000 miles of improved inland waterways which have been developed since the building of the Erie Canal. It was the forerunner of barge transportation in America. The mighty St. Lawrence Seaway with its international identity and its enormous potential for growth and progress, not only along its shores, but for the Nation, is a product of the same impetus that produced the Erie Canal.

I am not one who regards the expenditure of Federal funds for such projects as "pork barrel." I know of no national and domestic responsibility of government more worthy and more important than that of conservation of the water resources and the development of the waterways in our country. The need for more and wider and deeper harbors and waterways is illustrated by the experience of the first big trans-Atlantic steamer, *The Great Eastern*, which came to our shores a century ago. She required a channel 30 feet deep. Thus Portland, Maine, was the only harbor on the Atlantic sea coast she could use. New York Harbor was then only 23 feet deep. *The Great Eastern* failed commercially because she was too big for her day. She did make history though, and earned undying fame for making possible the laying of the Atlantic cable where smaller craft had failed. And, also, she pointed the way to the development of harbors and waterways which could handle ships not only of her tonnage and draft, but also those of the superspecifications of today.

Transportation today is one of the largest business operations in America. The public spends about \$65 billion a year for transportation facilities, equipment, and service. This is about one-sixth of our national income. Yet the transportation business is

one of the fastest growing in our economy. Its traffic grew from 544 billion ton-miles in 1939 to 1½ trillion ton-miles in 1957. Only an integrated system of highways, airways, railroads, waterways, and pipelines has made possible an increase in industrial production similar to the increase in transportation. It amounts to more than two and one-half times what it was 20 years ago. Each type of transportation has its place in the pattern. Each complements the other, and all are necessary. A significant fact about the industrial development in the past 10 years has been the growth of new industrial plants, facilities, and capacities along our navigable waterways. In 10 years we have seen a \$15 billion expansion of industrial plants in the Ohio Valley. At the same time, we have seen tremendous developments along the Mississippi River and its navigable tributaries, as well as on the gulf coast. This expanded industry along our navigable waterways not only enables our country to grow more rapidly than would otherwise be possible, it feeds a constantly increasing volume of business to the entire Nation, including all other forms of transportation. It is especially noteworthy that some of our most prosperous railroads today are those which parallel the tremendous industrial developments along our water routes.

When I see New York City and State of today in relation to the Nation of today, I wonder what tomorrow will bring. Let's lift the curtain of the golden sixties and the fabulous decades beyond and inspect their entrancing possibilities. We are aware that it has taken 352 years to achieve a population of 180 million Americans. Yet Census Bureau experts assure us that the number will double in 40 years. Our mighty agricultural and industrial economy is now producing at the rate of \$500 billion gross products per year. Authoritative engineers assure us that this production will double in 20 years. By 1980, they say the value of our gross national production will be \$1 trillion per year based on the value of the 1959 dollar. It seems very probable that in that year our population will exceed 240 million.

Where will the agricultural production occur? Where will the enlarged and new industrial workshops be located? And, now for the \$64 billion question, Will New York State achieve for herself the same relative position in the America of the eighties that she now claims as her own? The answer can be found in the quality and quantity of your water resources. Look to your inland waterways; look to your deep channels and enlarged harbors; look to your industrial, agricultural, and municipal water supplies.

The Nation as a whole will require 2½ times as much municipal water in 1980 as we used 5 years ago. The six major water-using industries will use 3½ times more water in 1980 than they were using in 1954. The electric power generating facilities will require 4½ times as much water for cooling purposes.

Water is more than a natural resource. It is a necessity of life. It is the priceless ingredient for continuing increase in population and growth in industrial and agricultural production. The necessities and uses of water in modern society are so tremendous that they stagger the imagination. The Department of Commerce tells us that the cities and towns in America must invest \$80 billion in the next 20 years to keep abreast of the requirements for domestic and industrial water. Four years ago the Army Chief of Engineers reported that many areas even at that time were "constantly going through the ceiling of available average water supply." Even on the basis of our present national population, a U.S. Geological Survey hydrologist finds that most water which is immediately available, and inexpensive at each individual point, is already in use.

Please do not misunderstand me. I do not regard these problems as burdens, but as op-

portunities. They are burdens for men of little mind and limited vision and inadequate initiative or resourcefulness. They are the source of nearly as much worry to the pessimist as the pessimists are to a growing, thriving, prosperous America.

I am reminded of an incident that took place in Congress soon after the turn of the century. Members then complained of the burden of bureaucracy to the Government. People at home were demanding the elimination of any nonessential in Government. As a result a bill was introduced to eliminate the Patent Office. Its sponsors made the argument that since no more inventions could possibly be made, why keep a bunch of Government employees sitting around a Patent Office with nothing to do?

I once heard the story of an old grandfather who possessed most of the family wealth. He was urged by one of his daughters to provide the money to send her son, his grandson, through the necessary college and postgraduate work to become a doctor. The old man indicated his purpose to refuse—complained of the extravagance, low rated the young man's choice—and finally with a frown on his face demanded to know of his grandson what field of medicine he intended to pursue. "Obstetrics," the young man replied. "Yeah," the old man growled, "that's about what I thought—you spend 10 years and \$20,000 getting ready to do it—by that time they will have a cure for it, and you'll starve to death trying to practice it."

Even the President of the United States twice vetoed the water resources appropriation bill last year, complaining that it contained provision for some 60 new starts which his Budget Bureau had not approved. He reminded Congress that he had declared a policy of "no new starts." Imagine if you can what America would have been at any point in her glorious history had she been shackled by an effective policy of "no new starts." There would have been no Government of the United States of America had King George's policy of "no new starts" prevailed. And then, upon the founding of a government with 13 States—that would have been it.

America has reached the greatest heights of wealth, power, industrial, production, growth and prosperity of any nation in all history because its people believed in and practiced "new starts." I'm glad my father believed in new starts—else the log cabin in which I was born would never have been built. And then, tragedy of tragedies, had he practiced no new starts, I would not now be enjoying this blessed privilege of speaking to you here today.

The America of 1980 with its 240 plus million people and its gross annual national production in excess of \$1 trillion will be the product of "new starts" of today and tomorrow.

I told you a moment ago of the estimate that our cities and towns must invest \$80 billion in the next 20 years to keep abreast of requirements for domestic and industrial water. Add the presently projected Federal program to these figures and we learn that the total cost of all water development projects during the next 20 years will require in excess of \$180 billion.

This program is an absolute necessity for the population, economy, and way of life in our country two short decades from now. It is an absolute necessity if we are to maintain and develop the military strength and power required for our survival in this modern world. It is an absolute necessity to meet the challenge of the Soviet rulers whose spokesman, Mr. Khrushchev, now says that he will not need to engage in military conflict to win the cold war or humble and subdue the free world. He has declared that Soviet Russia will achieve its aims of world domination through economic development and power. We stand today appalled at the sight of a godless nation

and a pagan philosophy daring the free world to meet it in competition for economic growth and progress.

Undaunted and unafraid, America will answer this challenge. I know that the Empire State of New York and her proud people demand that we accept this challenge. They will cooperate in meeting it. To meet this challenge, we will plan ahead, and then work our plans, to adequately conserve our water resources and develop them as the prime necessity in reaching our goal. This we must do to achieve the agriculture production required. This we must do to build the industrial workshops our people will require. This we will do to improve and provide the recreational facilities for the teeming millions of Americans of today and tomorrow, who in their increasing periods of leisure will need them. Man who is made in the image of God feels an irresistible urge and necessity to spend increasing amounts of time in nature's environment as God made it. He yearns for the murmur of flowing water from pure mountain streams. He yearns to see the glint of the sunshine from the surface of reservoirs, large and small. Man is renewed when he walks within the arches of the cathedrals among the trees of God's forests.

A stronger, nobler America will be built as its people are permitted to enjoy the recreational facilities of a natural environment as nearly as we can keep it like the Creator fashioned it.

The people of the world respect you of the Empire State. The people of the Nation envy you with your natural resources, and unlimited quantities of water. They glory in the opportunity which is yours to play such a great role in the building of the America of tomorrow.

To contemplate the phenomenon which is the Empire State not only strains our powers of perception, it staggers the imagination. Nothing like it has ever existed before. But mark these words: Your fabulous economy has been possible under God, but is man made. And God is no respecter of persons. What man has done here, men are now doing elsewhere. Listen. Are you listening? If you are, you can hear the thunderous roar of the proud and mighty production machines in which the men and women of other States are even now threatening to catch and surpass you.

I know they cannot do so, except by your permission. Does their youth and vigor make you relatively old and feeble? Not at all. Do you possess a boldness and a daring which you once had but now have lost? Never. Yours is the tradition and glory of leadership. It is written in your factories and mills. It is attested on your farms and meadows. It is certified in your giant financial institutions which have achieved not only nationwide but worldwide leadership.

All of these are fortified by the abundance of your soil and water resources; by your vast forest and mineral wealth; by the wisdom of your leaders; by the daring of your men and women; by the courage and fidelity in the souls of your sons and daughters.

Injustice Cannot Endure

EXTENSION OF REMARKS

OF

HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. QUIGLEY. Mr. Speaker, the civil rights debate has occupied this Chamber for only the past week. It has occupied the other body for a good deal longer,

and it has occupied the minds of men and the pages of newspapers for even a greater length of time.

In the 19th District of Pennsylvania there has been a unanimity of opinion on the matter. Every newspaper in the district has spoken its mind on the subject and spoken its words to say that there shall be no such thing as second-class citizenship, or any other than one class of citizenship, whether for color or any other reason.

I submit the following examples of editorial opinion to those who would deny voting rights or any rights to any citizen as but 2 of 20 editorials that must have appeared within the past 10 weeks on the subject. The first, "Injustice Cannot Endure," is from the York (Pa.) Dispatch. The second, "Politics and People," is from the West Shore Times of Lemoyne, Pa. The editorials follow:

[From the York Dispatch, Mar. 14, 1960]

INJUSTICE CANNOT ENDURE

"We hold these truths to be self-evident—that all men are created equal; that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness."

These words, blazing forth from the Declaration of Independence, rallied colonial Americans against the injustices of the mother country, Britain. It is well to recall them now, for the Nation, and particularly the Southland, is deeply troubled again. Negroes are rebelling against practices which have made them second-class citizens in many places. In short, they are rallying against injustices.

Sitdown strikes at lunch counters, student demonstrations, martyrs' cries of "Let us fill the jails," a near lynching in Texas, are grim signs of the unrest that abounds. Even in the august U.S. Senate itself, a filibuster drones on over the simple issue of Negro voting rights.

What do Negroes really want? Why are they rising up and voicing their demands as never before?

Nowhere have we seen their desires better stated than was done a number of years ago by a Negro nun, Mother Philomena, of the Oblate Sisters of Providence.

"As regards equality," she wrote, "the colored want to be treated as human beings. Segregation must go. By segregation, we mean discrimination against Negroes solely on the ground of their color. They want to feel free to act as any white person can act legitimately in the framework of society. The colored want to feel free to enter movies, restaurants, stadiums, public parks, facilities, and public conveyances. If they qualify in skill, in intelligence, in deportment, and in wealth, they want to be able to go wherever and do whatever such privileges entitle equally gifted Caucasians. They want no other questions asked of them than are asked of people with blond or red hair."

Racial barriers in the United States have been crumbling with increasing rapidity in recent years. To be sure, much remains to be done before the day comes when every American will recognize a Negro for what he is, and not what color he is.

In the process, selfish bigotry on the part of whites is to be deplored, just as are taunting parades or demonstrations by Negro groups. There is always the danger that such demonstrations, however peacefully they start, can be turned into unruly mob scenes and resulting bitter memories, by radical elements.

It remains for conscientious Negroes and whites alike to melt the mental and physical barriers that separate some Americans.

Hard work, tact, and patience will succeed, while violence fails.

[From the Lemoyne (Pa.) West Shore Times]

POLITICS AND PEOPLE

(By John Phillips)

The great power of the southern Democrats is responsible for a big problem within the Democratic Party.

Because of their seniorities, in both Houses of Congress, by reason of their one-party rule, the proliberal Democrats of the North and West are at irreconcilable odds with their members south of the "y'all" line.

The civil rights fight now raging in the U.S. Senate is embarrassing the proponents of integration who happen to bear the Democratic label. It is possible that the first crack has appeared in the so far impenetrable defense of southern legislators. Democratic Leader LYNDON B. JOHNSON is completely in favor of passing this bill, or a watered-down version.

BIG BLOC

However, there is little reason to believe that he has completely divorced himself from the "big bloc." Aside from the purely political motivation on JOHNSON's part with regard to the present civil rights bill, the battle, while self-limiting and controlled, has serious portents.

The wisest move to make, it is believed, and quite probably the one that will eventually be taken, is for the national Democratic organization to disassociate the main body of liberal-type, multi-raced Democrats, from their all-white, stodgily conservative southern counterparts.

Such a move is long overdue. From the moment the Supreme Court handed down its decision on total and complete integration of public schools, time has been running out on the last stronghold of white supremacy. The finale is sounding for a disgusting era of American politics of everlasting reelection by virtue of a disenfranchised Negro population.

SOUTHERN PARADOX

This is not a unique observation on the part of this writer. Obviously the time was to come when the political value of a burgeoning Negro vote would form the focal point of a campaign to split the paradox that is "Dixie."

The ethnic complexity which is the South has never happened before in the history of modern man. Slave civilization in other periods have inevitably been freed and accepted by the host society. The color of the Negro's skin served as an easily perceived stigma and provided for the foundation for a one-party control which has existed for more than three-quarters of a century.

It has, inadvertently, allowed a political state to develop which has the shameful collusion of racial discrimination for its cornerstone. Eventually, perhaps within the next decade, the shoddy facade that presently exists will crumble and a new, healthy two-party system will evolve "down yonder." We are spectators on the opening scenes of a social and political drama long awaited.

Our Vice Presidents

EXTENSION OF REMARKS

OF

HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. RANDOLPH. Mr. President, it seems evident that, barring some major

and unpredictable upset, Vice President Nixon will be the Republican candidate for President. In this respect Mr. Nixon will take his place in the select company of John Adams and Thomas Jefferson as one of the three Vice Presidents to succeed to a presidential candidacy through normal political processes without the intervening death of an incumbent Chief Executive.

In an address delivered on March 4, 1960, before the Rotary Club of Charleston, W. Va., one of the finest service clubs in our State, my good friend, Dr. Frederick Taylor Wilson, offered much interesting information concerning these and other Vice Presidents of the United States.

Dr. Wilson, who was making his 11th appearance before the Rotary Club of Charleston, is a noted authority on this subject, as on the subject of the Chief Executives of our Nation, and I comment his highly informative address to the attention of my colleagues.

Therefore, Mr. President, I ask unanimous consent that excerpts from his address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

OUR VICE PRESIDENTS

For the third time in American history a Vice President, Mr. NIXON, California, is slated by the party in power, to succeed his chief.

John Adams for 8 years Vice President under Washington and Van Buren for 4 years under Jackson, were the other two.

Jefferson, Vice President under John Adams, succeeded him as President though he belonged to a rival party. Adams, like Jefferson a signer of the Declaration of Independence, defeated Jefferson by only 3 electoral votes. These two Presidents, Adams and Jefferson, have had over 2,000 descendants.

Mr. NIXON, California, is the fifth Vice President to serve for two successive terms. The other four were John Adams, Massachusetts, Vice President under Washington (1789-97); Tompkins, New York, Vice President under Monroe (1817-25); Marshall, Indiana, Vice President under Wilson (1913-21); and Garner, Texas, Vice President under F. D. Roosevelt (1933-41). George Clinton, New York was twice elected Vice President, but did not live to complete his second term.

Most people will agree that the American people have not been as careful in choosing their Vice Presidents as they have been in choosing their Presidents. This is a bit alarming when we remember that 7 of all our 36 Vice Presidents thus far elected have through the death of their chiefs been elevated to the presidency.

The seven so elevated were Tyler, Virginia, Fillmore, New York, Johnson, Tennessee, Arthur, New York, T. Roosevelt, New York, Coolidge, Massachusetts, and Truman, Missouri. It is fair to say that Theodore Roosevelt alone of all this group had ever been seriously considered as a future President before his sudden elevation to that high post.

By a strange turn of fate, exactly the same number of Vice Presidents as Presidents, have died in office. The seven were: Clinton, New York, Gerry, Massachusetts, King, Alabama, Wilson, Massachusetts, Hendricks, Indiana, Hobart, New Jersey, and Sherman, New York.

Clinton and Gerry both served under Madison, King of Alabama never served one day as Vice President, dying in Alabama be-

fore reaching Washington after being sworn in by special act of Congress in Cuba.

New York State has furnished 10 of our 36 Vice Presidents, three of these, Fillmore, Arthur, and Roosevelt, later became Presidents, by accident. Indiana and Massachusetts have each furnished four Vice Presidents. Two of those from Massachusetts (Gerry and Wilson) died in office. Eleven States have furnished one Vice President each. John C. Calhoun of South Carolina who was Vice President under both John Quincy Adams and Jackson resigned his office, and became a Senator, the only President or Vice President who ever resigned.

Kentucky has had three of its sons in the Vice President's chair. Colonel Johnson, Breckinridge, and Barkley. The first was chosen by the Senate. The second was our youngest Vice President (36). The third, our oldest one (71), at the time of election. Two States, Virginia and Illinois, have each furnished two Vice Presidents: Jefferson and Tyler, (Virginia), and Stevenson and Dawes, (Illinois). Levi P. Morton of New York, Vice President under B. Harrison, (1889-93), the oldest of all Presidents or Vice Presidents at death, died on his 96th birthday.

Two Vice Presidents, Stevenson of Illinois (1893-97) and Fairbanks of Indiana (1905-09) later were defeated for Vice President; the first went down with Bryan in 1900 and the second with Hughes in 1916.

Five Vice Presidents served later as Senators. They were Calhoun, South Carolina, Breckinridge, Kentucky, Hamlin, Maine, Johnson, Tennessee, and Barkley, Kentucky. Our three living ex-Vice Presidents, Garner, Wallace, and Truman all served under F. D. Roosevelt.

Many of the names of Vice Presidents are now all but forgotten. Who was Wm. A. Wheeler? It is certain that in the future the men chosen as candidate for Vice President will be more carefully selected than at some periods in our history.

St. Patrick's Story: Splendor and Paradox

EXTENSION OF REMARKS OF

HON. WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Baltimore Sun of March 16, 1960:

ST. PATRICK'S STORY: SPLENDOR AND PARADOX—AND IRISH HISTORY IS FULL OF BOTH—ALL ARE SONS OF ERIN ON ITS HOLIDAY

(By John D. Hackett)

"Ireland is a country where the probable never happens and the impossible always occurs."—John Pentland Mahaffy, provost of Trinity College, Dublin.

Thousands of Irish will cross over the border of predominantly Catholic Eire into "Protestant" North Ireland tomorrow to attend a pontifical Mass in the Cathedral of Armagh, seat of the Roman Catholic primate of all Ireland.

The Mass commemorates the death of St. Patrick, apostle to Ireland, who died on March 17, 465. He is buried in nearby County Down, another of the six counties in North Ireland.

At the same time, services will be held in the Anglican Cathedral of St. Patrick in the

capital of the Irish Free State, Dublin, which has no Catholic cathedral.

In Baltimore, the Irish, Irish-American and "adopted Irish" celebrate St. Patrick's Day with religious devotions, parade, banquets and dances.

HIRERNIAN PARADE

They marched Sunday in the Ancient Order of Hibernians parade behind the skirl of bagpipes and saluted the clergy and public officials on the reviewing stand outside the Pratt Library on Cathedral street.

The Friendly Sons of St. Patrick jammed their annual luncheon last Saturday and an overflow crowd is expected tomorrow at the Hibernian Society of Baltimore banquet in the Emerson Hotel.

Throughout the world the Irish celebrate March 17 for a man who was not Irish, a man who came to the Emerald Isle as a lowly slave, escaped, and returned to become one of the greatest apostles in Christendom.

CAST OUT PAGANISM, SNAKES

He converted the whole of Ireland to a new faith. He cast out the pagan beliefs of the Druids as he did the poisonous snakes from Irish ground.

He dared to light the Paschal fire on Easter Eve, 433, on the summit of the Hill of Slane above the valley of Tara in contempt of the Druid Ard-Righ Leoghaire, supreme monarch of all Ireland.

He appeared before the convened Druid chieftains dressed in the rich fabrics of a Christian bishop carrying a gold crozier. But, beneath this splendor he wore the coarse hair shirt of the ascetic who slept on a hard rock bed.

St. Patrick struck the earth with his crozier and started an earthquake. The frightened Leoghaire gave him permission to travel and preach. And seeing the marvels performed by St. Patrick, he asked to be baptized.

SMASHED PAGAN IDOLS

St. Patrick, at Magh-Slecht in Connaught, marched into the pagan rites to the chief idol Crom-Cruach and smashed the gold and silver covered stone pillar with his crozier. Crom-Cruach and the 12 minor idols crumbled to dust.

It was then that, in 1 day, 12,000 Irish "became docile to the faith."

St. Patrick, an extreme ascetic, lived a penitential life and often retreated to the island of Lough Dergh, the St. Patrick's Purgatory, where he fasted for extended periods.

It is to Lough Dergh that more than 50,000 pilgrims come each year on June 26 to observe a strict discipline which includes going barefoot on the rocky island and staying foodless for 3 days.

"WRESTLED WITH GOD"

Perhaps the greatest achievement of St. Patrick is his victory when he "wrestled with God" atop a stately mountain cone some 400 feet above the districts of Westport and Aghagower in Connaught in western Ireland. It is now called St. Patrick's Mountain.

It was here, the story says, that St. Patrick fasted for 40 days and 40 nights while he prayed that God bestow special blessings and mercy on his Irish people. He was attacked by the demons of hell and chased them with his holy bell.

MORE CONCESSIONS

An angel told St. Patrick that his fidelity, penance and prayer had won him the right to bring as many Irish into Heaven as would cover the land and the sea as far as he could see from the cone. He refused the boon and continued his prayer and fasting.

More concessions were made but the stubborn St. Patrick refused. At last, the angel envoy said all his wishes had been granted

and he came down from the mountain to give the Irish the "Promises of St. Patrick."

The angel, tradition says, told St. Patrick: 1. That many souls would be freed from purgatory through his intercession.

2. That whoever, in a spirit of penance, would recite his hymn before death would attain the heavenly reward.

3. That barbarian hordes would never obtain sway in his church.

4. That 7 years before the judgment day, the sea would spread over Ireland and save its people from the temptation and terrors of the anti-Christ, and.

5. That, greatest of all, Patrick himself would be deputized to judge the whole Irish race on the last day.

MORE THAN PROMISES

St. Patrick gave more to the Irish, and to Western civilization, than his promises. An uneducated slave, he returned as a learned priest who built schools and churches side by side throughout Ireland.

Learning flourished in Ireland while Europe slipped into the Dark Ages. Irish clergy were to carry classical learning back to the continent.

His Ireland has produced poets and prelates, authors and artists, barristers and balladeers, mayors and mystics, prizefighters, and politicians, soldiers and saints.

The paradox of Patrick runs through the Irish race and Irish history.

The Emerald Isle has produced world renowned scholars in a land where education for years had been suppressed. A country of 4,500,000 people, it has populated the world and given England such names as Swift, Moore, Goldsmith, Shaw, Sheridan, Congreve, Berkeley, Yeats, and Calvert.

NO IRISH UNIFORM

Scots regiments are encouraged to wear kilts and play the pipes, but no Irish regiment was ever permitted a distinctive uniform despite the great military records of the Dublin, Munster, or Enniskillen Fusiliers.

In some 700 years under British rule the Irish got used to seeing that evidence of their nationality was never encouraged.

This could well explain why the Irish are assertive, pugnacious and individualistic. At the same time, they are the saddest and gladdest of people, carefree, yet a people with a hard core of determination.

The Gaelic tongue, now heard more than often in Eire, is the only Celtic language with its own alphabet. There is no "V."

Which raises a question. How does an Irishman write DeValera in Gaelic?

LEADER OF MODERN IRISH

The great leader of the modern Irish, paradox again, is Eamon DeValera, born in New York City of a Spanish father. Ireland's greatest advocate for home rule was Disraeli, an English Jew. The presidents of Catholic Eire have been predominately Protestant.

The Far Down Irishman, or Orangeman, lives far up in the north of Ireland.

In only one section of Ulster do Orangemen on July 12 mark themselves off from all other Irish to celebrate the victory of William of Orange over James II at the Battle of the Boyne.

ANTI-PAPIST SPEECHES

They take this victory as license to indulge in anti-papist speeches and demonstrations.

Yet, historical fact shows the defeat of James II meant the defeat of Louis XIV of France and Pope Alexander VIII and the Holy Roman Emperor, Leopold of Austria, were elated at the victory of Orange at the Boyne.

In Ireland, the island of St. Patrick, these paradoxes continue.

Is it any wonder then, that in all the countries of the world and in Baltimore, the impossible occurs on March 17.

It's a fact:

Everybody is Irish on St. Patrick's Day.

Congressional Travel Is a Sound U.S. Investment

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. JOHNSON of Texas. Mr. President, there has been considerable discussion of the question of congressional travel. I should like to contribute to that discussion a very thoughtful editorial which was printed in the Waco (Tex.) Times-Herald on March 4. I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

CONGRESSIONAL TRAVEL IS A SOUND U.S. INVESTMENT

There is no doubt that on occasion Members of the Congress have abused their privileges of travel abroad, but any rational appraisal of the realities will show that it is important for Congressmen to go to other countries. The penalties of ignorance and narrow views and parochialism are too severe to be suffered without a struggle to remedy such blind spots. Congressmen must pass on matters that affect their constituents' interests many times when the constituents don't even realize their interests are involved. Our worldwide commitments in military and economic activities cannot be policed by our representatives with any degree of judgment unless they know something firsthand of the countries, peoples, and problems involved.

We will cite the case of Waco's BOB POAGE, who has traveled the world during his long congressional tenure. POAGE knows as much about farm conditions and problems in Asia, South America, and Europe as he does about the conditions in his own central Texas. He also knows considerable about other matters abroad, as witness his series of articles in the Waco News-Tribune last fall reporting on his journey around the world in September-October. POAGE is a much better Congressman for central Texas by reason of his observations and education through international travel. An alert, conservative, serious-minded person of POAGE's type can learn and can grow through travel experiences.

This country can afford to encourage the members of its Government to get about the world. There ought to be more of this activity than there is now. And the trend is in that direction.

During 1959 at least 190 Senators and Representatives from the 50 States of the Union fanned out to points all over the globe on missions of all kinds. Some traveled with large delegations to widely publicized conferences in London, Warsaw, or Paris. Others traveled singly or in pairs to such out-of-the-way spots as Saigon, Vientiane, or Djakarta.

Most of the trips were financed at least in part by the U.S. Government. Some were paid for by foreign governments or by non-governmental international organizations, such as the American Council on Germany. A handful were covered by the congressional tourists' personal funds.

The record shows that 51 Senators, sufficient for a quorum, and 139 Representatives, traveled out of the United States during 1959. Past surveys show that 159 Congressmen took foreign trips during 1958 and 222 lawmakers traveled abroad in 1957.

None of these trips were made at the same time, so the work of Congress was able to keep going.

The leading attractions for junketing Congressmen were found in Western Europe. The area was visited by 102 lawmakers during the 12-month period. Exactly half as many Members traveled to the Far East during the year.

The biggest gathering of U.S. lawmakers outside Washington was for the September meeting of the Inter-Parliamentary Union in Warsaw. The annual meeting of this body, which claims the membership of legislators from every country in the world, drew 17 U.S. Congressmen—4 Senators and 13 Representatives—most of whom made the trip to and from by special military aircraft.

Thirty-one Members of Congress traveled behind the Iron Curtain in 1959 compared to only six in the previous year.

Controller Levitt Saves Millions on State Bond Sales

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include an article which appeared in the New York Times of March 3, 1960, and which describes the fiscal astuteness of the highest Democratic elected official in the State of New York, Controller Arthur Levitt. The Democratic Party and the people of the State of New York are proud of the service this dedicated public official is rendering in a difficult area of State and local bond financing.

The article follows:

TOP SECOND-GUESSESS—LEVITT RISKS RECORD AS MONEY MANAGER IN DELAYING ISSUE

When Arthur Levitt became controller of New York State in 1955, his associates realized that the New York Bar was losing a zealous lawyer. But few people would have predicted that Albany was making room for a mastermind of the bond market.

The controller's repeated successful hunches about when to sell and when not to sell bonds have served the State well thus far in terms of borrowing cost. The business is fraught with risk, because the more the controller comes out ahead, the more the law of averages is against him.

That he is still willing to take a chance on outguessing the market was shown yesterday in his decision to call off a scheduled sale of \$50 million of bonds that would complete the State's full-faith-and-credit backing for the thruway.

It was only a few weeks ago that an impressive rally in the market had led the controller to plan to raise \$50 million of long-term money while conditions were favorable. He changed his mind just as abruptly when the marketing climate turned heavy last week.

When Controller Levitt took office, \$550 million of the cost of the \$1 billion thruway had been financed permanently through the sale of bonds.

In his efforts to finance the \$450 million balance of the cost on terms most advantageous to the State, Controller Levitt has seen fit to reject bids three times on issues of bonds totaling \$225 million, and to postpone the sale of two issues aggregating \$100

million in advance of the bidding deadline.

Four of these five decisions were vindicated by subsequent turns in the market. Whether the controller's newest market hunch will likewise pay off in a lower borrowing cost to the State remains to be seen.

Controller Levitt first challenged the market in July 1955, in rejecting bids submitted for \$125 million of State-guaranteed thruway bonds. The indicated cost at that time was 2.789 percent. Subsequently the controller broke the big borrowing up into three parts and succeeded, within 6 months, in selling \$150 million of full-faith-and-credit bonds at costs ranging from 2.418 to 2.737 percent.

Six months later, the State's top money man decided to postpone a scheduled sale of \$50 million of State-guaranteed bonds. He tried to raise this money in November of the following year, but he rejected the best bid—3.449 percent interest cost—as excessive. Three months later he readvertised the bonds and sold them at a cost of 3.123 percent.

The controller's latest successful outguessing of the market was in 1959. He refused to go along with the sale of \$50 million of thruway bonds secured by service revenues at a cost of 4.3029 percent. Three months later he sold the issue at a cost of 4.1995 percent.

The controller explained yesterday that the risk involved in yesterday's postponement of the sale of \$50 million of State-guaranteed bonds was not great. The money was to be used to pay off a short-term issue of notes due on April 15. This short-term loan is costing the State 2.15 percent.

Civil Rights, North and South

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. ERVIN. Mr. President, on March 15, 1960, the Greensboro (N.C.) Daily News carried an editorial entitled "Civil Rights, North and South," which paid a well deserved compliment to the able and distinguished Senator from Ohio [Mr. LAUSCHE] for his amendment to the first section of the Dirksen amendment in the nature of a substitute.

I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

CIVIL RIGHTS, NORTH AND SOUTH

Senator LAUSCHE, of Ohio, handled one phase of the civil rights debate better than any Dixie Congressman could.

He told the Senate that one section of the Dirksen bill had an "indefensible weakness." That section would have made it a Federal crime to interfere with court-ordered school desegregation. The Senator from Ohio noted that this provision would penalize civil disobedience "in only one section of the country." Why, he asked, shouldn't this protection of Federal court orders be extended to all similar situations?

The Senator's question was a good one. The answer he provided—to penalize interference with any Federal court order, whether

It involved segregation or labor dispute or any kind of civil commotion—changed the whole atmosphere of the civil rights debate. Senator LAUSCHE's amendment gored an ox of the abolitionists. They were heartily in favor of applying full Federal interference to the school desegregation controversy in the South; they heartily opposed extending that same interference to labor disputes which, while they might infringe on somebody's civil rights, could not be interpreted as a protection devoutly to be desired by liberals.

Thus some of the sham of the civil rights debate was cleared away. In an election year northern and western liberals were not anxious to incur the wrath of their labor union supporters. When the battle of civil rights came back to their own doorsteps, one of the leaders, Senator WAYNE MORSE, arose with a motion to table the whole section. His motion carried, creating for a moment a strange alliance—the abolitionists who wanted no curbs on labor and the Dixiecrats who wanted no Federal interference with desegregation.

Thus the Senate debate on civil rights rolled on toward an inevitable climax: Enactment of some kind of bill to guard against racial disenfranchisement. Such a bill will likely and should be accepted both in the House and Senate.

President Leads Hoosiers in Tribute to Representative Halleck

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. BRAY. Mr. Speaker, on Thursday, March 10, hundreds of fellow Indians and Government notables of both political parties joined to pay tribute to our colleague CHARLIE HALLECK for his distinguished service of more than 25 years in the Congress and of the great honor which he has brought to his native State. "Hoosier of the Year" was the designation bestowed on the Congressman from Rensselaer and Republican leader.

A list of all the notables and distinguished guests who gathered for this gala dinner would be a very long one indeed, headed by the President of the United States and the Speaker of the House of Representatives. Most of the Indiana congressional delegation were there and more than half a hundred other House colleagues. The great number of Hoosiers who journeyed to Washington for this occasion were led by Governor and Mrs. Handley.

The Indiana State Society of Washington issued a scroll honoring the second district Congressman. After he responded with words of gratitude the remainder of the evening was given over to entertainment with a truly Indiana flavor. A vocal quartet from Indiana University sang a variety of numbers including, of course, "Back Home in Indiana." World-famed Hoagy Carmichael performed some of his top hits, concluding with the song he said now belongs to everyone, "Stardust."

Herb Shriner, who has tickled the Nation's funnybone with Hoosier humor for

the past many years, ended the evening by leaving everyone laughing in the best show-business tradition. To people in other parts of the country Herb's local mannerisms and stories seem completely fictitious but to those familiar with the Indiana scene his stories are very much of the same type that you will hear on street corners in hundreds of Indiana communities.

All in all it was truly "A Night to Remember" which was the theme chosen by the Indiana State Society for this event. I am sure CHARLIE will cherish memories of the evening, and especially the remarks of President Eisenhower which I now submit in full:

REMARKS OF THE PRESIDENT AT THE INDIANA STATE SOCIETY DINNER IN HONOR OF CONGRESSMAN CHARLES HALLECK AT THE SHERATON PARK HOTEL, WASHINGTON, D.C.

Mr. HALLECK, Mr. SAM, distinguished guests, ladies and gentlemen, I am just sort of a wanderer that just dropped in on this party.

First of all, I am not from Indiana. Actually, I was born in the district of my friend here, Mr. SAM. And all of these years he has allowed me to call myself his vicarious constituent to this moment.

I understand that about two-thirds of Indiana is here—the other third is probably snowbound.

As I understand it, they call today "Charlie Halleck Day," because he is Indiana's Man of the Year. I would like to say that for me, during a session at least, every day is "Charlie Halleck Day."

He once pleased me mightily. He said: "Mr. President, this is going to cost me a lot of votes, but I'll do it." That kind of loyalty to a leader of the party and to an administration is priceless. I know it. Everybody in the executive department knows it.

Indeed, I think that some of my very distinguished members of the opposition, of whom the chief one is here, knows it, too. For that reason he not only has a great affection for CHARLIE but he respects him mightily.

A political party should stand for something. If the issues of our country are to be debated intelligently and properly, it is only proper that Americans just as good as we are should have political views that do not coincide with our own. That's why we have two major parties.

Among them both CHARLIE and I claim many, many friends—personal friends—no matter how much we may battle them in those factors and those subjects where are properly partisan or political.

I think it is only proper that I should say on CHARLIE's behalf—and my own—when it comes to matters that extend beyond the water's edge, we have had the cooperation and we have sought the cooperation of the opposition, which I think has been most effective for our country.

So as I come here—not to praise CHARLIE, because he doesn't need it—but merely to recognize what he has done, and to be one of you in sharing a great privilege of saying, "Thank you, Mr. HALLECK." I think it's a very good thing for us to realize that the politics in Washington should be—and I think most frequently is—a means by which we promote the welfare of America, not merely to satisfy the ambitions of any particular individual or any particular party, much as all of us are partisans.

I leave you with this thought: CHARLIE is doing a job not just for Republicans but above all and first of all for the United States of America. I am quite sure that my first Congressman would join with me in tribute to this very topflight, fighting, tough little Hoosier.

God bless you, CHARLIE—and goodbye.

Urgent Need for Foreign Aid Revision

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. TALMADGE. Mr. President, a great public service has been rendered by the special study mission of the House Committee on Foreign Relations which made an around-the-world investigation of foreign aid last fall. Headed by Georgia's able and respected Congressman, J. L. PILCHER, the mission has just released its report which deals harshly with the waste and inefficiency which characterizes the foreign aid program as presently administered and which calls for a complete revision of the entire program. The mission warned that unless foreign aid is restored to its proper perspective as an instrument for helping little people help themselves it is doomed to ultimate failure.

The findings of the Pilcher mission were lauded and endorsed by the Atlanta (Ga.) Journal in its editorial of March 14, 1960, entitled "A Bureaucratic Monster?" I ask unanimous consent, Mr. President, that the text of that editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A BUREAUCRATIC MONSTER?

Now when the Congress considers foreign aid measures, it will have a massive reference book, the first-hand findings of six representatives who probed deeply into this Nation's economic assistance abroad. Georgia's Representative J. L. PILCHER headed the bipartisan group.

To the surprise of few, the report of the committee is largely critical of the administration of foreign aid. It called for a reappraisal and revision of the entire program. It is doubtful that such will be forthcoming from the Congress in a presidential election year.

To do so, honestly and searchingly, would mean dislodging some sensitive vested interests that could rock the political boat of either party.

The committee found a strikingly dangerous gap between "grandiose projects at the top and the millions of human beings still starving, still untaught who have neither the stamina to undertake nor the capacity to understand self-government."

It urged that primary attention be focused on food production and teaching at least elementary knowledge.

The Pilcher committee catalogued instances of maladministration of American economic assistance. It pointed to the big boondoggles—costly power projects, bridges and super-roads in lightly motorized countries and the relative neglect of health, nutrition, and education work.

Anybody who expresses opposition to any aspect of foreign aid invites a lecture on humanitarianism and the worldwide Communist threat. But we are only asking that it be handled with more purpose and commonsense.

For all the unquestionable good it accomplishes, for all its contribution to world peace, foreign aid is in danger of becoming a bureaucratic monster with a characteristically voracious appetite for taxpayers' money.

A Freedom Academy

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. HERLONG. Mr. Speaker, under leave to revise and extend my remarks, I should like to insert in the Appendix of the Record a letter to the New York Times written by my good friend, Arthur G. McDowell, executive secretary and treasurer of the Council Against Communist Aggression.

Mr. McDowell is referring to my bill to set up a Freedom Academy to train men and women in the free world in counteraction to the Communist conspiracy:

The letter follows:

MARCH 2, 1960.

The Editor,
The New York Times,
New York, N.Y.

DEAR SIR: Permit me to take a slight caveat to the complaisance of your editorial of February 28 on Moscow's new university.

In your comment you beam with pleasure to announce that at last you have found something in the ideological field in which we are ahead of the Russians, namely, foreign students already drawn here for technical, professional and general education in our colleges and universities. Because this invaluable influx of foreign students is so impressive in size, you fail to dip below the surface to inquire what the results of this attendance is upon these students who have grown to such a great stream, almost in a fit of absentmindedness on the part of America. I would suspect that whatever absentmindedness may have contributed to the building of the British Empire, it has contributed very little to the political success of these United States as world leader in the struggle for men's minds with the Soviet.

How many of these students, left to their own devices with no appreciation of their importance and impact on their return to their homelands have gone back to turn the tools we have given them and sharpened them to attack the free order of society? I submit that in no country of the world did the United States expend as much idealistic endeavor, religious, educational, medical, etc., as in the Republic of China. There was probably no country, outside of the English speaking world, where as many Americans made the effort to learn the language and do all those things, minus of course any political purpose, which we did in China before 1949. Nevertheless, it was the Russian Soviet politically trained Chinese personnel who staffed the Communist movement which today rules mainland China in the name of anti-Americanism and communism.

We can look at this vast undifferentiated, undirected army of 50,000 foreign students and take all the complaisant pride which your editorial talks about being ahead of the Russians "on this particular front." But for nearly 40 years and up to and including this moment the Russians have been training foreign personnel for every continent in political training schools, of which the United States and all its free world allies have not one comparable or matching institution. Last year Congressmen Judd and Herlong introduced in the House and Paul Douglas of Illinois and Karl Mundt of South Dakota introduced in the Senate a bill for

a freedom academy, which would for the first time start training private citizens in all levels of activity to for the first time begin to match the hundreds and thousands of students that have been pouring out of the Soviet training schools for the last generation and a half with such fantastic success in political conquest, from China to Cuba.

It would seem to me that the Times would serve its thoughtful audience better, not by complaisance over the 50,000 foreign students who may have not only little or no effect in the balance of the political decision of their countries, but may indeed for various reasons cast their balance on the wrong side because they were neglected and misunderstood. When Senators as wide ranging in the political spectrum as Senators Mundt and Douglas join in a piece of legislation, when witnesses appear ranging all the way from a conservative public leader such as General Sarnoff to the AFL-CIO to support that legislation before the Senate Judiciary Subcommittee on Internal Security, it would seem to me to be great news. But checking last June's newspapers when it happened, it seems that the Times did not consider it fit to print, while the fact that Moscow opens a new foreign conventional university gets both front page space and editorial notice, although, as I note above, that editorial notice only lulls those already less than vigilant readers into a deeper sleep of complaisance, while the Russian tortoise makes for the finish line, not in overall quantity of televisions but in such selective things as missiles, space exploration and the training of political cadres of students and not just the exposure of multiple thousands to Moscow's skyline and show places.

Yours truly,

ARTHUR G. MACDOWELL,
Executive Secretary-Treasurer.

Success in Latin America Means Followup

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. WILEY. Mr. President, in a world of fast changing events, we recognize that, as a Nation, we face challenges in maintaining up-to-date policies to deal with the widely differing problems in areas of the world.

As we know, President Eisenhower just recently completed a successful mission to Latin America.

The big question now is: Just what kind of followup program should be undertaken to further cement relations with our Latin American neighbors.

Despite the overwhelming favorable impact of the President's trip, its long-range success can be assured only if practical steps are taken to improve trade, social, and cultural interchanges, greater political cooperation, and generally expanding efforts to find beneficial solutions to problems confronting us.

Recently, the La Crosse (Wis.) Tribune published a constructive editorial entitled "Success in Latin America Means Followup."

Reflecting the need for an effective action program to deal effectively with some of the real problems in the Western Hemisphere—if United States-Latin American relations are really to be improved and the security of the Americas strengthened—I ask unanimous consent to have the editorial printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

SUCCESS IN LATIN AMERICA MEANS FOLLOWUP

President Eisenhower has had a considerable success in his effort to show Latin Americans that the United States is just as interested in them as in other underdeveloped peoples, but the final evaluation of his visit will depend heavily on how quickly something is done.

It is a developing situation, in which some of the development—such as organization of the Inter-American Development Fund—began before the President planned his trip.

Discussion of the operation of this fund went on at lower levels while the President conferred with chiefs of government. The President therefore continues to speak in generalities.

These generalities already have led to predictions in the United States that there will be no real followthrough. They undoubtedly will produce an undercurrent of disappointment in Latin America until there is a factual display of action.

One feature of the situation calculated to contribute to uncertainty in Latin America during the period of gestation is the concrete planning of aid for the rest of the world which began Wednesday in Washington.

At that conference nine of the wealthier nations hope to work out a coordinated program for the have-nots, primarily in Asia, the Middle East, and Africa. This is in answer to the demand from the United States last year that aid be increased at the same time the load is better shared.

Such a conference is bound to keep alive Latin America's feeling of being left out until something happens in that sphere.

One of the most important products of the President's trip has been the kindling in the United States of a greater awareness of the problems of the southern continent.

The Cuban situation is a strong lesson in what can happen through lack of interest and inert policies.

These they set before the apostles, and they prayed and laid their hands upon them.—Acts 6: 6.

Southerners' Decisions Saved United States From Hitler

EXTENSION OF REMARKS

OF

HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the Record, I include therewith an excellent article by O. L. Warr who is a resident of a farming community in my State of South Carolina, called Quietude.

I believe Mr. Warr's article, entitled "Southerners' Decisions Saved United States From Hitler," is most timely for

insertion in the RECORD in view of the attacks against the South now being voiced on the floors of both bodies. Mr. Warr writes a farm column for the News and Courier of Charleston, S.C.; his keen observations and acumen are worth taking note of:

THE FARMER FROM QUIETUDE—SOUTHERNERS' DECISIONS SAVED UNITED STATES FROM HITLER

(By O. L. Warr)

"It is excellent to have a giant's strength; but it is tyrannous to use it as a giant."

The hindsight of history reveals in the life of each nation and of each civilization of the past the certain decisions which proved decisive, first in their upbuilding and later in their downfall, to their existence for varying periods and to their ultimate decline and passage from the scene.

I think that it is reasonable to say that the United States would be, with the rest of the world, under the heel of Hitler today except for a series of congressional decisions taken in 1940 and 1941. Even as it was, the outcome was a fairly near thing, entirely too close for comfort. Not to be forgotten by any man who lived through them were those days of 1942 when the Germans were in sight of the Volga and in reach of the Suez, when the Japs were scouring the Pacific and dropping bombs as far from their home as Australia.

Upon what legislative prewar decisions did the immediate fate of this Nation hang? They were four: The repeal of the ill-conceived Neutrality Act, the passage of the Draft Act, its renewal upon its expiration at the end of its first year, and the adoption of the misnamed Lend-Lease program.

Without these measures the peoples who were later to become our desperately needed allies would have had neither courage nor means to continue in the conflict. Without these allies and without trained men of our own we could not have withstood the blows of our enemies. We prepared, even if incompletely, for war. In the unfolding of the course of events those preparations proved vital and decisive in our military victory and in our national survival to this time.

It was the Senators and the Representatives from the South who had the realistic foresight and the political courage to enact those essential measures. A heavy majority of all the Members of Congress from the North and West opposed the passage of every one of them. Only the fact that the southerners were almost unanimous in their active support saved this legislation from defeat. Who can forget that on a day when Hitler's forces were already running rampant over all of Europe, the life of the Draft Act was extended in our House of Representatives by a majority of only one vote, even with almost all the southerners voting in its favor.

It is fair to ask why it was, in a day when sense and foresight were matters of life and death, that Southern Congressmen exhibited such superior possession of those attributes. It was because the electorates to which they were responsive had not since 1876 suffered the fatal dilution of intelligence that has rendered the remainder of this Nation politically incapable of making such basic decisions as are necessary to national self-preservation.

Southerners have always nodded politely toward the theory of democracy, but they have had too much hard commonsense and too much awareness of the harsh realities of existence to suffer the affliction of such a fatal practice. That and that alone is why they were able, 20 years ago, to save the rest of this Nation from its self-inflicted shortsightedness.

Should the plans and the programs of our undiscerning domestic enemies prevail, the South will not in the future be in position

to provide its traditional haven of political intelligence as a redeeming counterbalance to the collective electoral folly that elsewhere in the United States prevails.

Already its steady and stabilizing and strengthening influence has been notably weakened by the imposition, against its will and judgment, of a dilution of its electoral intelligence—and the real and destructive impact of that imposition is as yet barely in its infancy.

Destroying Dignity and Respect

EXTENSION OF REMARKS

OF

HON. ALLEN J. ELLENDER

OF LOUISIANA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. ELLENDER. Mr. President, I received from Mr. Kirk Railsback, a constituent who lives at Shreveport, La., a most timely and very interesting editorial appearing in the Shreveport Times in its issue of Sunday, March 13, 1960, entitled "Destroying Dignity and Respect."

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DESTROYING DIGNITY AND RESPECT

True Negro leadership, in its quest for various things it lists as rights or liberty or opportunity or equality, always has held that its major objective for the Negro as an individual and as a race is dignity and respect; recognition that the dignity of man is not determined by the color of skin and that all people may earn the respect of all others regardless of color.

These are things which in their purpose transcend such matters as seats in schools or on buses, use of public recreation facilities, service in restaurants or limitation as to residence. True Negro leadership has been joined often and in many places by true white leadership in this quest. Where each showed itself as worthy of the respect of the other, there has been success.

All of this is being undermined, perhaps destroyed, by sitdown demonstrations by Negroes in various Southern States.

Dignity cannot be demonstrated by forcing one's self into places where one is not desired—and where no law has opened the door.

Respect cannot be gained by physical action which erases the opportunity for respect.

Neither respect nor dignity can be had for the asking or the grasping, or through legislation or deliberate disturbance of others. They must be earned by the conduct of the individual. With a race, they must be earned by the conduct of the race as a whole; particularly by its dominant leadership. That is as true in any one race as in any other.

Taking over seats in eating places in which they are not wanted—and from which they are prohibited by the owners, who have both statutory law and moral right on their side—does not demonstrate worthiness as a citizen or ability to be a worthy citizen.

It does just the opposite.

It offers no argument for any sort of liberty or freedom or right, actual or imaginary.

In these sitdown cases, right is entirely on the side of the proprietors of the eating places. Any person has a right, if he wishes,

to set up a store, an eating place, or any other place of commerce or barter, and limit his customers to one-armed Baptists or red-headed Episcopalians, or in any other way.

He has a right, if he wishes, to refuse to serve anyone not falling in such categories and to bar them from admission to his place of operation.

No court ever has ruled otherwise that we know of. The Fourth Federal Circuit Court specifically has ruled in the case of an interstate chain restaurant serving interstate travelers in Virginia that it did not have to serve Negroes if it did not wish to do so—that it could limit its customers in any way it wished. In effect the court held that the restaurant could bar any person it wished to bar, with or without reason.

What makes the sitdown demonstrations especially harmful to the Negro race itself is that the demonstrators seem to be almost entirely college students—Negroes who presumably are receiving education comparable to that available to those of other colors, and chiefly at the expense of members of the race they seek to annoy; white taxpayers where the institution is State operated and white donors where it is endowed.

These Negroes should know that they are blocking their own progress toward that objective of dignity and respect which is always the inherent desire of all worthwhile people, regardless of color.

Whether the National Association for the Advancement of Colored People instigated the sitdown demonstrations is not especially material. It has picked them up as one of its causes, urged additional demonstrations, supported all that were held, given its encouragement in every way. Thus, the NAACP has in this case—as it has in many instances—guided the demonstrating Negroes in a direction far more harmful to the Negro race than to anyone else.

Secretary Roy Wilkins of the NAACP says that the demonstrations are a case of Negroes "fighting for their rights." There has been fighting, and it has come dangerously close to ignition of mass violence in some instances. But there is no issue of Negro rights. Rights, in such instances, rest morally, legally, and logically with the proprietors of the eating places.

The Negro race cannot gain anything by these demonstrations.

It already has lost a lot.

It will lose a lot more if they continue.

Each new demonstration is a step backward.

Such demonstrating has nothing to do with Negro voting rights as spelled out in the Federal Constitution, or with the Supreme Court rulings on desegregation of schools and other public facilities.

That is the lesson that Negroes themselves should learn from the sitdown demonstrations.

Federation of Homemakers

EXTENSION OF REMARKS

OF

HON. JOEL T. BROYHILL

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. BROYHILL. Mr. Speaker, many of the women in my district, as well as all over the country, have become increasingly concerned with the problem of color additive control, particularly in that product almost universally used by women and girls from their earliest teens to the grave—lipstick.

This concern was shown by a nationwide organization of women, the Federation of Homemakers, in a recent statement before the Interstate and Foreign Commerce Committee, and the hearing examiner of the Food and Drug Administration, and since this testimony concerns so many of our citizens, I hereby submit it for inclusion in the RECORD:

**STATEMENT OF FEDERATION OF HOMEMAKERS—
PUBLIC HEARING ON OBJECTIONS TO FINAL
ORDER DELISTING CERTAIN D. & C. COAL-TAR
COLORS FROM THE LIST SUBJECT TO CERTIFI-
CATION**

Mr. Examiner and gentlemen, I am Ruth Desmond, secretary of the Federation of Homemakers, a group which consists of housewives residing in this area and in many of our States. We also have junior members attending local colleges. Our federation is most appreciative of being afforded this opportunity to express the views of its members regarding colors used in lipsticks.

First, we wish to commend the Food and Drug Administration personnel as a whole for their efforts to protect the well-being of consumers, and especially to commend the scientists of this Agency, who are highly regarded in their professional fields. The present testimony has disclosed that these FDA scientists have made numerous contributions to scientific literature. We wish to state that our members have confidence in the ability, responsibility and integrity of these FDA scientists to make competent decisions in their respective fields.

Last spring before our federation was formed, an interested group (now charter members of our organization) inspected certain of the laboratory facilities of FDA. We were impressed with the dedicated attitude of the scientific staff, but disturbed that these scientists were carrying out their experiments in cramped, congested quarters not even their own. We hope that this present session of Congress will remedy this deplorable situation by an appropriation for the construction of the building recommended for this Agency by the Citizens Advisory Committee in 1955.

Here, I would like to note that the late Sir Edward Mellanby in his Sanderson-Well lecture on "The Chemical Manipulation of Food," delivered at the Middlesex Hospital, May 4, 1951, which appears in the British Medical Journal of Saturday, October 13, 1951, praises the experimental work carried out by the U.S. Food and Drug Administration and the official inquiries held by this Agency on specific matters of interest. Sir Mellanby expressed regret that at that time there was no such competent agency in this country carrying on this important work.

We also wish to compliment the cosmetic industry for its continuous efforts over a long period of time to furnish completely wholesome cosmetic preparations to the public. Their good record proves the effectiveness of this diligence.

It is appropriate to remind you here that in 1939 American housewives, through their various organizations and clubs, went on record at hearings conducted by the Federal Security Agency that they wished only colors certified as absolutely safe used in their foods and cosmetics. If today's housewives were consulted about this problem of colors added to foods and cosmetics, our federation feels confident they, too, would go on record as wishing safety of the product to be paramount.

Now that American women are accustomed to the brightness which lipsticks give to their faces and the lift to their spirits, they would be loath to forgo their addiction to them—but our members do plead that only harmless dyes be used in their lipsticks. Members of our sex start using lipsticks these days at the age of 12 or thereabouts and

continue their use till they depart this existence. Because of such universal and continuous use of lipsticks by all ages of our female population, cumulative effect of the dyes must be seriously considered. (Our members are positive they ingest a certain amount of their lipsticks and feel that the method of applying lipsticks determines the quantity ingested. Those users who blot their lipsticks do not ingest as much as those who prefer a moist effect and apply their colors liberally and do not blot.) It must also be noted that lipsticks are used by young girls whose cells are still dividing rapidly. Such dyes may have a different effect on these young persons than on mature individuals. Lipsticks are also applied by expectant mothers, whose bodies undergo many drastic changes during the stress and strain of pregnancy. Then consideration of the possible effects upon the elderly, who may be taking medication for chronic illness is suggested. May we point out that the seriously ill use lipstick to conceal the ravages of disease. In fact hospital staffs encourage women patients to primp, feeling morale will be improved by improvement of appearance. Yet concern should be expressed, we feel, to the fact that while morale of the ill is being bolstered by application of cosmetics, damage might possibly be sustained from synergistic reactions of medicines with impurities, however minute, of cosmetic dyes.

It is our understanding that in carrying out tests to determine the harmlessness of these lipstick colors, now being considered, all the animals selected were healthy, both controls and test animals alike. These animals obtained a balanced diet, the only difference being the addition of color to the diet of the test animals. It is our understanding also that rats are not as sensitive to dyes as humans and dogs. With humans we do not always have such an advantage of both good health and correct diets. Numerous surveys conducted by responsible nutritional and medical groups have revealed that our American young girls (both at high school and college levels) have poor food habits. These authorities deplore this revelation as they feel this is a time when our young girls should be receiving adequate, balanced diets to prepare them to be healthy mothers later. These same adolescents use lipstick generously and frequently.

Modern conditions of living force the human system to cope with air pollution and water pollution as well as the products of atomic fallout. We ingest traces of pesticide residues, food additives and dyes. Therefore, it seems especially needful that discretion and caution should be observed in the choice of dyes to be used in our lipsticks. We feel that total impact of all of these elements and substances on the human system must be taken into consideration in permitting certain colors to be used in the manufacture of lipsticks. Dr. W. Coda Martin, testifying before the House Subcommittee on Health and Science of the Interstate and Foreign Commerce Committee, during the recent food additives hearings, stated on page 279 of the printed report as follows:

"The first line of defense must be to protect the health of the consumer; otherwise, the long-range 'calculated risk' is that this country will become a nation of invalids, weak in body and mind."

Dr. Morton L. Levin, assistant commissioner, Division of Medical Services, State Department of Health, Albany, N.Y., stated after remarking that cancer is regarded as a common disease, at page 355 of the printed hearings:

"In the presence of a common disease, of which most cases are of unknown causation, I think you can understand the sensitivity of physicians and public health authorities to the possibility that substances which we do not suspect today may be causative of cancer."

Sir Edward Mellanby, discussing the effect of chemicals on the human system, warns in his lecture mentioned previously: "Even when such chemical substances have passed through a battery of tests from the point of view of toxicology, unexpected harmful results have often ultimately been demonstrated."

"Medical science often cannot give adequate answers to questions of toxicological action, not only as regards new compounds but even in the case of substances long in use. Indeed, to the medical man unpleasant surprises are constantly being revealed, in the case both of drugs and of chemicals used in food preparation."

It seems to our members that simply because it may take years to recognize the damage done to the body cells and function by certain pesticides, additives and dyes, discretion and caution should not be abandoned and their use permitted in our foods and cosmetics. We feel that the old adage "an ounce of prevention is worth a pound of cure" applied to this particular problem.

I thank you gentlemen for granting me this opportunity to convey the opinion of our members.

Southern Side on Civil Rights

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The Southern Side on Civil Rights: Talmadge Remarks on TV Interview Called Masterful Presentation," written by David Lawrence and published in the Washington Evening Star of March 15, 1960.

Mr. Lawrence is one of the ablest writers in this country. He has written an excellent article, which I hope Senators will take the time to read.

The distinguished junior Senator from Georgia [Mr. TALMADGE] was an able, progressive Governor of his State. He has made an outstanding record in the Senate. He is a member of that school which believes that the Constitution says what it means and means what it says. Senator TALMADGE is a strong exponent of constitutional government.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SOUTHERN SIDE ON CIVIL RIGHTS—TALMADGE REMARKS ON TV INTERVIEW CALLED MASTERFUL PRESENTATION

(By David Lawrence)

Much has been heard lately from the so-called liberal side about the need for balanced programming on television, but something happened the other day which indicates that maybe the broadcasters are doing better than the press in the balancing technique.

Just a week ago Sunday, for example, many persons heard a dramatic and informative debate on Meet the Press over the National Broadcasting Co.'s TV network and watched Senator HERMAN TALMADGE of Georgia, Democrat, do a masterful job in presenting his viewpoint on the civil rights issue. But how much of it was printed in most

metropolitan papers of the North? Virtually nothing.

The Georgia Senator made some good points which still are news to many readers. What he said represents the other side of the controversy, and most Americans like to hear or read both sides. Asked what could be done to insure the right to vote, Senator TALMADGE held up a sheaf of papers and said in part:

"Here are 17 pages of Federal laws that guarantee every citizen in America the right to vote. . . ."

"Now, in my own State we have approximately 175,000 to 185,000 Negroes who are registered and who do vote. They have elected officials within my State. Frequently, they are the balance of power in mayors' races and local races of all kinds. The Negroes in Georgia do vote in very substantial numbers. In some counties in Georgia we have a greater percentage of Negroes registered than we have of the white population. In three counties in Georgia we have more Negroes registered and voting than there are white people"

"All citizens who are qualified have been encouraged to vote. We can't help it if some citizens don't exercise that right. My colleague, Senator RUSSELL, inserted in the CONGRESSIONAL RECORD this past week a statement by the leader of the National Association for the Advancement of Colored People in Cleveland, Ohio, which stated that only 25 percent of the Negroes in Cleveland were registered, and of that 25 or 26 percent only about 25 or 26 percent of them voted. Now, we have a much higher percentage than that who are registered in Georgia and a far higher percentage vote in Georgia."

The Georgia Senator was then reminded that, according to the U.S. Civil Rights Commission, there were 22 Georgia counties where less than 5 percent of the Negro population believed to be eligible was registered. He replied that there were adequate remedies and added:

"First, any citizen who thinks that he is being illegally deprived of the vote can go into the Federal court, he can get an injunction, he can recover damages against the registrar."

"Second, there is a criminal law. He (the registrar) can be indicted, he can be convicted and sentenced to the Federal penitentiary and fined. And, thirdly, there is the Civil Rights Act of 1957 that authorizes this group to have the Attorney General of the United States of America file a suit in the name of the United States of America as their tax-paid private lawyer to enforce their rights. Now, if those remedies aren't sufficient, there are no laws on the face of the earth that will be."

Then why did the Attorney General write a letter this week urging the House of Representatives to restore the section of the civil rights bill that was voted down by the Senate a few days ago? The answer is that politics is back of it all.

The moment Senator LAUSCHE of Ohio, a courageous Democrat, proposed that the principle of equal justice under law be applied so as to provide criminal penalties, not just for violations of court orders on school desegregation, but also for violations of court orders relating to picketing and violence in labor disputes, a northern group of Senators promptly voted against it. They were plainly afraid of the reprisals from the labor union vote.

The Attorney General, moreover, in his latest communication to Congress, writes that while the right to vote is of fundamental importance to the Negro, "this thought should not lull anyone into forgetting that, meanwhile, the Federal Government has a responsibility in other civil rights matters, including the duty to enforce court orders in school desegregation cases."

The Attorney General then makes an unhappy reference to what happened at Little Rock in 1957, and declares that the section deleted by the Senate and now up for passage in the House is designed to prevent a recurrence of the situation which, he says, required the use of Federal troops. He adds:

"At the present time, when State officials fail to maintain law and order, the Federal Government, as a practical matter, has no certain or very effective way to deal with mob violence except by the use of Federal troops."

Is this really so? The State of Arkansas did order its militia to maintain order and prevent mob violence, but the Federal Government obtained a court injunction which ordered the Governor to withdraw the militia. Then mob violence did ensue.

What the Attorney General is saying about the need to enforce court orders on school desegregation would be received with more enthusiasm if the Department of Justice had not remained strangely inactive in recent months when labor union pickets were refusing in many strikes in Northern States to allow nonunion workers and management personnel to enter plants where they wanted to work. So long as there are these examples of hypocrisy in Government, there will be little tendency to regard the present ruckus about enforcing court orders in civil rights cases as little else than a brazen attempt to win an election by wooing Negro votes in the North.

Legion 41 Years Old

EXTENSION OF REMARKS

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. CANFIELD. Mr. Speaker, my very good friend and World War I comrade, Mr. Charles A. Lenge, of the Prospect Park (N.J.) Memorial Post 240, has written the following article appearing in the Paterson Evening News of March 14, 1960, relative to the American Legion's birthday anniversary:

LEGION 41 YEARS OLD

(By Charles A. Lenge)

March 15, 16, and 17 mark the 41st anniversary of the founding of the world's greatest veteran organization, the American Legion, its birth conceived with the troops stationed in France and Germany in 1919.

More than 600 members of the A.E.F. representing every rank of the Armed Forces of the United States serving in World War I, met in Paris and founded the American Legion, an organization with unselfish and patriotic purposes in mind. These purposes were to weld that great body of men, soon to be released from service in arms, into one vast organization whose aim would be to exhibit charity to comrades and their dependents, loyalty to the Nation, support law and order, without which neither peace nor progress would be possible. Former rank and social prestige were ignored in the formation of the new organization.

The second caucus convened in St. Louis, Mo., May 8, 9, and 10, 1919 and set up plans for the first national convention to be held in Minneapolis, Minn., November 10-12, 1919, with Franklin D'Olier, of Pennsylvania, elected its first commander. He was later president of the Prudential Insurance Co.

Jerseyites who attended the Paris caucus were: John W. Maseker, first sergeant, 29th Division, Paterson; Harold P. Barker, second

lieutenant, 26th Division, South Orange; Bert Betterson, captain, 29th Division, Newark; Carle D. Cella, of Ridgewood; Milton Conover, second lieutenant, 29th Division, Harrisonville; John S. Cooke, major, 29th Division, Paterson; George F. Fleming, sergeant, 29th Division, Trenton; Charles S. Gaskill, lieutenant colonel, SOS, Moorestown; Charles C. Goodrich, lieutenant colonel, Ordinance, Orange; E. O. Howell Jr., major, 80th Division, Cape May Court House; Gordon MacDonald, lieutenant colonel, 81st Division, Morristown; Amos J. Peaslee, major, Paris Command, Clarksboro; E. B. Rommel, sergeant, 29th Division, Trenton; Dr. Absolum Wescoat, major, Atlantic City; James I. Wyckoff, major, 79th Division, Leonia; Russell E. Young, sergeant major, 29th Division, Newark; the Rev. Fred M. Adams, Trinity Cathedral, Trenton; Charles E. Sommers, sergeant, 29th Division, Trenton, and Fred A. Snyder, colonel, 28th Division, West Orange.

The preamble to the constitution of the American Legion is as follows: "For God and Country we associate ourselves together for the following purposes: to uphold and defend the Constitution of the United States of America; to maintain law and order; to foster and perpetuate a one hundred percent Americanism; to preserve the memories and incidents of our association in the great war; to inculcate a sense of individual obligation to the community, State and Nation; to combat the autocracy of both the classes and the masses; to make right the master of might; to promote peace and good will on earth; to safeguard and transmit to posterity the principles of justice, freedom, and democracy; to consecrate and sanctify our comradeship by our devotion to mutual helpfulness."

Membership in the American Legion is open to those who served their country in time of war, honorably discharged, men and women of the Army, Navy, Marine Corps, Coast Guard, and Air Corps. Eligibility dates are: World War I; April 6, 1917, and Nov. 11, 1918, World War II; Dec. 7, 1941 to Sept. 2, 1945 and the Korean War; June 25, 1950 to July 27, 1953, the date of cessation as determined by the U.S. Government. Three million ex-servicemen of America's three wars are members of the thousands of American Legion posts throughout the world carrying on the program of service to the community, State and the Nation, to the sick and disabled and the widows and orphans of their departed comrades.

Mike and Pat Goode, of New Haven, Conn., Enrich St. Patrick's Day Celebration

EXTENSION OF REMARKS

OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. BUSH. Mr. President, St. Patrick's Day, which we celebrate tomorrow, has in a sense become a national holiday in America. Americans of all nationality and racial backgrounds share in the enthusiastic annual celebration in honor of the patron saint of Ireland. The day is marked with religious observances, parades, and speeches coupled with great merriment as Irishmen, in fact and in spirit, join together in celebration.

The State of Connecticut has thousands of Irish-Americans who have contributed much to the development and growth of our small but great State. In honoring all those of Irish extraction, I should like to call attention to two men who exemplify the characteristic Irish temperament, drive, and humor which are so famous. Purely by coincidence, these men are named "Mike and Pat." They are Michael J. and Patrick J. Goode, of New Haven, Conn.

Mike and Pat Goode are two of the most famous "Irishmen" in our State. They came from Ireland, as youngsters, with their parents, after the Irish rebellion in the late 1830's. Mike has passed his 82d birthday, and his brother Pat is approaching his 80th birthday. Both men have had outstanding careers in their respective fields of endeavor—Mike as a newspaperman and commentator, and Pat in diversified activities which included secretary to a Congressman, postmaster, work in real estate, and work in the broadcasting industry.

Mike and Pat have become somewhat of a legend in their home town of New Haven. Mike, who has remained a bachelor, is perhaps best known for his People's Lobby radio and television broadcasts of political activities on the local, State, and national scenes.

Pat has a sense of well-reserved pride in speaking about his family. His son, Col. James P. Goode, is Air Force Deputy for Manpower, Personnel, and Organization. A daughter, Mrs. Mary Rogan, became one of the first women attorneys in the State; and another daughter, Mrs. Eleanor Sanders, is the wife of Connecticut's Commissioner of Education.

A feature article on the Goode brothers, published in the New Haven Register on March 13, concluded with the following statement:

The flight of the Goode family from Ireland has been New Haven's gain—one of the key reasons that St. Patrick's Day has become "everybody's holiday" as Pat and Mike proclaim for all to hear.

Mr. President, I concur wholeheartedly in that statement, and make one additional comment: The flight of millions of Irishmen to the United States has been our country's gain and has brought about an enrichment of our society through the spirit, talents, and good humor of the Irish.

Mr. President, I ask unanimous consent that the article to which I have referred be printed in the Appendix of the RECORD, following these remarks.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THERE WERE THESE TWO IRISHMEN, PAT AND MIKE—AND THEY WENT ON TO BECOME FAMOUS NEW HAVENERS—GOODE BROTHERS. RECALL ERIN ON EVE OF ST. PATRICK'S DAY. "Mike," said Pat, "you're an amazing man. I don't know how you do it."

"Pat," said Mike, "you're going pretty well yourself, for a young fellow."

The "amazing" Mike and the "young" Pat are two of New Haven's most prominent Irish-born residents who will be celebrating St. Patrick's Day this week—"everybody's holiday," Mike claims. Mike is Michael J. Goode, a spy, active ex-newspaperman and commentator, who will chalk up 83 years next September, and Pat is Patrick J. Goode,

former postmaster, waiting his 80th birthday shortly after St. Patrick's Day.

Both men, sons of a public works department foreman who fled Erin as an aftermath of the Irish rebellion in the late 1800's, started work here at long hours and low pay and have achieved enviable positions of eminence in the community.

They have seen the development of the electric light, the automobile, the telephone, the coming and departure of the electric trolley cars and pioneered the broadcasting mediums of radio and television in the area. And they have dabbled in politics, starting in the "fighting neighborhood" of the old fifth, sixth, and seventh wards up through major party conventions.

Mike took one fling at State office, running against Col. (then Major) John Q. Tilson for the State Legislature, but lost by 700 votes, 3,500 less than his party's standard bearer 2 years before.

"That was enough for me," Mike grins, sparkling Irish eyes bespeaking latent wit behind a ruddy face topped by a crop of white hair. "Pat and some of the boys engineered my nomination in 1906, but then I lost the election and I decided to be an observer."

This role was strictly adhered to through the years as a newspaperman in Lynn, Mass., Stamford, and Stratford before Mike began a remarkable string of over 1,200 "People's Lobby" radio and television broadcasts on political activities on the local, State and national scene.

Pat came up from a factory shipping clerk to work as a mail carrier, secretary to a Congressman and a postmaster, aid to famed theater magnate Sylvester Z. Poli, head of the New Haven Post Office and founder of broadcasting organizations. Both men still maintain an active interest in the medium, as well as a number of fraternal and fundraising activities that would tax the resources of much younger individuals, even those of rugged Irish stock.

A GREAT INSTITUTION

With Mike, it is plain to see that politics rates his full attention. "Politics is a great social institution," he will tell a listener in his famed, husky voice. "I still take an active interest. It is good mental exercise and keeps me busy. I have found politics to be the greatest game in the world, and the poorest business."

A bachelor, he is at home walking through the halls of the State Capitol in Hartford, or meandering and greeting friends in Washington. "Mike," says Pat, "thinks nothing of hopping a train and heading for Washington, any time of the year."

"You know," says Mike, "I've traveled on the New Haven Railroad longer and more often than anyone I know. My first trip was on the train from Boston to New Haven on May 6, 1884, when we arrived from Ireland."

FATHER CAME FIRST

"We" included mother Goode, Mike, Pat and two brothers and a sister, William, Tom and Della. The father had preceded the family by 2 years, joining friends here from Galway, Ireland, to find employment with the city where he supervised, among other projects, the construction of Howard and Kimberly Avenues.

The father's success in America was short-lived. He died in 1897, followed in death a year later by Mrs. Goode. The burden of raising the family fell on the older children, William, who became a fireman and was sexton of St. Aedan's Church after his retirement; and Della. Tom served a term as tax collector for the city, and was in the real estate and insurance business. Only Pat and Mike survive the hard-working, ambitious family that has contributed so much to the rich Irish background of the community.

Pat, who is an honorary marshal for the annual St. Patrick's parades and thoroughly enjoys meeting old friends at the many events that mark the observance, is proud of two of the many awards he has received during an active lifetime. Both presentations grace the living room of his home at 27 Rubinger Street—a framed citation from the Hibernians and a shillelagh.

His multitude of friends, acquired over years of service, is evident as he thumbs through voluminous scrapbooks with photos of top civic, fraternal and political associates, reminders of organizations to which he has contributed time, devotion, and loyalty.

PRIDE IN FAMILY

Mention of his family brings a glow of well-deserved pride to the sparkling face of the usually reserved Pat. A son, Col. James P. Goode, is Deputy Assistant Secretary of the U.S. Air Force. His daughters include Mrs. Mary Rogan, one of the first women attorneys in the State, now a resident of Burbank, Calif.; and Mrs. Eleanor Sanders, wife of Connecticut's commissioner of education, William Sanders.

These children have made Pat 11 times a proud grandfather.

Pat's career has spanned six decades. During the period he served as private secretary to Congressman Thomas L. Rully, of Meriden; secretary to Philip Troup, then postmaster, from 1910 to 1915; and was in charge of the Poli Theater real estate department from 1920 until 1934 when he organized the first of his two radio stations. He served as postmaster from 1936 until retirement a decade ago at the age of 70.

The flight of the Goode family from Ireland has been New Haven's gain—one of the key reasons that St. Patrick's Day has become everybody's holiday, as Pat and Mike proudly proclaim for all to hear.

A Bill for the Relief of the Shrimp Industry

EXTENSION OF REMARKS OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. HERLONG. Mr. Speaker, under leave to revise and extend my remarks, I should like to offer an editorial from the St. Augustine (Fla.) Record of Wednesday, March 9.

This editorial refers to my original bill, H.R. 8769, which has been revised and renumbered H.R. 10961, which is for the relief of the shrimp industry of the United States. St. Augustine was the cradle of the American shrimp industry, and it is still an important factor in it.

The editorial follows:

BILL ON SHRIMP IMPORTS ENDORSED

Of importance to the economy of St. Johns County is a congressional bill (H.R. 8769) which would place restrictions on shrimp imports in this country.

Not only does this bill affect this county but the entire shrimp industry of the United States and its allied businesses.

The shrimp industry is the No. 1 seafood industry of the Nation and it represents a very substantial investment in St. Johns County such as boats, shore installations, boat building yards and other allied business. It was from the port of St. Augustine that the shrimp industry in Florida spawned.

The unprecedented influx of foreign shrimp from new countries has caused a market glut which is hurting shrimp producers and processors alike. A survey shows that the total annual imports from approximately 50 foreign countries is in excess of 1 million pounds of shrimp. This is more than half of all the shrimp consumed in the United States.

The consumer demand for shrimp in the United States cannot be met entirely with domestic production. Some imports are required to meet the demand and to maintain an orderly market which will not permit the price of raw shrimp to go too high. Up through the year 1957 this delicate balance was fairly well maintained. The principal imports came from well-established fisheries in Mexico, Panama, and Ecuador, where modern shrimp trawlers are used, and where costs of production (production plus freight) compare favorably with the United States. Shrimp are found in many parts of the world, equatorial to arctic. Countries which had been indifferent producers now eyed the U.S. shrimp market and tooled up for heavy production which would increase the flow of U.S. dollars to them.

With all facts available and a valuable U.S. fishery facing ruin, all segments of the domestic shrimp industry met to study the situation and to attempt to evolve a solution. They did not want to go to Government for dole or subsidy. Preliminary talks with responsible Government officials indicated that normally bankruptcy must come first then assistance would be forthcoming. But the industry bill, H.R. 8769 looks for preventive medicine now rather than surgery later. This bill has the overwhelming approval and support of all segments of the domestic industry and is a fair approach to the problem, nationally and internationally. It provides for an increasing supply of imports, based upon historic quotas. It would help to stabilize the foreign producer as well as the domestic producer, because it would provide an orderly and stable market in the United States, the chief consumer of shrimp.

We wish to join with the shrimp industry in urging Congress to pass the pending bill and for its enactment into law in order to save the shrimp industry from economic disaster.

The Forand Bill To Add Health Benefits to the Social Security Program

EXTENSION OF REMARKS

OF

HON. JOSEPH S. CLARK

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. CLARK. Mr. President, like many of my colleagues I have received a great deal of mail pro and con the Forand bill to add health benefits to the social security program. Since the Ways and Means Committee is currently holding executive sessions to discuss social security amendments, and the Senate Subcommittee on Problems of the Aged and Aging—on which I serve—will soon resume hearings on health problems of the aging, increased public attention is bound to be focused on the Forand bill and similar proposals.

Some of the mail that has come into my office on this subject has shed more heat than light, but I am delighted to say that much of it has been so thought-

ful and reasonable that the exchange of views has educated both my constituents and me. I have been especially heartened by the correspondence I have had with Mr. Jay Lavenson, Jr., president of the Denson Insurance Agency, Inc., of Philadelphia, Pa. I ask unanimous consent to include our exchange of correspondence in the Appendix of the RECORD.

There being no objection, the communications were ordered to be printed in the RECORD, as follows:

PHILADELPHIA, Pa., December 18, 1959.

Re the Forand bill (H.R. 4700).

Hon. Senator JOSEPH S. CLARK,

U.S. Senator, Washington, D.C.

DEAR SENATOR CLARK: Regarding the captioned bill which I understand is now pending I would like to ask your consideration in voting against it.

It is my personal feeling that this legislation would result in unnecessary tax burden upon the citizens of the country and produce only quasi-desirable results.

Your corporation in soliciting and working on behalf of those who are opposed to this measure would be very much appreciated.

Cordially,

JAY LAVENSON, JR.

JANUARY 8, 1960.

Mr. JAY LAVENSON, JR.,

President, Denson Insurance Agency, Inc.,

First Federal Building, Philadelphia, Pa.

DEAR MR. LAVENSON: I have your recent letter opposing the Forand bill.

While I am not committed to the specific provisions of that bill, I believe action is urgently needed in this field. During recent hearings of the Subcommittee on the Aging, of which I am a member, elderly people in every part of the country testified that their most frightening financial problem is that of meeting hospital and medical bills. They are most subject to catastrophic illness at a time when they earn the least (in 1958, 60 percent of those over 65 had less than \$1,000 a year income) and when about two-thirds are not covered by private hospitalization plans, either because of cost or age limitations.

So far, nobody has come forward with any solution along other lines that shows promise of being effective, and I am not satisfied that this major human problem should continue to drift along without solution.

Rather than hurting private hospitals and hospitalization plans, the inclusion of some of these benefits under social security would be of great assistance to them in dealing with increasingly complex financial problems. (May I refer you to an article entitled, "Can Blue Cross Survive Its Own Success?" in the October 29, 1959, issue of Reporter magazine, for an illuminating discussion of these problems. And may I also refer you to the forthcoming report of our subcommittee.)

Since there is a good chance that the Forand bill will be considered in this session of Congress, I appreciate having your views. I hope you will also give serious consideration to the points I make above.

Sincerely,

JOSEPH S. CLARK.

DENSON INSURANCE AGENCY, INC.,
First Federal Building,

Philadelphia, Pa., February 9, 1960.

Hon. JOSEPH S. CLARK,

U.S. Senate,

Washington, D.C.

DEAR SENATOR CLARK: I was particularly pleased to receive yours of January 8 in reply to my letter asking you to oppose the Forand bill. I was particularly pleased at

the fairness of your answer, your obvious complete awareness of the situation, and your open mind.

Enclosed is a copy of a letter I have written to Mr. Harold G. Evans, president of the American Casualty Co. of Reading, Pa. In addition, identical letters went to: Mr. James Powell, vice president, Provident Life & Accident Insurance Co., Chattanooga, Tenn.; Mr. James S. Kemper, chairman of the board, Kemper Insurance Group, Kemper Building, Chicago, Ill.; Mr. David Kilgour, president, Great-West Life Assurance Co., Winnipeg, Manitoba, Canada; Mr. V. J. Skutt, president, Mutual of Omaha, Omaha, Neb.; Mr. Frank V. McCullough, vice president, Continental Casualty Co., Chicago, Ill.; Mr. Neville Pilling, U.S. manager, Zurich Insurance Co., 135 South La Salle Street, Chicago, Ill.

Again many thanks for your prompt and courteous response.

Cordially,

DENSON INSURANCE AGENCY, INC.,

JAY LAVENSON, JR.,

President.

DENSON INSURANCE AGENCY, INC.,

First Federal Building,

Philadelphia 9, 1960.

Mr. HAROLD G. EVANS,
President, American Casualty Co.,
Reading, Pa.

DEAR MR. EVANS: I am writing to the chief officer of every company with which our office holds an agency contract engaged in the writing of accident and sickness insurance and to a few additional companies we know as being extremely active in the accident and sickness field although we may not represent them at this moment.

We, as most other agencies, have received a flood of literature and letters from a number of insurance companies asking us to contact our Senators and Representatives to take a stand against the Forand bill. The brochures and letters we have received all quite directly criticize the Forand bill as being inadequate, encroachment in the sanctuary of private industry, and as a threat to the future of our social security system. In addition, we have been led to believe that the evil of the Forand bill is far-reaching in its effect on future taxation costs, deterioration of individual initiative and independence, and the possibility of excessive use of our present hospital facilities.

As a good and loyal agent, I took up the cudgel of the insurance companies and wrote a letter to my Senator, JOSEPH S. CLARK, asking him to oppose the Forand bill. Mr. CLARK promptly replied in a manner that makes me proud to have him be my representative in our Federal Government. A copy of his reply is enclosed and I would like to call your attention to a few pertinent remarks.

First of all he reminds us that the problem of medical expenses for older persons is not only a financial but a human problem; second, and in my opinion a most valid observation, is the fact that apparently no one has as yet come forward with any solution better than the Forand bill.

Certainly we all are keenly aware that this problem is not a new one, and we have known for years that something would have to be done about it ultimately. Only a handful of insurance companies active in the field of hospitalization and medical expense insurance have done anything in the way of designing or affording any type of coverage for the older individual, particularly if the individual is not in good health when he initially applies for insurance.

We can't avoid the problem any longer; it's here—it's going to stay and undoubtedly become enlarged. If we of the insurance fraternity are going to be constructive and do the job we are certainly equipped to do,

the time is now to design a standardized program of adequate coverage for the aged to be underwritten by the private companies, handled by the private companies, and supervised by the industry rather than the Government.

The only way we will effectively keep the Government out of the insurance business is to do such a damn good and effective job that it won't have any reason to come into our field. By spending our time designing literature of criticism for a job we have not been able to do ourselves, we are merely spinning our wheels, and we're being passed by the governmental machinery with its chains on.

Cordially,

DENSON INSURANCE AGENCY, INC.,
JAY LAVENSON, Jr., President.

Speech by Representative James E. Van Zandt, Member of Congress, 20th District of Pennsylvania, on the Floor of the House of Representatives, March 16, 1960, in Support of the Van Zandt Bill, H.R. 6483, To Construct 100 Nuclear-Powered Attack Submarines at the Rate of 20 Vessels per Fiscal Year

EXTENSION OF REMARKS OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. VAN ZANDT. Mr. Speaker, in 1958, during the 85th Congress, and again in this Congress I introduced legislation which would authorize the Secretary of the Navy to construct 100 nuclear-powered attack submarines.

My bill, which is H.R. 6483, would direct the Secretary of the Navy to construct the 100 nuclear-powered attack submarines at the rate of 20 per fiscal year, starting with the present fiscal year which expires June 30, 1960.

H.R. 6483 would authorize to be appropriated out of any money in the Treasury not otherwise appropriated, such sums not to exceed \$4 billion as may be necessary to carry out the provisions of such an act.

In urging that immediate attention be directed to the necessity of constructing 100 nuclear-powered attack submarines over a 5-year period, I wish to make it clear that I am not criticizing the present posture of our national defense.

In my opinion we have an adequate national defense. Moreover, I am convinced that the vast majority of Americans are in accord with President Eisenhower's reassuring statement that we have a strong defense system.

The one disturbing factor, however, is that everyone seems to be concerned solely with the need of concentrating on building more Polaris missile-firing submarines. Thus, in doing so we tend to neglect to recognize the imperative need of also increasing the fleet of nuclear-powered attack submarines which have a greater all-around capability as an arm of our national defense.

Mr. Speaker, it is common knowledge that all of our alliances and our ability to maintain the integrity of the free world are dependent upon keeping open the sealanes. And, in that respect, I am convinced that the most serious threat to the ability of the Navy to control the seas is the large Soviet submarine fleet already in being and the nuclear fleet now under construction by the Soviets.

Then too, Mr. Speaker, we must realize that a few of these Soviet submarines now equipped to fire missiles can place our coastal cities in danger of being destroyed in the event of war. Speaking frankly, many believe there is little doubt that the Soviets are capable of effecting their own marriage of the IRBM to the nuclear-powered submarine, as we are doing with the Polaris type submarine.

At the same time, the Soviets are advanced in the missile field and are known to be building nuclear-powered submarines. In this connection, over a period of years they have long pointed out the vulnerability of the United States to such attacks. In short, missile launching submarines are the Soviet equivalent to our overseas air and missile bases.

Mr. Speaker, no longer is the ocean our protector. In fact, the ocean now becomes the hiding place, the breeding ground, and the potential battlefield of the most serious threat to our safety.

Frankly, the Navy must expedite all efforts to cope with this threat, sacrificing if necessary other functions of lesser importance.

In analyzing our position today, it is well to recall that at the outbreak of World War II, Germany had 57 submarines of which 22 were ocean going. Before the war was over, 14 million tons of allied shipping went to the bottom of the sea. It took us four long years to gain control over the German submarine menace.

In this age of atomic power and missile, the submarine is even a more powerful and more versatile weapon. The knowledge that the Russian submarine fleet is nearly nine times as large as was the German submarine force at the outbreak of World War II should stir us to action now, rather than waiting for destruction. For survival we not only must be able to control the air above and the surface of the sea but also the waters beneath.

Fortunately, we have in our arsenal the nuclear-powered attack submarine—a superior weapon which, if produced in sufficient numbers, could defeat the large Soviet submarine fleet.

With that thought in mind, it is pertinent to review the following tables showing the estimated maximum numbers of combat submarines we now have on hand and will have from now until 1966.

ESTIMATED MAXIMUM NUMBERS OF COMBAT SUBMARINES

TABLE I.—Attack type less than 20 years old

	Now	Late 1960	1961	1962	1963	1964	1965	1966
Nuclear.....	7	13	16	23	27	30	33	36
Conventional.....	87	87	87	87	84	59	23	19
Total.....	94	100	103	110	111	89	56	55

TABLE II.—Missile types less than 20 years old

	Now	Late 1960	1961	1962	1963	1964	1965	1966
Nuclear-Polaris.....	1	5	7	9	12	15	18	21
Nuclear-Regulus.....	1	1	1	1	1	1	1	1
Conventional-Regulus.....	4	4	4	4	4	3	2	2
Total.....	6	10	12	14	17	19	21	24

TABLE III

	Now	Late 1960	1961	1962	1963	1964	1965	1966
Nuclear total of table I and table II.....	9	19	24	33	40	46	52	58

BASIS FOR TABLE

First. Submarines have a maximum useful life of 20 years. This is due to two factors: (a) Hull deterioration becomes so pronounced that the ships become unsafe to operate except at very shallow depths. Repairs to the hull become prohibitively expensive. (b) Space and arrangement restrictions make it impossible to install the later types of equipment needed to keep the submarine militarily effective. Modern submarines require more and more electronic devices.

These cannot be installed in World War II hulls without unacceptable infringements on habitability.

Second. Nuclear attack submarines will continue to be authorized at the present rate of about three per year.

Third. Nuclear Polaris type submarines will continue to be authorized at the present rate of about three per year.

Mr. Speaker, the majority of scientists and tacticians agree that the best way to hunt down and destroy a submarine is with another submarine. When deal-

ing with the threat of Soviet submarines with nuclear power this naval fact becomes intensely significant. An atomic submarine is an extremely durable, elusive craft and is immune to many of the search and attack techniques effective against conventional submarines.

Further, as demonstrated by the cruises to the North Pole by the *Nautilus*, the *Skate*, and the *Sargo*, a whole new strategic area of the world has been opened. No longer can we comfort ourselves with the protection afforded the most northern boundaries of our continent by the Arctic ice cap. Nuclear submarines of any nation will be free to militarily exploit the Arctic Basin.

Only a strong force of nuclear attack submarines will provide us with the ability to check missile-firing submarine threats from that area.

Mr. Speaker, it is reassuring to know that the United States is for the present ahead of Russia in the development of nuclear submarines by a significant if not commanding margin. However, as Rear Adm. Hyman Rickover testified a considerable time ago, if the Soviets build their nuclear-powered submarines at even a fraction of the rate they have been building conventional submarines we could very soon lose our present lead in submarine nuclear propulsion.

No one will deny that it would be devastating and nothing short of criminal for us to let this happen.

The dramatic successes of our nuclear-powered submarines have captured the imagination and the admiration of all Americans and millions of people throughout the world. To these people these splendid ships are a modern symbol of America's capacity for progress and leadership in the field of science and exploration. If we permit the Russians to surpass us we not only invite destruction but we destroy this world-wide image. In a few words, it is an accepted fact that we now possess an actual weapon superiority and a psychological supremacy of incalculable value in the nuclear submarine. Frankly, we must retain it.

We should be mindful, too, of the fact that our current submarine fleet is composed mainly of ships built during World War II which was clearly demonstrated by the tables called to your attention a moment ago. These ships are rapidly becoming obsolete and overage. Therefore, as the tables show, if we are to have anything more than a token attack submarine fleet, we must immediately increase our submarine construction program.

Let me submit one further point for your consideration.

The Navy has been quick to point out that fighting Russian submarines is not a numbers matching game. The Navy has said that the usefulness of the nuclear-powered attack submarine best accrues when we are able to take advantage of its unique characteristics in conjunction with other tools which supplement it.

I do not deny this, but I am very much concerned that if we continue the construction of attack submarines at the present rate we very soon will not even

have enough submarines to run target for these other tools of antisubmarine warfare.

Of all the elements of the U.S. Navy the nuclear-powered attack submarine will probably be the last to become obsolete. Even the *Polaris* submarine, now being developed so vigorously, will undoubtedly give way to improved deterrent systems utilizing the nuclear underwater concept.

As my bill, H.R. 6483 provides, I again urge that we immediately build large numbers of attack submarines that have the capacity to sink Russian submarines. My bill proposes that the Congress authorize, for construction in the next 5 years, 100 nuclear-powered attack submarines.

To get started on this effort now, I propose that we immediately authorize in the fiscal year 1961 supplemental budget \$500 million for the construction this year of 10 additional attack submarines. If we start now I am confident that these ships could be completed in 1964 and 1965. If we build them on an accelerated basis, with top priority, and I propose that we do so, I am confident they can all be completed before the end of 1964.

Mr. Speaker, from my own investigations I have determined that these 10 ships could be built without constructing new facilities. In other words, no retooling would be required.

Failure to immediately start constructing these attack submarines is a national admission that we do not intend to protect the lead we now have in the nuclear submarine field.

To make my position crystal clear, I heartily support all efforts in the anti-submarine warfare program.

In addition, I recognize the urgency of ship construction, including new carriers, *Polaris* submarine, amphibious ships or vessels, and all the other elements involved in establishing and maintaining sea power.

I also recognize that ICBM missiles encased in hardened sites or moving around the countryside on flat cars, also play an important role in our defense structure.

But when all is said and done, considering the present state of the art, we have high hope of being able to at least briefly anticipate ICBM's by tracking devices as they travel through thousands of miles of space.

We have reason to hope that we will have enough advance notice to detect and intercept such missiles.

But no one has yet found a way to overcome the natural cover of billions of tons of sea water particularly under conditions of variable temperature.

Commonsense, therefore, would seem to indicate that this natural protection for our submarines is also our greatest danger.

Thus, that weapon which can seek out and destroy a submarine underwater is the weapon we should accelerate.

That weapon, Mr. Speaker, is the nuclear attack submarine.

It is the weapon that will destroy the ballistic missile submarine that would

otherwise be able to fire its lethal load practically undetected.

Mr. Speaker, in concluding these remarks, I urge that we give immediate consideration to the construction of 100 nuclear-powered attack submarines as provided for in my bill, H.R. 6483, pending since April 16, 1959, before the House Armed Services Committee.

Tight-Money Policy

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. PROXMIRE. Mr. President, the Frederic Inter-County Leader is one of Wisconsin's outstanding weekly newspapers.

In these days of very hard times for weekly newspapers throughout America, days in which the weekly newspaper population is constantly diminishing, this fine Frederic paper stands out as a vigorous, widely read and mighty successful spokesman for the people of northwestern Wisconsin.

Mr. President, recently the Inter-County Leader published an editorial in which they discuss the tight-money policy with remarkable thoughtfulness and perception. I ask unanimous consent that this excellent editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered printed in the Record as follows:

TIGHT-MONEY POLICY

In a speech before the U.S. Senate, February 4, which is now part of the CONGRESSIONAL RECORD, Senator WILLIAM PROXMIRE of Wisconsin revealed that the new tight-money policy is costing the schools an additional \$675 million each year. The speech followed the passage by the Senate of a \$913 million school assistance bill.

Mr. PROXMIRE said, "I would agree that this is a bright, not a dark, hour in the history of the Senate. I can think of nothing more important, nothing which is more desperately needed, than assistance for American education in this year of challenge."

But, at the same time, Senator PROXMIRE brought to the attention of the public that the direct action of the Federal Government agency, the Federal Reserve Board, has cost the schools a full two-thirds of the value of the bill passed. Between 1952 and 1960, interest rates have increased for school bonds from 2.19 percent to 4.19 percent.

According to standard figures for the Nation, an average elementary school costs about \$500,000. The interest rate on such a project in 1952, carried for 30 years would reach \$164,000. On this same basis the interest cost in 1960 has risen to \$314,000, an increase of \$150,000. In other words, the interest rate related to the construction cost of a school has gone up 30 percent. The total cost including interest and construction has gone up more than 22 percent.

Senator PROXMIRE said, "Many will say that the increase in the interest rates is not the responsibility of any individual, of any group, or of any government agency; it is simply something which has happened in our economy."

"This is not the case. The interest rate is a direct function of the relationship between the money supply and the gross national product. As the money supply is increased by the Federal Reserve Board, the gross national product remaining constant, the interest rate falls. As the Federal Reserve Board fails to increase the money supply in relation to the gross national product, or reduces the money supply, the interest rate goes up."

Between 1952 and 1953, the money supply was held almost constant by the Federal Reserve System. It increased only \$1.5 billion. During the same year the gross national product increased by approximately \$18 billion. The result was that the money supply, as a percentage of the gross national product, dropped; so the inevitable happened, interest rates for schools rose from 2.19 percent to 2.72 percent. The same has been true for the years that followed.

Last year the Federal Reserve Board reduced the money supply sharply. They took \$4 billion out of circulation, and the gross national product increased very sharply—nearly \$40 billion. The result was that the ratio between the money supply and gross national product dropped to the lowest in 30 years—29 percent. With the drop, interest rates increased to their highest level in 30 years. Interest rates on school bonds rose to a punishing 3.90 percent. This trend is continuing, and already in 1960 the squeeze becomes tighter and the cost of money for schools has increased to 4.19 percent.

According to the Senator, the Federal Reserve Board is directly responsible for the level of the cost of school bonds. He pointed out that not a single dollar of that \$675 million of the additional costs, the 22 percent increase in costs, goes to any working man, none of it goes for higher construction wages, or in profits to any of the school building contractors, who are generally small business people. Every penny of it goes to the money lenders, and comes from the property taxes of hard-pressed local citizens.

Free Asia Opposes U.S. Recognition of Red China, Farley Reports

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following reported by James A. Farley:

FREE ASIA OPPOSES U.S. RECOGNITION OF RED CHINA, FARLEY REPORTS

LOS ANGELES, CALIF., March 2.—Free Asia is overwhelmingly in agreement on one thing, inflexible opposition to U.S. recognition of Red China, James A. Farley, world-famous Democratic leader and board chairman of the Coca-Cola Export Corp., reported here today on his return from a 6-week business trip to the South Pacific and Far East.

"Leaders throughout Free Asia pointed out to me on my recent trip," Farley asserted, "that in the face of Communist China's action in Tibet, its invasion of Indian territory, its subversive efforts against its neighbors, and its refusal to renounce the use of force, it would be a great error to reward Communist China by recognizing it or supporting its entry into the United Nations."

"They maintained that until Communist China by its actions gives proof that it wishes to live in peace with its neighbors and is willing to cease its effort to undermine their hard-won independence, nothing should be done to enhance the position or prestige of a Communist China regime, since this would simply increase Communist China's ability to increase its subversive action."

Free Berlin and the Summit

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. HUMPHREY. Mr. President, in a recent statement made in Milwaukee, Wis., on March 6, 1960, I briefly summarized my assessment of the situation 10 weeks before the Geneva summit conference, with particular reference to the critical problem of Berlin. I ask unanimous consent at this time to have printed in the Appendix of the RECORD, the text of my remarks on the Berlin crisis.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR HUMPHREY

Big and dramatic events are on their way. It is only 10 weeks until the opening of the summit conference at Geneva. It is 16 months since Khrushchev launched his ultimatum against the freedom-loving city of free Berlin, and he is losing no opportunity to show his impatience—his toughness.

He very badly wants to push the West—and freedom—out of Berlin.

Even during his recent junket to Indonesia, he took time to threaten Berlin again. He demanded that the Western Powers sign peace treaties with both Germanies—West Germany and East Germany.

If they did not, he threatened to sign his own treaty with East Germany, and to snuff out the legal rights of the occupying powers in Berlin.

"West Berlin," he said, "is on the territory of East Germany."

The 1958 ultimatum has already yielded big dividends to Khrushchev—two foreign ministers' conferences, his visit to America, and an invitation to a series of summit meetings. But the appetite grows with eating, and he wants more and more.

At his press conference last month, our Secretary of State Herter acknowledged that the tough Soviet talk on Berlin has him worried. He attributed this tough Communist talk to the lead the Soviet Union now holds over the United States in intercontinental missiles—the so-called missile gap.

This raises a very grave question—what have we done with the 16 months since Khrushchev launched his warning?

One thing we certainly cannot complain of—the attitude of the free people of West Berlin. Under the leadership of their gallant mayor, Willy Brandt—a man whom I am proud to number among my close friends—they have remained steadfast in the face of a long series of threats.

I was in Europe in 1958 when the Khrushchev ultimatum was delivered, and I went direct to Berlin to assure its mayor and people that the American people backed them to the hilt.

I remember, as if it were yesterday how warmly Mayor Brandt welcomed me and with what pride he showed me his half of the

city—from its bustling shops and factories to its modern housing for workers.

In long and frank talks as we drove about the city, he shared with me the grave problems in maintaining this little island of freedom in a totalitarian sea.

At the heart of the city, by famous Brandenburg Gate, we stood together on the very frontier between freedom and slavery.

I was deeply moved as he told me of the hardships of the first Berlin blockade, and expressed the gratitude of his people for the allied airlift which kept the city alive. The people of Berlin have put up a beautiful memorial directly in front of Tempelhof Airport to the 38 flyers who lost their lives in the course of the airlift, and I was privileged to lay a wreath before it.

I spoke to many Berliners, and asked them how their nerves were standing up under the strain. They told me: "Don't worry about our nerves, and we won't worry about yours."

I don't worry about our nerves—but I do worry about the yawning gaps in our readiness to meet a crisis which may burst upon us in 10 weeks time—or even sooner.

I am concerned, as many well-informed observers are, about the space gap and the missile gap.

Soviet sputniks and luniks are blazing out into space with a magnitude of thrust which, even now—2 years after the first sputnik—we are unable to match.

I am alarmed by the prospect that, within the next 2 or 3 years, the Russians may have a 3-to-1 advantage over us in missiles—but I am even more alarmed that the administration reacts to this appalling prospect as if it were nothing more than the Russian victory in the winter Olympics.

It is the "complacency gap" which troubles me even more than the missile gap.

We have been warned—again and again and again. But all the administration does is to administer us another tranquilizing pill.

There is another huge gap that bothers me—what I call the "testimony gap," the gap between what we are told and what we uncomfortably suspect to be the painful truth.

Recently we were told, in an official manual that shall remain nameless—and, in fact, unsanctified—that the idea of Americans having a right to know what's going on is, and I quote: "Another foolish remark often heard."

The manual has been shot down, but the malady lingers on. Only a few days ago the President blasted two of our most responsible newspapers—the New York Times and the Washington Post—for printing perfectly accurate reports of the testimony of former Defense Secretary Robert A. Lovett—a Republican, by the way.

I for one shall keep repeating this so-called foolish remark until someone up there hears and heeds—and lets the American people know what's going on.

Who are we fooling, anyway? Maybe our own people—but not, by Secretary Herter's admission, the Soviets.

Then there is a third threatening gap—the "moral gap," the gap between what we preach and what we practice.

Almost 6 years have passed since the Supreme Court's decision outlawing segregated schools. Yet the administration and Congress still shirk their share of responsibility for enforcing that decision.

We haven't even heard from the White House what we have every right to expect—a clear and unequivocal affirmation of the moral rightness of that historic decision.

We talk of our prosperous society—and yet we leave over 20 million of our people languishing in poverty: the aged, the sick, and those marooned in the depressed areas which pockmark our country.

Khrushchev doesn't need a "seeing eye" satellite to spy out our weaknesses.

As he sees it, ours is a dying system—and his hands are itching for the spade so that he can "bury" us—to quote his own blunt word.

There isn't any quizmaster who can slip us, under the table, the answers to the grave questions which hang over us. There isn't any "payola" that will ensure our prestige in the world, unless we earn it by deeds as well as words.

I have made a careful study of Soviet strategy.

There is no day-to-day fumbling in their policy, as there too often is in ours. They think in terms of years and of decades. They weigh future trends as well as present facts.

They will have one kind of policy if they think America is rising in the world—a policy of respect and carefulness. They will have another, and much more unpleasant one, if they see we are sinking.

They will be watching what we do, listening to what we say, in the coming weeks. They will form their own shrewd judgment about whether we will continue sleepwalking into the limbo of second-class powers—or whether we will, at long last, wake up and rally our great energies and capabilities for the crisis that lies ahead.

It is good that we—Democrats and Republicans alike—have said in one united voice that we will stand firm on Berlin. But we must do more than say the right words—much more. We must move to close the gaps that cloud with doubt the firmness of our purpose.

I have just heard that Mayor Brandt of free Berlin has cancelled plans to visit America and put the case of his beleaguered city before us—because of the renewed gravity of the situation there.

He wants to be on the job 24 hours a day, to meet and to cope with whatever may come. Oh, how I wish that our own Government had been on the job 24 hours a day for all these recent 7 years.

For myself, I shall continue to blow the bugle, sound the warning, seek to awaken the American people to the peril in which they stand. Given the full facts and alert, on-the-job leadership, we shall—I am utterly confident—surmount this coming crisis.

Extended Debate Justifies Itself

EXTENSION OF REMARKS

OF

HON. STROM THURMOND

OF SOUTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. THURMOND. Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD a very timely and well-written editorial from the Columbia Record of March 14, 1960, entitled "Extended Debate Justifies Itself." The Record has as its editor one of the soundest and most able writers in this country, Mr. Henry Cauthen.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EXTENDED DEBATE JUSTIFIES ITSELF

The value of extended debate has just been historically proved in the Senate of the United States.

Not all of the prospective advantages for the country which have come into vision through doors opened by this debate will be realized, but already there have accrued some benefits. It has been extremely healthy for the order and fairness of this Nation.

True resolve, tireless enterprise and the harnessing of mentalities, under inspiration, are elements not to be denied. These are the qualities which the southern Senators have brought to the filibuster.

And it has been the experience of men that the use of such qualities not only brings stated goals or quests closer, but often leads into unexpected areas of discovery and achievement. Almost any energetic newspaper reporter can narrate cases in which he, seeking a specific story for his paper, finds his enterprise has led him to another. Salesmen can tell of many a similar experience. So can scientific researchers.

And so it has been in the extended debate over so-called civil rights legislation in the Senate. Who, for example, would have imagined that during this debate northern and western liberal Senators would suddenly have been forced to join southerners to defeat one of the sections of the bill in contention?

In the bill was a provision making it a Federal crime to interfere with Federal court orders in desegregation cases. This, of course, was aimed directly and exclusively at the South. Senator LAUSCHE, of Ohio, a conservative Democrat, had proposed the broadening of the provision to include court injunctions in labor cases and all other Federal court orders.

This brought outraged liberals immediately into action, and, under fear of the labor unions, they joined southerners in voting to kill the whole provision. The vote was 65 to 19 to eliminate that section of the bill.

Southerners, of course, opposed the original section all along. And in voting with the strange companionship of the liberals they were consistent. The southerners were acting to protect their area of the country and the northerners and westerners to retain the trade-union vote.

Had the southerners in the beginning, in a spirit of hopelessness, decided to abstain from extended debate over civil rights, there would never have been any such development as the elimination of the section. In the circumstances, the scorned Lausche amendment made sense; it applied section 1, if there was to be such a section, to all court orders and removed the discrimination from the South, if not removing southern objection.

But the circumstances changed. The northerners and westerners did not want laborite resistance to court orders affecting labor to be a crime. So fearful were these liberals of the unions that they went back on the Negroes by killing that section of the bill designed favorably to affect desegregation.

In protecting the unions, the northern and western Senators were compelled to let what purported to be protection of southern Negroes go by the boards.

Here was one of the miracles, and doubtless unexpected, coming out of the enterprise of extended debate and helping justify what outside the South is regarded as a most iniquitous device—the filibuster.

To Our Negro Friends

EXTENSION OF REMARKS

OF

HON. A. S. HERLONG, JR.

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. HERLONG. Mr. Speaker, in view of the agitation current in the Southern

States between races, I should like to incorporate in the RECORD the following editorial from the Orlando Sentinel, Tuesday morning, March 8:

TO OUR NEGRO FRIENDS

Agitators from the Negro and white races are stirring up a new kind of trouble in the South: The lunch counter sitdown strike.

This useless nonsense started in Virginia and North Carolina a few weeks ago. College students of both races, perhaps intent more upon attracting attention to themselves rather than sincerely protesting segregated eating, succeeded in setting off a wave of trouble which could become serious.

The NAACP, an organization noted in recent years for creating dissension between the races rather than trying to find a realistic solution to the differences of opinion, was quick to give the sit-down strikes its blessing and encouragement.

So today we find new racial tensions existing in parts of the South where the question had not even come up.

We want to point out to our Negro friends in central Florida that the motive behind this attempt to destroy harmony between the races is purely political.

Item 1: The Senate is arguing the matter of civil rights. It is not unreasonable to suppose that sit-down demonstrations are being promoted to provide ammunition for the supporters of punitive "civil rights" measures for the South.

Item 2: A presidential election is coming up. Attempts will be made to solidify the Negro vote on an emotional basis. Also, attempts will be made to repudiate any southern candidate such as Senate Majority Leader LYNDON JOHNSON.

Before central Florida Negroes allow themselves to be persuaded to participate in lunch counter demonstrations they should ask themselves three questions:

1. Do I really want to eat in a white lunchroom?
2. Am I helping the cause of my race by insisting that custom be reversed?
3. Wouldn't racial harmony and understanding be achieved more quickly if my race worked with, rather than against, other races?

Expert Support for the Establishment of a "Know Your Government Office"

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. KEATING. Mr. President, several weeks ago, I introduced S. 3096 which would establish a Know Your Government Office in the National Archives and Records Service of the General Services Administration.

Dr. George B. Galloway, senior specialist in American Government and Public Administration in the Legislative Reference Service of the Library of Congress, has written me a very informative and thoughtful letter commenting on this proposal. Dr. Galloway, who is one of the Nation's leading experts on governmental reform, indicates that he is in agreement with this proposal and in a most interesting fashion describes a similar office which existed from 1934 to 1948.

I feel that Dr. Galloway's letter contains much useful background material

with reference to the idea of establishing a Know Your Government Office. For this reason, Mr. President, I ask unanimous consent that this letter and the text of S. 3096 be printed in the Appendix of the RECORD.

There being no objection, the letter and bill were ordered to be printed in the RECORD, as follows:

THE LIBRARY OF CONGRESS,

Washington, D.C., March 2, 1960.

Senator KENNETH B. KEATING,
Senate Office Building,
Washington, D.C.

DEAR SENATOR: I have examined with much interest your bill (S. 3096) and supporting statement for establishing a "Know Your Government Office."

It seems to me that this is an excellent proposal for at least two reasons: (1) It would establish a central clearinghouse for informing the public on the organization and operation of the Federal Government; and (2) it might well reduce the workload on congressional offices created by constituent inquiries for such information.

The proposal to locate the new office in the National Archives and Records Service of the General Services Administration seems appropriate since that is where the U.S. Government Organization Manual is prepared.

An alternative title of the new Office might be the "Government Information Service."

It is pertinent to recall that such an agency as you now suggest actually existed in Washington from March 1934, to June 30, 1948. In March 1934, a "U.S. Information Service" was established as a division of the National Emergency Council, to function as a central clearinghouse for information on all phases of governmental activity. It continued as a division of the Office of Government Reports when that agency succeeded to the functions of the National Emergency Council pursuant to the President's Reorganization Plan No. 2, effective July 1, 1939. It was transferred and consolidated, along with other functions of the Office of Government Reports, into the Office of War Information by Executive Order 9182 of June 13, 1942, where it functioned as the Division of Public Inquiries within the Bureau of Special Services. Executive Order 9608, of August 31, 1945, transferred the Bureau of Special Services to the Bureau of the Budget where it functioned as the Government Information Service. Upon the reestablishment of the Office of Government Reports by Executive Order 9809, December 12, 1946, the service again became a unit of this office. Subsequent to the enactment of the act approved July 30, 1947 (61 Stat. 588), the functions of the OGR were restricted and liquidation of the OGR was completed on June 30, 1948.

Sincerely yours,

GEORGE B. GALLOWAY,
Senior Specialist in American Govern-
ment and Public Administration.

S. 3096

A bill to establish in the General Services Administration an office to disseminate general information concerning the organization of the Federal Government.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) in order to achieve a better public understanding of the organization of the Federal Government, and the operation of its various agencies, the Administrator of General Services shall establish in the National Archives and Records Service an office, to be located in Washington, District of Columbia, and to be known as the "Know Your Government Office" (hereinafter referred to as the "Office").

(b) The functions of the Office shall include—

(1) the dissemination of general information concerning the functions of the various departments and agencies of the Government;

(2) providing students and other interested persons with information concerning the organization of the Government;

(3) the furnishing of information upon request concerning the officer or agency to be contacted for specific inquiries bearing upon the activities of a particular agency of the Government; and

(4) enhancing by an educational program public interest in and understanding of the structure and operations of the Government.

SEC. 2. Such sums as may be necessary to carry out the purposes of this Act are hereby authorized to be appropriated.

Educate the Whole Child

EXTENSION OF REMARKS

OF

HON. HUGH J. ADDONIZIO

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. ADDONIZIO. Mr. Speaker, in the great debate about our educational deficiencies that has been going on throughout the country for the past several years, the fact that education consists of more than academic learning is often overlooked. This point is well developed in a letter written recently to the New York Herald Tribune by Mr. William Ashley, principal, Freeport High School, Freeport, N.Y. I believe Mr. Ashley's comments will be of interest to my colleagues and to all in the country who are concerned about and responsible for the education of our young people. Mr. Ashley's letter follows:

EDUCATE THE WHOLE CHILD

To the NEW YORK HERALD TRIBUNE:

Recently scare headlines appeared in your paper about the evils of athletics in junior high schools.

As one who has spent many years in both the academic and athletic phases of our public education system, I greatly deplore unscientific generalizations that are made by people who know only one side of the story. These statements of opinion become gospel to many readers.

I, of course, refer to Dr. Conant's study of the junior high school system. Not all athletic programs are equally good, any more than the math or science courses in all schools compare favorably. However, by and large, this field is the last bastion in many a school for the perpetuation of the ideals and discipline so needed and often so lacking in our American culture.

Would you propose that it is better to encourage a furthering of the ever-increasing habits of smoking, drinking, partying and "corner hanging out" by our 12- and 13-year-olds rather than have them on the playing fields where at least an effort at social training is being made? If Dr. Conant was in this field of public education, he would soon find that it is quite an effort to encourage our young people into the field of athletic endeavor. It costs too much in sweat and effort, as opposed to gossiping in the corner drugstore.

Again I say, it will be a sad day when you convince the American public that the elim-

ination of an athletic program is desirable. This has already been done to a great extent by TV and the movies.

Certainly those who realize that education is a total process do not wish to be added to the deteriorating process already too far underway in our public schools. The great city of New York is a fine example of what happens to a school system that has canceled the educational value of an athletic program.

There is no conflict between intellectual development of our youngsters and the social training provided for by a good athletic program. Education in America is not deficient only on the scholastic level, as studies such as Dr. Conant's indicate, but far more so on the moral and social side of the problem.

I am sure that we all give at least lip-service to the idea that we cannot separate the physical from the intellectual, the social from the emotional. Therefore, total behavior must be the concern of the educational process.

How can this be done by eliminating that part of the process which best appeals to these various aspects of total development?

WILLIAM ASHLEY,

Principal, Freeport High School.

FREEPORT, N.Y.

The House by the Side of the Road

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. BYRD of West Virginia. Mr. President, on a hot summer afternoon, many years ago, a traveler walked along a country road. He was a stranger to the countryside, and he became hungry and thirsty and tired, but he saw no welcome farmstead to which he might retire for succor and refreshment. As the warm summer sun beat down upon him, he came to a bend in the dusty road and he saw a path winding its way over the hill into a shady, sylvan spot. He walked down the path and came to a little spring beneath the protecting trees, and beside the spring was a cup and a bowl of ripe, luscious fruit. Looking about him, he noted that the ground had been cleared and that a little table had been erected, surrounded by benches for the comfort of those who might pause to rest. After he had drunk from the cool, clear, refreshing water of the spring, and after he had renewed his strength by resting under the trees and by eating the fruit, he decided to look for his benefactor, the person who had made the recent pleasures possible. Consequently, he followed the path as it delved deeper into the forest until at last he came to a humble cottage. Knocking upon the door, he was greeted cheerfully by a kind man, bent with the weight of years. The traveler inquired as to the identity of the individual who kept the spring clean and the fruit fresh, and the old gentleman replied that it was he, but he refused to give his name. He was content to have the traveler know of his desire to remain anonymous and of his pleasure in making life a bit

happier for those who toil along the road.

The kind old man's name will never be known, but his kind acts inspired the traveler to write a poem that has been read by the youth of every race and repeated from the lips of men around the earth. The traveler was Sam Walter Foss; the poem, "The House by the Side of the Road." I ask unanimous consent that this poem be printed following my remarks in the Appendix of the RECORD.

There being no objection, the poem was ordered to be printed in the Appendix of the RECORD, as follows:

There are hermit souls that live withdrawn
In the peace of their self-content;
There are souls like stars, that dwell apart,
In a fellowless firmament;
There are pioneer souls that blaze their paths
Where highways never ran—
But let me live by the side of the road
And be a friend to man.

Let me live in a house by the side of the road,
Where the race of men go by—
The men who are good and the men who are bad,

As good and as bad as I.
I would not sit in the scorner's seat,
Or hurl the cynic's ban—
Let me live in a house by the side of the road
And be a friend to man.

I see from my house by the side of the road,
By the side of the highway of life,
The men who press with the ardor of hope,
The men who are faint with the strife.
But I turn not away from their smiles nor their tears,

Both parts of an infinite plan—
Let me live in my house by the side of the road
And be a friend to man.

I know there are brook-gladdened meadows ahead,
And mountains of wearisome height;
That the road passes on through the long afternoon

And stretches away to the night.
But still I rejoice when the travelers rejoice,
And weep with the strangers that moan,
Nor live in my house by the side of the road
Like a man who dwells alone.

Let me live in my house by the side of the road,

Where the race of men go by—
They are good, they are bad, they are weak,
they are strong,

Wise, foolish—so am I;
Then why should I sit in the scorner's seat,
Or hurl the cynic's ban?

Let me live in my house by the side of the road
And be a friend to man.

Attorney General's Plea

EXTENSION OF REMARKS

OF

HON. THOMAS G. ABERNETHY

OF MISSISSIPPI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. ABERNETHY. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD I include a

timely editorial which appeared in the Washington Evening Star of yesterday, as follows:

ATTORNEY GENERAL'S PLEA

Attorney General Rogers has appealed indirectly to the House to retain in its version of a civil rights bill the provision making it a Federal crime willfully to use force or threats of force to obstruct Federal court orders in school desegregation cases. The language used by the Attorney General is somewhat surprising, especially in the light of the debate in the Senate last Friday.

Essentially this same provision was contained in section 1 of the administration bill submitted to the Senate. This section was killed, however, after the Senate, by vote of 65 to 19, had accepted the Lausche amendment which made it a crime to obstruct any Federal court order, not merely orders issued in school desegregation cases.

Why did the Senate adopt the Lausche amendment by an overwhelming vote, and then move on to kill all of section 1 after the Lausche amendment had been added to it? In many respects, we think, this was purely a political performance. But some very persuasive arguments were advanced against section 1 as originally proposed by the administration.

Chief among these was the contention that it would be unjust, as a matter of principle, to legislate with respect to one—and only one—class of cases. In this view, if it is wrong to obstruct court orders in school desegregation cases it is equally wrong to obstruct court orders in other types of cases. And if such obstruction is to be made a crime, the law should apply evenly to all obstructions, not to just one kind of obstruction. The political hitch is that organized labor would bitterly oppose the application of the Lausche doctrine to court orders in labor disputes. As a matter of principle, however, it seems to us that the argument in support of the Lausche proposal cannot be successfully answered.

The Senate vote (49 to 35) to strike all of section 1 came after the labor lobbyists had been heard from. But this action was not entirely a result of labor pressure. Senator Morse, for example, argued strongly, and we thought persuasively, to the effect that the new criminal provision in section 1 is not needed. He thought that existing law plus the power of a Federal judge to punish for contempt is sufficient.

The Attorney General does not think that these remedies are adequate. He believes that the criminal provision is needed. If he is right in this, however, it is surprising to us that, in effect, he would be urging the House to ignore the sentiment of the Senate as expressed in the 65-to-19 vote on the Lausche amendment. The Attorney General, of course, did not say this in so many words. But his appeal was strictly and repeatedly limited to school desegregation cases, and he even tried, not very successfully, to draw a distinction between court orders in school cases and court orders in other cases. Yet, according to Senator Morse, the Attorney General testified earlier before a Senate committee that "if Congress feels there are other situations where there is a similar need for this (section 1) statute, we obviously would have no objection."

As of this date, however, Mr. Rogers apparently wants a criminal sanction applicable only to school desegregation cases. We think that this, as a matter of principle, is wrong, and we do not see how the 65 Senators who voted for the Lausche amendment can be expected to accept, in the House bill, the very same discriminatory provision which the Lausche proposal was designed to remedy.

Reuben B. Robertson, Jr.

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. ERVIN. Mr. President, on March 15, 1960, the Asheville (N.C.) Citizen carried an editorial relating to former Deputy Secretary of Defense Reuben B. Robertson, Jr., who was a native of North Carolina.

I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

REUBEN B. ROBERTSON, JR.

The death of Reuben B. Robertson, Jr., president of the Champion Paper & Fiber Co. and former Deputy Secretary of Defense, in a highway accident in Cincinnati, brought pain and sorrow to the Champion family and to his great many friends in western North Carolina and elsewhere in the Nation.

He was an industrial and public figure of national stature. His passing is a loss that the Nation can ill afford.

A vigorous and able man of friendly, outgoing personality, he was much interested in people and their welfare and he had a deep appreciation of the importance of proper human relations in industry.

Mr. Robertson, the son of Reuben B. Robertson, Sr., of Asheville, Champion board chairman, and of the late Mrs. Robertson, was born in Asheville in 1903.

After graduating from Asheville school, he won a degree in chemical engineering at Yale in 1930 after which he studied forestry in Europe before joining the Champion company at Canton.

He held numerous positions of responsibility in the company before his election to the presidency in 1950. He made his home in Cincinnati while directing the vast operations of Champion at Hamilton, Ohio, Canton, and Pasadena, Tex.

After making his home in Cincinnati, Mr. Robertson maintained his close family, social and business ties with western North Carolina. He was the third generation of the family with Champion, founded in 1893 in Hamilton by his grandfather, Peter G. Thomson.

As Champion president, Mr. Robertson earned a reputation as one of the Nation's top industrial executives. In 1957 he was named "Man of the Year" in the paper industry for outstanding service to his country. Previously, in 1953, the National Association of Manufacturers named him "Man of the Year" for his work as head of a group of businessmen sent abroad by President Eisenhower to evaluate the U.S. security program.

Other governmental services of Mr. Robertson included the vice chairmanship of a committee that studied the Defense Department's business setup for the Hoover Commission on Governmental Organization. In 1950-51 he was on the Wage Stabilization Board and in 1942 he served on the War Production Board before entering the Army in World War II as a captain. He rose to the rank of lieutenant colonel.

Mr. Robertson came into greater national prominence as Deputy Secretary of Defense, 1955-57. He exhibited patriotic devotion and

worked earnestly and ably in behalf of America's security.

After returning to private life, he maintained close contact with defense matters and staunchly upheld the defense policies of the administration. Only last month one of his last speeches, if not the last, was on the subject of defense. It was prepared for the meeting of the chamber of commerce in Waynesville.

Though a busy corporation head and a director of several other corporations, Mr. Robertson found time for active participation in such causes as education, conservation, the Red Cross, the YMCA, and the community chest, both while at Canton and in Cincinnati. He was also a vestryman.

Mr. Robertson will be remembered for his many fine accomplishments in business and civic life and for his devoted service to the Nation and its security.

Baring Letter Exchange on Bureau of Public Roads False Technical Data

EXTENSION OF REMARKS OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks, I wish to place in the RECORD information on an exchange of letters between Mr. Robert E. Merriam, Deputy Assistant to the President, and me. On January 27, 1960, I addressed a letter to Mr. Merriam which was substantially identical to a letter I addressed to the Secretary of Commerce on the same date, now appearing in the CONGRESSIONAL RECORD of February 4, 1960, pages A963 and A964. In that letter to Mr. Mueller I showed conclusively that the Bureau of Public Roads did falsify pertinent technical information in presenting its side of the picture to the John A. Blatnik Special Committee investigating the selection of the routing of the Interstate Freeway System from the California State line through Reno and Sparks to Vista, Nev. I now wish to insert in the RECORD the unusual answer Mr. Merriam sent on February 16, 1960, and the letter I addressed to Mr. Merriam on March 4, 1960, in which I showed that the responsibility for disciplining the Bureau of Public Roads on account of its issuance of false technical data to the John A. Blatnik Special Committee rests with the President of the United States in the exercise of his executive power in accordance with article II, section 1 of the Constitution of the United States. The letters follow:

THE WHITE HOUSE,
Washington, February 16, 1960.

The Honorable WALTER S. BARING,
House of Representatives,
Washington, D.C.

DEAR MR. BARING: I wish to thank you for your letters of January 26 and January 27 with their further information regarding the National Defense Highway program for the Reno area.

There is very little I can add to my letter of September 22, 1959, to you.

Your two recent letters are mostly concerned with statements made in the Blatnik

subcommittee report with which I was acquainted when I wrote my letter of September 22. It appears advisable at this time for you to discuss questions of interpretation of information contained in this report directly with the subcommittee. In this direct manner the problem of the third party is not produced.

While it would appear that the questions you have recently raised regarding the data furnished the subcommittee by the Bureau of Public Roads should be taken up with the subcommittee, I am requesting the Department of Commerce to furnish me with an analysis and interpretation of the comments in your letters with respect to the benefit cost data.

I am sure we are all interested in insuring that the information furnished public bodies shall be as accurate and complete as possible, and your interest on this occasion is appreciated.

Sincerely yours,

ROBERT E. MERRIAM,
Deputy Assistant to the President.

HOUSE OF REPRESENTATIVES,
Washington, D.C., March 4, 1960.

Mr. ROBERT E. MERRIAM,
Deputy Assistant to the President,
The White House, Washington, D.C.

DEAR MR. MERRIAM: This will acknowledge your letter of February 16. In my letter to you dated January 27 I told you, that the Bureau of Public Roads' testimony before the John A. Blatnik subcommittee that the benefit-cost ratio of the Reno-Sparks Third Street Route would be 4.6 is false.

As all the affected constituted authorities as they reached their decisions were using essentially the same false data, their decisions, although possibly in agreement, are unsupported by technical fact and are, therefore, valueless. The Blatnik subcommittee, page 17 of its House Report No. 292, did "attach no sinister motives to the action of the Bureau in the above regard."

Now that the Blatnik subcommittee members know through unrefuted charges that the Bureau of Public Roads has presented false technical information to it at the Reno hearings, it may wish to reexamine its attachment of "no sinister motives to the action of the Bureau in the above regard."

The Blatnik subcommittee may wish to reexamine its conclusions and recommendations, report, page 17:

(a) The record contains falsely high benefit-cost ratio figures for a downtown highway through Reno.

When the record has been purged and factual technical data supplied, the record may well support charges that Federal participation in financing the construction of a downtown interstate highway through Reno would be a wasteful expenditure of Federal moneys.

(b) Line J—Verdi: Coercion and pressure. Report, page 17, shows there was not technical compliance by State officials with Federal statutory requirements on public hearings. It shows that the Bureau of Public Roads colluded with the State officials in violating the statutory requirements.

The record shows that the citizens of Reno, who live near and have full knowledge of the line J—Verdi infamy, received ample communication from the State to support their commonsense appraisal of the outrages being perpetrated upon them by the State, Federal, and county authorities. The citizens may well demand a house cleaning, rather than a justification and whitewash.

(c) Possible guidelines and paperwork in the "consideration of economic effects" by the Bureau of Public Roads would be an insult to the citizens as long as the Bureau of Public Roads can serve false information to the Congress of the United States and to the public with impunity.

(d) A falsifying Bureau of Public Roads does not need its "investigative func-

tion . . . strengthened." The Bureau of Public Roads needs to be investigated.

Nothing in your letter of September 22, 1959, bears on the infamy of the interstate highway program scandal in Reno.

We are not discussing "questions of interpretation of information contained in this (Blatnik) report." We are discussing false testimony presented to Members of the Congress of the United States as they were properly exercising their legislative powers in accordance with article I, section 1, of the Constitution of the United States by the Bureau of Public Roads which is a Bureau of an executive department acting under the Executive power of the President of the United States and answerable to him in accordance with article II, section 1, of the Constitution of the United States.

There is no third party; the President of the United States is the first party where a bureau responsible to him presents false testimony.

We are more than "interested in insuring that the information furnished public bodies shall be as accurate and complete as possible."

The continuing viability of the United States of America depends on the furnishing of accurate technical and economic fact to public bodies by constituted authorities and their consultants.

Sincerely,

WALTER S. BARING,
Congressman for Nevada.

America's Crisis in Open Land

EXTENSION OF REMARKS OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. WILEY. Mr. President, in facing the future, we need to provide realistic programs for preserving our out-of-door heritage for an ever-expanding Nation. Population-wise, for example, the present total of 180 million is expected to increase to 240 million by 1975—60 million more than today.

In addition to more people, the average citizen today is living longer. In 1885, the life span was 40 years; today, it is about 70. Changes in the pattern of living—including increased leisure time for our citizens—also put ever-greater demands upon our open lands.

All of these factors emphasize the need for preservation of our basic resources—soil, forests, and water—if these invaluable assets are to be retained in sufficient volume for future generations.

As we know, the present technological, industrial, urban-expansion revolution now being experienced by the country has the effect of eradicating, acre by acre, more and more of the open land of this great country.

As a Nation blessed with tremendously rich land and natural resources, we need to design ever-improved constructive programs for nonwaste utilization, as well as replenishment—so far as possible—of these resources. If we fail, we will be doing a disservice to ourselves and to future generations who deserve—along with a progressing technological, scientific inheritance—a preservation of

an outdoor heritage—significant to man's existence.

Recently, the Milwaukee Journal published an informative article on this topic entitled "America's Crisis in Open Land."

Reflecting upon a serious problem with which we in Congress, as well as others throughout the country need to be deeply concerned, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S CRISIS IN OPEN LAND

(Condensed from a booklet published by the American Institute of Park Executives, as the result of a park workshop conducted at Michigan State University.)

Man needs open spaces. We do not know why the sight of the open sky, the soothing quiet of woodland, the breath of a fresh sea breeze or the first view of a majestic natural landscape fills emotional needs which no amount of manmade comforts and conveniences can satisfy.

We do know that, in order to maintain physical and mental health, we must continually renew our contact with nature.

The spilling over of population from the crowded centers of our cities into the suburbs, the vaulting over those suburbs into the open country beyond, reflects man's eternal reaching out for open space.

CROWDING AND OUTER SPACE

Our insistence on an urban existence is not a matter of free choice. To an ever greater degree our economy is centered in our cities. The feeling of being crowded—of people and things pressing in on us from all sides—has crept up on us gradually. It causes some of us to behave irrationally, even self-destructively.

The rapid increase in degenerative disease, in mental disease, crime, and juvenile delinquency are among its overt symptoms. It leads to rivalries, tensions, and hatreds between individuals, races, nationalities, communities, and even nations. To love and appreciate our fellow man as our conscience tells us we should, we need elbow room and breathing space.

This increasing crowdedness is the psychological cause of the space age. But most of us will still have to work out our life problems right here on earth. That crowded feeling—that growing sensation of suffocation—could easily become more and more painful until we reach the point where we can no longer deal with its social consequences. That would mean a breakdown of our social structure.

We must do what we can to prevent that. Open land is fast disappearing in the very places where it is most needed. We are facing a genuine crisis that does not affect all areas equally. It is most acute in the areas where population is growing fastest.

A hundred years ago opportunities for outdoor activity were abundant, for 85 percent of our population then lived in the country. Now nearly 70 percent of us live in urban areas and only about 30 percent in the country.

Meantime the urban dweller spends more and more of his working, studying, eating, visiting and even travel hours in shells of wood, masonry, metal, and plastic. Consequently, the greater is his need to relieve his accumulated emotional and nervous tensions.

MORE IDLE DAYS IN LIFE

And while this need grows, the remaining open land available for the tonic of outdoor activity moves constantly farther away and harder to reach. He seeks sub-

stitute satisfactions in outdoor adventure stories and western movies, his teenaged children drive aimlessly about hoping to bump into some excitement and his younger ones try to escape monotony through TV shows or comic books.

Sooner or later we are bored by these substitute satisfactions because the amount of leisure time at our disposal is rapidly increasing. Since the beginning of the century the standard workweek has been cut by one-third. Vacations are also longer and there are more paid holidays and leaves.

Meanwhile, the lengthened span of human life adds more idle days to the average lifetime. In 1885 the average lifespan was 40 years. Today it is well above 70. The average American male above 65 years of age enjoys (or suffers) an average of 10 waking hours of leisure per day. His wife has 14 such hours (although she might dispute it).

Seventy-five years ago the average man spent 5.6 percent of his total lifetime in school, 26 percent working and had only 7.8 percent left for leisure. Today a man spends about 4 percent of his lifetime at school, only about 15 percent at work and has about 21 percent left for leisure.

Add to these changes the many things which are shortening the time required by housework and our personal needs, and the need for leisure time outlets becomes ever more intense. Here is one of the knottiest social problems of our age. How shall we dispose of these mounting surpluses of idle time?

If it cannot be used constructively, it must inevitably be used destructively.

In any metropolitan community a well planned system of parks and protected open areas offers more different solutions to these problems than any other single factor. Parks open up an unlimited range of healthful and emotionally satisfying experiences to people of all ages.

"BEST REMEDY WE KNOW"

Protected natural areas provide that renewed contact with nature which is the best remedy we know for the mounting tensions of urban life.

The factor that makes the leisure time problem so acute is the "explosion" of population in our metropolitan areas. This explosion in the form of new suburb after suburb spreading far out into the open country increases the need by destroying the very open spaces we must have to satisfy it.

As Europe's cities grew slowly most of them reserved enough open space to maintain the unhurried, pleasant, balanced community living they had known as mere villages. Europeans never accepted the industrial revolution without reservation. They doubted it held the answer to every human need. Thus they were able to preserve essential life values which we, in our hurry to increase our material prosperity, tended to shrug off as unnecessary luxuries.

Paris is remembered with intense pleasure and affection by almost every visitor. Perhaps the chief reason why the French capital is so beautiful and so pleasant to live in is that there are, in the city and the area immediately surrounding it, no less than 385,000 acres of publicly and privately owned park lands open to all the people.

No American city has felt it needed or could afford a proportion of open space to population compared with what many European cities have achieved. Our spreading metropolitan areas ate up open land at a rate far higher than their populations grew. The farther out people moved, the more private living space they wanted around them. A hundred years ago the typical building lot was only 20 feet wide. Today it is 80-100 feet. A century ago, a population increase of 1,000 people required 10 acres. Today it calls for 100-200 acres.

The central portions of most of our older cities can absorb more population only through slow, costly processes of urban redevelopment. Most of the growth must take place on the fringes of the metropolitan area, in what yesterday was open country.

By 1975 about 60 million more people will have been added to our metropolitan population. Of these only 10 million will be absorbed by our central cities. Fifty million will help to swell suburbia. And of these 26 million will be living in what today is still open country.

By the year 2,000 what is now open land will in itself be supporting between 58 and 75 million souls.

AUTOMOBILES MULTIPLY FASTER THAN PEOPLE

Automobiles multiply even faster than people. Besides providing the rocket power behind metropolitan sprawl, our automobiles themselves are space eating destroyers of open land. Our present crop of motor vehicles (about 70 million) would cover 600,000 acres if parked bumper to bumper. In actuality, they are tying up at least double that amount of space.

When completed, our new Federal Interstate System of Highways alone will occupy 1,500,000 acres. (This would be an area almost 10 times that of Milwaukee County.) More millions of acres are tied up in inadequate networks of streets, roads, and thoroughways.

Our growing system of air transport, too, is draining away more of our open land. The growth of cities requires not only much larger airports, but more of them.

Some of our cities and metropolitan regions have park programs which are to some degree expanding proportionally with increasing population. Few if any of our park programs have dared to hope to acquire and maintain more than about one acre of park land to every 100 population. That ratio was determined as a standard for wholesome community living half a century ago.

Today the standard of one acre of park space to 100 people is outmoded. But judged even by outdated standards, it is doubtful whether 10 percent of our metropolitan areas have acquired enough open land. Almost none has a program massive or aggressive enough to meet the requirements of the next 10 or 20 years.

Not only are they failing to acquire new lands fast enough. Many cannot even hold what they already have. Cleveland is trying to make up its collective mind whether to give away a piece of its 50-year-old mall to the owner of a chain of hotels. Westchester County (New York) may sell a big piece of a park to a manufacturer. Murfreesboro, Tenn., recently traded its only park for a new industry, while Andalusia, Ala. was turning its only open land into a parking lot. In Portland, Ore., a new highway will cut across 21 parks; Wilmington, Del. will lose 40 acres of park to a new expressway.

By comparison with other public services, well planned park programs cost little. Many a fine park will repay its initial cost by raising the values of adjacent properties, increasing the community's tax revenues. Central Park in New York City is a classic example.

TOMORROW TOO LATE TO SAVE LAND

Because the crisis permits no time to be lost, the park battle must be waged on several fronts. Regional coordination in widespread metropolitan areas where there are many political subdivisions is essential.

In congested parts of cities it is very costly to create open spaces. But larger parks and reserved natural areas can be quite accessible even miles from the city center.

Action to meet the open land crises in our metropolitan communities must move fast. Tomorrow will be too late.

Well-Known Postal Union Officer Going Strong After 60 Years in Organizational Work

EXTENSION OF REMARKS

OF

HON. PAUL A. FINO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. FINO. Mr. Speaker, I am happy to include in the Appendix of the RECORD a statement made by Harry Spiegel, executive vice president of Branch 1, United National Association of Post Office Craftsmen, in which he pays tribute to a distinguished public servant, Andrew T. Walker, president, on the occasion of 60 years of dedicated service to the rank and file in the Post Office Department.

The statement follows:

WELL-KNOWN POSTAL UNION OFFICER GOING STRONG AFTER 60 YEARS IN ORGANIZATIONAL WORK

(By Harry Spiegel)

Every individual of accomplishment has a trademark. A cigar in his mouth, carrying a particular kind of paper case, perhaps a cane, or a genial smile. The ready smile is the one associated with one of New York post office's most distinguished individual, Andrew T. Walker, president of Branch 1, United National Association of Post Office Craftsmen—a fluent and able employee representative basing his knowledge of civil service matters on 60 years of personal experience. Andrew T. Walker whose wit and wisdom have sharpened with age is approaching his 80th birthday. At the four-score mark Andy Walker looks remarkably spry for an elderly gentleman, there is the same impish twinkle in his eye when he was called that fresh blond-haired kid from the West Side. In fact his one trouble is a limp as a result of a fractured hip some years back which happened during a dance "bump-and-daisy" at a convention.

Andy continues his vigorous activity each day as president of Branch 1, UNAPOC, at 225 West 34th Street, in the center of midtown New York, rounding out a daily pattern of meetings with postal officials or representing members as disciplinary or appeal hearings. Keeping in touch with over 250 station delegates by phone in his suite of offices on the 13th floor.

The name of Andy Walker is not new in Washington or in many congressional offices and his concern for the aggrieved has earned him the admiration and respect of not alone the 39,000 New York postal men and women but throughout the State of New York and the Nation as well.

Branch 1, of the United National Association of Post Office Craftsmen amended its bylaws some years back to permit Andy to continue on as president when he reached the mandatory retirement age of 70 and, in a few weeks, I will be happy to present his name once again in nomination for the office of president. An office he has filled with distinction for many, many years.

When I joined branch 1 almost 30 years ago my delegate at that time Belle van Zandt volunteered a bit of advice which has never failed me. She said, "If you ever have a problem in connection with the job or what to do, talk with Andy Walker." That is as true today as it was over half century ago.

Time and again I have had occasion to realize how much Andy Walker meant to the United National Association of Post Office Craftsmen because he had the answers and

the heartfelt willingness to help one and all, regardless if they belong to our association.

This is the Andy who has served our branch ever since he became an officer of our organization. Quietly, efficiently and unselfishly he has been the friend of all and enemy of none. I have never heard a disparaging comment about him.

In 60 years of service he has earned the confidence, friendship and gratitude of postal officials both here in New York City and in Washington and also the friendship of members of the House and Senate. He has labored long and hard in behalf of branch 1 and even now in the twilight years is working at a job that represents to him a purpose in living.

Dedication is a rare quality indeed and commands respect whenever or wherever it shows itself. Andy Walker has truly dedicated himself and still dedicating himself for the betterment of his fellow man and has in that effort passed up many a service promotion to better his personal self and gain. 1960 will mark the 80th birthday of Andrew T. Walker and his 60th birthday of organizational activity and from coast to coast will come the sort of messages to a grand old guy to make his heart and spirit just as young as his first day when he took his postal oath of duty.

Grain Storage Investigation

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. PROXMIRE. Mr. President, the Special Investigating Subcommittee of the Committee on Agriculture and Forestry has been conducting hearings in recent weeks on the grain storage program of the Department of Agriculture. Under the leadership of the junior Senator from Missouri [Mr. SYMINGTON] the subcommittee has scrutinized the strikingly high profits earned by many warehouses which store Government grain. On March 1, 1960, the Des Moines Register carried an editorial which is a careful, thorough, and accurate description of the grain storage situation as revealed by the subcommittee. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

GRAIN STORAGE COSTS

The Department of Agriculture is negotiating new storage fees for its mountainous grain surpluses stored in commercial warehouses. The current fee for corn is 16.5 cents per bushel per year.

A study by the Department published some time ago indicated that the average direct annual operating cost of warehousemen for grain storage was 9.5 cents per bushel per year. This does not include income taxes, quality and quantity deterioration, and margin for return on investment. But, making liberal allowance for these costs, it is clear that many commercial warehouses, including farmers' cooperatives, have been earning large profits from storing Government grain.

Now the Department has revised its estimates of the average cost to adjust to a lower

depreciation cost. The Department accountants were criticized by congressional investigators for accepting rapid depreciation—quick writeoff under the tax laws to encourage construction of storage space. With a lower cost of depreciation the average direct operating cost came out at 8.4 cents instead of 9.5.

These cost figures can be argued back and forth incessantly. Some of the smaller and less efficient operators of course have higher costs. With any average, firms handling about half the total storage would have costs above the average and about half below the average. So it is incorrect to say that all commercial warehouses are making huge profits from storage of Government grain.

Also, it should be recognized that some of the grain is stored by farmers themselves, and they also get the 16.5 cents. Since the programs are intended to support farm income, some subsidy in this grain storage fee to farmers could be defended. Also, the profits of the farmers' co-ops presumably are returned to farmers.

But after all the qualifications are made, it still is apparent that the Government has been spending far too much money for storing the grain surpluses.

These costs could be lowered substantially. At the very minimum, the Government could use all the Government-owned space available, for which costs are lower, before contracting more commercial space.

In negotiation of new storage fees, lower rates should be established. If necessary, the Government could buy some new bins in order to have a lever to get lower commercial fees.

Plainly, the Government is going to be in the business of storing grain for some years to come.

The grain crops for 1960 probably will be as large, and perhaps larger, than in 1959. There is no production control program in sight that will reduce the additions to storage—let alone permit any reduction in stocks. The Government ought to handle this storage matter as cheaply as possible.

But let no one be misled into thinking that this will reduce total farm price support expenditures very much. These can be reduced only in two ways—(1) cut the price supports much farther and let farm income slide, or (2) establish an effective production control program, with quotas in bushels.

The latter alternative would be difficult to manage. But it is the only way to reduce Government farm subsidies and give farmers higher income in the marketplace. More and more farm groups are coming to the conclusion that some restriction on output or marketing should be made a condition of eligibility for Government subsidy.

The present program which encourages unlimited production at a guaranteed price is extremely costly. The profits in grain storage operations have created large vested interests in continuing the program just as it is. But it is in the interest of farmers to get the costs of Government farm programs down—without reducing farm income.

California, Midwest and Eastern Editors Regret United States "No" to Dutch Airline

EXTENSION OF REMARKS

OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. JACKSON. Mr. Speaker, I ask unanimous consent to have printed in the RECORD the following editorials from

newspapers in California, in the Middle West, and on the eastern seaboard, all regretting the refusal this month by the U.S. State Department of the request of Netherlands Government to allow KLM Royal Dutch Airlines to land planes at Los Angeles International Airport and thus provide rapid jet service between our west coast and Amsterdam, via Canada.

On the dates shown, these papers published their views under the following headings:

Pasadena Independent Star-News, February 14, "Denial of Air Rights to Dutch Ill-Advised."

Los Angeles Herald-Express, February 22, "Socking Our Good Friends."

Los Angeles Enterprise, February 5, "Discriminatory Decision—State Department Denies Los Angeles Landing Rights to Royal Dutch Airlines."

Detroit News, February 13, "Wounding the Dutch."

Los Angeles Mirror-News, February 22, "KLM Should Fly Into Los Angeles."

Long Beach Independent, February 17, "A Provincial Decision."

Cleveland Plain Dealer, February 14, "A Harsh Decision."

Baltimore Sun, February 18, "Offending a Friend."

Detroit Free Press, February 20, "In One Easy Lesson, How To Lose a Good Friend."

USLA Daily Bruin, February 11, "Air Trouble."

Now, Mr. Speaker, the State Department's own background statement concerning the negotiations last month between the two governments on the Netherlands request was published in the Senate proceedings reported in the RECORD February 25. On page 2963 the State Department's summary includes this sentence:

International airline traffic rights are subject to bargaining on the basis of an equitable overall exchange of economic benefits for the airlines of each country.

It has been my impression, Mr. Speaker, that international agreements properly are based on a much broader consideration than a single segment of the economy of either country, such as the airlines.

The State of California, Mr. Speaker, and particularly the Los Angeles area, are the fastest growing sections of our country. The recent tremendous increase in the population of the Los Angeles area and the estimates of its continuing phenomenal growth, as well as the importance of the industry and agriculture of the area, justify the belief that it has the potential of becoming one of the world's most important air traffic centers. On the basis of this belief, the Los Angeles community is investing \$46 million in a new international airport. Yet, today, only three lines operate between Los Angeles and Europe: Pan American, TVA, and SAS. Even with the addition of two proposed services, those of Air France and BOAC, only five air carriers will provide transatlantic services out of Los Angeles, the largest urban center in Western America, as compared with 16 out of New York.

If Los Angeles is to develop into the important international air traffic center, which it could become in the absence of artificial restrictions, then addi-

tional carriers must be allowed to provide direct service from Los Angeles to other foreign centers of air traffic. These additional services could provide not only a volume of transportation which is needed, but also the stimulus to improve quality of service which added competition would afford. They could also foster and promote the development of additional industrial and trading relationships with other foreign areas.

Specifically the grant of the KLM route would support and bolster the already existing strong and profitable trade relations between California and the Netherlands which is an important purchaser of agricultural and manufactured products, particularly aircraft and fruits and vegetables from the Southern California area. It could also strengthen KLM, which is one of Southern California's best customers. KLM's fleet is almost entirely American built. It has spent over the years approximately \$200 million for planes and equipment, mostly of Douglas manufacture, and at the present time it has commitments in an amount of over \$100 million for additional Douglas and Lockheed planes. I am told that these amounts are two and a half times the revenue from traffic to and from the United States which KLM has enjoyed.

For all these reasons, the Southern California community has manifested its strong desire for additional carriers and specifically its desire to have KLM accorded the new route. The city council of Los Angeles, the Board of Supervisors of Los Angeles County, the Los Angeles Chamber of Commerce, the California Contract Cities Organization, the International Association of Machinists, the Southern California local of the International Union of United Automobile, Aircraft and Agricultural Implement Workers of America, and the Sunkist Growers are among those organizations which have accorded their official support of the Dutch request.

I am, of course, aware of the fact that it is an objective of American policy, in negotiating route agreements with foreign countries, to seek an equal exchange of economic benefits. However, I disagree with any contention that in weighing the exchange of economic benefits our Government should restrict its consideration to the narrow question of economic effects on the carriers involved. Rather, the Government should consider the economic benefits to the broad public interest which are to be derived from any proposed agreement. On this basis, the economic benefits to the Los Angeles community and the State of California which I have mentioned above must be given the most serious attention. Additionally, Mr. Speaker, as a member of the Foreign Affairs Committee of this House, I was disturbed to read the Baltimore Sun headline "Russia Fans United States-Dutch Airline Row—Quotes Netherlands Press Protests on Route Refusal."

Mr. Speaker, I further ask unanimous consent to have published in the RECORD that news report on how Moscow's propaganda apparatus is moving to make anti-American capital by disseminating throughout Europe excerpts

from Dutch newspaper editorials berating the U.S. Government for its February 3 rejection of the Netherlands Government's plea that KLM, the Royal Dutch Airlines, be given a chance to compete with British, French, German, and Swedish as well as American airlines for transatlantic air traffic originating on the West Coast.

There being no objection, the news article and editorials were ordered to be printed in the RECORD as follows:

[From the Sun, Baltimore, Feb. 13, 1960]

RUSSIA FANS U.S.-DUTCH AIRLINE ROW—
QUOTES NETHERLANDS PRESS PROTESTS ON
ROUTE REFUSAL

(By Paul W. Ward)

WASHINGTON, February 12.—Moscow's propaganda apparatus is moving to make anti-American capital out of the current rift between the United States and the Netherlands, one of its NATO allies.

Both the Kremlin's radio and Tass, its official news agency, were found today to be disseminating throughout Europe excerpts from Dutch newspaper editorials berating the U.S. Government for its February 3 rejection of the Netherlands Government's plea that KLM, the Royal Dutch Airlines, be given "a chance to compete" with British, French, German, and Swedish as well as American airlines for transatlantic air traffic originating on the west coast.

QUOTES NONCOMMUNIST PRESS

The Soviet exploitation of that development speaks of it as "bitterly resented" in the Netherlands as "an act of discrimination prompted by disregard for the interests of a small country."

It then elaborates the point with quotations from such notably non-Communist Dutch dailies as De Maasbode (Catholic), Het Parool (Independent Labor), and All-Gemeen Handelsblad (Liberal Conservative).

They speak of the United States as "a nation which pays lip service to the principle of free trade but shows itself to be ultra-protectionist as soon as interests of U.S. companies are involved."

RESERVATION IS SEEN

They assert that "if Washington again starts to advertise the advantages of pulling down trade barriers, people in Holland will at least know that Washington will be doing this with a reservation: 'Listen to what I say but don't look at what I do.'"

The quotations selected by Tass and the Kremlin's broadcasters appear to reflect fairly the current mood of the Netherlands, a country little larger in area than Maryland but with a population of 11,200,000.

Only yesterday leaders of the Netherlands Veterans Legion notified Philip Young, U.S. Ambassador at The Hague, that, to demonstrate their resentment of his Government's action in the KLM case, they were rejecting his invitation to an American Embassy party on March 7.

NEGATION OF FREEDOM

Two days earlier the Dutch equivalent of the House of Representatives—the Second Chamber of the States-General—adopted unanimously a resolution expressing "deep disappointment at the attitude taken by the Government of the United States, which is a negation of freedom of aviation and of the principles of sound competition and which, furthermore, discriminates against the Netherlands' national interest."

Adding that Washington's February 3 decision was "incompatible with existing relations between the United States and the Netherlands as allies," the resolution concluded with a request that the Dutch Government "take new steps to obtain reconsideration of the American decision."

REDS JOIN IN SUPPORT

Introduced in the names of the Catholic Party, which has 49 seats, the Labor Party (47), the Anti-Revolutionary Party (14), the Freedom and Democracy Party (19), and the Christian Historical Union (12), the resolution also enlisted the supporting votes of the Chamber's three Communist, two Pacific Socialist and three Reformed Party members.

Adoption of the resolution followed a speech by Joseph M. A. H. Luns, the Netherlands Foreign Minister, who said the Chamber never before had taken such action in respect to an allied power.

Referring to the United States as "our greatest ally," Luns said its Government's February 3 action was "aimed plainly and undisguisedly at the most complete protection of the short-range interests of the American aviation companies."

CONCENTRATION OF SERVICE

These companies apparently are not interested in developing air traffic between Los Angeles and Amsterdam, he added, but in the interest of higher profits, are concentrating their own transatlantic services on a few big European centers.

"Are we to conclude that a powerful country such as the United States, always proclaiming its belief in free enterprise, wants to hamper the natural growth of traffic," he asked before asserting that American companies now have a 60- to 70-percent share of the world potential air traffic and suggesting that its anti-KLM action may generate forces that will reduce that share in future.

CONTRACT CANCELLATION URGED

From editors and other shapers of Dutch public opinion the government Luns represents is getting advice to stop paying its contributions to NATO; to withdraw from arrangements to equip its Air Force with American Starfighters, and adopt a French jet, the Mirage, instead; and to cancel the orders for \$108 million worth of passenger planes that KLM has placed with American manufacturers.

According to Luns, however, the Dutch Government has no intention of acting on any of that advice. Instead, according to Hilversum, the Dutch Government's radio, he has "requested the U.S. Ambassador to once again make known to the U.S. Government his Government's disappointment" and "expressed the hope that this attitude will be speedily changed."

E. G. Stijkel, State Secretary for Transport and Waterways, who was the Netherlands' chief representative in the negotiations that began here January 7, refused at their breakdown on February 3 to regard them as conclusive and reserved a right to press for their renewal at a later date.

[From the Pasadena (Calif.) Independent Star-News, Feb. 14, 1960]

DENIAL OF AIR RIGHTS TO DUTCH ILL ADVISED

The denial by the State Department of west coast (that is, Los Angeles) landing rights to KLM Royal Dutch Airlines smacks of the kind of narrow protectionism the United States has been assiduously discouraging by both precept and example in other areas of international commerce.

The principal opponents of the grant, as was to be expected, were the domestic airlines, who can hardly be criticized for protecting their own interests as best they can in a competitive field.

But otherwise, there was all but unanimous approval of the Dutch petition. The rosters of supporters included local governmental bodies, industry, and labor.

U.S. policy in these matters is based on a congressional enactment to the effect that this country should not freely give away landing rights, but should exact a quid pro quo.

The Dutch position is that not only have they given all they have to give, but U.S. interests have not even taken advantage of what has been given. Thus, under an earlier agreement, the Dutch granted landing rights to U.S. carriers to and beyond every point in the Netherlands themselves, the Netherlands Antilles, and Surinam. In exchange, the Dutch received the right to fly to New York, Miami, and Houston, but not beyond.

No American carrier flies to the Netherlands, for the reason that Paris and London are close enough to serve their purposes. The Dutch hold that economic benefits beyond those strictly connected with air transport should be taken into account. They cite the fact that KLM buys nearly all its planes from American manufacturers and does a large volume of other trade with the United States.

The decision against KLM appears to be unfair in the light of decisions that have favored the applications of other foreign carriers for landing rights. It is understood that France was heading for the same kind of denial the Dutch received, until the French made it clear that landing rights for American planes in Paris could easily be withdrawn.

Political considerations are believed to have entered into the favorable decision for the West German Lufthansa airline. The Dutch, unfortunately, have no such lever as the French do, for American lines are not now using the landing rights they have in Holland. Nor is Holland as important to our international position as West Germany.

The situation of SAS, the Scandinavian airline, is somewhat analogous, in outline, to that of KLM. The Scandinavian countries are small, and lack any particular leverage. But they emerged from World War II with a going airline concern, and got in on the ground floor.

Observers of these matters are closely watching a pending application by Italia, the Italian airline, for west coast landing rights. It is expected to be granted. Why? Italy has the power of life or death over American landing rights in Rome.

[From the Los Angeles Evening Herald Express, Feb. 22, 1960]

SOCKING OUR GOOD FRIENDS

The people and the Government of Holland are deeply shocked by the refusal of the American Government to grant west coast landing rights to the Royal Dutch Airlines, better known publicly as KLM.

The proposed west coast landings on the flight from Amsterdam were to be at Los Angeles International Airport, and the rank turn-down by Washington bureaucracy also has amazed and shocked the Los Angeles Chamber of Commerce and other civic and business interests of this city.

The word "why" becomes a big "why" when one seeks the reason for this drastic and eminently unfair discrimination against one of America's staunchest longtime friends.

The State Department's policy is to see an equitable exchange of economic benefits primarily in terms of air traffic between the United States and Holland.

The Dutch Government and the Royal Dutch Airlines have argued that as far as trade advantages are concerned, the ratio in trade between the United States and Holland is 3-1 in favor of the United States.

Aircraft and aircraft parts purchases by KLM from southern California manufacturers amounted to \$273 million from 1946 to 1959; in fact, all their aircraft purchases are made in this country.

Currently being purchased are \$108 million worth of Douglas DC-8's and Lockheed Electras for KLM, and the Dutch air force is being equipped with Lockheed-designed F-104 Starfighters.

Holland has purchased \$13 million* in southern California citrus fruit and \$13.2 million in cotton in the last 3 years.

The Dutch are naturally concerned that while their permit to fly from Holland to Los Angeles is denied, similar privileges have been granted to their European competitors, Air France, British Overseas, Lufthansa, the German carrier, and SAS, the Scandinavian carrier.

Not only Los Angeles, but other cities throughout the United States, including Chicago, Washington, Detroit, Baltimore, Cleveland, and Denver, have expressed indignant editorial displeasure over this decision from the Nation's Capital.

The Detroit News, in an editorial, says that "seldom has the Washington bureaucracy gone so far out of its way to antagonize a warm friend." The Cleveland Plaindealer calls it a "strange way to treat a good friend and a loyal ally."

[From the Los Angeles Enterprise, Feb. 5, 1960]

STATE DEPARTMENT DENIES LOS ANGELES LANDING RIGHTS TO ROYAL DUTCH AIRLINES—DISCRIMINATORY DECISION

Another tragic payoff to big business cronies has resulted in a U.S. Government decision to deny KLM Royal Dutch Airlines the right to serve Los Angeles.

The only excuse the State Department could give in a feeble effort to justify its discrimination against the Netherlands was that the Dutch are better businessmen than their counterparts in America.

One of those shrewd Dutchmen, President I. A. Aler of KLM, summed up the stupidity and unfairness of the American decision in these words:

"The decision of the Government of the United States to again refuse permission for the operation of a fast Dutch air service between California and Europe is a reality which is difficult to accept."

"Once more it is evident that American air policy is inspired by protectionism, which is entirely alien to the general endeavor of the United States of America to promote freedom of economic relations and to do justice to the principle of free competition."

"When Holland's request for landing rights on the west coast of the United States was refused in 1957 the reasonableness of that decision was already incomprehensible, but now that refusal also assumes the nature of discrimination against the Netherlands because, as is well known, many other airlines have been granted rights on the west coast. The refusal of rights to the Netherlands can only be interpreted as a penalty for the fact that, from a geographical point of view, this is a small country."

"The Kingdom of the Netherlands follows an absolutely liberal air policy. All American airlines can cover Dutch territory with their services, but in this respect the Netherlands offers less possibilities than the United States."

In view of the fact that in general the rendering of services, and in this case the rendering of services in the field of air transport, is a typical Dutch activity, the attitude of the U.S. Government forms a particularly serious threat to our traditional economic activities. Furthermore, it constitutes a severe handicap to the free development of air transport and is thus detrimental to the interests of the traveling public.

"The regrettable outcome of the discussions in Washington by no means implies that KLM meekly submits in regard to the rights on the west coast of America. The arguments so clearly and strongly presented by the Dutch delegation in Washington led by the Minister of State, E. C. Stijkel, as well as the complete reasonableness of these arguments, cannot fail to convince the U.S. Government in the near future."

"KLM feels sure that, just as has happened in the past, the Netherlands Government will support this aspiration of KLM with all the arguments which are necessary in conducting such negotiations.

"It must therefore be expected that the Government of the United States will realize how greatly the political and economic relations between the two countries are harmed and public opinion in the Netherlands aroused by the rejection of the request, the granting of which is of vital importance for KLM, while its refusal does not yield any apparent benefit to the United States of America.

[From the Detroit News, Feb. 13, 1960]

WOUNDING THE DUTCH

There is this to be said about the storm in the Netherlands where public anger is boiling against the United States. Seldom has the Washington bureaucracy gone so far out of its way to antagonize a warm friend as in the ruling which again denies landing rights on our Pacific coast to KLM, the Royal Dutch Airlines.

Holland needs that kind of accommodation because her state of living depends on being able to sell services, and there was every reason in fairplay and commonsense, why we should have listened favorably to her petition.

Let us look at a few of them. British Overseas Airways, Scandinavian Airlines, and Air France already operate from our Pacific coast in direct flight to Europe, and the Dutch merely wanted an equal chance at this traffic.

Their case for getting it is extraordinary. The Dutch import annually from the United States approximately double the value of the goods they sell us annually. In balance of trade, no European state favors us more. All of KLM's planes are bought here, the company is 30 percent American owned; many of the pilots are Americans.

But these and other large considerations were tossed aside and the decision was made largely on a technical point. Now the Netherlands press is fuming and urging that The Hague take such reprisals against the United States as getting out of NATO, canceling all orders now standing for the purchase of jet airliners from U.S. industry and substituting French military aircraft for American Starfighters about to be purchased.

Can we blame them? Does any part of our action have that golden rule ring by which we hold friends and influence peoples to believe that Americans deal square?

[From the Chicago Daily Tribune, Feb. 29, 1960]

IN DUTCH WITH THE DUTCH

There is a good deal of indignation in the Netherlands over our State Department's recent refusal to allow KLM, the Royal Dutch Airlines, to fly between California and Europe.

The people are angry because we have authorized British, French, German, and Swedish lines to fly this route, because we have been preaching free trade, especially where it will benefit us, and because the Netherlands has been one of our most loyal friends and customers. KLM is the oldest of the international airlines and is one of the few which is not Government subsidized. In addition, it buys nearly all of its equipment from the United States.

What seems particularly indefensible, in retrospect, is the State Department's explanation that we could not grant the permit because the Netherlands is unable to grant us an equivalent favor. It is a small country, and our airlines already have permission to fly to Amsterdam.

If the Netherlands were still in control of the East Indies, the situation might be different, and she would be able to grant favors to American lines in the Orient. But the Netherlands let the islands go in 1949 after several years of warfare and at the insistence of the United States. Her presence as a colonial power was thought to be damaging to American influence in southeast Asia. There were even threats from State Department officials and others to withhold Marshall plan aid from the Netherlands if she refused.

The Dutch were right to give in at that time, and would have had to sooner or later anyway. But in view of our position at the time, it seems odd that we, as the self-appointed champion of small countries, should base our rejection on the fact that the Netherlands is no longer large enough to do us an equivalent favor.

[From the Los Angeles Evening Mirror News, Feb. 22, 1960]

KLM SHOULD FLY INTO LOS ANGELES

The State Department has denied the application of KLM, the Royal Dutch Airlines, for landing rights in Los Angeles to complete a Los Angeles-Amsterdam route.

The reasoning advanced by the State Department in denying the application seems highly questionable. Holland has been completely cooperative in granting reciprocal rights to U.S. air carriers, and the present ruling is an undeserved slap at a loyal NATO ally.

Holland ceded landing rights to U.S. carriers in the Netherlands, Surinam, the Netherlands Antilles and points beyond in 1957. In return, limited landing rights were granted Dutch carriers in Houston, Miami and New York.

In denying the KLM petition for Los Angeles landings, the State Department badly notes that "The Netherlands, as a small country, has given all its air rights, and can make no further concessions to U.S. carriers."

In short, we've got everything we could from the Dutch, so they can go roll a hoop.

The convenience of Los Angeles air travelers, and fairness to the Dutch who have been cooperative in granting us landing rights, would seem to dictate a review of a decision that appears entirely out of line.

[From the Long Beach Independent, Feb. 17, 1960]

A PROVINCIAL DECISION

Although the United States spends billions every year in foreign aid in a cosmopolitan effort to make friends throughout the world, the State Department has assumed a rather unfriendly and provincial attitude toward the Royal Dutch Airlines.

The Dutch Government negotiated with the State Department on an application by the Dutch airlines for landing rights at Los Angeles International Airport. Since Los Angeles has only 4 foreign air lines connected with it (New York has 23), and since more international air travel originates in California than in any State except New York, the Dutch request to market transportation here appeared worthy.

But the State Department has rejected it with the statement that The Netherlands has nothing to give in return. It's unsurprising that the Dutch Parliament now expresses deep disappointment, charges discrimination against Dutch interests, and states that the decision is not in keeping with the relations of good allies.

We'd like to point out, as we did once before, that the Dutch Royal Airlines has quite a bit to offer in return. Of the airline's 90 planes, 81 were made in southern California, and the airline is buying \$72 million worth of DC-8 jetliners made in America by Americans. The State Department's provincial decision hurts at home as well as in Holland.

By the way, did you see that dandy little item the other day about plans for the marketing of compact Russian-made autos in the United States?

[From the Cleveland Plain Dealer, Feb. 14, 1960]

A HARSH DECISION

Refusal by the American Government to grant west-coast landing rights to the Royal Dutch Air Lines, better known as KLM, is a matter of deep disappointment because the decision seems to be a strange way to treat a good friend and loyal ally.

Here is rank discrimination, as the United States says "No" to the Dutch, but "Yes" to British, West German, Scandinavian, and French lines. American reasoning that there must be an "equitable exchange of economic benefit" is a bit difficult to follow in view of policy, or lack of policy, in other fields.

Why pick on the Netherlands, which is one of our best customers and closest collaborators. Some better explanations should be given before the U.S. alibi sounds convincing.

[From the Detroit Free Press, Feb. 20, 1960]
HOW TO LOSE A GOOD FRIEND IN ONE EASY LESSON

Indignation would run high in this country if Americans were to pick up their newspapers and read that the Netherlands Government had banned U.S. shipping from its principal ports on the grounds that British, Scandinavian, and Russian vessels could handle Dutch foreign trade.

Yet that is precisely the sort of treatment which we have accorded the Dutch by denying KLM-Royal Dutch Airlines landing rights at Los Angeles.

For 3 years KLM has been petitioning the United States for the same landing rights at Los Angeles which are enjoyed by its competitors—Scandinavian Air Service, British Overseas Airways Corp., and Air France. Each time the petition has been turned down by the Civil Aeronautics Board, the last time within the past few weeks.

The result is the same kind of indignation and resentment on the part of the Dutch—our friends and allies—which we in this country would feel if the situation was reversed.

The Dutch House of Representatives adopted a resolution stating that the attitude of the United States "does not fit into the relations between allies."

Never before, it is said, has that Parliament issued such a pointed criticism of the actions of a friendly country.

The Dutch resolution charged the United States with disregarding the freedom of the air; disregarding the principles of healthy competition, and discriminating against Dutch national interests.

The Netherlands Government may not stop with only sharp words. Recommendations are being made that the Dutch cancel contracts with American manufacturers for millions of dollars worth of jetplanes.

Up to this time, all KLM planes have been American made. There also have been proposals within the Netherlands Government to withdraw arrangements to equip its air force with American Starfighters, and buy French equipment instead.

The CAB and State Department policy toward the Netherlands in this matter is extremely shortsighted. As has been pointed out before, the Dutch are among our best overseas customers. Moreover, they receive virtually no U.S. foreign aid.

At the same time they rely upon us for a fair competitive shake in their efforts to maintain an economy that is self-sufficient. If the United States does anything to interfere with the self-sufficiency of its allies—as has been done in the KLM case—we might as well accept the probability of having to substitute direct financial aid.

Maybe that explains the reason President Eisenhower felt it necessary to ask Congress

the other day for a recordbreaking foreign aid appropriation of \$4.175 billion.

[From the Sun, Baltimore, Md., Feb. 18, 1960]

OFFENDING A FRIEND

The Netherlands Ambassador has informed the United States of widespread disappointment in his country over our refusal to grant west coast landing rights to KLM, Royal Dutch Airlines, to permit it to make direct flights between Los Angeles and Amsterdam. A resolution to the same effect as the Ambassador's complaint has been passed by the Dutch Parliament in what is described as unprecedented action.

Landing rights now are enjoyed by Scandinavian Airlines, Lufthansa, Air France, Japanese Airlines, Qantas, and BOAC. Officials of the State Department have explained that today granting or refusing flying rights is a matter of "horse trade." That is to say they are granted for something in return. The Netherlands being a small country has no facilities that are particularly needed by an American airline.

The Dutch request, which has been a matter of negotiation since early in January, has been opposed by KLM's American competitors. On the other hand it has had the support of farm, labor, industrial and political groups on the west coast.

In answer to the Dutch charge of discrimination it is pointed out that KLM enjoys landing rights on the east coast that tie in with a number of valuable air routes. No doubt other extenuating circumstances stand in the way of granting the request. But the Dutch are particularly sensitive to flying rights since it is on providing transportation services to the world that they have survived. KLM is one of the nation's greatest resources, bringing in a reputed income of \$120 million a year.

However, cogent the reasons for refusing the Dutch request the fact remains that our policy, while pleasing our own airlines, has offended a country that is one of our staunchest friends.

As for "horse trading," their continued friendship is worth more than any privilege they might offer to one of our airlines. The Netherlands Government's official warning of its displeasure forbids its being dismissed as merely something stirred up by KLM.

[From the UCLA Daily Bruin, Feb. 11, 1960]

AIR TROUBLE

Administrative agencies of the Federal Government today have more power to influence American foreign relations than ever before. Abuse of this power or shortsighted decisions can wreak havoc upon our alliances.

Such an undiscerning decision was made last week by the Bureau of Transport, when this agency refused to grant Los Angeles landing rights to KLM Royal Dutch Airlines.

Reason for the refusal, which climaxed weeks of heated debate, was given as "American policy not to grant commercial rights to foreign businesses unless similar rights are granted abroad to Americans."

This meant that if American Airlines can't land in Rotterdam, KLM can't land in Los Angeles.

This Smoot-Hawleyism has already caused an international incident. Dutch Foreign Minister Joseph Luns told his people in a nationwide TV broadcast that Holland was being "punished" by the United States for having what he called a "small and insignificant" Communist Party.

Americans, asserted Luns, feel they can treat Holland with less consideration than other countries, "which have to enjoy certain benefits from the United States to prevent a political attitude which might be unpleasant to the United States." The Dutch

Parliament passed a measure Tuesday protesting U.S. action.

Arbitrary protectionism will get us nowhere. Only mature decisions and willingness to go more than halfway to win the world's good will can insure eventual American triumph in this public relations war we are waging.

The KLM rejection has damaged Los Angeles, which has lost a potential means of distributing her products to the world. It has damaged Holland. It has damaged the United States.

The Bureau of Transport can reconsider. We urge it to do so at once.

The Plight of Agriculture

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. HUMPHREY. Mr. President, the president of Minnesota Farmers Union, Mr. Edwin Christianson, recently submitted a statement to the House Agriculture Committee on needed farm legislation. Mr. Christianson's concise and lucid statement merits the attention of all of us. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

THE REAL TEST OF FARM LEGISLATION

(Statement relating to needed farm legislation submitted to House Agriculture Committee, Monday, February 29, 1960, by Edwin Christianson, president, Minnesota Farmers Union)

We wish to commend the members of the Agriculture Committee for their concern regarding the economic situation in agriculture.

The \$2 billion decline in net income in 1959 and the prospect that conditions will become progressively worse under a full application of the Eisenhower-Benson farm policy, make it imperative that Congress proceed with a legislative program which will face up to the major problems existing in agriculture.

We feel that it is particularly important that the agricultural leaders in the House committee and in the House, as a whole, have based their program upon the broad foundation of what is needed, rather than upon the narrow and superficial foundation of what is politically feasible or smart.

There are three conditions in agriculture of such serious importance that action cannot be safely delayed. They are:

1. The farm income crisis.
2. The continuous build-up of farm surplus.
3. The excessive expenditures for measures which are of only limited help to farmers.

We submit that it would simplify the discussion of farm legislation considerably if every proposal were put to the test of whether or not it will make any significant contribution to solving each of the three points listed above.

By putting the administration proposals to the test suggested above, the committee can in good conscience at once reject them since they can only result in heavier farm production, greater Government sur-

pluses, larger costs to the taxpayer and greater financial difficulty for agriculture.

There is no shortage of sound and workable proposals to improve or replace the current farm legislation. Many of the members of this committee are identified with proposals which would, if adopted, achieve a major improvement in farm conditions.

There are several workable comprehensive farm proposals and there are numerous single commodity bills which would be effective and practicable.

It is not our purpose in the submission of this statement, to say that any particular general farm bill or single-commodity bill is necessarily the only or the best answer.

We believe that decision on the choice of a certain bill or bills must depend upon the best judgment of leaders in the Congress, such as yourselves.

In making such a choice, of course, there occurs some indecision upon whether the strategy ought to take the form of commodity bills or package bills.

Comprehensive farm legislation is desirable. In fact, it is important because it is difficult to design commodity legislation except on a short-range basis without taking into account the relationships to other farm commodities.

It appears to us that both short- and long-range actions will be necessary. Much of the effect of the general farm bills, particularly of the enabling-act type, would not be felt for many months because of the time lag in development and placing into operation such marketing orders or stabilization plans. Many of these plans envisioned in the enabling-act farm bill would not become operative at the earliest until some time next year.

Meanwhile, however, we have a triple-crisis in agriculture which will continue and become progressively more severe month by month. These crises constitute a national emergency and do not permit a year's delay.

Therefore, in our opinion, it appears to be necessary both to proceed with a comprehensive farm bill, such as H.R. 10355, the plan sponsored by the able vice chairman of this committee and other farm statesmen in this committee and in this House, and at the same time, move forward with short-range bills dealing with the most critical of the commodity problems which can still in some measure be remedied during this growing or production season.

We believe it would be important to act on such commodities where an important influence could still be exerted on 1960 market price levels.

This short-range action should include measures relating to dairy products, hogs, eggs, peanuts, tobacco, and such commodities of which producers are advocating program improvements for 1960.

We would suggest the following actions as being important to producers in our area which would be of significant help yet this year:

(a) To direct the Secretary by congressional resolution for the balance of the current dairy marketing year to peg the parity value of manufacturing milk at 90 percent of the parity for all milk wholesale. This would result in a support level for the balance of this year of about \$3.36 per hundredweight for manufacturing milk. This would help tide the dairymen over until they could initiate their own type of a stabilization program under authorization of such legislation as the Poage bill.

(b) To direct the Secretary of Agriculture to offer incentive payments of \$1 to \$3 per hundredweight on all hogs marketed at 200 pounds or less through the end of the year. This would give producers time to develop their own stabilization program while at the same time avoiding the unfavorable effects

of excessive marketings which otherwise will be unavoidable next fall and winter.

(c) To direct the Secretary of Agriculture in 1960 to use section 32 funds in direct payments to egg producers to reestablish their purchasing power.

In regard to the long-range picture, we believe that a comprehensive measure such as Representative Poage's Family Farm Income Act of 1960, has special merit.

Here is a bill that will cut back on production, avoid any further accumulation of Government surpluses, reduce present Government stocks, substantially reduce the cost of agricultural programs to the taxpayer, and at the same time, and most importantly, reverse the downturn in farm income and purchasing power.

According to our calculations, the application of the Poage bill to the major commodities produced by Minnesota farmers would result in a price and income gain in a year's time of about \$400 million, which would be of tremendous benefit to the individual farmer, to his community and to the economy of the State, as a whole.

The particular aspects of the Poage bill which we feel should merit the consideration of all people seriously searching for a better agricultural program include:

1. Retention of parity as the goal and the basis for support measures.
2. Opportunity for the family farm to continue as the basic pattern in American agriculture.
3. Opportunity for producers themselves to have a voice in developing stabilization programs.
4. Provision for a variety of support methods and tools.
5. Opportunity for farmers to limit marketings in commodities where production is in excess of all possible needs and all reasonable reserves.
6. Retention of present programs until such time as producers initiate their own programs.
7. Limitation of supports for each producer to a reasonable level.
8. Limitation of costs to the taxpayer.
9. Expansion of consumption of food by needy and low-income consumers here and abroad.
10. Provision for this authority to continue through December 31, 1965.

We respectfully urge that the committee proceed as expeditiously as possible in the approval of a farm income improvement bill.

Konrad Adenauer—Leader in the Revival of West Germany

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. CURTIS of Missouri. Mr. Speaker, it is fitting on the occasion of the visit of the distinguished Chancellor of West Germany, Konrad Adenauer, to review the record of West Germany's economic revival, its return from a position of collapse to the important and vital position it now holds in the economic strength of the free world.

Less than 15 years ago Germany was in desolation. The collapse of the monetary system had reduced exchange in the country to a barter system. The

effects of defeat and destruction had sapped the physical and moral strength of the country and the economy had reverted to an unhappy subsistence level. Today we see in West Germany a strong and growing industrial plant and an economy that offers to its workers, managers and citizens the immense benefits of productive free enterprise.

In the decade from 1948 to 1958 West Germany's annual rate of growth in its gross national product was 8 percent, in its real per capita gross national product 6.9 percent. During this same time, there was a seven percent increase in consumer prices, an increase at the rate of a mere eight-tenths of 1 percent per year. From these figures can be drawn a picture of substantial economic growth coupled with great success in preventing rising price levels from taking the benefits of this growth from the people. This is an expression of the vitality of the free enterprise system in providing economic growth and welfare.

A large measure of the credit for this growth must be given to the leader of West Germany, its Chancellor, Konrad Adenauer. His strength of character and strength of purpose have given the country a leadership under which it has risen from the desolate days of 1945 to its present position of economic prosperity.

Statement by Mr. Andrew T. Walker, President of Branch 1, United National Association of Post Office Craftsmen

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. KEATING. Mr. President, Andrew T. Walker, president of branch 1 of the United National Association of Post Office Craftsmen, has sent me a strong statement about the need for legislative action to provide assistance to retired Federal employees. As a cosponsor of S. 2575, to provide a health benefits program for certain retired Government workers, I am glad to have this informed endorsement, and hope it will help speed action on this important proposal.

At Mr. Walker's request, I am pleased to ask unanimous consent to have his statement printed in the Appendix of the Record.

There being no objection, the statement was ordered to be printed in the Record, as follows:

TAX RELIEF FOR OUR ELDER AGERS

(By Andrew T. Walker, president, branch 1, UNAPOC)

With each passing month additional annuitants are being added to the retirement rolls. Retirees coming from every governmental agency, and with their coming comes the added responsibility for the Congress and State legislature to see that the retiree's pension is adequate by lessening the

tax burden on these elder agers. With today's increasing longevity this problem piles problem upon problem in all areas of the United States.

During the past few years a voice for these thousands of retired public servants has sounded a rallying call to band together and further the equitable requests demanded of by the times. That voice is the National Association of Retired Civil Employees with a membership of over 100,000. The New York chapter, headed by John Gillen, former Post Office Department official in charge of foreign mails, is rapidly gaining prominence by its active legislative work. Assisting Mr. Gillen are many UNAPOC's and notably among them is Maxwell Licker, secretary, George Yorke, Belle Van Zandt, Belle Cangro, Marjorie McLynch, and ever so many more. John Sheehan, former acting New York postmaster, is the legislative representative.

At the regular January monthly meeting branch 1 adopted a resolution endorsing the Conklin-Marano bill, which would exempt Federal civil service retirees from the New York State income tax. The NARCE has been foremost in the fight to get this bill through the New York State Legislature. Branch 1, UNAPOC, is happy to lend its assistance.

I have recently sent a letter relative to this resolution to the Governor of the State of New York and to leading legislators of the State assembly and senate.

Not alone is the UNAPOC striving for tax exemption for retirees on a State level but on the Federal level as well. Strong support is developing for our annuitants in the Congress for ample health coverage, tax exemption and for additional annuity increase whenever Federal and postal employees receive upward revisions of salaries.

Keeping shoulder to shoulder with tax-exemption legislation is the desperate need for health insurance. Soaring costs of medical care is of vital concern to governmental retirees and of the country's elder population as well. This subject should command the attention of the Congress from this very minute on despite the hue and cry of budget control. Several million elderly retired persons live in constant fear of illness that may deplete their precious life savings or force them to apply for public assistance. How far will a pension go at a time of illness? About 70 percent of the entire population is covered by health insurance but less than half of the persons over 65 have such protection. Congress should note that older persons are ineligible for most regular hospital and surgical insurance.

On July 1, 1960, a long-awaited health insurance act will come into being for those on the active Federal and postal rolls. Congress after considerable debate and legislative procedures finally adopted the measure. The bill had started out with language which included both the active worker and the retired governmental employee, and well-intended employee leaders and legislators were content to fight for the enactment of such a measure but administrative spokesmen, both on the legislative floor and in executive offices fought the inclusion of retired people. When the amendments were offered excluding the retirees assurances were given that separate legislation would be offered later to provide such health insurance protection for annuitants. Senator JOHNSTON and Senator NEUBERGER promised to lead the fight for such a bill. They have kept this promise and in addition 24 Senators have cosponsored the measure.

This truly is reasonableness and the Government as the recipient of long and faithful service from these former employees should meet reasonableness with reasonableness. It remains for the Congress to meet the challenge.

Recognition of the Order of the Knights of Pythias

EXTENSION OF REMARKS

OF

HON. SAMUEL N. FRIEDEL

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. FRIEDEL. Mr. Speaker, ever since Biblical times the question has been asked, "Am I my brother's keeper?" We are told to love one another and to practice friendship, charity, and benevolence.

While we have our churches, synagogues, and other places of worship, it is an acknowledge fact that it is through the medium of the various fraternal organizations that the great lessons of brotherly love are more firmly inculcated and friendships among men promoted.

In order to help heal the wounds allay the ill-feelings engendered by the Civil War, the Order of the Knights of Pythias was founded in 1864. This great fraternal order, which bases its lessons and builds its ritual largely on the familiar story of the friendship of Damon and Pythias, has grown to such an extent that it now embraces more than 3,000 subordinate lodges in the United States and Canada with occasional lodges having been formed elsewhere.

No doubt, it will interest my colleagues in the Congress that when President Abraham Lincoln was advised of the teachings of the Order of the Knights of Pythias he said in part:

The purposes of your organization are most wonderful. If we could but bring its spirit to all our citizens, what a wonderful thing it would be. . . . I would suggest that these great principles be perpetuated and that you go to the Congress of the United States and ask for a charter.

The suggestion made by President Lincoln was adopted, and the Order of the Knights of Pythias was the first fraternal order chartered by an act of the Congress.

In recognition of its truly wonderful charitable and benevolent accomplishments, His Excellency J. Millard Tawes, Governor of Maryland, has proclaimed the week of March 13-19, 1960, as Pythian Week. The Governor's proclamation is as follows:

Whereas the Order of the Knights of Pythias is a great brotherhood with high principles based on the virtues of friendship, charity, and benevolence; and

Whereas it had its conception and takes its inspiration from the ancient friendship of Damon and Pythias; and

Whereas when the Pythagorean philosopher Damon was sentenced to death, he asked for a leave of absence to settle his affairs, and his friend, Pythias, pledged to give his own life if Damon did not return; and

Whereas such friendship and loyalty are the ingredients of true brotherhood—the great need of the world today,

Now, therefore, I, J. Millard Tawes, Governor of the State of Maryland, in recognition of the Pythians' fine accomplishments and in tribute to the order's magnificent principles, do hereby proclaim March 13-19, 1960, as Pythian Week throughout the great State of Maryland.

It is altogether fitting that we pause in our deliberations today and join in this tribute to the Order of the Knights of Pythias. In these days that try men's souls, when we know not what an hour may bring, it is both a comfort and an inspiration to know that organizations such as this are ever striving to bring about true friendship and charity among men.

Commission on National Goals

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. HUMPHREY. Mr. President, recently a distinguished Minnesotan, Mrs. Charles Hymes, of Minneapolis, who is president of the National Council of Jewish Women, made a wise and thoughtful comment on a number of urgent public problems. I was also struck by her forthright call for the appointment of women to the President's Commission on National Goals.

I surely support this suggestion, and I urge the President to take action immediately to include on this important Commission a number of representative women leaders. Mrs. Hymes' comments on the need to protect public health, to provide hospital and medical assistance for the aged, increase in social security benefits, for a revision of the immigration laws, and her emphasis on the need to move forward in the field of antijuvenile delinquency, are all squarely in line with my own thinking.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, excerpts of a news release dated February 17, 1960, covering Mrs. Hymes' remarks.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

NATIONAL COUNCIL OF JEWISH WOMEN URGES APPOINTMENT OF WOMEN TO EISENHOWER'S COMMISSION ON NATIONAL GOALS—MRS. CHARLES HYMES, PRESIDENT, SCORES OMISSION OF WOMEN FROM PRESIDENT'S GROUP FOR SOCIAL WELFARE—EXECUTIVE COMMITTEE OF COUNCIL HEARS DEFENSE OF FLEMMING FOR INSPECTION OF DRUGS IN FOOD—CALLS FOR REVISION OF RACIST IMMIGRATION LAWS

NEW YORK, February 17, 1960.—A call for the appointment of women to President Eisenhower's Commission on National Goals, coupled with a defense of Arthur S. Flemming, Secretary of Health, Education, and Welfare, against criticism by industry of his efforts in the field of food and drugs, were made today by the head of the National Council of Jewish Women, 66-year-old community service and education organization, with a nationwide membership of 110,000.

Addressing a meeting of the executive committee of the council at its national headquarters, 1 West 47th Street, New York City, Mrs. Charles Hymes, of Minneapolis, president of the organization, pointed out that "not a single woman's name was included in the published lists of President Eisenhower's appointments to the Commission" which is headed by Dr. Henry M. Wriston.

The Commission was appointed early this month for the purpose of developing broad national objectives and programs for the next decade. Emphasizing needs for progress in education, welfare, and civil rights to enable large numbers of American citizens to realize their full potentialities, Mrs. Hymes declared that the omission was made "in spite of the eminent roles of women and of their organizations in the fields of social welfare."

"Women, who are entrusted with the responsibility of rearing children, should likewise be entrusted with the responsibility of helping to formulate the social goals for our generations. I urge that the President enlarge the Commission on National Goals by appointing several well-qualified women to it," Mrs. Hymes said.

Attended by members from all parts of the country, the meeting of the Council's Executive Committee dealt with major aspects of the organization's program in the fields of civil rights, housing, juvenile delinquency, aid to aged, mental health, and education.

Special attention was given to plans for financing a \$500,000 construction program for the housing of the model high school of the Hebrew University in Jerusalem. Mrs. Hymes and Miss Hannah Stein, executive director of the council, recently returned from Jerusalem after concluding an agreement there for the selection of the site and erection of the buildings.

In her statement Mrs. Hymes took note of the criticism levelled against Secretary Flemming in regard to his efforts and those of the Federal Food and Drug Administration to protect public health against any potential health menace that may exist in the growing use of chemicals in food production.

The speaker said that "as women, we are particularly interested in recent investigations of foods and drugs." She urged Secretary Flemming and the Federal Food and Drug Administration "to continue to put the protection of the consumer above special pleading by industry," adding that "it is also vitally important that the Food and Drug Administration be provided with sufficient funds to carry out its responsibilities effectively."

In her report, Mrs. Hymes assailed both proposed and existing residence requirements for persons applying for public assistance. She pointed out that with the exception of New York such restrictions are in existence in all States of the Union. Most of these restrictions require a person or family in need of help to have lived in the State for at least a year before that State will provide assistance. She asserted that it is not unusual for a family, or a child without a family, to lose residence in one State before establishing it in another and that assistance is denied, delayed, or provided only on emergency basis.

Calling for the abolition of such residence restrictions, Mrs. Hymes pointed to the situation of the State of New York where no such restrictions prevail. "The fact is that less than 2 percent of New York State's public assistance funds are now distributed to nonresidents. Experts in this State have testified that the cost of applying a residence restriction would approximately equal the cost of giving the assistance."

In assailing the proposed legislation to introduce residence restriction requirements also in New York, Mrs. Hymes declared that such residence restrictions "work cruel hardships and they do not make the problems of the needy disappear. In actual fact, they shift the financial burden to local governments and private agencies."

"There are no frontiers where help to the needy and service to the sick and homeless are concerned. There must be no passport requirements for those in need of help," Mrs. Hymes said.

Dealing with what she termed the tragic social problem of the aged, Mrs. Hymes asserted that most of the 15½ million persons in the United States over the age of 65 "are hardly able to subsist on their incomes, much less to pay for medical and hospital care." She urged the expansion of social security benefits to include payment of hospital expenses for persons over 65. She asserted that most of the needy aged suffer an acute need for hospital and medical attention but generally cannot afford it.

The speaker further termed the financial situation of the over-65 population as shocking.

"Eighty percent of them live on incomes of less than \$2,000 a year; 60 percent on less than \$1,000 a year." She continued.

"Perhaps the condition is clearest in the case of those living alone. Half of the total number of persons living alone have incomes of less than \$900 a year. Half of the elderly couples living alone have incomes less than \$2,000 a year."

She also pointed out that since the average social security benefit to a retired worker is less than \$900 a year, "it is time for social security benefits to be substantially increased. The Government needs to compare these benefits with its charts of today's prices."

Turning to the existing immigration laws of the United States, Mrs. Hymes charged that under these laws the Government "still doles out national immigration quotas on a racist basis."

"The major contribution which the United States can make to World Refugee Year is a revision of the McCarran-Walter immigration law, not only to permit the admission of refugees uprooted by crises, but also to eliminate racial and national discrimination. The liberalization of the racist McCarran-Walter law would be the most powerful and significant gesture the United States could make in the wake of world racist outbursts," she said.

In reviewing the recent eruption of anti-Semitic vandalism, the women's leader urged that while these acts have subsided they "should not be relegated to the limbo of forgotten events."

"There are very important lessons," she said, "to be learned from the fact that the overwhelming majority of the culprits caught defacing houses of worship and daubing swastikas on buildings were teenagers or youths in their early twenties." She urged that the White House Conference on Children and Youth, which will convene in Washington, D.C., on March 23, include this problem in its discussions of the causes and prevention of juvenile misbehavior.

Death of a Great Artist

EXTENSION OF REMARKS

OF

HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. MONAGAN. Mr. Speaker, on February 29, 1960, Rex Brasher, the Audubon of Connecticut, died at his home in Gaylordsville, New Milford, Conn. Mr. Brasher was born in Brooklyn, N.Y., on July 31, 1869, the son of Philip Marston Brasher, a prominent amateur ornithologist and taxidermist, who gave his valuable collection of mounted birds to Yale University.

Rex Brasher turned to art when still a young man, more than half a century

ago, and set out to paint all the birds of North America. His wanderings across the country in search of every species of birds took him 15 years and resulted in a collection of 874 pictures depicting more than 1,200 birds against their natural backgrounds. It is a collection combining scientific observation and distinctive artistry. I am happy to say that the State of Connecticut now owns this priceless collection and houses them in the mansion at the Harkness Memorial in Waterford, Conn., where they may be seen by the public.

The Brasher paintings are regarded as second to none in the world today—equal, if not superior, to those of Fuertes and Agassiz, and more realistic than those of the famous John James Audubon. They represent the meticulous labor of more than half a century for he started painting when he was about 20 and did not consider his work completed until he was 70.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include two editorials titled "Rex Brasher," one from the Waterbury American of March 7, 1960, and the other from the New Haven Register of March 2, 1960:

[From the Waterbury (Conn.) American, Mar. 7, 1960]

REX BRASHER

The name of Rex Brasher is nowhere near as familiar to American lovers of art as that of a great many other artists.

But Rex Brasher, who died last week at his secluded home in the Chickadee Valley section of Gaylordsville, was an artist with a special bent and a special talent. Just how he developed this particular interest in birds is not certain, but he did—and he has left behind a marvelous collection of paintings for the enjoyment of the public.

Nearly 20 years ago, the State of Connecticut purchased the bulk of Mr. Brasher's works for \$75,000. For several years they lay carefully crated in the basement of the State Capitol in Hartford, for lack of a place to display them.

When the State acquired the Harkness estate in Waterford, and turned it into one of the lesser known but more beautiful State parks, it was decided to use the Harkness mansion as a gallery for the Brasher paintings.

Today visitors to the Waterford park can spend hours browsing through the lovely gardens and hours more inspecting Mr. Brasher's works. Mr. Brasher is believed to have painted some 1,200 species and subspecies of American birds, of which the State owns about 1,000. Even the huge Harkness mansion is not large enough to display them all at once, so that the pictures are rotated about every 60 days with about 200 on display at one time.

Mr. Brasher painted birds in the swamps of the Everglades, on the rock coasts of New England, on beaches, on the broad deserts and plains of the West, on mountain peaks—in fact everywhere there were birds to be found.

He continued to paint until about 2 years ago, when his eyesight failed.

Often referred to as a 20th century Audubon, Mr. Brasher is believed by some art critics and naturalists to have been even more exacting in detail than was Audubon himself.

At any rate Mr. Brasher has left a great art treasure to the world and Connecticut is fortunate to own the bulk of that treasure and to have a place where it can be displayed for public enjoyment.

[From the New Haven (Conn.) Register, Mar. 2, 1960]

REX BRASHER

Rex Brasher is a name that Connecticut will long remember, and perhaps someday come to value more than the man and his work were openly valued during life. For the 91-year-old artist who died this week in Kent shared with Audubon and Agassiz and a very few others the dedicated pursuit of North America's birds and their devoted recording in sketch and painting. In Brasher's case, his legacy is a massive collection of many thousands of field paintings of more than 1,200 species and subspecies of this continent's birds.

The Brasher paintings are now owned by the State of Connecticut and they are housed in the mansion at the Harkness Memorial in Waterford. They are, in themselves, a treasure. As the lifetime work of Rex Brasher they represent also a testimonial to individual perseverance and to a self-sufficiency which may no longer be possible in most of the quiet places to which Rex Brasher hiked and canoed and otherwise made his solitary, watchful way in search of birds whose lives went undisturbed as he captured them forever in his sketchbook.

When he was in his twenties, Rex Brasher set out to paint all the birds of North America. He was in his seventies when the job was finished. There were sketches that he would have improved upon, birds that he longed to see for a few fleeting moments more. But what a life he led—and what a memorial he leaves.

The Dawn of a New Decade

EXTENSION OF REMARKS

OF

HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. PROXMIRE. Mr. President, we are all deeply concerned over the directions and trends inherent in our world's recent history, knowing full well that no less than the survival of our civilization is now in question. In the January 1960 issue of the Bulletin of the Atomic Scientists there is published a superb editorial by Dr. Eugene Rabinowitch, the editor, which is highly worthy of serious attention from every Member of this body and every thoughtful American.

Dr. Rabinowitch has written provocative thoughts which are at the same time hopefully optimistic and soundly realistic. I am grateful to Mr. Carl Pemble, of River Falls, Wis., for his suggestion that this editorial be given the wider circulation and attention that it so definitely merits.

I ask unanimous consent that the editorial be published in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

THE DAWN OF A NEW DECADE

THREE REVOLUTIONS OF OUR TIME

January 1, 1960, marked the end of a decade. Looking back on the 10 years which are now history, one is seized by a breathtaking thought: perhaps we have lived through a great turning point in the affairs of mankind.

In the January 1955 issue of the Bulletin, the years 1945-55 were called "Ten Years

"That Shook the World." Another 5 years have passed, and vague outlines of a new world have begun to emerge from the anguish and confusion spread over the old world by the blasts that leveled Hiroshima and Nagasaki.

In 1921 the Russian poet Alexander Blok said, as he lay dying, that he could hear "the stormwinds of history" blowing over his head. The stormwinds of history have been blowing ever since 1914; by now, they have risen to a hurricane.

Several major developments have reached their climax in our time: the revolution of underprivileged classes against societies which failed to soften their social injustices; the revolution of underprivileged nations against empires which did not transform themselves fast enough into commonwealths of free nations; and—lending terrible urgency to these two upheavals—the great scientific and technological revolution, which has endowed mankind with an unheard-of capacity to destroy itself—or to reach out for new heights of material welfare everywhere.

On the day when the existence of the atom bomb was made known to the world, Robert Hutchins, then chancellor of the University of Chicago, declared, "The atom bomb calls for world government," and appointed a committee to write a world constitution.

The constitution, elaborated at Hutchins' behest by Professor Borgese and his associates, is now all but forgotten; other elaborate plans for world reorganization (such as that described by Grenville Clark and Louis Sohn, to name but one among many) have left equally little imprint on world events. Even the much less ambitious "foot in the door" plan for international ownership and management of atomic energy, accepted in 1948 by all U.N. members, except the Soviet Union, now seems like a dream which only unworried scientists could ever have taken seriously.

It seems that mankind is as far as ever from stable peace. The danger of war lurks around many corners. The dominant political passion of many peoples still is hatred for other peoples, desire for the fall of their political or economic systems, for the reduction of their territories, or for their outright destruction—desires which cannot be realized except by war.

Does this mean that practical men have been proved right—men who smugly asserted in 1945 (as some still assert now, although less smugly) that bomb or no bomb, human history will remain the history of contests for power; and that wars have always been, and will always remain, the inevitable climax of these contests?

Much contemporary evidence supports this skeptical view. The world scene is still ominously dark. Several countries of Eastern Europe remain under alien military rule, exercised through native ideological minorities, but no less abhorrent for that to the majorities of these peoples. The minority that lost the civil war in China is still supported by outside powers in its hope of regaining the control of the country, where another minority that won the civil war has successfully established its domination. Armistice, and not peace, still rules in divided Korea and Vietnam; and not even an official cease-fire exists in the sea around Taiwan. And yet, whenever one of these smoldering power conflicts has flamed up in the last decade, the eruption has been quenched and the original situation—however patently absurd—has been reestablished. The world map has been frozen by the universal fear of a great war. The Suez expedition was called off after the fighting was well underway—in fact, when it was almost over—although vital interests of two great powers had to be sacrificed. The troops

that landed in Lebanon reembarked; the threatened assault on Quemoy never went beyond an artillery barrage; the showdown around Berlin is being delayed indefinitely, despite the obvious local military superiority of one side.

This repeated frustration illuminated the decadence, in our time, of a diplomatic technique which had been successfully used in the past when threats of war carried conviction. Now, war threats and counter-threats have become bluffs and counter-bluffs. Even if this change is for the better, it is not without new dangers. A power, threatened with a loss of face, may resort to force if its bluff is called—even if it did not seriously intend to do so in the first place. However, in the past decade, major powers have shown considerable caution in keeping the paths of retreat open for themselves and for their adversaries. We can hope that they will be even more cautious in the age of intercontinental missiles and missile-launching submarines—since these weapons make the possibility of a last-minute halt precarious and thus call for abstention from all practice of "brinkmanship."

These are signs of the changing world—evidences of the impotence, in our time, of the diplomacy of the mailed fist, of gunboat demonstrations and Marine landings, of the brandishing of ICBM's or atomic bomb-carrying airplanes. They are gratifying, but not too reassuring. After all, one can say, abortive conflicts also occurred before the First and the Second World War.

Little more reassurance can be derived from the decade of coat-tail diplomacy—from the dreary bargaining in London, Warsaw, and Geneva, or from the easy triumphs (and occasional fiascos) of the peregrinations of VIP's—be it Premier Khrushchev and Mr. Bulganin (Remember these two garlanded with roses in India?), Vice president Nixon, Premier Macmillan, or—most recently and most triumphantly—President Eisenhower. Nor are the evanescent exhilarations of the "spirits" of Geneva or Camp David to be taken seriously as signs of a new age. Equally dramatic was the encounter of Napoleon and Alexander I on a float on the Niemen, which was followed, a few years later, by Napoleon's invasion of Russia—not to stir up the painful memories of the summit meetings in Munich, Berchtesgaden, Yalta, and Potsdam. Relaxation of international tensions, softening of the long-rigid policies of Moscow and Washington—all this is for the good and should be eagerly fostered; but all these things have happened before, in past power conflicts—and never meant peace for more than a few years.

Where can we see, then, real signs of a new turn in human affairs? In the treaty for the demilitarization of the Antarctic and its permanent reservation for cooperative international research; in the resounding success of the International Geophysical Year, which pressed into service not only the full scientific resources of all nations, but also their warships and rockets; in plans for other cooperative scientific efforts, particularly first steps toward worldwide pooling of space exploration; in the International Atomic Energy Agency; in the vigor lately displayed by specialized agencies of the United Nations devoted to worldwide relief and reconstruction—WHO and WFA, UNESCO and UNICEF, and the new U.N. Special Fund; in the work of various agencies of the United States and of the British Commonwealth in the rehabilitation of underdeveloped areas in Asia and Africa; in conversations between world scientists on the problems of war and peace, such as the several "Pugwash" meetings; in the obvious urge of peoples, in all parts of the world, to work together irrespective of ideological

antagonisms and power conflicts between their governments. A new world of international cooperation is being to take shape under the frozen crust of the old world of self-centered nations deadlocked in power conflicts.

If this new spirit is fanned by those aware of the stake mankind has in its preservation; if the governments of the world will permit it to grow; then the trend of history may truly take a new direction in our time. Future generations may then come to see, in the years which now appear as an era of darkness, confusion, desperation, and deadly danger, the time when a break was first made with the age-long divisive tradition of mankind; when world community began to become a reality.

LOST BELIEFS IN WAR AND RULE OF FORCE

Three broad changes in man's awareness of human relations are pushing us in this hopeful direction: a change in man's relation to war; a change in man's attitude toward the rule of force; and a growing feeling of personal and national responsibility for the security and prosperity of mankind as a whole, and not only of one's own country.

A generation ago, the belief in the naturalness of war, in the glory of victorious battles, in the rationality of the use of military power as tool of national policy, was universal. In a Russian student calendar which I used to buy every year before the First World War, there was a table showing the numbers of battles each country had fought in its history with the comment, "France, the most civilized of all countries, has also engaged in the greatest number of battles." This attitude toward war is now dead. What was once the faith of a few exalted religious leaders and the reasoned conclusion of a few humanist philosophers—that war is evil, and that the establishment of permanent peace must be the considered aim of mankind—has now become a common, everyday belief of men and women all over the world.

The same change has occurred in man's attitude toward the rule of force. The use of force in the maintenance of national strength was taken for granted as legitimate since the dawn of history. All empires have been founded on conquest; even now, while the historical empires of the European nations in Asia and Africa are crumbling, an attempt is being made in Eastern Europe to stabilize a new empire, intended to be held together by a bond of common ideology, but founded, like all empires before it, on military conquest. There is, however, a significant difference. In the past, no ideological justification was needed; the right of the stronger nations to rule over the weaker ones—England over Ireland or India, Russia over Poland, Austria over Italy, Japan over Manchuria, to take only the most recent examples—was not questioned and empires built on such conquest confidently hoped to last forever. Nobody believes now in the legitimacy or viability of the rule of powerful nations over weaker ones. If the Soviet rulers do not succeed soon in converting the East Germans, the Poles, the Hungarians, into loyal Communists, their domination of these countries will not last long—and the same is true of France's hope of making North Africans into loyal members of the French Commonwealth. We cannot fortify, in every given case, how the rule of force will be broken, if it does not gain popular support; but we are now certain that no institution can survive for long if it is not accepted by men as natural and legitimate.

War and the rule of force always went together in the minds of men. Acquiescence in the recurrence of one and the permanence of the other has now disappeared from human minds—and this change has occurred in the short span of 30 years, between 1918 and 1948.

AWAKENING OF WORLD COMMUNITY

Each war in history has had its special cause, its aggressors and its victims, its heroes and its villains. Yet, there has been one common underlying cause of all wars—the existence of groups of mankind within which individuals have abandoned some of their power for the benefit of the community, while no ethical or legal restraints were imposed on their relations to other similar groups. The purpose of each community was to assure for its members the greatest possible share of the limited wealth available on earth. In this, its interests were naturally opposed to the interests of other communities. One nation could not be rich except by others being poor, powerful except by others being weak.

Mankind still largely exists in this traditional framework. It still consists of self-centered factions, pursuing their fractional interest as the summum bonum; but behind the continuing reality of a world divided into contending factions, into mutually hating and distrusting national, religious, and ideological units, there has begun to grow another reality—that of a humanity conscious of mutual involvement and responsibility of everybody for everybody, one for all, all for one.

Much too slowly—and yet, how rapidly, if considered in the context of history—the realization is spreading in America that assistance to less fortunate nations is the moral obligation of an economically strong country. Americans are beginning to understand that no nation has either a moral right, or the objective possibility, of surviving indefinitely as an island of prosperity in a sea of want. What was once the opinion of small groups of peculiar people, such as the Quakers, or of idealistic individuals, such as Albert Schweitzer, whom nobody took seriously, is becoming in our time, a common belief.

Vice President Nixon suggests that the United States should accept the jurisdiction of a world court in its future international treaties. Mr. Khrushchev, as well as President Eisenhower and General DeGaulle, cautiously mentions the possibility of all advanced nations pooling their resources to assist the underdeveloped parts of the world. These words are not deeds, but they are portents. In the most cynical interpretation, the words of politicians suggest what they believe the public wants to hear—and only a few years ago such utterances would have meant the death by ridicule of an unwary American politician. Remember how Henry Wallace was accused of wanting to provide milk for Hottentot children? Was it not on that occasion that Mrs. Luce coined the ignominious term "globaloney"; and is it not 10 years later, a Republican president, elected to put an end to such nonsense, who proclaims in New Delhi a "world war against hunger?"

In recent months, the U.S. Government has begun to exercise pressure on its European allies to make them accept their share of the responsibility to aid underdeveloped nations; and if many in Europe think that this is none of their business, they hesitate to say so, because this is not a proper thing to say in our time.

ETHICAL AND SELFISH CONCERNS

Of course, the abhorrence of war and the broadening feeling of responsibility for the well-being of all men are not due simply to the moral growth of the human race. As always in history, virtue is the child of necessity. In the past, devotion to one's people and country, renunciation of unlimited pursuit of selfish interests for the benefit of a racial or national community, could only become a general code of conduct when it was realized that by subjecting himself to this code, an individual would improve his own chances for survival and the safety of his progeny.

In our time, the survival and prosperity of

any individual or group is becoming more and more obviously tied up with the well-being and security of mankind as a whole. The selfish interests of these groups now call for the recognition of new ethical principles, encompassing the whole of mankind. It is not a disparagement of the value of moral ideas in history to say that these ideas, always latent, and expressed, from the earliest ages, by exceptional individuals, become powerful influences in social life when their immanent virtue and justice find expression in their practical importance for the well-being of men.

CONSTRUCTION VS. DESTRUCTIVE COMPETITION

In the last year or two, while the arms race continued unabated, the contest between the West and the East has shifted to a new arena: to competition for the allegiance of the uncommitted parts of the world, gained by increasing production and by using this increase for world political aims. This is significant progress. Even if the immediate motive of political leadership is engaging in this new competition is the old quest for power, the idealistic ingredient in this effort (without which no national effort can succeed) is new. Competition in the development of military power is, by the nature of things, directed against somebody. The only aim of military power is to be able to destroy the military power of others. Competition in bring about improvements in the well-being of other nations has a common positive aim, and can easily become a step to cooperation. Three steel mills are being built in India, one by America, one by Germany, and one by the Soviet Union; in an even more drastic case, in one town in Central Asia, an electric power station has been built by one great power and a street-car system by another one. The logic of the situation calls for these efforts to become cooperative; and the most hopeful sign of our time is that this logic is beginning to prevail against the traditionalist blindness of those in the East who refuse to see in Western assistance programs anything but a drive for the enslavement of new nations by capitalist exploitation, and of those in the West who see in Soviet assistance nothing but a particularly reprehensible technique of Communist subversion.

THE VIENNA DECLARATION

When, 16 months ago, at Vienna, a declaration was adopted by scientists of all countries calling not only for an end to wars, but also for the cooperation of all nations, irrespective of their political and economic structure, in technological assistance to the less well-developed nations, this may have seemed a quixotic idea which only men with no understanding of reality could cherish. Since then, this concept has started popping up in public discussions, including the pronouncements of responsible national leaders. It is not boundless optimism to hope that a few years from now, the concepts of worldwide cooperation in the technical advancement of the underdeveloped parts of the world will be widely accepted.

The development of science and technology is rapidly changing the realities of human existence; one does not need to be a Marxist to say that this change in existence must entail changes in consciousness. The progress of scientific technology has given to fractions of mankind the capacity to destroy each other utterly, and thus made the historical concepts of international struggle for power obsolete; but human consciousness needs time to adjust itself to this new state of affairs, in which no security exists for any one nation except in the security of all of them. The same progress in scientific technology is converting a world of limited wealth, in which each nation (and each class within a nation) could be prosperous only at the expense of other nations or other social classes, into a world in

which prosperity is available for all, if science and technology are pressed into the service of creating wealth; but the past experience of strict limitation of wealth, and the struggle for this wealth between nations and classes, is but slowly forgotten. When Premier Khrushchev was in America, he admitted that "The slaves of capitalism live well;" in other words, that the capitalist system (which he believes to be inferior in effectiveness to a planned Communist economy) can produce enough wealth to keep everybody fairly prosperous. This is the kind of enlightenment that may permit a softening of the power conflict between the Soviet Union and the West, now exacerbated by exaggerated belief on both sides in the decisive importance for prosperity of this or that system of production and distribution of wealth.

SETTING THE MINUTE HAND BACK

These are the signs that a turning away from the path of traditional power policy is becoming psychologically possible. We do not doubt that, as of now, the mainstream of political events is still dominated by traditional thinking and by the inertia of established institutions. The outlines of a new world community are but vaguely discernible behind the traditional structure of divided humanity. Nevertheless, in recognition of these new hopeful elements in the world picture, we are moving the "clock of doom" on the Bulletin's cover a few minutes back from midnight. In doing so, we are not succumbing to a facile optimism, engendered by a change in the climate of our diplomatic relations with the Soviet Union, or to the exhilaration engendered by the personal contacts of the leaders of the great powers and their visits to different countries of the world. We want to express in this move our belief that a new cohesive force has entered the interplay of forces shaping the fate of mankind, and is making the future of man a little less foreboding.

When, in the past, the Bulletin clock was moved forward closer to midnight, it was on the occasion of events—the first Soviet atom bomb, the first hydrogen bomb—symbolic of mankind's drift toward the abyss of a nuclear war. The recent advent of intercontinental missiles is another stage of the same drift; the forthcoming test of a French nuclear bomb in Sahara, symbolic as it is of the beginning of the worldwide spread of nuclear weapons, will be another. No similar landmark can be pointed out indicating progress on the road to world community, but there has been, in recent years, an accumulation of facts and words which suggest that this hopeful trend is gathering force. The feeling seems justified that a turn of the road may have been reached, that mankind may have begun moving, however hesitantly, away from the dead end of its history; and so, with a hesitant hand, we are setting back the Bulletin's clock.—E.R.

Air Force Manual Is Fine

EXTENSION OF REMARKS
OF

HON. DONALD L. JACKSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. JACKSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Indianapolis Star, Mar. 4, 1960]

AIR FORCE MANUAL IS FINE

An educational training manual of the U.S. Air Force Reserve recently was strongly denounced by many powerful liberal groups

in Washington. It was said that the manual was unfair and insulting to the Christian churches and to the National Council of Churches in particular.

The manual, so we are told, had recklessly accused the National Council of Churches of harboring pro-Communists in its midst. Public indignation against this Air Force manual was so great that the appropriate authorities in the Defense Department in Washington felt compelled to withdraw it from circulation, and offered full apologies to its critics.

We have studied the full text of the manual very thoroughly and we cannot understand why it was withdrawn. Nor can we understand the reasons of those Washington VIP's who saw fit to apologize for it. Maybe their utter ignorance concerning Communist problems is their excuse. We find the manual a very timely, a very reasonable, and a very admirable document. We see nothing wrong in the fact that it was used as textbook material for Reserve training courses by the U.S. Air Force. Quite on the contrary—we think the Educational Department of the U.S. Air Force should be congratulated for having done such an excellent job in exposing the underground Communist activities in the U.S. churches.

In the first place, the manual warns all Air Force personnel of the dangers of Communist spying activities, giving actual examples of the successful—for the Communists—work done by very skillful Communist agents. The manual then discussed the Communist technique of confusing gullible people with well-sounding words and phrases about peace, democracy, social justice, international trade and the like, which mean different things to the Communists. Democracy, for example, in Communist phraseology, means the dictatorship of the Communist one-party regime. Peace means an international settlement on Communist terms. Social justice means the Communist system of injustice, discrimination and terror. What's wrong in pointing out these very obvious—but oftentimes forgotten—truths concerning the deceitful ways with which Communist propagandists work?

The manual then gives concrete and documentary evidence proving that many ministers of the church, including a lot of prominent members of the National Council of Churches, have sponsored and supported—and continue to sponsor and support—both open Communist political groups and drives, and so-called Communist front organizations. The manual quotes prominent U.S. Christian ministers arguing that Jesus Christ was, in fact, a Communist, and that the Soviet Union today follows Christ's teaching of brotherhood, equality and justice. Considering the Communist slave labor camps, in which tens of millions of innocent human beings have perished, considering the Communist police terror system—the most cruel system known to man, it is indeed breathtaking to see preachers of the Gospel of Christ praise the Red murderers as humanitarian social workers and saint-like missionaries. Yet such preachers exist in America today. What's wrong if an Air Force manual names them and quotes their fantastic, not to say blasphemous hymns of praise to the most sinister killers and torturers in history?

The manual ends with a simple, but well-defined and beautifully phrased definition of the American way of life, and in contrast, of the Communist political purpose—to subjugate all human activities, all economics, all morality, all religion to the iron will and discipline of the Communist state.

Our only regret is that the controversial Air Force manual has not been distributed outside the personnel of the Air Force Reserve. We think it should be read by all Americans, from all walks of life, of all professions, all religions and all political affiliations.

The manual can displease or anger only people who know nothing about communism, or who consciously or unconsciously serve the Communist cause.

Youth Conservation

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. HUMPHREY. Mr. President, public support for my proposal for a Youth Conservation Corps, authorized in S. 812 and sent to the House of Representatives last year continues to mount. In my travels throughout the country, and particularly in the great States of the Middle West and Northwest, there is the most intense interest and anticipation of the possibilities for good of such a corps of young men. I am deeply hopeful that we shall yet have hearings and action on the bill in the House before the end of the current session.

In an article which I prepared for the January issue of *Sports Afield*, I described the Youth Conservation Corps in some detail, and outlined the legislative situation with respect to S. 812. I ask unanimous consent that the text of this article, entitled "Youth Conservation Corps" be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

YOUTH CONSERVATION CORPS

(By Senator HUBERT H. HUMPHREY)

On August 13, 1959, the forces of conservation in America squeaked through a surprise victory in the Senate, with the passage (47 to 45) of S. 812, a bill creating a youth conservation corps to consist eventually of 150,000 young men, trained to attack the major problems of resource conservation which have plagued our Nation since the onset of World War II.

It was a victory in which conservationists shared the glory with educators, judges, and youth authorities—sickened by the constant substitution of brave words for any meaningful action to deal with the growing problem of juvenile delinquency.

It was a victory, but the Youth Conservation Corps is not yet a reality.

Between now and next January, the infantry of conservation and those enlisted in the struggle against delinquency must move up into the line of battle. If the YCC bill cannot be passed by the House in 1960, any significant action on the conservation needs in our national forests and parks, our wildlife refuges and our other Federal-owned lands will inevitably be postponed until well into 1961.

Opposition to the proposal has been almost entirely underground, except for a blunt statement of opposition from the Bureau of the Budget. During the extensive hearings on the bill, no organization came to testify against it. Indeed, not one of the opponents of the bill in the Senate even attended a single hearing on the bill. The word was simply passed: "Kill the bill." And the forces that have always fought against any meaningful regulation of the public

lands in the public interest, who have always tried to block any significant investment in conservation, quietly went to work. They have failed in their first attempt, but they will not give up with one defeat.

The outdoorsmen of America have better cause than most of their fellow-Americans to remember the Civilian Conservation Corps. They know that before the old CCC was thrown into the breach in 1933, only the most token efforts had been made to carry out the dreams of Gifford Pinchot and Teddy Roosevelt and their friends who succeeded in setting aside great tracts of the public lands for the benefit of future generations. The hunter and the fisherman, the family camper, the wilderness rider, the just plain nature-lover, each of these Americans every year can afford to say a word of thanks for those 3 million raw young men who were sent into the woods during the 1930's with no plans, no training, no preparation—just willing brain and muscle during a time when society seemed unable to offer men jobs in industry. The cleared camping area, the second-growth grove of trees, the stabilized streambank, the wilderness trail, the upstream reservoir, the handsome retaining wall, the still-sturdy but now rundown recreational facilities in the national forests and parks constitute a gift from one generation of boys to the next—and from one enlightened group of leaders to the sportsmen and outdoor-lovers of the next 500 years.

In 9 years the CCC boys—averaging more than 300,000 of them a year scattered throughout the country—built into our public land holdings almost incalculable values, in terms of timber and water and soil and recreational opportunities.

There were many harsh words said about some of the bold experiments of the New Deal, but there was virtually unanimous agreement that the CCC was a resounding success.

What happened to the CCC? It was one of the first casualties of World War II. The boys who had been volunteering for the corps by the tens of thousands suddenly were swept up by an even more urgent call to arms. The manpower—or boypower—of the CCC just went to war.

And, strangely enough, when the last shot was fired, and the last GI returned to the United States, the country was just not in the mood to buckle down. We wanted to produce and consume all those goods we had been doing without for 5 years. We wanted to have fun, to get postponed families started, to buy that new car, the new house we had been dreaming about, the new gun, the new boat.

We hit a tremendous production stride. And to the surprise and consternation of all the population experts, we also began to produce what now looks like a virtual population explosion.

Conservationists soon began to have bad dreams about the available soil and water and timber resources for this mushrooming population, and the pressure on the outdoor recreational areas of the country began to get out of hand. In the national forests alone, there were 68.5 million visitors last year. By 1969 there will be 130 million.

Even the conservative Secretary of Agriculture of an administration publicly committed to a balanced budget at all costs was finally persuaded to sign his name to a report that outlined a vast new investment program for the national forests that would, he said, produce \$245 million annually in new revenues from the sale of timber in the national forests by the year 2000. (P.S.—He did not ask Congress for the money.)

Conservationists outside the Government, unhampered by the wraps of the Budget Bureau and with long professional experience under previous Federal administrations, estimated the "conservation gap" in 1958 at \$3 billion in needed investment over the next

10 years to put our forests into adequate productive shape. (There are 560,000 acres needing reforestation, 11 million acres that require thinning, pruning and other remedial action.) An investment of \$4.5 billion is needed to halt the loss of our topsoil and to protect our vital watersheds. (At least 1.3 million acres of national forest lands need erosion control, and 535 flood prevention structures should be built. About \$1 billion is needed to stabilize the soils and increase the forage yields on our western range lands. (Four million acres of national forest range lands needed revegetation.) There should be an investment of \$2 billion over the next decade to upgrade and expand the areas of outdoor recreational facilities, and another \$1 billion to improve wildlife refuges. Planned, detailed projects, adding up to these 10-year investment figures, the conservationists pointed out, are waiting in the files of the major Federal agencies concerned with the management of our public lands.

And while conservationists were worrying about the population pressure on our natural resources, a second and even uglier problem was developing in American cities.

From the files of police authorities and juvenile court judges an ugly and disturbing story has been brought to light—of boys dropping out of school and finding no jobs, of gang-formation and violence, of arrests and convictions on a scale so unprecedented that the FBI Director has felt himself compelled to call it to public attention. The Navy reports that one out of four of its recruits has a record of arrest for a nontraffic violation of the law. Police forces have been augmented, juvenile court dockets saturated and reformatories jammed.

With slum clearance moving at a snail's pace, school construction lagging and automation making it increasingly difficult for boys just out of school to find satisfactory jobs, youths from underprivileged families are turning to dark and desperate roads in increasing numbers.

During the hearings on S. 812, we heard witness after witness from the great metropolitan areas tell of the tremendous burden being placed on the police and the courts, and of the rising curve of costs to deal with delinquency. There was general agreement that a figure of \$25,000 was a good estimate of the cost to the taxpayer for every juvenile delinquent who went the police-courts-reformatory road. The sickening waste of human lives was being accompanied by a staggering rise in costs. Worst of all, what was being spent apparently was not doing anything to solve the problem.

I particularly recall the comment of the warden of the Oklahoma State Reformatory, who wrote me: "The solution to our crime situation is not more jails, reformatories, and penitentiaries, but some educational program which will prevent boys from coming to our penal institutions." And Warden Joe Harp concluded, "It is so very hard to rehabilitate a boy behind prison walls."

The problem of juvenile delinquency is acute now, at a time when employment is at record heights, and before the great population bulge resulting from the marriages during and after World War II has hit its peak. The Bureau of Labor Statistics tells us that the rate of unemployment of young people between 16 and 19 is almost three times the national average for all workers. Furthermore, as Katherine Oettinger of the U.S. Children's Bureau points out, "It is all too easy to step from low pay or unemployment into delinquent behavior. . . ." And Ewan Clague of the Bureau of Labor Statistics predicts very firmly that by 1965 the number of persons in the work force under the age of 20 will increase by 40 percent. Where we now have about 9 million boys and girls between ages 18 and 21, by 1965 there will be

more than 12 million, and by 1975 more than 16 million.

Unless we succeed in bringing down the rate of delinquency, the figures on delinquency are going to leap also.

It all adds up to trouble—big trouble—a shocking waste of young lives and a scandalous waste of the taxpayers' money in fruitless efforts to seal off nonrehabilitable boys from society.

When I first proposed the Youth Conservation Corps I tried to make it crystal clear that we were not proposing a panacea for the cancer of juvenile delinquency, but we were trying to save some boys who would otherwise go wrong. And we could point to the experience of hundreds of thousands of CCC boys who had been encouraged to lead a constructive life, who had been given both physical and mental health by their few months in hard, well-led work on the land.

Putting boys on the land, putting them to work on projects that needed to be done, on patriotic undertakings to build for the future of America, this I am ever more convinced would do more for America in terms of our Nation's mental health and physical fitness than even the important resource-conservation work.

We are creating no new agency, no make-work boondoggles, but a simple and direct way to channel the creative energies of American boys into the planned projects of our Federal conservation agencies—under the direct supervision and leadership of our splendid forest and park rangers, wildlife management specialists, and soil conservationists.

Although the Youth Conservation Corps will not be a "new CCC," it can proudly and rightfully draw upon the invaluable experience gained from that notable experiment in government. It has the vast successes and the minor mistakes of the CCC to guide the new corps. One has only to look at the record to know that what the YCC can do for America is not a matter of theory, but of proved practice.

Here is an opportunity to take action in a sea of words, to move purposefully and swiftly to deal with the two apparently unrelated problems of resource wastage and the wastage of youth, in one great forward step. Boys on the land in a Youth Conservation Corps—this can become a reality if every American who understands the wholesome and healing nature of the great outdoors will make it a personal project to express to his Congressman, and to his President, his support of S. 812.

Need Permanent Judgeship

EXTENSION OF REMARKS

OF

HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. LOSER. Mr. Speaker, a rather poignant editorial appeared in one of Tennessee's great newspapers, Nashville Tennessean, a day or two ago. It calls attention to the distressing need for an additional permanent Federal judge for the middle district of Tennessee. A subcommittee of the Committee on the Judiciary has recommended an additional judge for the district on a temporary basis. This is, of course, an unrealistic approach to a problem existing at Nashville for about 3 years. We had

two district judges for several years. One of them was a temporary judgeship. A very capable judge died and since that time we have struggled along with one judge. This splendid editorial points up the unrealistic approach to this pressing problem. The editorial follows:

NEED PERMANENT JUDGESHIP

At long last, it appears an omnibus bill providing new Federal district judges throughout the Nation will clear Congress. But the kinks with respect to a proposed judgeship serving middle Tennessee have not been sufficiently removed.

As things now stand, a House subcommittee is recommending a temporary judge to relieve the caseload piled up on District Judge William E. Miller's docket. The Senate Judiciary Committee has reported a bill which would provide a roving judge for west and middle Tennessee.

Despite these recommendations, Representative J. CARLTON LOSER says he is confident that the final action of Congress will give middle Tennessee a second and permanent district jurist. Congressman Loser, a member of the House Judiciary Committee, feels the full committee will override the suggestion of its subgroup and recommend permanent tenure for the middle district. We hope his confidence is well founded.

Certainly, the history of the judgeship situation in middle Tennessee should be given some weight by Congress. That history is this: Judge Miller was appointed with permanent tenure at a time when Congress correctly assumed that such was justified by the heavy backlog then existing in the middle district judge's court, which operates from Columbia and Cookeville, as well as Nashville.

But terms of the bill creating this second court contained a quirkish provision which had the effect of abolishing the second permanent judgeship upon the retirement or death of either middle district jurist. The provision, which was never justified, was to have been eliminated by Congress in the next upcoming session, but before it could be done, Judge Elmer Davies, Sr. died.

Two permanent judges in middle Tennessee are needed if only two circumstances are considered:

1. The tremendous number of land condemnation cases centering in Nashville because the U.S. Corps of Engineers' district office is situated here, and,

2. The heavier-than-normal income tax caseload created by the presence in Nashville of the Collector of Internal Revenue's district office, which serves the entire State.

Add to this the number of lawsuits which arise in the middle district because Nashville is a State capital city and the problem is thrice underscored, as to need.

Port of New York Day

EXTENSION OF REMARKS

OF

HON. KENNETH B. KEATING

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Wednesday, March 16, 1960

Mr. KEATING. Mr. President, today is being celebrated in New York City as Port of New York Day. It is a well-merited tribute to the port which has welcomed so many fine newcomers to our shores and which serves as a hub of America's booming international trade activities.

Today's New York Times contains an excellent editorial on this subject, and I ask unanimous consent to have it printed in the Appendix of the RECORD. There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Mar. 16, 1960]

PORT OF NEW YORK DAY

Today has been proclaimed Port of New York Day in New York City by Mayor Wagner. Most New Yorkers, unfortunately, are only dimly aware of their city's position as a center of international trade, but it is as a port that New York has climbed to eminence.

The port, which the city shares with its neighboring New Jersey communities, is able to berth 396 vessels at one time along 833 miles of waterfront. In 1958 it processed almost 38 million long tons of ocean-borne foreign trade cargo to a value of \$8,500 million. At the same time its airports moved over 13½ million people.

And these figures are only the beginning of the story, for without the magnet of the city's magnificent port facilities New York would be just another coastal town. Because of the port's easy accessibility people came here from all over the world, bringing their cultures with them, and in the millions funneled through the city to swell the nation to the strength it now possesses.

Many of these immigrants remained here, where their feet first touched American soil, so that now almost one-fourth of the city's over 8 million population is foreign-born. What other city can boast of publishing 57 foreign-language newspapers? With all its richly endowed museums the city itself is the largest and best museum of the world's cultures.

New York's color and content change, its ever-upward movement, its mosaic of the world, are the city's living tribute to its port facilities.

Mobility Held Defense Key

EXTENSION OF REMARKS OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. BRAY. Mr. Speaker, under leave to extend my remarks, I include an article "Mobility Held Defense Key" appearing in the San Diego Evening Tribune of February 20, 1960. The author of this article is the distinguished military writer, Maj. George Fielding Elliot, whose column appears in numerous newspapers in this country and is also widely read in Europe.

This article is particularly timely in that it explains the great danger of placing overemphasis upon U.S.-based long-range missiles, and points up, in turn, the inherent advantages that stem from a diversified and mobile arsenal of deterrents. I recommend this article to Members of this House because it sets forth the essential strategic thought which in large measure underlines the present defense policy of the United States which seeks—and has achieved—deterrent superiority over the Soviet Union through emphasis upon diversity and mobility of our strategic weapons system.

As Major Elliot so clearly points out—

and this is something which is too often overlooked by those critics in this country who equate deterrents with only missiles—the United States has "in the weaponry and know-how of global, mobile warfare, the time lead—not Mr. K., and we are vastly favored by geography."

This article underlines the sound logic of our current policy which has chosen a deterrent system based upon mobility, versatility, and diversity, instead of following the disastrous path of placing our total dependence upon only the highly publicized intercontinental ballistic missile.

The article follows:

MOBILITY HELD DEFENSE KEY

EDITOR'S NOTE.—The following analysis of the U.S. military position is written by Maj. George Fielding Elliot, USA, ret. A veteran of two wars, Elliot has gained fame for his books and articles on national defense. His books include "If War Comes," "The Ramparts We Watch," and "If Russia Strikes."

(By George Fielding Elliot)

The overwhelming issue of the coming campaign, says Vice President Nixon, is the national security.

Doubtless many citizens are ready to agree. But what then? A daily diet of discordant headlines, adorned with the names of statesmen and military leaders, has bred more confusion than assurance. The years just ahead seem dark with peril.

The weapons on which the Nation is asked to rely for safety are for the most part unproven in battle. Yet the nubbin of the debate now in progress isn't beyond the grasp of plain Yankee commonsense.

For the layman, a handy rule of thumb in judging the split-second weaponry of the dawning missile age might go like this:

If you can't keep it on the move, you can't protect it. And if you can't protect it, you can't depend on it to protect you.

Apply this rule to every weapon and military argument you hear of during the coming year and you won't be far off base.

National security is indeed the overwhelming issue of our times. And the overwhelming military requirement of American national security is to safeguard our freedom of action—freedom to carry forward the American mission of preserving human liberty against the Communist challenge.

We require powerful nuclear striking forces to deter the Soviets from depriving us of freedom of action forever by a surprise nuclear assault.

We also require non-nuclear forces—ground, sea, and air—to be able to intervene with enough of the right kind of power to deal with Communist aggressions of threats against specific parts of the free world. But freedom of action to do that—as we did recently in Lebanon and the Formosa Straits, as we may have to do at Berlin one day—depends on the power of our nuclear deterrent to protect us from Soviet nuclear counterblows.

Thus our deterrent forces must continue to be so armed and disposed that they cannot be knocked out by any surprise attack which the Soviet Union has the means to deliver. Otherwise we shall find our future freedom of action increasingly shackled by Soviet rocket threats.

Nothing that our military leaders are saying disagrees in principle with this central need to protect our freedom of action, nor with the proposition that our freedom of action can only be secure if our nuclear striking power is secure from surprise destruction.

When Adm. Arleigh Burke, for example, asks for more sea-based Polaris missiles and another aircraft carrier, he is asking for deterrent missile and air forces which cannot

be destroyed by Soviet ICBM's, these being useless against moving targets. He is looking forward to the wider use of the ocean spaces for the deployment of mobile nuclear deterrent forces of the future, which may include such systems as nuclear-powered seaplanes.

When Gen. Thomas S. Power insists that a substantial portion of his Strategic Air Command's planes be kept constantly in the air, he too is seeking some measure of security against surprise missile attack through applying the same principle of mobility on which Admiral Burke relies. And he looks to a future in which airborne weapons systems of far greater flexibility and endurance than his B-52's with their Hound Dog missiles may be available to us.

Meanwhile, it becomes more and more difficult for the advocates of massive fixed-base missiles, installed here in America, to reconcile the inherently static character of such weapons with the overwhelming American military requirement for global freedom of action, and with the fact that the main Soviet armament is specifically designed to attack fixed targets but has little value against moving targets.

Here is the real issue which is beginning to take shape amid all the present confusion of military debate.

It is a fundamental issue which any citizen can understand.

It is an issue between those who realize that security from surprise attack by missile weapons, against which there is no present defense and zero warning, can be sought only in mobility, and those who assert that we can hope to pile up enough concrete here in our homeland to resist multimegaton blows—though no sufficient tests have yet been made to support this theory.

The advocates of mobility seek to avoid the political and psychological paralysis of our national freedom of action which could result from basing deterrent weapons in our bosom.

SIMPLE YARDSTICK AVOIDANCE SOUGHT

Also they don't want Nikita Khrushchev to be able to measure the risk of war by the simple yardstick of so many megatons to smash so many fixed targets with a precalculated percentage of hits. Mobile deterrent forces he will have to go look for.

If found, they can be attacked only by such means as submarines or aircraft, against which there will be both warning and defense. Hence his calculated risk must include a much bigger question mark.

Finally, in the weaponry and know-how of global mobile warfare we have the time lead, not Mr. K., and we are vastly favored by geography.

An American strategy which chooses mobile weapons in order to preserve our freedom of action and restrict that of our opponents will deny the Soviets any reliable calculation of a surprise knockout and any credible basis for nuclear blackmail.

In the current arms debate, the inescapable logic of such a strategy is beginning to appeal to many minds. Yankee horseshoe may yet make nonsense of Mr. K.'s rocket-supported hopes.

One Hundred and Twelfth Anniversary of the Hungarian Revolution

SPEECH

OF

HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. CUNNINGHAM. Mr. Speaker, I join my colleagues in marking this somber anniversary. For more than a cen-

tury, the people of Hungary have fought and dreamed of independence and freedom as we have known and loved it in this country.

We can hardly appreciate what freedom means to people who are enslaved by the Soviet military rule, their every institution and activity subject to controls ordered from the Kremlin. Yet we know the yearning these people have for self-government, for true justice in the courts, for freedom of opportunity and individual liberty.

This anniversary of the Hungarian Revolution of 1848 is an appropriate time to pledge our friendship and offer our best wishes to the people of Hungary. Let us hope that the forthcoming meeting of the heads of states will be one at which important blows may be struck for the freedom of the Hungarian people.

Commentary on Civil Rights

EXTENSION OF REMARKS

OF

HON. MILTON W. GLENN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. GLENN. Mr. Speaker, I have listened to all of the debate on H.R. 8601, the civil rights bill, for the past 5 days. I have listened to the explanation of the provisions of the bill by the proponents and the opponents. I have heard recitals in detail of the differences between the referee and the registrar plan of supervision of elections. I have heard repeated references to the voting rights of American citizens under the Lindsay amendment, the McCulloch amendment, the Meader amendment, and the Kastenmeier amendment, and on sober reflection, considering the provisions of the Declaration of Independence, the Constitution, and the Bill of Rights, it does not seem possible that we, the Members of this great deliberative body, must at this late date in the history of our Republic consider these things.

Starting with the famous phrase in the Declaration of Independence "that all men are created equal," and considering the supreme law of the land embodied in the Constitution, which guarantees to all people the blessings of liberty, due process and equal protection of the laws, it just does not seem possible that we must legislate on civil rights, year after year after year.

Further, the Constitution has conferred upon all native born and naturalized citizens, not only citizenship in the State where the individual resides, but citizenship of the United States as well, and this is an unqualified right, regardless of race, creed, or color. Therefore, I submit under these basic truths forming the foundation of our way of life in these United States of America, there would appear to be no rhyme or reason why there should be any dispute, disagreement, or distinction in the enjoyment of these things by every citizen of the United States. It is, indeed, unfor-

tunate that so much litigation has been necessary to both define and enforce these rights within the past several years. Even so, the U.S. Supreme Court, the court of last resort of our judicial system, has had to say and reiterate that racial discrimination in publicly supported schools must be eliminated. It has directed that school desegregation shall be accomplished with "all deliberate speed" locally through Federal district courts.

I find the consideration of the need for this type of accomplishment difficult to comprehend, coming from the State of New Jersey, where we have enjoyed integration in our school system for years. In fact, I recall in my grammar and high school days in Atlantic City, the white and colored children not only studied and worked together, but formed friendships which have lasted throughout my lifetime—friendships for which I have the sincerest and deepest regard. I see no reason why the same mingling of the races cannot be affected in every State of the Union, the same as it has been in New Jersey for many years. It grieves me to think that it is necessary, as it is, to formulate and to act on legislation on these things, which are so fundamental in this life.

I naturally am in favor of this bill, the civil rights bill, and will support any amendment which gives it strength and simplicity to effect its purpose. I can only hope and pray that we are making true progress, and that we will eventually obtain through understanding and good will the ideal of equality before the law, regardless of race, creed, or color.

The Facts About Our National Defense

EXTENSION OF REMARKS

OF

HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. MINSHALL. Mr. Speaker, so much has been written pro and con on the status of our national defense that the American people have a right to be justifiably confused. A series of discerning and objective articles written by the Cleveland Plain Dealer's most capable military reporter, Phil G. Goulding, thoroughly discuss our defense posture and clarifies many of the points in dispute.

As a member of the Defense Department Appropriations Subcommittee, I have heard daily many of the facts that Mr. Goulding recites and can vouch for their authenticity.

I trust that the American people will benefit from the reading of these articles, along with a subsequent editorial: [From the Cleveland Plain Dealer, Mar. 6, 1960]

HERE'S WHY IKE BELIEVES UNITED STATES IS STRONG ENOUGH

(By Phil G. Goulding)

WASHINGTON.—What if the world knew that America could respond to any sudden

attack with certain delivery of a single superbomb powerful enough to eliminate the attacking nation?

The problem of deterring all-out war would be solved.

It would not matter whether a potential enemy had 100 times the manned bombers, 1,000 times the intercontinental ballistic missiles or a 3-to-1 edge in flotillas of space ships.

Economic, psychological, and brushfire warfare would demand other forms of strength. But no sane opponent would risk inevitable destruction by pushing the button which would force the United States to deliver that bomb.

That is a simple statement of the administration's position on the missile-gap controversy.

President Eisenhower and the Secretary of Defense are confident that America now has and will continue to have the equivalent of the one-shot superbomb—more than enough nuclear explosives to do the same job and ample means of applying them.

If they are right, there would obviously be no military advantage in spending \$1 billion or \$11.69 merely to buy one U.S. ICBM for each Soviet ICBM.

If they are wrong, we should obviously lay out as many billions as necessary to expedite production of intercontinental missiles, 2,000-mile-an-hour B-70 bombers, crossbows, poisoned darts, and all other required articles of all-out combat.

What are the destructive capabilities of the United States today and how will they change over the next few years?

All informed parties in the missile-gap debate stipulate two basic facts.

The first is that neither nation now possesses significant numbers of long-range ballistic missiles. America has 3 which are battle ready; Russia is credited with about 10.

All-out war today would be fought with manned bombers. Soviet bomber strength is considerable, but even the most severe critics of Eisenhower defense policies concede that the United States stands supreme in March 1960.

The second stipulation is that the mid-1960's will be the period of missile plenty. By that time, the 6,000-mile solid-fueled Minuteman ICBM will be in the arsenal. Precise force levels have not been established. There have been suggestions in Capitol Hill testimony that the Minuteman will be deployed in thousands.

In itself, the missile gap cannot possibly make this Nation "forever a second-class power," as some have contended. It is a temporary issue, dealing neither with today nor with the period beyond 1964. It is concerned only with the intervening years when Russia is due to have a substantial supply of ICBMs and a substantial numerical superiority—1961 to 1964.

STRENGTH BASED ON VARIED WEAPONS

Between the 1960 day of unquestioned thermonuclear supremacy via manned bombers and the 1964-65 day of unquestioned thermonuclear equality via the Minuteman, U.S. ability to prevent or fight all-out war will rest upon these weapons systems:

Planes of the Strategic Air Command—the 600-mile-per-hour B-47 medium jet bomber, the slightly faster B-52 heavy bomber and the supersonic B-58 medium bomber.

Intercontinental ballistic missiles of SAC—the huge liquid-fueled Atlas now available in small numbers, the companion liquid-fueled Titan due to become operational next year and the mobile Minuteman, scheduled to begin to appear in quantity in 1963.

Fifteen-hundred-mile Thor and Jupiter intermediate-range ballistic missiles in England, Italy and Turkey.

Aircraft based on the 14 attack carriers of the Navy—and capable of handling hydrogen weapons.

Fighter-bombers assigned to the Tactical Air Command in this country and to our theater commanders overseas. These can also deliver nuclear bombs.

Atomic-powered Polaris submarines. Each will be armed with 16 1,200-mile (later 1,500-mile) ballistic missiles that can be launched from hidden positions far below the surface.

An assortment of other nuclear-tipped nonballistic missiles: The Air Force intercontinental air-breathing Snark; the tactical Matador pilotless plane; its successor, the 1,100-mile Mace, and the old Navy Regulus.

BACKBONE OF SAC IS 480 B-52 BOMBERS

Backbone of SAC today is the B-52, which is not the outmoded flying machine that Mr. Khrushchev would have the world believe.

It operates from 24 dispersed bases. They are in Puerto Rico and 14 States, from Maine on one coast to Washington on the other.

Some 704 B-52's have been financed. Crashes have taken several, training units have others, research and development teams operate a few. The active force, ready to go today, numbers 480. New models are currently being delivered.

A large percentage are on ground-alert—prepared to be en route to the target within 15 minutes. The number on this status has increased fourfold over the last year.

Modifications have tremendously improved the B-52 since the first production plane. The G-series, now being accepted by operational units, boosted the range from 6,000 to 9,000 miles, chiefly through using the space within the wing for additional fuel.

Funds for 40 B-52 H-models are requested in the new budget. Turbofan engines on these will yield another 15 percent increase in efficiency. The advantages: More range, better acceleration on takeoff, superior performance at low altitudes.

AIRBORNE MISSILES TO SHOOT 500 MILES

The big bomber also will have a new brain and a new set of hands to help punch its way to the target.

Each B-52 will carry two Hound Dog missiles which it can launch against surface targets while it is still more than 500 miles away. They travel at supersonic speeds and are armed with large atomic warheads. SAC accepted the first battle-ready Hound Dog in December. The first B-52 test launch of both its missiles, held this week, was highly successful.

Two B-52 squadrons will be equipped with Hound Dogs by midyear; all 14 wings by the end of 1962.

The missile is extremely difficult to pick up on radar. Enemy air defenses will not easily intercept it.

Another helper for the B-52, the Quail decoy missile, will also become available this year. It will be launched from the bomber to confuse antiaircraft radar.

FOURTEEN HUNDRED B-47'S BACK UP B-52'S AT HOME, ABROAD

Partner of the B-52 in SAC is the shorter-range medium B-47 bomber.

America has 1,400 of them. No longer in production and approaching obsolescence, their number, bomb-carrying capacity and deployment still make them a potent force.

B-47's perch on 20 bases in the United States. These are sprinkled in 14 States, from New York to California, from New Hampshire to Florida. Range of the aircraft is 3,000 miles, but this is extended by aerial refueling.

Overseas, units of B-47's stand on runways of Operation Reflex. Chews are nearby, always together, always ready. The second hand of your watch will not complete many cycles before these aircraft can be airborne.

There is a "Reflex" unit at Guam. Others are on three bases in Spain, five in England,

three in Morocco. One SAC base in Alaska harbors B-47's and another maintains tankers. Goose Bay in Labrador and Harmon Air Force Base in Newfoundland are primarily for tankers, but B-47's are frequently there for a week or two en route to other sites.

Additional B-47's operate from two bases in Greenland. The aircraft and all of the equipment which makes it into a weapons system can function at temperatures far below zero and far above 100 degrees. Flying near the speed of sound, the plane can move from Arctic to desert between breakfast and dinner.

B-58 ON BOMB RUN TO FLY 1,300 M.P.H.

The third manned bomber of SAC is the B-58, which makes its bomb run at more than 1,300 miles per hour. The first duty-ready plane was accepted by SAC a couple of months ago; the first unit will soon be operational. Three wings are contemplated in the present program, or a total of 116 aircraft.

Two wings of B-47's will be dropped for each new wing of B-52's and B-58's.

Ballistic missiles traveling 16,000 miles per hour have obvious advantages over the airplane. But the airplane also has many advantages, beyond the human factor of recall after a false alert and flexibility of target selection.

HOUND DOG'S BITE SWALLOWS UP CITIES

It is almost impossible for the human mind to accept the destructive power packed into one bomber.

The atomic bomb dropped on Hiroshima was the equivalent of 20,000 tons of TNT, or 20 kilotons. It killed or injured 150,000 persons; it destroyed or damaged 75 percent of the city's buildings.

This was a firecracker.

Atomic weapons now go into hundreds of kilotons.

When one thinks of the Hound Dog as a means of merely paying the way for the B-52, he must think in new terms. "Paving the way" conjures up mental pictures of a battleship's 16-inch guns softening an enemy beach prior to an amphibious landing.

Such World War II images are deceptive. When a "little" Hound Dog paves the way, it blasts the city.

Yet these are also firecrackers, compared to the large thermonuclear, or hydrogen, bombs.

The Mike H-bomb shot of November 7, 1952, caused a small island to disappear and left an underwater crater 1 mile across and 175 feet deep. Its fireball was 3½ miles wide—against one-sixth of a mile for the Hiroshima atom bomb.

This was "only" a 5-megaton device; 5 million tons of TNT equivalent; 250 times the Hiroshima explosion.

A 10-megaton bomb would cause total destruction of all buildings within a 7-mile radius. It would kill 75 percent of the people. In a large city, this would be many times the 330,000 who died in Germany from all World War II raids.

Yet the Rockefeller committee reported that a 20-megaton bomb, twice as powerful, was by no means the largest available.

CARRIER PLANES CARRY H-BOMB, TOO

This unthinkable power can also be applied by naval bombers based on aircraft carriers.

Two attack carriers (as distinguished from smaller antisubmarine carriers) are always on duty with the 6th Fleet in the Mediterranean. Three are assigned to the 7th Fleet in the western Pacific.

More than 200 attack aircraft are available to those two fleets. They can also deliver hydrogen bombs. While there are arguments as to whether the 6th Fleet could survive in the Mediterranean, admirals are certain the planes could get off for an initial strike.

The Mediterranean is 196,000 square miles of water. The moving carrier is virtually invulnerable to ballistic missile attack; the decks can be cleared of aircraft in minutes.

Biggest naval plant is the 600- to 700-mile-per-hour A-3D with an unrefueled range of 2,000-plus miles.

The lighter A-4D Skyhawk and the A-3J Vigilante, which flies twice the speed of sound, can travel some 1,200 miles without refueling.

Both of the first two planes are in the fleet in large numbers, together with the lumbering old propeller-driven bombers. Money for the last 42 Vigilantes is sought in the new budget. The supersonic Vigilante is undergoing its second evaluation tests, but is not yet battle ready.

Eight new twin-engine A-2F turboprop attack planes, still under development, are also requested in the new budget.

There are 14 attack carriers now in service. The number of attack aircraft remains fairly constant—there will be 1,300 at the end of 1961. Adm. Arleigh A. Burke, Chief of Naval Operations, has told Congress that these planes, under certain circumstances, could deliver more bruising blows more quickly than the SAC bombers.

Most of their targets, however, would be of a different type.

[From the Cleveland Plain Dealer, Mar. 7, 1960]

PLANES NOT OBSOLETE TO SAC CHIEF

(By Phil G. Goulding)

WASHINGTON.—Is it valid to predict that multistage weapons delivered by manned aircraft will continue to be a major military asset over the next 4 years?

Many critics of existing defense policies concentrate on intercontinental ballistic missiles and imply that bombers are rapidly becoming obsolete pieces of equipment which a sentimental Air Force retains as the Army did its cavalry.

Among them is not the four-starred head of the Strategic Air Command, Gen. Thomas S. Power, who has operational control of both strategic bombers and ICBM's.

WANTS 6 MORE WINGS

Power is confident that the B-52 heavy bomber, assisted by the Hound Dog and Quail missiles it will carry, will remain an effective weapon for years. So is his boss—Gen. Thomas D. White, Air Force Chief of Staff.

Both the B-52 and the medium B-47 bomber, they say, will maintain a "high probability of penetration success" through the mid-sixties, at least.

Power, in fact, wants six more wings of new B-52's than the Department of Defense will let him have.

The bomb load of a single B-52 is many, many times the size of the biggest warhead in the most powerful intercontinental ballistic missile. This is one of the reasons why the chief of staff of the Army and the chief of naval operations both opposed a decision a few months ago to increase planned squadrons of Atlas and Titan ICBM's to 27.

They argued that the United States had achieved an "overkill" in thermonuclear power which would last through the "missile gap" period.

The amount of destruction potential of various weapons systems is often disregarded in defense debates.

Of the three American ICBM's being developed, the liquid-fueled Atlas and Titan missiles will be able to toss much greater weights across the ocean than the solid-fueled Minuteman. This means bigger warheads—and more bang.

Congress has been told that Atlas has four times the payload capability of Minuteman; Titan eight times.

While the payload sizes are highly classified, all three are believed to be in the low

megaton range—50 times the Hiroshima atom bomb, but far below the multimegaton B-52 load.

For enemy targets that are dug in and protected by concrete, the bigger warheads of the liquid missiles will be needed. There are no thoughts of discarding Atlases and Titans, even after Minuteman joins the inventory.

Minuteman will have other advantages. It can be left unattended in a hole in the ground. Several, miles apart, will be fired by pushbutton from one central post. They will react immediately. The cost will be \$1,500,000 per missile and launcher, or little more than 10 percent of an Atlas with its launcher.

Because of its smaller size and the stability of its fuel, Minuteman can also be flitting around the country on special railroad trains, impossible targets for opposition ICBM's.

Development is on schedule and moving as rapidly as possible. No additional dollars are needed. This is the Nation's most important weapons system for the future.

But it is for the future. In the interim will come the Atlas and Titan.

The pacing factor in more Atlas and Titan missiles is not production of the weapons themselves. Convair, makers of the Atlas, could double its present rate without building new facilities. The missile, however, is worthless without trained personnel and without launchers.

TWENTY-EIGHT MONTHS NEEDED TO BUILD KBM BASE

Site survey for an ICBM launching base takes 3 months, specific design 5, contract bidding and awards 6 weeks, brick-and-mortar construction 13 months. Another 10 months are required for installing ground equipment and final checkout. Then the crew needs 3 to become familiar with the particular base.

Favorable weather can cut this schedule a little. Advantage can be taken of some overlap. But the cycle cannot be shaved down below about 28 months, even with the 7-day, 24-hour operation. That is the opinion of Air Research and Development officers assigned to the task and of their chief, Lt. Gen. Bernard A. Schriever.

America plans 13 squadrons of Atlases. There will be 14 of Titans, a more advanced weapon but still in the flight-test stage. Except for the first two Atlas squadrons, each will have nine missiles on launchers and one spare weapon.

This will mean 111 Atlas and 126 Titan launchers—a total of 237 American liquid-fueled "first generation" ICBM's ready to be fired. It will take more than 3 years to get them all.

The forecast, calculated for the end of each year:

Nineteen hundred and sixty—Nine. All Atlas. Three (now ready) at Vandenberg Air Force Base, Calif.; six at Cheyenne, Wyo. Another three will be at Vandenberg by December, but for training rather than war plans.

Nineteen hundred and sixty-one—54. Additional Atlases at Cheyenne, Omaha, Spokane, and Topeka. The first two Titan squadrons, both at Denver.

Nineteen hundred and sixty-two—163. Conclusion of Atlas, with a third squadron at Cheyenne and others at Salina, Kans., Lincoln, Nebr., Plattsburgh, N.Y., Abilene, Tex., Roswell, N. Mex., and Altus, Okla. New Titan bases at Rapid City, S. Dak., Moses Lake, Wash., Marysville, Calif., and Mountain Home, Idaho.

Locations for eight remaining Titan squadrons have not been announced. Most of their 72 missile-loaded launchers will be ready by the end of 1963.

The first Minuteman will have appeared in late 1962, the first squadron the following spring.

Important differences will be built into early and later Atlas and Titan bases, resulting from modifications of the missiles themselves.

Vandenberg Atlases stand bare, without protection against enemy attack. The next 24 will be stored horizontally in boxlike structures prior to launch, then 27 in semi-hardened below-ground coffins. The final 54 will be in deep silos, built to withstand tremendous pressures. Missiles will be raised by elevators for firing.

Titans will also change. The last eight squadrons will be launched from within their silo. Their fuel, while still liquid, will be storable within the weapons. Firing time and exposure will be lessened.

Several hundred feet will separate launchers in the early ICBM squadrons and 18 or more miles in the later versions.

Since the whole point of the "missile gap" controversy is the ability of the United States to survive a surprise attack with enough power to strike a devastating counterblow, all of these facts must be cranked into the discussion.

Estimating reliability, accuracy, and warhead of Soviet ICBM's, the head of SAC figures that it would take three Russian missiles to knock out each "soft" U.S. site. Several times as many would be required to destroy a semi-hardened launcher—and three more times as many for the silo variety.

MISSILES OVERSEAS BOOST U.S. MIGHT

Thor and Jupiter 1,500-mile intermediate range ballistic missiles yield additional power.

Three Thor squadrons, with 15 missiles each, are now operational in England. A fourth will soon be ready. Work is progressing on two Jupiter squadrons in Italy and a third in Turkey. These launchers will build up gradually over the next 2 years.

The ICBM's will add another 105 H-bomb warheads to the arsenal.

No other ICBM's are planned by the United States. England is developing the Blue Streak, a cross between our 1,500- and 6,000-mile weapons. There is also an unresolved decision on a solid-fuel ICBM for NATO—possibly an offshoot of the Navy's Polaris fleet ballistic missile.

In advance of these, however, the Polaris itself will be ready for action.

Four nuclear-powered submarines built to carry and fire the Polaris have been launched. Two will be in the fleet by the end of this year, each hidden somewhere at sea and able to blast off 16 ballistic weapons.

A new submarine, equipped with missiles, will be ready for war every 4 months thereafter. Including 3 in the new budget and head-start items for 3 more, there are 15 in the current program.

Without acceleration, there will be 32 Polaris missiles at the end of this year, 80 at the end of 1961, 128 in 1962, and 176 in 1963.

Final decisions on the ultimate size of the program have not been made. The Navy is shooting for 40 to 45 submarines—640 to 720 missiles.

SUB-A-MONTH PACE PREDICTED BY 1963

Once the weapon proves itself out in a few months, the Department of Defense may OK Navy plans for three more submarines and early-start items on another six. Admirals are confident that they can turn out the atomic-powered ships on a one-a-month basis by 1963.

They also propose installing the Polaris missiles on merchant ships of 5,000 to 7,000 tons and on cruisers. Space has been reserved on 18 heavy cruisers and 6 light cruisers—each handling 16 weapons.

America reaps more nuclear strength from the less glamorous "airbreathing" missiles

which fly at airplane speeds and altitudes, in contrast to 16,000-mile-per-hour ICBM's.

The Air Force has one wing of Matador surface-to-surface pilotless planes in West Germany, a unit in Formosa, and another in Korea. European Matadors have been bolstered by a successor, the Mace, which is faster and has better range and guidance.

Two hundred Maces have been produced. An advanced model, the "B," is now being tested at Cape Canaveral. Both versions fly just under the speed of sound. The range is 650 miles for one, 1,100 for the other.

By the end of 1961, two squadrons of the newer Mace will be battle ready in Europe and another two at Okinawa.

At Presque Isle, Maine, is an operational wing of jet-powered Snark intercontinental missiles. The Snark program was ended because of incoming ballistic weapons. While slower by far than the ICBM's, the Snark has magnificent accuracy and carries a tremendous warhead.

FIGHTER-BOMBER A NUCLEAR THREAT

Tactical fighter bombers are not designed as "strategic" weapons systems, lack the unrefueled range of the bigger aircraft and pack a lighter punch.

Again, however, "lighter" is a misleading word. Nuclear capability of the fighter bomber spreads across the atomic-hydrogen spectrum.

Under the Tactical Air Command in the United States are seven wings of faster-than-sound fighter bombers. Each wing has three 25-plane squadrons.

Two wings of F-100's, first American supersonic combat aircraft, are based in New Mexico. One wing is in Louisiana, one in South Carolina, and one in California. In California, too, is a wing of F-104's. North Carolina has a wing of F-105's.

Both of the latter planes fly twice the speed of sound. The F-105 was designed and developed to deliver nuclear weapons, heavy loads of conventional bombs and rockets at high speeds over extremely long ranges. It is the only fighter-bomber with an internal bomb bay.

The composite air strike force draws upon these 375 aircraft and their spares, supporting wings of reconnaissance planes and tankers were reacting to such overseas crises as Lebanon and Formosa.

Because of the increased performance of the latest tactical fighters and their air refueling capability, this force can be deployed within hours. TAC, as a command, keeps at least one squadron of fighter-bombers at Aviano, Italy, on a rotation basis. Other overseas fighters are under theater commanders.

In Europe, three wings of F-100's previously located in France have been transferred to bases in England and West Germany. There are three more F-100's wings in West Germany, one in Holland, and one in England. All of these can deliver nuclear weapons; many are on the edge of the Iron Curtain.

At other bases in the United Kingdom are one wing of supersonic F-101A Voodoo fighter-bombers and one of B-56B Destroyer light bombers. These, too, have nuclear capabilities.

European-based wings of troop carriers, fighter interceptors and reconnaissance planes are not included in this rundown. Nor are any aircraft of U.S. allies.

The estimated buildup of Soviet intercontinental ballistic missiles has been deliberately avoided in this story. So have a dozen other controversial issues of current U.S. defense policy, from the development rate of the B-70 bomber and the Army's desired acceleration of the Nike-Zeus antimissile missile to the Nation's ability to fight limited wars.

The objective of the story has been simply to pull together all of the nuclear potential of this country—and to suggest that 6,200-mile ballistic missiles will be only a portion of that potential for some years to come.

[From the Cleveland Plain Dealer, Mar. 9, 1960]

THE STATE OF OUR DEFENSES

In two articles which appeared in the Plain Dealer Sunday and Monday Phil Goulding of our Washington bureau presented what we believe to be the most comprehensive survey of the U.S. military might, as it now exists and as it has been planned for the immediate future, to be published to date.

The survey was appropriate at this time in view of the extensive hearings conducted by congressional committees which have given critics of the administration an opportunity to express their fears that the United States will be vulnerable to a Soviet attack or ultimatum unless we do more than we are doing now, or have planned to do in the next 4 years, to catch up with the Russians.

In a presidential election year it is inevitable some of these criticisms, no matter how sincere the critics are, will have a political tinge. As a result, it is difficult for a layman to understand the real situation. Goulding's articles, we believe, will clear up some of the misunderstandings and doubts.

To begin with, there is the situation today. The sources Goulding consulted believe that any all-out war today would be fought principally with manned bombers, a field in which the United States is supreme.

Next comes the period of the so-called missile gap, from 1961 to 1964, during which it is admitted that the Soviet Union will have more intercontinental ballistic missiles than we will have. After 1964 we will have "caught up" with the Russians and will have achieved missile equality.

The issue, then, is whether permitting the missile gap to exist will endanger the security of the United States. According to Goulding's information it will not.

During this period the ability of the United States to prevent or to fight a war will rest on a number of deterrents. These include the Strategic Air Command, with B-47, B-52 and B-58 bombers, some able to throw a 500-mile punch with the Hound Dog missiles; intercontinental missiles, such as Atlas, Titan and the Minuteman; intermediate range missiles such as Thor and Jupiter; carrier-based Navy attack aircraft; fighter bombers of the Tactical Air Command; atomic-powered, Polaris-equipped submarines; and other missiles, such as Snark, Matador, Mace, and Regulus.

Moreover, our attack could be mounted from bases that girdle the globe, from Greenland to Guam, from Spain to Alaska, and from the 6th Fleet in the Mediterranean or from the 7th Fleet in the Pacific.

According to Goulding, the chief of staff of the Army and the chief of naval operations believed we achieved an "over-kill," that is, more power than we need to accomplish any conceivable objective, and that this over-kill will last through the missile-gap period.

In other words, our striking power and our nuclear potential are adequate for the present and will remain so for the foreseeable future.

We trust that Goulding's articles will contribute some light on an issue which is bound to become distorted the more it is injected into the presidential campaign.

Red China, a Formidable Reality

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. PORTER. Mr. Speaker, the chairman of the Hydro Electric Power Commission of the Province of Ontario, Canada, is Mr. James S. Duncan, C.M.G., LL.D. In April 1959 Mr. Duncan visited Red China as a guest of the Government at the invitation of the China Council for the Promotion of International Trade.

Saturday, December 5, 1959, Mr. Duncan told members of the City Club of Cleveland, Ohio, about his visit to mainland China. The subject of his remarks was "Red China, a Formidable Reality." A copy of his remarks was made available to me last month by Mr. Thomas Kerr of the Kerr Grain Corp. of Portland, Ore.

I want to cite a few of observer Duncan's astute remarks. The whole of his speech will then follow under the leave to extend my remarks in the Record.

He says:

There are no grays in China, all is either black or it is white. If you belong to the Western World, then you are an imperialist; if you are a landowner, then you are an exploiter of the people; if you live in Korea or Formosa, you are a running dog; if you are an American, you are an imperialist and a paper tiger to boot; if you differ from the party line, in the most minor detail, you are a reactionary and a deviationist.

There must be many among the older people who have known a better life, many who are spending their days in suffering, in hopelessness, and in despair, but these are not vocal. They are the anonymous ones, they are not identifiable. They are caught up in a mass movement from which there is no escape.

Besides, the Government is not interested in the middle aged or the old—these are expendable. All their thoughts, all their hopes and their planning are centered around the young, whose pliable minds they are carefully indoctrinating into the ways of communism, and into whose eager hands they intend in due course to pass on the torch. From what I have seen of these bright-eyed, enthusiastic, hard-working and dedicated young men and women, they will not disappoint the hopes and aspirations of their teachers.

They are supremely ignorant of the outer world. They have learned but one side of every question: as the French saying goes, "Having listened to but one bell, they have heard but one sound."

Mr. Duncan describes the grim living conditions within the communes. He details the failure to meet predicted agricultural production but notes that even in failure China experiences a 25-percent improvement in total agricultural production in 1 year is still a remarkable performance. He points out that living conditions are unbelievably low everywhere but adds:

Be all this as it may—and much as we deprecate the methods used—China of 1959 is a formidable reality. The authority of her Government is not being effectively challenged by any rival group. Its control over the masses is such that, providing China's Government can insure a modest yearly improvement in the living standard of her docile and disciplined people—and from what I have seen, I believe she probably can—the Communist government will remain in power for many years to come.

Later in his speech, Mr. Duncan says:

The opinions I am expressing are merely those of a businessman and a private citizen and have consequently no official connotation. If I am dealing with this delicate subject at all it is because I feel strongly that the events which are taking place in China today could so intimately affect the lives of each one of us that no opportunity should be lost to place the facts as I see them before as wide an audience as possible.

I doubt if anyone who has visited China in recent years still believes in the fiction of the successful subjugation of the mainland by Chiang Kai-shek and the Kuomintang.

The \$64,000 question is what can be done about it. How do we emerge from the present impasse? The first thing which must be understood is that China is no longer prepared to accept renewal of diplomatic relations with any country which recognizes the National Government of Formosa, which she considers as part of her national territory. The recognition of China, therefore, implies the abandonment of Formosa, and insofar as the United States and certain other Western countries are concerned (including our own) the disavowal of treaties freely entered into.

There are many who feel strongly that the nonrecognition of China by the United States and Canada in 1949 was unrealistic and regrettable. I share that point of view. It would be an oversimplification, however, to conclude that if nonrecognition was a mistake, early recognition, without a change of heart and policy by China, is the necessary answer.

Near the close of his remarks, Dr. Duncan notes:

Many Asiatic nations, who claim to be allergic to American imperialism, are in reality looking toward the United States to hold in check the expansionist tendencies of Red China. Their real concern is not American, but Chinese, imperialism.

He says:

The United States of America should continue, therefore, her policy of containment. Weakness and compromise have never advanced the cause of peace, and it is eminently desirable that both Soviet Russia and China should know the limits beyond which the Western World will not go.

Drawing on his observations, Mr. Duncan adds:

But the continuation of the status quo ante does not make sense either. The formidable reality of Red China cannot be indefinitely ignored. Operating, therefore, from her position of strength (and her strength in the Pacific is still unquestioned), the United States should embark in all sincerity upon a policy of rapprochement with China, carrying with it no immediate recognition but acknowledgment and respect for China's position as a great world power.

To implement this policy of detente, China should be given to understand by the

United States that the broadest possible exchange of visitors, as is the case with Russia, would be welcome. Representatives of the Chinese press should be invited to travel widely throughout the United States on a reciprocal basis. All forms of cultural exchanges should be promoted, including especially an exchange of students.

The American embargo on exports should be reduced to an absolute minimum. These trade restrictions, which are treated with ridicule in China, have not seriously hindered her development. They have, however, driven her closer to Russia.

The mutual exchange of trade delegations, the display of goods at trade fairs and international exhibitions should be encouraged. None of this implies approval of the Chinese form of government, any more than our reception of the leaders of the Soviet Union implies approval of theirs.

There are those who say that these conciliatory moves might be rebuffed, but I am inclined to doubt it. Those guiding China's affairs are subtle and farsighted men and it might well be that, their present hostile attitude notwithstanding, China would welcome a gradual rapprochement with the United States and a correspondingly lesser dependence upon Russia.

Commenting on China's military strength, Mr. Duncan finds:

Rapid and spectacular as her progress has been, China is in no position at the present time to challenge the United States. Many a year will go by before China will qualify industrially or militarily as a really great power. She has too many roads to build, men and women to train, houses to erect, people to educate, mouths to feed, factories and power projects to construct.

But the handwriting is on the wall, plain for everyone to read. Any nation which can do what China had done in 10 years, even if the facts as given to us are greatly exaggerated, has the potential of a great industrial power; and, with approximately one fourth of the world's population to draw from, of a great military power also.

I think these observations by Dr. Duncan are realistic and reported as accurately as possible. I would call to the attention of every person interested in the survival of our Government as we know it—and want to keep it—Mr. Duncan's one sentence summation near the end of his speech.

He said:

One cannot oppose awesome dedication and self-denial by comfortable complacency and hope to come out on top.

The full text of his address follows:

RED CHINA, A FORMIDABLE REALITY

Mr. President, honored guests, and gentlemen, during a trip to Soviet Russia 4 years ago I noticed important numbers of bright-eyed, keen-looking young Chinese workers in every manufacturing plant which I visited. The invariable answer to my questions was that these young workers were in training for the future industrialization of China.

It was then that I decided to visit Red China at the earliest opportunity. I was impressed by the thought that if China, with its 650 million people would become educated and industrialized as rapidly as the Russians had, the Western World would be faced with a challenge the like of which they have never been called upon to measure up to before; and that the sooner my fellow Canadians learned what was shaping up behind the Bamboo Curtain the better and the healthier it would be for all of us.

Three and one-half years elapsed before a suitable opportunity arose. Last April, however, the China Council for the Promo-

tion of International Trade invited me officially to visit their country as a guest of the Government.

It was a rewarding experience, if in some respects an alarming one. Red China is indeed a formidable reality. Having benefited by the experience, the mistakes and the massive aid of Soviet Russia, the Chinese progress since their revolution has been much more rapid than that of their guide and mentor.

It is upon the tempo of their progress, the success of their revolution, and the outpacing of Soviet Russia that their intransigence, their unshakable faith in the future and their distressing arrogance are based. During the past two decades China has indeed sprung from a semifederal, semi-colonial state, foreign-dominated, weak, and torn by internal strife, into a position of world power and one of growing leadership in Asia.

It is perhaps even still more remarkable that "the great leap forward" (to use Chinese phraseology) which carried this problem child of Asia to a position of strength and unity, has been accomplished since the Communist government took over power just 10 years ago. The Communist leaders point with pride to the things which have been accomplished in this short period of time—and indeed there is a lot to be proud about.

They do not mention, however, that the chaotic conditions of the Chinese economy in 1949 were due in no small measure to 20-odd years of civil war, heralded in by the Communist Party in 1927 (when they seceded from the Nationalist government at Wuhan); and, with the strong moral support of Soviet Russia, announced a program which called for all-out class struggle and a crusade against what (in their Communist jargon) they describe as all reactionary forces and foreign imperialists.

Be all this as it may, the Communist government is now strongly entrenched. It is probably the most dynamic, the most dedicated, and the most powerful which has ever controlled the destiny of China.

Whereas their leaders have risen to power frequently through cruel deception and subterfuge, and the heartless elimination of those who opposed their ambitions, it must be said of them in all fairness, that once they reached the summit they set an example of austerity, of endless toil, of dedication, and (according to their standards) of personal integrity, which has not only left its stamp upon the people, but has made more bearable the ruthless disciplinary measures imposed upon those who fail to live up to their exacting standards.

Opium smoking, alcoholism, prostitution, gambling have been practically stamped out. Bribery—and even tipping—have been eliminated.

To what degree this new puritanism is attributable to indoctrination or to the fear of retribution is a matter of speculation. Both have no doubt played their part, but I strongly suspect that fear was the predominating factor.

Wherever one's travels take one in China, unbelievable activity and material progress are in evidence everywhere. Factories, the building trades, basic industries operate around the clock on a three, 8-hour shift basis every day of the year, excepting the days of "national rejoicing," which are six in number.

In the city of Peiping alone, more building has taken place in the last 7 years than since the beginning of the Ch'ing dynasty in 1644. Everywhere new factories are being constructed. Public buildings, apartment houses, schools, universities are rising from their foundations with amazing rapidity. Railway lines are being laid down; airports and sewage systems are being built. More food is being grown, more goods are being

produced, more children and young people are being educated, and the specter of starvation no longer stalks the land.

It is perhaps, therefore, explainable that the great masses—illiterate, docile, inured to hardship, and unaccustomed as they have always been to freedom as we know it in the West—are prepared to put up with the endless toil and sacrifice which is being imposed upon them. Firstly, because they have no alternative; and secondly, because of the belief and hope, which is being drilled into them every hour of the day, by every known method of indoctrination, that they are laying the foundation for a better and more abundant life. They are being taught to suffer now without complaint so that their children, and their children's children, will suffer less in the future.

The people as a whole are polite, friendly, hospitable. They are remarkably resourceful, unbelievably hard working, and indoctrinated to a degree which precludes individual judgment and causes them to reject the most obvious truths. They are puritanical to the point of boredom.

By 9:30 they are ready for bed; by 5:30 in the morning they are preparing for the day's work. Their most exciting topic of conversation is the great leap forward in pig iron production or the additional bushels of wheat per acre produced in 1958 over 1957.

They wear their faith like a badge of honor and proclaim it much more vigorously than the Russians. They display an almost pathological reluctance to express any personal opinions on ideological questions or to deviate in the least little bit from the party line.

There are no grays in China, all is either black or it is white. If you belong to the Western World, then you are an imperialist; if you are a landowner, then you are an exploiter of the people; if you live in Korea or Formosa, you are a running dog; if you are an American, you are an imperialist and a paper tiger to boot; if you differ from the party line, in the most minor detail, you are a reactionary and deviationist.

There must be many among the older people who have known a better life, many who are spending their days in suffering, in hopelessness, and in despair, but these are not vocal. They are the anonymous ones, they are not identifiable. They are caught up in a mass movement from which there is no escape.

Besides, the Government is not interested in the middle-aged or the old—these are expendable. All their thoughts, all their hopes and their planning are centered around the young, whose pliable minds they are carefully indoctrinating into the ways of communism, and into whose eager hands they intend in due course to pass on the torch. From what I have seen of these bright-eyed, enthusiastic, hard-working, and dedicated young men and women, they will not disappoint the hopes and aspirations of their teachers.

They are supremely ignorant of the outer world. They have learned but one side of every question: as the French saying goes, "Having listened to but one bell, they have heard but one sound."

They are fanatically convinced that communism is the only road, and they are all looking forward with infectious enthusiasm to the bright new world in which they expect to play their important part.

I have seen no evidence whatsoever of the weakening of the Sino-Soviet ties, so hopefully forecast by Western wishful thinkers. That there are cracks in the Sino-Soviet walls is fairly evident. That their present relationship will deteriorate in the course of time is highly probable—but this day has not yet dawned. The two partners holding sway, as they do, over a territory stretching from West Germany to the China Seas, and

controlling the destiny of one-third of the world's population, are bound together for the time being by ties of mutual interest, of common faith, and of similar objectives, and I predict that until China grows a lot stronger than she is now, the cracks in the wall will be plastered over as they arise.

The spectacular growth of China's infant industry has only been made possible by the massive aid of the U.S.S.R.—all of which, by the way, is paid for by China through shipment of foodstuffs and raw materials to Russia. The Soviets have not only cooperated in the overall planning of China's industrialization, but they have designed their factories, supplied the machine tools and equipment, sent teams to supervise their installation and get the plants started; in addition to which, they have trained tens of thousands of young Chinese in corresponding plants in Russia.

One of the most astonishing features of China's growing industry, the output of which is increasing very rapidly, is that it is manned exclusively by young people, whose average age does not exceed 25 and in many plants does not exceed 22.

The upsurge of Communist education has kept pace with that of the economy as a whole. Before the revolution, probably 90 percent of the population of China was illiterate. Today the percentage is still high but primary education has now become obligatory.

There are 83 million children in the primary schools, 12 million in the secondary schools, and 660,000 in institutions of higher learning.

In the early days of the revolution, Chairman Mao Tse-tung was not slow to recognize that the path to power in China lay not through the proletariat, as in Soviet Russia, but through the teeming masses of hard-pressed peasantry, for whom (in the opinion of many) any change could only be for the better. Mao Tse-tung became the leader of the peasants, who supplied not only the economic sinews of the revolution, but the voluntary manpower for the Red army.

Eighty percent of all the agriculture land of China was owned by the landlords and wealthy farmers. That this should be taken from them without compensation, and distributed gratis among the land-hungry peasants was the bait which rallied them to the cause of the Communist revolution.

Land reform (because so it was called), was, however, but a gigantic hoax, a calculated deception of unprecedented proportions. And although it was implemented in 1951-52, at was never the intention of the Government to create a permanent land-owning peasantry. Just as soon as they felt themselves sufficiently entrenched, the Government moved forward with relentless and unrelenting purpose toward their original objective of becoming the sole owners of all the land in China and of turning the peasants into a disciplined, militarized, captive and regimented labor force.

Time does not permit me to describe the steps which were successively taken, but by the end of October 1958, the Government's purpose was achieved and 26,000 communes sprang into existence in a short period of 3 months.

From November 1958, no peasant in China owned any land at all, and all of them, men and women, became overworked and regimented members of labor brigades detailed to tasks alternately upon the land, in small factories, on building projects, or for any other purpose which the commune manager and his committee (all young, and all active members of the Communist Party), deemed to be in the interests, not of the peasants and their families, but of greater productivity.

Living conditions in the communes are bleak and starkly utilitarian. All the peas-

ants eat together unbelievably modest rations of ground corn or rice, with an occasional sprinkling of bits of dried fish, in unbelievably drab communal dining halls. They report to work in the fields or the local factories at 5:30 in the morning in the summertime, and are there until 6:30 at night, with rest periods during the day.

It must be pointed out, however, that from the point of view of increasing agricultural production, and thus reducing the danger of starvation, the commune system, which disposes of large working forces, has a lot of merit. What is missing in the picture is the fulfillment of a pledge, and the well-being, the individual freedom and the human dignity, of the peasants themselves.

I reject the thought that this form of mass slavery was the only avenue open to the Government by which national production could be increased and starvation held at arms' length. Those of us who believe in the free enterprise system and the productivity of farms which operate under it, know that this is not so. From a political point of view, however, it was undoubtedly the best way to control the lives of 520 million peasants.

That all is not well in the commune system is startlingly illustrated by the fact that Chou En-lai, in an official speech before the People's Congress, when we were in China in May, stated that total agricultural production in 1958 had risen by 64 percent over 1957, and that by 1959, as a result of the communes, it would reach the enormous figure of 122 billion yuans. On September 1, 4 months afterward, he announced that these estimates had been overoptimistic and that the 64 percent increase was reduced to a 25-percent increase, and that the 1959 estimate was reduced from 122 billion yuans to 67 billion yuans. The great leap forward proved to be a medium size leap only; but even so, a 25-percent improvement in total agricultural production in 1 year is still a remarkable performance.

Although the living conditions are very much worse in the communes than in the cities, they are unbelievably low everywhere. A large proportion of all the freight in China is transported by human effort, and one is moved to pity at the sight of tired and sad-faced women, 8 or 10 of them together, struggling to push or to pull heavy carts laden with steel girders, or bags of cement or material of all kinds, knowing that all that is in store for them at the end of a long and weary day is to share a miserable room, and no doubt a common bed, with 5 or 6 other people, and to eat a bowl of rice or ground corn, or occasionally noodles, for their evening meal.

Be all this as it may (and much as we deprecate the methods used), China of 1959 is a formidable reality. The authority of her Government is not being effectively challenged by any rival group. Its control over the masses is such that, providing China's Government can insure a modest yearly improvement in the living standard of her docile and disciplined people (and from what I have seen, I believe she probably can), the Communist government will remain in power for many years to come.

Under these circumstances it is fairly generally agreed that recognition of the People's Republic of China must someday become an accomplished fact. Six hundred and fifty million people (1 billion by 1980), whose population is increasing every 12½ years by a number equal to the 1958 population of the United States of America, cannot be indefinitely ignored.

Before I proceed to outline the conclusions I have reached as a result of my visit to China I should like to make quite clear that, as a guest in your great country, the last thing I would wish to do is to appear to advise you concerning what your foreign policy should, or should not be, in relation to

China. These are matters which you and your Government alone can properly decide.

The opinions I am expressing are merely those of a businessman and a private citizen and have consequently no official connotation. If I am dealing with this delicate subject at all it is because I feel strongly that the events which are taking place in China today could so intimately affect the lives of each one of us that no opportunity should be lost to place the facts as I see them before as wide an audience as possible.

I doubt if anyone who has visited China in recent years still believes in the fiction of the successful subjugation of the mainland by Chiang Kai-shek and the Kuomintang.

The \$64,000 question is what can be done about it. How do we emerge from the present impasse? The first thing which must be understood is that China is no longer prepared to accept renewal of diplomatic relations with any country which recognizes the national government of Formosa, which she considers as part of her national territory. The recognition of China, therefore, implies the abandonment of Formosa, and insofar as the United States and certain other Western countries are concerned (including our own) the disavowal of treaties freely entered into.

There are many who feel strongly that the nonrecognition of China by the United States and Canada in 1949 was unrealistic and regrettable. I share that point of view. It would be an oversimplification, however, to conclude that if nonrecognition was a mistake, early recognition, without a change of heart and policy by China, is the necessary answer.

Such a reversal by the United States of America of a policy which has been pursued with uncompromising determination for 10 years, would be looked upon by China as a sign of Western weakness and compromise and would be acclaimed by the Communist world as a victory of unparalleled proportions.

In addition, many well-informed people, while critical of the United States early non-recognition policy, believe that if she now reversed herself, China, intoxicated by such a signal victory, might well look upon the abandonment of Formosa as a stepping-stone to further and more important demands. These might well include the relinquishing of America's zone of influence in the Pacific and this would involve Japan, Okinawa, South Korea, and the Philippines.

Furthermore, the abandonment by the United States of America of Formosa, and the repudiation of her treaty obligations, would weaken the position of the Asiatic nations who are resisting Communist infiltration and shake their faith in the value of American support. Many Asiatic nations, who claim to be allergic to American imperialism, are in reality looking toward the United States to hold in check the expansionist tendencies of Red China. Their real concern is not American, but Chinese, imperialism.

They do not forget, nor should we either, that one of the tenets of Chinese, as well as Soviet, communism is world revolution; and China so far has certainly not shown herself to be free of expansionist tendencies.

The United States of America should continue, therefore, her policy of containment. Weakness and compromise have never advanced the cause of peace, and it is eminently desirable that both Soviet Russia and China should know the limits beyond which the Western World will not go.

But the continuation of the status quo ante does not make sense either. The formidable reality of Red China cannot be indefinitely ignored. Operating, therefore, from her position of strength (and her strength in the Pacific is still unquestioned), the United States should embark in all sin-

cerity upon a policy of rapprochement with China, carrying with it no immediate recognition but acknowledgment and respect for China's position as a great world power.

To implement this policy of detente, China should be given to understand by the United States that the broadest possible exchange of visitors, as is the case with Russia, would be welcome. Representatives of the Chinese press should be invited to travel widely throughout the United States on a reciprocal basis. All forms of cultural exchanges should be promoted, including especially an exchange of students.

The American embargo on exports should be reduced to an absolute minimum. These trade restrictions, which are treated with ridicule in China, have not seriously hindered her development. They have, however, driven her closer to Russia.

The mutual exchange of trade delegations, the display of goods at trade fairs and international exhibitions should be encouraged. None of this implies approval of the Chinese form of government, any more than our reception of the leaders of the Soviet Union implies approval of theirs.

There are those who say that these conciliatory moves might be rebuffed, but I am inclined to doubt it. Those guiding China's affairs are subtle and farsighted men and it might well be that, their present hostile attitude notwithstanding, China, would welcome a gradual rapprochement with the United States and a correspondingly lesser dependence upon Russia.

I am well aware of the fact that no measure of understanding and no amount of trade will fully satisfy China until her international status is accepted. She knows, and we know, that she cannot be indefinitely ignored, but she must be brought to realize that this status cannot be achieved by threat or by force. In other words, China cannot shoot her way into recognition.

Precipitate action and repudiation of treaties are thus not the answer. The cure might prove worse than the disease. China must work her passage toward a settlement in which all parties concerned, including Korea and Formosa and the uncommitted countries of Asia, would take part and the interests of each be safeguarded.

None of this will be easy but it will be much less difficult if China is offered the olive branch. The United States is powerful enough and generous enough to be able to do so without loss of prestige. Some say that the situation is too explosive for gradual settlement—that a cure-all must be found now. I doubt this, providing always that the West remains united and the United States of America firm and strong.

Rapid and spectacular as her progress has been, China is in no position at the present time to challenge the United States. Many a year will go by before China will qualify industrially or militarily as a really great power. She has too many roads to build, men and women to train, house to erect, people to educate, mouths to feed, factories and power projects to construct.

But the handwriting is on the wall, plain for everyone to read. Any nation which can do what China had done in 10 years, even if the facts as given to us are greatly exaggerated, has the potential of a great industrial power; and, with approximately one-fourth of the world's population to draw from, of a great military power also.

Like her Communist partner, China will restrict her production of consumer goods and devote her major resources to the expansion of her basic industries. Just as the indoctrinated Russians have accepted the sacrifices in comfort and well-being which this policy involves, the indoctrinated Chinese will do likewise.

China today is shipping vast quantities of

foodstuffs to Russia, which her own people so badly need, in order to pay for new plants and services. So will she in the immediate years to come ship goods, which her people can ill do without, to foreign countries at prices which even Japan cannot compete with, for the purpose of obtaining essential exchange or of destroying the markets of other nations.

Increases in Soviet Russia's industrial production over the past 10 years have been estimated at 12 percent yearly, compared with 3½ percent in the United States of America. She is catching up quickly.

China has still a long way to go, but she will follow in Russia's footsteps, and unless I misread the situation, she will get there much more rapidly.

These are unpleasant but formidable realities which the Western World, and the United States as their leader, cannot afford to ignore. Such realities will not be overcome by indifference, or complacency. Our danger today, vis a vis the gathering economic onslaught of the Communist bloc, springs in no small measure from the ironical fact that these splendid qualities of self-reliance, thrift, self-denial, hard work, and discipline, upon which the greatness of both our nations was built, are tending to wither away in the soft climate of our unparalleled success.

Until each one of us comes to realize that the leadership of the West is being challenged today, and that we are in grave danger of losing it, we will not face up to the measures of self-denial which are essential to preserve it. The comfortable assurance that because we have been unchallenged leaders in technical skills and mass production we will automatically retain this position in the future—the much discussed 36-hour week—more leisure—production costs which are pricing us out of our foreign markets—featherbedding—more gadgets, more superfluities, more luxuries—long strikes which ravage our economy—these, gentlemen, are certainly not the weapons which will help us win the cold war. One cannot oppose awesome dedication and self-denial by comfortable complacency and hope to come out on top.

All of us, not only by any means the workers only, must be prepared to make greater efforts, to practice thrift, self-denial, and discipline, and if necessary, to do all these things for lesser rewards. One doesn't have to be an expert at crystal gazing to see that if we do not voluntarily make the sacrifices, and take the kind of action, which this challenging situation demands, the gradual encroachment of the Communist bloc, representing one-third of the world's population, will force a reduced standard of living upon the Western nations, with political consequences which none of us will wish to contemplate.

What we are up against is nothing new. It is the time-honored law of the jungle—the survival of the fittest.

One can lose a cold war just as surely as a hot one, if one is insufficiently equipped for it, and unprepared to make the necessary sacrifices in order to win it.

The more one sees of the long-suffering, toiling masses of China, controlled, indoctrinated, and directed by an authoritarian government toward the objectives of building a powerful state with small regard for the comfort, dignity, or well-being of the people, the more one should be thankful for, and appreciative of, a form of government and a way of life which have brought us all so many blessings.

But to be thankful is not enough. We must be prepared to defend our heritage, not only on the military but on the economic front, and unless I am greatly mistaken, it is in this latter area that the battle is about to be joined.

Methodist Women Endorse Murray-Metcalf Bill—Urge Federal Funds for Building Classrooms and Improving Teachers' Salaries

EXTENSION OF REMARKS
OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 3, 1960

Mr. BRADEMAS. Mr. Speaker, the action taken by the House Education and Labor Committee on March 15, 1960 in approving a bill to provide for the use of Federal funds for education brings closer to reality an important step in meeting the serious need in our country for more schools.

I believe that Members of Congress will find of great interest a resolution adopted by the Woman's Division of the Department of Christian Social Relations of the Methodist Church on January 16, 1960, at a conference at Buck Hill Falls, Pa. This resolution endorses the principles set forth in H.R. 22, the Murray-Metcalf bill, which provides direct Federal grants to the States to be used for either classroom construction and/or improving teachers' salaries. This is, of course, the same principle represented by the McNamara-Clark-Monroney bill, which was passed by an overwhelming vote by the U.S. Senate last month.

The resolution follows:

RESOLUTION ENDORSING PRINCIPLES OF THE MURRAY-METCALF BILL, ADOPTED ON JANUARY 16, 1960, BY THE WOMAN'S DIVISION OF THE DEPARTMENT OF CHRISTIAN SOCIAL RELATIONS OF THE METHODIST CHURCH

The education of our children in proper conditions and with qualified teachers is one of the primary tasks of our country. We believe the time has come when Federal aid for public schools is necessary to bring the number of classrooms to adequacy for our children and to secure adequate salaries for our teachers.

The Department of Christian Social Relations recommends to the Woman's Division that it call on Methodist women across the Nation to work for the speedy enactment into law of the principles embodied in the 1959 School Support Act. This bill, the Murray-Metcalf, was not brought out of either House or Senate in the first half of the 86th Congress. It is expected to appear on the congressional calendar early in 1960.

As the Woman's Division continues to support the principle of State control of such funds, it is further recommended that Methodist women be urged to work in their States for the allocation of both Federal and State funds on a basis of nondiscrimination because of race and in compliance with the Supreme Court decision of 1954.

As steps toward these ends the following suggestions are made:

1. Contact Congressmen and Senators by letter or in person and urge the enactment of legislation for this Federal aid to education.

2. In local communities contacts with local boards of education should be made. PTA's may be enlisted in planning citizenship brunches to which members of boards of education may be invited for discussion. Letters to local newspapers, contacts with local radio and TV stations and special in-

terpretation and discussion of this issue within our own organization may have value. Cooperate with other like-minded community agencies working toward these ends.

All but Incredible

EXTENSION OF REMARKS OF

HON. WALTER NORBLAD

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. NORBLAD. Mr. Speaker, for the past several months the CAB has been conducting hearings which vitally affect the flow of air traffic between the new State of Hawaii and the Pacific Northwest. In opposition to a CAB examiner's recommendation that Pan American World Airways should no longer be allowed to fly between Hawaii and the Northwest, the entire Northwest congressional delegation plus the chief executives of the State of Oregon and of Washington, have expressed grave concern should a giant step backward be taken along the path of progress.

Since the time 10 years ago when the CAB granted temporary certificates to two carriers to fly between the Northwest and Hawaii the growth of traffic between the two points has kept steady pace with the expansion and development of these areas. This interest in Hawaii has been further enhanced by the statehood which was granted to the islands last year. Now, for some unknown reason, it has been recommended that an airline be given a monopoly over the route and that Pan American cease to service the area.

I join with my colleagues in their unanimous opposition to this recommendation and, under unanimous consent, I ask that an article from the San Francisco Daily Commercial News dated March 7, 1960, be included in the RECORD in support of this position:

ALL BUT INCREDIBLE

We live in the jet age of worldwide air transportation—but, apparently, some of our regulatory policies and attitudes stem from the tri-motor Ford era.

The Portland Oregonian has devoted an editorial to one such instance. It writes: "In the category of sure things, along with death, taxes, and the daily appearance of the sun, one surely can include the continuing growth of air travel between the Pacific Northwest and the new State of Hawaii. That the Civil Aeronautics Board should give serious consideration to the cutting off of one of the two airlines serving this route is, under the circumstances all but incredible."

Here's the story. A CAB examiner has recommended that Pan American World Airways should not be allowed to fly the route, even though it has demonstrated its faith in the route's potentialities by putting on pure jets of the latest and fastest type. If the examiner should have his way, another airline, which won't be employing the pure jets for another year, will be given a monopoly. The entire CAB board has been holding hearings on the matter.

This might be of limited importance if only the Pacific Northwest-Hawaii route were at stake. But in instance after instance rulings and regulations prevent our interna-

tional airlines from providing the best and most expeditious service, particularly on the Pacific route complex. In other instances, foreign lines have been heavily and unduly favored at the expense of our own. Here's a form of horse-and-buggy regulation that the country can't afford in the jet age.

The Honorable George Huddleston, Sr.— A Tribute

EXTENSION OF REMARKS OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 1, 1960

Mr. PATMAN. Mr. Speaker, it is difficult for me to speak of my late good friend, the Honorable George Huddleston, of Alabama, without bringing to the surface of my mind and my feelings recollections that have for decades endeared me to him and that will remain in my memory for the rest of my life. He was of course the Representative in this House from Alabama's 9th district for 22 years. Here, if I may permit myself a personal note, was a man from Alabama who appealed enormously to a man from Texas. He had my respect and my admiration through the years because he was what I like to call a fighting man who so highly prized his honor and his personal dignity that he felt obliged, if need be, to defend them in personal combat. For me, for all that it implies, a fact like that about a man's life is more important than such chronological data as the statistic that he was born on a farm near Lebanon, Tenn., that he studied law at Cumberland University, that he served as a private in the Spanish-American War, and that he was elected to the 64th and to the 10 succeeding Congresses serving in this House from 1915 to 1937. As a legislator he belongs well up in the category of men who made an impact on his time. He was progressive enough in his thinking to sponsor legislation for a Federal home loan system. He fought for the principle of the honest label on materials produced by child and prison labor. In fact it was his promotion of the idea for the Federal development of electrical energy at Niagara Falls that may be said to have fathered the Tennessee Valley Authority. It is good to reflect that when after a good and a successful life he died at 90 years of age in Birmingham last February 29, he knew that the people of his district, of his State, and of the country, and his old colleagues here in the House, held him in the highest esteem. And with that esteem went a warm and profound affection. Not the least of the contributions which the late George Huddleston, Sr., made to his country, is his young and brilliant son, GEORGE HUDDLESTON, JR., who is now serving the same district in this House that his father served before him and who has been with us I am glad to note since 1955. Two Huddlestons so to speak in a single era capable of such distinguished service to

their time is a special kind of favor conferred upon the Congress and the country. This Nation has an enormous strength in its people and the image of that strength is dramatically presented to us in the life and personality of such men as my late dear friend, George Huddleston.

Ethiopia Overcrowded by 400 U.S. Families—Many Called Unnecessary

EXTENSION OF REMARKS OF

HON. WAYNE L. HAYS

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 16, 1960

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Robert C. Ruark which appeared in the Pittsburgh Press of March 6, 1960, describing various U.S. operations in Ethiopia. This article was sent to me by a constituent who expressed his shock at the activities described in the article, a feeling which I am sure will be shared by all who read it.

The article follows:

**ETHIOPIA OVERCROWDED BY 400 U.S. FAMILIES—
MANY CALLED UNNECESSARY**
(By Robert C. Ruark)

ADDIS ABABA, ETHIOPIA, March 5.—There are about 400 American families in Ethiopia today. Many could be classed as unnecessary, either to the benefit of Ethiopia, or to our own prestige here.

We have MAG—the military assistance people—and we have the International Co-operation Administration (ICA) the foreign aid group. We have the Ethiopian Airline people, who more than justify their presence, and we have the U.S. Information Agency.

I get the feeling that when a man can't get steady work back home he hooks up with either the foreign aid people or with the information service, with certain exceptions always allowable.

I quote an efficient man, a business executive.

VERY ENTERTAINING

"It seems to me most of ICA's functions here is entertaining each other. You take people out of their former environment and set up false standards of rich living. Maybe these people couldn't make it back home, but here they can hobnob with the upper crust on a living scale they never dreamed of."

"It costs the American Government about \$25,000 to bring a family out here. They bring cars, refrigerators, all the household gear—the lot. I bring my people out here for about \$2,500."

"What I can't understand is why it takes so many people to do so few things. You've got a director, a deputy director, an assistant deputy director, and in the final analysis all they've got to direct is one stenographer and a couple of bearers."

"We are selling long-term prestige projects instead of immediate efficiency. We are trying to sell them Greenbelt, Md., while they are still punching holes in the ground with sharp sticks."

"We are establishing bad habits of inefficiency instead of preaching efficiency. These people really don't know what they need. We're supposed to move in and sell them on what they need now—not 20 years from now."

HOUSING WRECKED

"But what do they see? They see the ICA's taking all the American holidays as well as all the Coptic church holidays. They see the secretarial staff being driven to and from the office for lunch in Government vehicles. And we have wrecked the housing situation."

The foreign assistance people are given a \$200 to \$250 monthly housing allowance. Unless they spend it, they don't get it. So they spend it, thereby driving up rental values. This is not only true of Ethiopia, but of Somalia. It has placed such a false value on rental property that an employee, say, of Ethiopian Airlines, cannot really afford to rent a decent place unless he arrived before the aid program.

"The one thing," my friend of 10 years says, "is that the locals don't understand efficient management. We are not showing them efficient management. We are showing them bureaucratic overlap, and that's one thing they already know about. We also are showing them how to spend American funds on other people's products."

I noticed myself that there were only two Chevrolet police cars in Addis Ababa. Everything else is German Taunus, Opel, or Volkswagen. Yet we have plowed \$100 million in outright aid, plus heaven knows how much in maintenance money, into assistance here. I took this one to Vic Harrells, who runs the profitable Ethiopian Airlines.

"Look," said the blunt Mr. Harrells, who has been around for about 12 years. "You will notice that the point 4 (foreign aid) people use British Landrovers to haul the help back and forth. We have flatly priced ourselves out of a market, and on our own dough. I don't like to see the Landrovers, on our money, when it should be jeeps, but what are you going to do?"

FOREIGN STEEL CHEAPER

"We are going to build a new hangar. I can save 30 percent of a quarter-million dollars by buying German or Italian steel—about \$75,000. The steel's just as good. But the Germans work for about 50 cents an hour and our people get \$2.20. We are in business to make money for the Ethiopians, and you have to head for the best market."

"What we need here is a businessman's point 4," Mr. Harrells said. "If they gave us a little money for technical training of the locals we wouldn't need a director at \$15,000 a year, with an assistant director, and an administrative staff as the ICA does with its National Airlines training program. We have the direction already built in. I might say that we lost 18 top accountants, trained on the spot, to the Government last year."

"If" (Not by Kipling)

EXTENSION OF REMARKS
OF

HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 2, 1960

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the Record, I include the following poem, written by Mr. Argus Durwood Smith, postmaster, Godley, Tex., concerning U.S. mail service. I think it is excellent and would like to commend it to my colleagues:

"If" (Not by Kipling)

(By Argus D. Smith)

If it's worth mailing, it's
Worth sending first class.
When placed in this category
It arrives first, not last.

If it should be rushed, then
Why not fly it by Air?
As a matter of time or distance
Our Airlines will get it there.

If it's of value to you
We suggest Registered Mail
Insurance can also be secured
By a nominal stamp sale.

If it's of no great value
Yet of importance to you,
Certified Service will assure
Safe prompt delivery too.

If you should have a complaint
See your Postmaster today.
Attention to such matters, prevents
Unnecessary and undue delay.

If you have a friend in need
By illness or sorrow feeling,
Never underestimate the value
Of a card of friendly greeting.

If you're a lover of color
Our commemorative stamps seek.
There's a pretty new one out
Just about every week.

If it's banking you must do, then
Break that traffic barrier.
Endorse and address it, and let
Uncle Sam be your carrier.

If you have-a-de Xmas card
To send-a-de friend today.
For de goodness sake my friend
Getta de card on-a-de way.

If by chance you're worried
About the mail volume cost,
Let's pay as we go, then our
Postal Deficit will be lost.

If as your public servants
Our service we can expand
With economy and speed combined
We're trying the Metro-Plan.

If it's new methods you want
Listen then while I say
Your wish is our command, and
Missile Mail is on it's way.

Freedom Day—A Monument to the
Hungarian Nation

SPEECH

OF

HON. LOUIS C. RABAU

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 15, 1960

Mr. RABAU. Mr. Speaker, the memory of the valiant freedom fighters of the Hungarian revolt of recent years is still vivid in the minds of all. The heroic efforts of the Hungarian people in the face of the completely overwhelming odds represented by the Russian Army will long live as an inspiration to freedom loving people everywhere. Indeed the love of freedom has long been a basic characteristic of the Hungarian people. Today, Mr. Speaker, marks the 112th anniversary of the first realization

of true freedom by the Hungarian people. It was on March 15 in 1848 that the demands of freedom-seeking Hungarian nationalists were acceded to by King Ferdinand II.
